Mr. B. said, however much ingenuity might attempt to disguise this question, the result was, that we must now determine whether we will borrow the amount of the fourth instalment, either in the form of Treasury notes, or by a direct loan, and pay interest upon it, in order that we may deposit it with the States for safe-keeping, and without interest. This was the plain and simple proposition. It was the result of all the argument. What man, in his senses, ever contracted a debt in order that he might deposit the amount of it with his neighbor for safe-keeping? And is the Federal Government to be guilty of this absurdity? Are we, as the trustees of the people of the United States, to manage their concerns so unwisely as to involve them in a debt, and collect taxes from them to pay it for any such purpose? However much the States might desire to receive this fourth instalment, and whatever attempts might be made to excite popular feeling upon this subject, he had full confidence that his constituents would approve his vote upon this bill.

Mr. B. said that he knew very well that this was a subject well calculated to enlist the feelings of Senators. The instalment might be deposited with the States against his vote. In that event, he should bow most cheerfully to the will of the majority. Indeed, there was one consideration which had induced him to endeavor to bring himself to this conclusion; and nothing but a conviction of imperious duty had stood in the way. He knew that the greater amount of Treasury notes which we issued, the greater would be the relief to the community. Whatever amount might be issued would be equal, in this respect, to the creation of so much gold and silver. They would assist in regulating the exchanges, both foreign and domestic. They would go to Europe in payment of our debt, and thus prevent the transportation of the precious metals. If this bill should not pass, their amount would be increased several millions; and thus additional relief would be afforded to the public. But however much he might desire, and however much he did desire this result, he could not consent to borrow money on the faith of the United States, not to carry into effect the legitimate purposes of the Government, but to place it on deposit with the several States.

In answer to Mr. BUCHANAN—

Mr. WEBSTER, having obtained and examined the act of 1815, said: The honorable member from Pennsylvania had been kind enough to say that I do not often get into difficulties in debate, and that when I do, I generally extricate myself better than I have done on the present occasion. He partakes in the supposed triumph of his friend from New York, (Mr. Wright,) in having proved me incorrect when I said that this Government had never issued such paper money as the Secretary has now recommended. Now, sir, although I am pleased to see the happiness which the gentleman enjoys; yet I believe I must dash it a little. Most assuredly, sir, it authorizes no such paper as is now proposed. I was persuaded it could not, as I have a pretty good recollection of the proceedings of Congress on such subjects at that time.

The law of 1815 authorized the issue of two classes of Treasury notes: 1st, such as bore no interest, but which, the very hour they were issued, might be funded in a seven per cent. stock, to be redeemed like other stocks of the Government. 2d. Treasury notes bearing an interest of five and two-fifths per cent. capable of being funded in like manner, in a six per cent. stock. These stocks were to be issued on application by any commissioner of the revenue in any State. Now, what comparison is there between either of these classes of Treasury notes and those recommended by the Secretary which bear no interest, and for which no fixed redemption is provided?

I affirm again, therefore, sir, all that I have said, namely, that the notes recommended by the Treas-

ury are regular paper issues, like the old emissions of Congress and the States before the adoption of the present Constitution, and that no precedent has been found for them, and I am sure none can be found, in the practice of this Government.

Mr. BUCHANAN said he did not think the Senator, with all his ingenuity, had got out of the difficulty. Under the section of the law of 1815, which he had just read, Treasury notes were to be issued without interest; they were to circulate as a currency without interest; they might continue to circulate for years without interest. It did not alter the case that the holder of them above a certain amount had the privilege of funding them, and converting them into a stock bearing interest. This interest did not commence from the date of their issue, but from the time they were funded. All the time they remained in circulation, they were Treasury notes without interest. They were what the Senator from Massachusetts had supposed never was issued under the present Constitution. Mr. B. however, agreed with the Senator that at this time no Treasury notes ought to be issued which did not bear interest.

Mr. CALHOUN said that he was decidedly of the impression that, under the circumstances of the case, this postponement ought to be made. The object of the deposit law was to draw the revenue out of the grasp of the Government, and to restore it to those to whom it ought to be restored. And now, when there was no surplus, it was not contrary to the purpose of that law to withhold it. But the responsibility of doing so would rest on gentlemen of the administration, and those of the opposition who made last year the extravagant appropriations of \$32,000,000, exceeding the estimate of the Secretary of the Treasury. They were then told of the folly of raising the revenue, and of raising the disbursements. The result now was that the Government was bankrupt. Were they never to look ahead and see the difficulties that threatened them?

Another era had now arisen. They had got through with the surplus, and Mr. C. trusted they were through with extravagant appropriations. If they did not economize and retrench, he saw a new age commencing, perhaps that of Treasury notes, when the compromise act would be annulled, the high tariff revived. But Mr. C. would agree that the fourth deposit should be withheld, since that law had fulfilled its main purpose, and since a new series of extravagances was now to arise, unless they kept a good lookout.

Mr. BUCHANAN offered the following amendment, to be inserted at the end of the bill:

"Provided, That the three first instalments under the said act shall remain on deposit with the States until otherwise directed by Congress."

Mr. NILES said he must ask for the yeas and nays on the amendment, and was sorry it had been offered. If it was to be fully considered, it would renew the debate on the deposit act, as it went to change the essential principles and terms of that act. A majority of those who voted for that act, about which there had been so much said and so much misrepresentation, had professed to regard it—and he could not doubt that at the time they did so regard it—as simply a deposit law; as merely changing the place of deposit from the banks to the States, so far as related to the surplus. The money was still to be in the Treasury, and liable to be drawn out, with certain limitations and restrictions, by the ordinary appropriation laws, without the direct action of Congress. The amendment, if adopted, will change the principles of the deposit act, and the condition of the money deposited with the States under it. It will no longer be a deposit; it will not be in the Treasury, even in point of legal effect or form: the deposit will be changed to a loan, or perhaps, more properly, a grant to the States. The rights of the United States will be changed to a mere claim, like that against the late Bank of the United States; and a claim without any means to enforce it. We were charged at the time of making a distribution of the public revenue to the States, in the disguise and form of a deposit; and this amendment, it appeared to him, would be a very bold step towards confirming the truth of that charge. He deemed the amendment an important one, and

highly objectionable; but he saw that that Senate were prepared to adopt it, and he would not pursue the discussion, but content himself with repeating his request for the yeas and nays on the question.

Mr. BUCHANAN said he had not imagined this amendment would meet with opposition. He wished to know if it was right and proper that the Secretary should be made responsible for not calling upon the States for this money, as the law required him to do? The condition of the States was such that the Secretary cannot make such call upon them. He (Mr. B.) was therefore desirous to relieve him from this embarrassment. The substituting Congress instead of the Secretary would not, Mr. B. thought, make any change in the nature of the fund.

Mr. CALHOUN said he fully concurred in the proposed amendment. It was due to the States, in their sovereign capacity, not to subject themselves to be called upon for the money by any other authority than Congress.

The question was then taken on the amendment offered by Mr. BUCHANAN: and the yeas and nays being called for, were as follows:

YEAS—Messrs. Allen, Bayard, Black, Brown, Buchanan, Calhoun, Clayton, Crittenden, Fulton, Grundy, Kent, King of Alabama, King of Georgia, Knight, Linn, Lyon, Morris, Nicholas, Norvell, Preston, Robbins, Robinson, Sevier, Smith of Indiana, Southard, Strange, Swift, Tallmadge, Wall, Webster, White, Williams, Young—33.

NAYS—Messrs. Benton, Clay of Alabama, Hubbard, Niles, Pierce, Rives, Roane, Ruggles, Smith of Connecticut, Tipton, Walker, Wright—12.

Mr. TALLMADGE then moved as an amendment to strike out all after the enacting clause, and insert, in substance, as follows: "The money deposited with the States shall remain on deposit until otherwise directed by Congress."

Mr. TALLMADGE made a few brief remarks in support of this amendment, which he said embraced the substance of the amendment offered by the Senator from Pennsylvania, (Mr. Buchanan.)

The yeas and nays being ordered, the question was taken on Mr. TALLMADGE'S amendment, and decided in the negative, as follows:

YEAS—Messrs. Bayard, Clayton, Crittenden, Fulton, Kent, Knight, Lyon, Nicholas, Norvell, Preston, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Tipton, Webster, White—18.

NAYS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Grundy, Hubbard, King of Alabama, King of Georgia, Linn, Morris, Niles, Pierce, Rives, Roane, Robinson, Ruggles, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—27.

The question on engrossing the bill, as amended, and ordering it to a third reading, was then taken, and decided in the affirmative, as follows:

YEAS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, King of Georgia, Linn, Morris, Niles, Pierce, Rives, Roane, Robinson, Ruggles, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright—27.

NAYS—Messrs. Bayard, Clayton, Crittenden, Kent, Knight, Lyon, Nicholas, Norvell, Preston, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Tipton, Webster, White, Young—18.

The Senate then, on motion of Mr. NICHOLAS, Adjourned.

## DEBATE IN THE SENATE.

In Senate, Friday, September 15, 1837.—On the bill to postpone the payment of the Fourth Instalment of the Deposits with the States.—

The bill to postpone indefinitely the payment of the fourth instalment of the deposit bill, was read a third time; and the question being upon its passage—

Mr. PRESTON, of South Carolina, said he should not now undertake to make a formal opposition to this bill, as he understood it to have been decided on the second reading, and it might be considered as having already passed. He thought, however, it ought to have met with more discus-

sion than had taken place upon it, and we would therefore beg the indulgence of the Senate while he briefly expressed his opinion upon its merits.

The first inquiry he should make was, whether a case had been made out justifying the withholding of this instalment of the deposit with the States; and, secondly, he would inquire if, supposing the case had arrived, this was the proper and the most advisable course to be adopted to assist in replenishing the Treasury.

My opinion (said Mr. P.) decidedly is, that the *casus federis* has not arrived for Congress to encroach upon the fund set aside for deposit with the States; and I further am of opinion that, even if it had now arrived, yet this is not the course by which we shall best consult the interests of the country, in attempting to bring brief relief to the Treasury.

Let us briefly consider the history of the deposit act. That act was passed contemporaneously with other acts of most prodigal expenditure. We had a surplus which we knew not how to dispose of. To expend—to get rid of our overflowing funds, was then the order of the day. We were in the full tide of an inauspicious prosperity, and the Departments were stimulated and goaded on to find out how much they could spend, while the majority in Congress seemed to be employed in finding out how much they could give. The Departments asked for twenty millions, and Congress, eager to get rid of the surplus, outstripped even their extravagant demands, and gave them thirty millions. Then it was, sir, that this deposit bill was originated. It went hand in hand with bills of the most extravagant and prodigal expenditure.

Now, sir, under these circumstances, when we give so prodigally to the Departments, at a time of high prices, it is well worth our while to inquire whether the time has not arrived to lop off and curtail from our expenditure, rather than to withhold this instalment from the States. I am of opinion we might save the nine millions of this instalment by curtail the extravagant expenditures of the Departments, and so pay the instalment—not by distressing the States in withholding it, but by introducing a wholesome measure of retrenchment in the expenditure of Government.

This, sir, is the ground I take; namely, that it would be far better to curtail our expenditure than to stop the payment of this instalment.

Again, I would ask, does the proposition embraced in this bill go to relieve in any manner the pressure upon the people? Not in the least, sir. Neither will the Government place itself in funds by the operation of this law. The banks have laid violent hands on the deposits; they will pay them no longer in the medium they were expected to pay them in. Of what use, then, will this bill be to Government? The money is locked up in the banks, and the wildest enthusiast in favor of this measure would not go so far as to say that the mere fiat of this body, a bill such as this, is going to fill the country with gold and silver. We have not got the magician's wand, by one touch of which we can make the gold come forth from its hiding places. We may call, indeed, by our enactments, the spirits from the vasty deep, but will they come when you do call them? Will money be obtained for the Government when you pass this bill? No, sir; we all know that this bill will bring no money into the Treasury.

It would be better, therefore, under such circumstances, to let the law go on, and let the States receive the whole of the deposit. The States, sir, are willing to take the instalment in the only medium in which the State institutions are able to pay it. They are not going, at this crisis, to clamor for a hard money currency. They will be satisfied with receiving the State currency, their own domestic currency. But the President says, "No;" and by passing this bill, according to his recommendation, you will not let them receive a currency which they are willing to receive. The amount of the instalment now in the banks would be useful in that currency, to them, for they would gladly receive it; but it will be of no use whatever to the Government, for the Government will not receive it. Then, sir, if I may use a homely similitude, by such an enactment as this, you act the part of

the dog in the manger; you will not take the money of the States yourselves, and you will not let them have it, though they wish to receive it. Is this a noble or even a politic proceeding? Is this your reforming the currency? Is this aiding and relieving the embarrassments of the people, to stamp a bad name upon their currency, to refuse to receive it yourselves, to pass laws fixing a stigma upon it, and then to forbid others to receive it?

Again, sir: there is another view which I think ought to be taken of this subject; and, had it received its due consideration, such a measure as this could surely never have been proposed. In fifteen days from now, this instalment will be due to the States. They have already made their disposition of the money. It has been disposed of in various contracts, and been directed to various great and useful purposes; and now, suddenly, at this short notice, the expected sum, the sum which the law had pledged to them, is, by another law, to be withheld. But, by the terms of the deposit law, a specific time was fixed upon and accorded to the States, in which the States were to have notice of any demand to be made upon them for the sum deposited. By the law, therefore, they are entitled to a notice before this fourth instalment can be withdrawn from them. For they have already expended it; and this bill to withhold it is equivalent in its action to taking back the money from them, without the notice which the law provided for.

Mr. P. then proceeded to show that there were other and better methods of raising money for the Treasury, without resorting to this expedient, which, while it would be onerous and oppressive to the States, would be, at the same time, virtually useless and unproductive to the Government. One mode which he should point out was that of an issue of certificates of deposit, which would immediately provide available funds for the Government, without this measure of withholding an expected and promised instalment. Mr. P. remarked that such a provision had been originally inserted in the deposit bill, but he greatly regretted that, in order to overcome the prejudices of an illustrious person, and to make the bill acceptable to him, (the late President of the United States,) that provision had been stricken out of the bill, in order to secure its passage and save it from his veto. Mr. P. remarked that he should not permit himself now to dwell upon that painful recollection, but should content himself with merely expressing his deep regret that so wise and salutary a provision had been stricken out of the bill from considerations so individual, personal, and little.

If (continued Mr. P.) that wise and salutary measure had been carried out in the original deposit bill, we should not now be here. The Senate would not now be fatigued with its present labors, and all the trouble we are now undergoing would have been avoided. The Treasurer would then have only had to throw the certificates into the market to raise what sum he required for the use of the Government. Such a course, sir, (observed Mr. P.) would have been enough and ample to pry up the Government out of the slough of despond in which now it is sunken. Not only would it have given funds to the Government, but also it would have given relief to the people. It would have thrown money into circulation, it would have benefitted all parties. It would have been twice blessed, giving double relief both to the States who gave the certificates, and to the General Government, which received them.

By this proposition to suspend or postpone the payment of the instalment, Mr. P. said, no one will be benefitted. He would venture to suggest how both parties might be benefitted, and the issue of Treasury notes might be avoided. Let the clause excised from the original deposit bill be re-enacted; let the States issue their certificates, which will be as good as specie to the Government. Let the States receive this instalment, and let the Treasury receive the certificates, and sell them. In this manner, instead of adding to the general distress of the times, both parties would be eminently benefitted. Surely (said Mr. P.) those gentlemen who hold our destinies in their hands, who carry all the measures they please to imagine, good or bad—and (Mr. P.) was sorry to say he could not look

back and call all their measures good, nor could he look at this measure and deem it either wise, or good, or politic—surely, he would repeat, those gentlemen ought to be willing to adopt such measures as would be the least distressing, the least painful, onerous, and disturbing, at a time of general distress, such as the present, when we are called together to relieve, not to aggravate, to benefit, and not to injure, to heal, and not to take vengeance.

I entreat those gentlemen, therefore, said Mr. P. to take these things into consideration; I entreat them to give more time to the States, not to stop the payment of this instalment; I entreat them to let the money go where it might almost be considered a vested right it should go. Mr. P. concluded by saying he was sorry to have detained the Senate at this stage of the bill; he had not expected that he could have weight enough to change the course of the gentlemen of the majority, or to prevent the passage of this disastrous bill. All he had desired was, to give brief expression to his views of it. He had now done so, and in doing so he felt that he had done his duty.

Mr. CALHOUN said he thought it would be better for his colleague (Mr. Preston) to make a motion at once for the repeal of unexpended appropriations to the amount of nine millions of dollars, the amount of the instalment. There would then be a surplus to that extent, which might go for the payment of the fourth instalment. If Mr. P. felt unwilling at this stage of the bill to make such a motion, he (Mr. C.) would agree to the laying of the bill on the table in order to give time. He confessed that the idea had occurred to him which his colleague had just stated; but he did not see any probability of such a proposition being attended with success. He had done his utmost to stop the extravagant course pursued at former sessions in granting the appropriations. His efforts had been unsuccessful, and now he thought there was still less chance of getting back that which it had not been possible to prevent from being legislated away. He agreed with Mr. P. that it was entirely useless to lock up this money. It would do no good to the Government; when, if let go, it would do good to the States.

Mr. CRITTENDEN of Kentucky said he fully concurred in the views just expressed by the gentleman from South Carolina, (Mr. Preston.) In the State which he came from, he said, the general opinion was that retrenchment was wanting, and ought to be exercised in the several Departments of the Government. The profusion to which they were becoming habituated it was time should be checked, and he (Mr. C.) agreed with the honorable Senator from South Carolina, (Mr. Preston,) that now was the time, if ever, to put in force such a necessary retrenchment. He (Mr. C.) could not well understand the reason why any other course should be resorted to; for it clearly appeared to him, that, by proper retrenchment in the expenditures of Government, enough, and more than enough, might be curtailed from its superfluous disbursements to make up the amount which the payment of this instalment would require.

But he (Mr. C.) was at a loss to understand what object the Government could have in view by the measure here proposed. Such was its tenacity of a metallic currency, so great was its abhorrence for any other media, that it refused to take, or acknowledge as available funds, the money of the country and of the people. It could, therefore, get no available funds by this bill. The banks could not pay its demands now in gold or silver, nor were they likely to be able to do so for some time to come. Why, then, did the Government seek by this bill to deprive the States of funds which were available to them, but which were altogether unavailable to the Government? He could not comprehend the reasons and motives of such a measure. If this bill would benefit the Government by making the sum it withholds from the States available to the General Government, there might be, indeed, some reason in it. But why, he asked, take from the States that which would benefit them, in order to hand it over to the General Government, to whom it will confessedly be of no benefit whatever? The State of Kentucky, and other

States also, had made provisions for the expenditure of this money; had already applied it to various great and useful objects, relying on the solemn faith of a law of Congress, passed after the fullest deliberation by that body. On such a law, not deeming that it would be lightly broken or rescinded upon the first pretext, Kentucky had built her expectation of this money, and had acted upon that expectation, and had disposed of it by anticipation. Therefore, not only on the ground that this money would not be available to the General Government was this bill objectionable, but also on the ground that its present withdrawal from the States would be highly injurious and inconvenient to them. On this ground the bill in his view was eminently objectionable.

Was the faith pledged by an act of Congress to be so lightly broken? Was an expectation, based upon such ground, to be with such indifference and facility disappointed? Was it worth no effort—no exertion—no trouble, to keep a promise? to stand by a law? to fulfil an engagement? The States were invited to accept this deposit; it was no boon of their soliciting; and now, after it has been offered—after it has been promised—after it has been accepted—after it has been spent—after numberless schemes and plans for its employment, all beneficial to the States, have been devised and settled, and are waiting the payment of this fourth instalment for their completion, is it now the time to recede from our engagement? Is it now the time to break a promise? Is it now the time to violate a pledge, and say that you have not got the money? Might it not be replied, you have got the money, but you will not let the States have it! Such, in fact, would be the effect of the passage of this bill! Yes, sir, the money is there; the money is in the banks; the States are willing to receive it; but Congress interposes, and, by this bill, says "No; you shall not receive it."

We are told by the supporters and advocates of this bill that it must be passed, because it would be highly impolitic to borrow money in order to deposit it with the States. This, sir, is not the correct view of the case: this is not a fair statement of the question: this, sir, is not the question at all. The question is this: The States have been led to expect this fund, on the faith of a law: they have made improvements, entered into contracts, incurred expenses on the expectation of receiving this money, pledged to them by the law; and now, sir, the question is, "Is there no right on the part of the States, is there no obligation on the part of the General Government to fulfil the law?" Shall the law be set aside on the mere plea of inconvenience? That, sir, is the question, the great question! Whether a solemn law shall be fulfilled—whether a pledge shall be redeemed—whether a promise shall be performed—whether there exists any obligation to fulfil promises given, and not to disappoint expectations gratuitously raised? Shall we be told, sir, that there exists no such obligation? It is, in my view, the highest obligation which attaches to any Government. Now, in answer to this, we are met by the plea of convenience. We are told it would be very inconvenient to fulfil this contract with the States; that money will have to be borrowed for the purpose; and, therefore, since it would not be quite convenient to fulfil the obligation, the obligation ought to be broken, and the faith of the law violated!

But there is also another plea for this measure. I understand gentleman to say that there is not money enough in the Treasury to pay this fourth instalment. But, sir, laying aside the question how far such an argument ought to prevail to induce the violation of a solemn engagement, let us ask, as to the fact, whether there are, indeed, no funds for the purpose of meeting this engagement? On looking over the report of the Secretary of the Treasury, (said Mr. C.) I only find a probability spoken of. He says, there may probably be a deficit, and not that there is. The argument therefore is divested of its main strength, and that is, of the absolute fact necessary to sustain it. But, sir, if there are no funds adapted to the wants of the General Government, there are funds which the States would willingly receive. They have confidence in the banks; they would receive their

paper. They are not engaged in warfare against them; they do not wish to destroy them, and to destroy the credit of the country and of the people; while, on the other hand, there are no funds for the use of the General Government only because it will not recognise our money, our funds, our credit, and will only receive gold and silver; it is not willing to go hand in hand with the people in aiding and assisting to support and sustain that credit which is the life and soul of the business, trade, and commerce of the nation.

Again, sir, let me expose another monstrous idea which seems to possess the gentlemen who have brought forward, and those who advocate this bill; an erroneous idea, indeed, of which it were well that they were dispossessed; and it is this, sir: they seem to imagine that this money belongs to the Government. Not so, sir, (said Mr. C.) far from it: it belongs to the States—it belongs to the people, from whom the Government has gathered and collected it; but which gathering and collecting did not make it its own. Therefore, sir, in addition to the many strong reasons why this money should not be withheld from us, the reason above all is, that it is our own money.

The President of the United States in his Message had read a lecture on economy to Congress, and to the people of this country, and had told them that the distress and exigency of the times which have brought us here are to be attributed to the extravagance of the people. Now, sir, it is very strange that it never occurred to the President that economy was of all things that in which the Government itself was most deficient; that economy was especially needed to be put in practice by it; that the tide of prodigality and high expenditure of millions upon millions, in which it had of late years indulged, it was now high time should be stopped. Strange, sir, is it, that the President, before he made this charge upon the people, did not look to the crying necessity for reform and economy in the Government itself.

In a time of distress like this, when the Government gives to the people such lessons of economy, what conduct do we behold in the Government? Any approach, sir, to economy? No, sir, none whatever: on the contrary, all the recommendations of the Message, and all the measures of the administration, are, notwithstanding the people's distress, and notwithstanding the lessons of economy read to them by the President, directed and aimed at the one single and only object of filling the Treasury with money! of keeping the Government going; of providing means for a profuse and wild extravagance of expenditure. Before we vote for the issue of Treasury notes, I feel it my duty, sir, to inquire to what extent retrenchment may not be carried into the expenditures of the Departments. All eyes are turned upon you; the people look to you for relief, and what do we behold? Why, sir, all the inquiry made, all the measures proposed, are merely how to fill the Treasury with money! *Sauve qui peut!* is the cry of the Government. All its efforts are directed to help itself, to save itself; to cut loose from the general wreck, and leave the country to help itself as it best may be able! Is this the duty of a Government? when we come here for the express purpose of giving relief, then only to bring forward a bill like this, to withhold money from the States, and other bills, as bad in their principle, to raise more money from them, in order to sustain, and help, and fill the Treasury, while nothing is done or thought of for the people?

Mr. BROWN said, he had not intended, at that stage of the bill, to delay its early passage by any remarks of his, but in consequence of the observations which had fallen from the two gentlemen, who in the course of that morning had addressed the Senate, he would take the occasion to make a few remarks in reply, and in justification of the vote which it was his purpose to give on the measure then before them.

In addition to the arguments which had already been urged, and which to his mind were conclusive, in favor of withholding the fourth instalment payable to the several States on the first of October, under the deposit act, another argument entitled to still more weighty consideration had decided his mind in favor of that course. If we refuse to pass

the bill having that object in view, the obligation will unavoidably devolve on Congress to provide the means to meet the payment of the instalment, which will otherwise become due to the States, the available means of the Treasury being inadequate for that purpose. Now he (Mr. B.) could not see in any part of the Constitution the power to raise money, and of necessity the power to tax our constituents to pay the money thus raised, for the mere purpose of depositing it in the treasuries of the several States. The power to raise money was limited to the objects and duties with which the General Government was charged by the Constitution, and in no part of that instrument was the power to be found, either by express grant or implication, to raise it for any such purpose. It could not be pretended, that to raise money for such purpose was to carry into effect any power belonging to the General Government. To his mind, therefore, it was a palpable violation of the Constitution to exercise such power, which they unquestionably would have to do, in providing the means to meet the remaining instalment, if its payment should not be postponed. He drew a distinction between the power of Congress to authorize the deposit of a surplus in the State treasuries which already existed, and the power to raise money for the sole purpose of thus depositing it. It was in that point of view, that he deemed the deposit act of last year justifiable; that act, had, in the course of its execution exhausted the surplus, which was the true object Congress had in view in passing it, and having fulfilled its great end, he was of opinion its further operation should now cease. He thought the gentleman from South Carolina (Mr. Preston) would have much difficulty in reconciling the vote which he had announced his intention to give on this question, with the doctrines of a strict construction of the Constitution, of which he had heretofore professed himself a zealous advocate. He called on that gentleman to show what constitutional authority Congress had to pass a law raising money not in execution of any of its conceded powers, but for the avowed purpose of being deposited with the States. It had been argued by the same gentleman that strong expectations had been created among the States, that the instalment which it is now proposed to withhold, would be paid over to them, and that an equitable obligation was imposed on Congress not to disappoint those expectations. He contended that the idea of an equitable obligation on Congress to pay over the money was utterly destroyed, by the power given to the Secretary of the Treasury in the deposit act to call on the States, under certain restrictions, for the repayment of the sums deposited with them. The power thus given to that officer by the act in question, was, in effect, a notice to the States that the Government of the United States might want the money deposited with them; and, in that event, would require its repayment. He considered the same notice as substantially applicable as regarded the instalment yet unpaid, and was, in itself, a very significant indication that Congress would withhold any part of the money unpaid, should a contingency arise making it necessary to do so. That contingency had arisen, making it proper, in his opinion, to withhold that which remained unpaid; but he trusted that none would arise making it necessary to call on the States for that portion of the surplus revenue already deposited with them.

Besides the constitutional objection to raising money for the purpose of depositing it with the States, the unavoidable consequence of providing for the payment of the remaining instalment to them would be to lay the foundation of a new national debt, than which nothing, in his opinion, would be more preposterous, when resorted to for the unauthorized purpose of dividing money among the States. He would in no event vote for any measure leading to the creation of a national debt, unless it could be made appear to be indispensable to aid the Government in the performance of its legitimate functions.

It had not been without some surprise, that he had heard the charge of harsh and unjust treatment towards the States, in reference to the proposed measure especially, brought against the

General Government. Was it nothing, that it had in the space of a few months past divided among the States near thirty millions of dollars? Was the distribution of this immense amount among the States, (for he regarded it, practically and in point of fact, as a distribution) to be considered nothing? Or was it, in this act, that gentlemen found reasons to complain of oppression, on the part of the General Government, against the States? He really thought, if gentlemen would take a dispassionate review of the conduct of the General Government towards the States, in its pecuniary transactions with them, if they did not find all their most extravagant expectations realized, they would at least find enough, in the magnitude of the distribution which had been made, to exempt the General Government from the harsh censure which they had cast on it.

The gentleman from Kentucky (Mr. Crittenden) has taken strong exceptions to what he has been pleased to term the paternal advice given us by the President, in his message, against the increasing luxury and extravagance in the mode of living, which are rapidly diffusing themselves throughout our country, and thinks that it would have been more becoming him to have set an example of economy and retrenchment, by the introduction of those principles into his administration, before he ventured his advice on such subjects. It was true, (said Mr. B.) that the President had, not in the way of advice, as had been suggested by the gentleman, but in tracing the causes which had led to the present embarrassed condition of the country, enumerated that, among many others, in connection with the inflated paper system existing in this country and in England, which, acting and reacting on each other, have, in conjunction with the cause first mentioned, mainly contributed to produce the existing evils—evils which all experience, in both countries, proves belong to the paper system, and periodically recur under it, no matter in what form it exists, whether in the shape of a national bank or of State institutions. He would, however, before finishing his reply to the censure which had been cast on the President for this remark, take the occasion to say to the gentleman from Kentucky, if he would unite in carrying out the recommendation of the President to withhold the fourth instalment to the States, that it would be taking a step of no little importance towards bringing the Government back to economy and retrenchment. The state of the case between the views of the President and the gentleman from Kentucky, in relation to the measure alluded to by him, was simply this: the President recommends the passage of a law postponing the payment of the fourth instalment to the States, amounting to some nine or ten millions, and which the Government, not having the means to satisfy, owing to the default of the deposit banks, will necessarily, if paid, have to provide the means by going in debt for that sum while the gentleman from Kentucky insists on the payment of the instalment to the States, the effect of which would be to compel the Government to raise the necessary means, either by an issue of Treasury notes or in some other manner. Now he would submit it to the impartial decision of any one to determine who was for economy and retrenchment, and who was for extravagant expenditure—the President of the United States or the honorable Senator himself.

We have been told, with much emphasis, said Mr. B. that although Congress had been specially convoked by the President, yet no measure of relief had been recommended for the people; that it was all for the Government. While he would say that this declaration was unsustained by the character of the measures recommended in the Message of the Chief Magistrate, he could not permit the occasion to pass without the expression of his sincere regret that language of that character had fallen from any Senator on that floor. The Government of the United States had been spoken of as something alien to the people who were its constituents. Gentlemen surely forgot the principles and theory of our Government, and imagined themselves engaged in combating against a Government of irresponsible powers, and claiming no origin from, or sympathy with, the public will. What, he would ask, was the nature and character of that Govern-

ment, which it was in this way attempted to rouse public prejudice against, and to induce the belief that its interests were distinct from the great body of the people? Was it not an emanation of that popular will which it was now sought to turn against it, imbued with the same feelings, and interwoven with the best interests and dearest rights of the great body of the people? Was it to be regarded as a crime, that means should be taken by those sent here to legislate, and by the Executive, whose province it was to see that the laws are executed, to continue the Government in its regular and constitutional action? Heretofore, we had been taught, that the preservation of our system of government in its constitutional action, while it was, by far, an object of higher interest and more universal concernment than any other, to every citizen, was, at the same time, the first and highest duty of patriotism. Language of the kind, to which he had alluded, had unfortunately been too common among a certain political party in this country; the effect of it was, to produce dissatisfaction in the public mind, and prepare the way for the overthrow of our system of government, by inducing the impression that there is no identity of interests between the people and their own Government. It was not the part of an American statesman, in his humble judgment, to use language calculated to bring the Government into disrepute at home, and to degrade it in the estimation of foreigners abroad.

As to the idea of legislative relief to the country, of which so much had been said in the course of this debate, he must confess that he had but little faith in it. It was true that Congress might, and probably would, grant indulgence to such of the merchants as were debtors to the Government and required it; and might adopt some other measures affording some incidental benefit to the country; but as to the idea of a legislative remedy to relieve it from its embarrassments, it was, in his opinion, not only impracticable, but at variance with the principles of our Government. What, he would ask, did gentlemen mean by the relief, which they had so often spoken of in the course of the debate? Was it that men should be legislated out of debt, who had most improvidently plunged into gambling speculations? Was it that banking corporations should in some way be favored, by our legislation, at the expense of public rights? They had not spoken out as to the measures of relief, on the virtue of which they seemed so much to rely. He ventured to predict, however, whenever these measures of relief were proposed, although they might be brought forward professing to be in the name and for the benefit of the people, they would turn out to be a plan to relieve certain classes at the expense of the great mass of the people. The true doctrine under our system, if he had rightly comprehended it, was for Government to extend its powers no further than to protect individuals in their personal rights and lawful acquisitions of property against fraud and violence, leaving each in the enjoyment of the rewards of his own industry, and to pursue his own happiness in his own way. When Government undertakes to do more, and to interfere in the private pursuits of men, it must of necessity, in endeavoring to relieve one class, violate the rights of another, by doing it at their expense. Such was the doctrine that had been taught by the highest and most revered names on the list of our statesmen. He, therefore, repudiated the doctrine of legislative nostrums to relieve classes who were embarrassed, and believed that such things must mainly work out their own cure; that being the only sure and effectual way of remedying the evil.

While gentlemen in the opposition were so unsparing in their censure against the measures proposed by the administration, they had not condescended, in the plenitude of their skill in curing diseases of State, to propose the panacea which they were ever and anon obscurely hinting at. Without intending to dictate a course of public conduct to them, he must be allowed to say, that when gentlemen condemn so freely the policy and plans of others, they thereby assume an obligation, as faithful representatives of their constituents, to furnish a better, and not to

confine themselves simply to a line of condemnation.

He (Mr. B.) did not see in the condition of the country the alarming symptoms and dangerous crisis which had been described in such dark and gloomy colors, and which, however well intended the motives doubtless were that prompted them, were but little calculated, in the present tremulous and sensitive state of public confidence, to allay the evils arising from pecuniary embarrassment. He did not believe that the nation had fallen into the "slough of despond" as the gentleman from South Carolina (Mr. Preston) had said. It was true that embarrassment had been severely felt in the commercial community, and among other classes who had overtraded and engaged in ruinous speculations; but the great mass of substantial citizens, agriculturists and others, he believed, were unaffected, except by the banks having suspended specie payments, which they had done with, he believed, a larger aggregate proportion of specie than they had at any time before possessed. Looking to the condition of our country in contrast with others, he saw no reason to despair, but much to congratulate ourselves on. With no national debt weighing on our resources, with a population possessed, to an unexampled degree, of the means of human subsistence and happiness, with a country of unlimited capacity for the production of every thing essential to supply its wants and comforts, and, above all, remembering that our free and noble institutions yet survive, who does not feel that we stand in proud and gratifying contrast with any other nation?

Checked in its prosperity, it might be, for a short time, by the causes which had operated on both sides of the Atlantic to produce an imprudent extension of the credit system; but he denied that the substantial resources of the country were even touched by the events which had happened in the last six months. Many individuals, in commercial and other pursuits, had fallen beneath the pressure of the times; others perhaps would share the same fate; property had and would, he did not doubt, in very many more instances, change proprietors, but it would still remain in the country, leaving us in possession of all the substantial elements of individual happiness and national greatness. He saw nothing in the present crisis to produce despondency, but much to animate our hopes, in looking through the perspective of the future. No country on earth, he believed, possessed, in a higher degree, the faculties of self-recovery. Its onward course might be retarded for a very short period, but could not be arrested by the causes now operating.

He could not admit that the country was so absolutely dependent on banks for its prosperity, as was supposed by some. As a citizen of this Republic, he should feel humiliated to make such an admission. The true sources of its prosperity are to be found in the enterprise and industry of our citizens, in the inexhaustible natural resources in which it abounds, and in our free Government, which, by protecting each citizen in the enjoyment of the fruits of his labor, quickens enterprise, and invigorates exertion. Notwithstanding these views, he was, however, far from either expecting or wishing the abolition of the paper system; the most that could be effected, was to subject it to salutary restrictions, by lessening its capacity to do mischief, and to infuse into it a greater proportion of metallic currency. These correctives could be applied only by the joint agency of the States and the General Government, which were demanded as well by the public voice, as the best interests of the country. He repeated, therefore, that he saw nothing in the condition of the country to inspire alarm, nothing that the public virtue and intelligence were not fully able to meet, and in a short time to overcome. For this, we had the best guaranty in the abundant capacity which the nation had shown to rise above all difficulties, in seasons infinitely more trying than any to be found in its present condition. Mr. WALKER said, without discussing at this time the great question debated by the Senator from Massachusetts, (Mr. Webster,) in regard to the paper currency of the country, and the supreme

contro, which he claims on this subject, and all that relates to it, for the Government of the United States, he would proceed at once to the inquiry now before us, whether it would be proper to postpone paying over to the States the last instalment under the deposit act. This instalment amounted to a sum exceeding nine millions of dollars. The report of the Secretary of the Treasury informs us, that the money is not in the Treasury to pay the instalment. Even in the event of the postponement of this deposit with the States, there is still a deficiency in the revenue, which the Secretary asks to be supplied by the emission of Treasury notes. It is, then, obvious, that if this instalment is to be paid to the States on the first of October next, it can only be effected by an emission of an additional amount of Treasury notes, bearing interest, or in other words, by the creation of a new national debt, arising from a new loan, in order to deposit the amount for safe keeping with the States of this Union. Disguise it then as we may, the refusal to pass this bill is a determination on our part to borrow more than nine millions of dollars on the credit of the United States, to be deposited for safe keeping with the States of this Union. The Constitution authorized us to borrow money on the credit of the United States—but for what object? Clearly for no other than to carry into effect the powers delegated by the Constitution. But that this Government could borrow millions, without limitation as to the amount, for the purpose of depositing it with, or distributing it among the States, was to clothe this Government with the most alarming and despotic powers. If this Government can make such a loan for such a purpose, the taxing power is unlimited, for by taxes only can it raise the money to refund what it has borrowed. Mr. W. said he was one of a small minority of six in the Senate who had voted against this deposit bill. He had then predicted the disastrous consequences that he thought would follow from the passage of this bill, and his worst fears would be realized, if now, when there was a deficit in the Treasury, when many of the public creditors had to be paid in protested drafts on broken banks, a surplus was created by loans for the purpose of depositing among the States of the Union.

Mr. W. said he well knew the voracious character of the surplus spirit; that it was ready to keep up the tariff, to keep up the price of the public lands, and to refuse all relief to the settlers of the West, for the purpose of creating a surplus for distribution; but he could scarcely have believed that now, when we must in any event replenish, by loans, an exhausted Treasury, that new loans are asked for to the amount of nine millions for distribution, —loans to be refunded, if not from the lands of the West, from the tariff, by which Mississippi, now nearly the greatest exporting State of this Union, will receive but about one fourth as much as she will be compelled to refund by the operation of the tariff—reducing the price of her great staple to enrich the incorporated monopolists of other sections of the Union. Mr. W. said he must be blind indeed, who did not perceive, that to raise, by loans, nine millions for deposit with the States, is, to the extent of nine millions, to render it necessary to augment the tariff. It is true, we talk of getting back this money from the States, whilst a majority of the Senate, as he (Mr. W.) thought, most unwisely, have just taken from the Secretary of the Treasury the authority which he possessed, under the deposit act, to call upon the States to refund any portion of the money already deposited. And now, (Mr. W. predicted,) that Congress never would make any requisition upon the States for this money, but that when it was wanted, the South would be compelled to raise it through the operation of the tariff. Could any man doubt this result, when so bold an effort was now made to induce the Government to borrow money to pay the last instalment to the States.

But the Senator from South Carolina (Mr. Preston) tells us that we can obtain this money for deposit among the States by repealing some of the appropriation bills. Sir, the Senator from South Carolina (Mr. Calhoun) has most clearly shown the impossibility of obtaining a repeal of laws partly executed, passed by large majorities in both

houses of Congress. But if the appropriation bills were repealed to-morrow to the extent proposed, it would not put one dollar in the Treasury, now exhausted, nor enable the Government on the first of October next, now at hand, to deposit these nine millions with the States of the Union; for, in the calculation of the Secretary of the Treasury, the expenditure of fifteen millions of these appropriations is postponed till next year. But we have been told by the Senator from Massachusetts, (Mr. Webster,) that this amount may be paid to the States by the money in the deposit banks, whose paper would be gladly received by the States in which they are located. It has been already shown by the Senator from New York, (Mr. Wright,) that the entire money now in the deposit banks subject to new drafts, is not enough, by more than a million, to meet the required amount of the last deposit instalment; but if it were enough, let us examine the effect of this proposition. It is to pay the States in the paper of the deposit banks, by new issues of paper by those banks to an amount exceeding nine millions of dollars—to put out, in other words, more than nine millions of depreciated bank paper, issued by banks that have suspended specie payments. And is this the relief the Senator from Massachusetts would extend to the community? Sir, (said Mr. W.) nearly all the embarrassments of the community have been occasioned by the vast over-issues of paper by the banks, paper which they cannot now redeem in specie, and which has depreciated from ten to thirty per cent. in various sections of the Union. Is it not clearly perceived that this would greatly increase the embarrassments of the community? that it would add greatly to the present enormous mass of depreciated paper? that it would still further depreciate all the paper of all the banks making the new emissions; postpone for a long time, if not indefinitely, the resumption of specie payments by the banks, by augmenting nearly one-third the amount of their depreciated paper, and thus, also, disable them from extending the least indulgence to their debtors by this vast increase of their circulation, imposing the correspondent obligation of calling in their debts as rapidly as possible to the same amount? If (said Mr. W.) this proposition of the Senator from Massachusetts be a part and portion of the plan of the opposition for relieving the embarrassments of the country, he had no curiosity to hear the remainder of their proposition.

Mr. PRESTON replied at some length, (chiefly to the arguments of Mr. Brown;) he denied that he had said, if there was no money in the Treasury, it was better to create a loan than withhold these deposits. What he maintained was, that the fourth instalment should go to the States in good faith; and that if the Treasury was empty, and there was that pressing demand for money which had been represented, that they had better call upon the States to refund the first and second instalment, according to the provisions of the deposit law, giving the States the legal notice; not, by withholding this instalment, disturb their domestic arrangements, and subject them to so much inconvenience. He had said, and would still say, that it would be a violation of a pledge to the States, and he would stake his character as a lawyer on the soundness of that assertion.

The gentleman (Mr. Brown) had said he did not believe in this general distress; for his part he was glad that in all this wide-spread calamity that gentleman was exempt from it; but neither the State he represented, nor himself, had the good fortune to be so situated—they came in for their full share.

Something had been said "about being tired of *nostrostrums*." The administration party had the destiny of this nation in their hands, and it was their duty to produce cures for the evils they had inflicted. Mr. P. said he belonged to a portion of a small and helpless minority, that could do nothing but advise and warn,—and had that advice been taken, the country would not have been in its present situation; we should not have been convened here at this time, and had *projects* for issuing Treasury notes and withholding instalments. Mr. P. understood we were to have an entire currency of gold and silver; and now we were presented with a plan for

Treasury notes. Did not that look more like *nostrostrums*?" Yes, the nation had been depleted, bled, and drenched with warm water, upon the true Sangrado principle, till it was weak and powerless. When it was prosperous, the gentlemen of the administration pointed triumphantly to the ship of State, and said "See the effect of our policy." There was the gallant bark, with her wide sails spread, skimming her way over the smooth and glassy ocean of prosperity—her crew blithesome and joyous, and songs of mirth and gladness resounding from her deck—what a gorgeous spectacle! Suddenly the scene is changed—the sails are rent, and hang flapping against the yards, and the spars and masts drop piecemeal from the hull; she is overwhelmed before the crew are raised from the giddy rapture; and this was the effects of experiment—of *nostrostrums*. The evils of the experiment remain. Would to God he could get rid of the experimenter!

### TREASURY NOTE BILL.

### SPEECH OF MR. BENTON, OF MISSOURI,

IN SENATE, MONDAY, SEPT. 18, 1837.

Mr. BENTON said he should not have risen in this debate, had it not been for the misapprehensions which seem to pervade the minds of some Senators as to the character of the bill. It is called by some a paper-money bill, and, by others, a bill to germinate a new national debt. These are serious imputations, and require to be answered, not by declamation and recrimination, but by facts and reasons, addressed to the candor, and to the intelligence, of an enlightened and patriotic community.

I dissent from the imputations on the character of the bill. I maintain that it is neither a paper-money bill, nor a bill to lay the foundation for a new national debt; and will briefly give my reasons for believing as I do on both points.

There are certainly two classes of Treasury notes—one for investment, and one for circulation; and both classes are known to our laws, and possess distinctive features which define their respective characters, and confine them to their respective uses.

The notes for investment bear an interest sufficient to induce capitalists to exchange gold and silver for them, and to lay them by as a productive fund. This is their distinctive feature, but not the only one; they possess other subsidiary qualities; such as transferability only by indorsement—payable at a fixed time—not re-issuable—nor of small denomination—and to be cancelled when paid. Notes of this class are in fact loan notes—notes to raise loans on by selling them for hard money—either immediately by the Secretary of the Treasury, or, secondarily, by the creditor of the Government to whom they have been paid. In a word, they possess all the qualities which invite investment, and forbid and impede circulation. The act of 1812 authorized an issue of notes of this description. They bore five and two-fifths per cent. interest, with an express clause that the Secretary of the Treasury might raise money upon them by loan. I presume there are Senators present who were members of the House of Representatives in 1812—who gave the sanction of their approbation to the Treasury note law of that year, and who would be very unwilling to hear the epithets applied to that law which are lavished upon this bill, which is copied from it.

The Treasury notes for currency are distinguished by features and qualities, the reverse of those which have been mentioned. They bear little or no interest. They are payable to bearer—transferable by delivery—re-issuable—of low denominations—and frequently re-imbursable at the pleasure of the Government. They are, in fact, paper money, and possess all the qualities which forbid investment, and invite to circulation. The Treasury notes of 1815 were of that character, except for the optional clause to enable the holder to fund them at the interest which commanded loans—at seven per cent.

These are the distinctive features of the two classes of notes. Now try the committee's bill by the test of these qualities. It will be found that the notes which it authorizes belong to the first named class; that they are to bear an interest, which may be six per cent.; that they are transferrable only by endorsement—that they are not re-issuable—that they are to be paid at day certain; to wit, within one year—that they are not to be issued of less denomination than one hundred dollars—are to be cancelled when taken up—and that the Secretary of the Treasury is expressly authorized to raise money upon them by loaning them.

These are the features and qualities of the notes to be issued, and they define and fix their character as notes to raise loans, and to be laid by as investments, and not as notes for currency, to be pushed into circulation by the power of the Government, and to add to the curse of the day by increasing the quantity of unconvertible paper money.

The execution of the act, and especially the cardinal feature of the quantum of interest, is left to the President and the Secretary of the Treasury. I presume it will be executed as a law to borrow money; and in that point of view the interest was left open, under a maximum limit, as is proper to be done in all propositions for loans. Bids may be invited by advertisement; the competition of lenders may fix the interest; capitalists may fix it by competition, though nominally left to the discretion of the President and Secretary; and at whatever rate it is thus fixed—at whatever rate a loan of gold and silver is commanded—at that rate the whole issue, made at any one time, ought to go. There should not be two rates of interest; a high one for the independent and opulent capitalist, and a low one for the helpless and necessitous public creditor.

This is my opinion of the character of these Treasury notes, and of the mode of using them. I cannot doubt but that lenders will present themselves, and that the whole ten millions may be borrowed in gold and silver just as fast as the Government needs it. That opinion is formed upon data—upon the great amount of specie now in the country—its unproductiveness to its present holders, and the facility with which large amounts of specie were borrowed immediately after the bank suspensions; and the commercial revulsions of 1819. The specie in the United States cannot now be less than it was six months ago, to wit, eighty millions of dollars; for it is shown by the custom-house reports, and other data, that, notwithstanding the efforts to ship it to Europe, the imports and exports are about even during that time; and that, taking the whole fiscal year together, the imports now exceed the exports by nearly four millions of dollars; and that near nine hundred thousand dollars in gold have been coined in the first three quarters of the present calendar year. The specie in the country cannot, therefore, be less than \$80,000,000, and, upon the calculation of last year, is more. The whole of this vast amount is lying idle, barren, and unproductive to its owners—not that they are all unwilling to lend it, and to receive interest, but for want of borrowers in whom they have confidence. The United States will present that borrower, and will bring forth the hoarded treasures which the lack of general confidence now consigns to sterility in private chests, and in special bank deposits. Thus it was in 1819, '20. The commercial and bank catastrophe of that period took place in 1819; in less than a year afterwards, from the collapse of business, and the stagnation of commerce, money in the Atlantic cities was abundant, idle, and seeking investment at four or five per cent. So says Mr. Cheves—so we can all remember—but to refresh memories, and establish this important fact, I will read a paragraph from Mr. Cheves's late letter to Dr. Cooper:

"Before the close of the first year of my administration, adequate capital had been assigned to the offices in which it had been deficient, and the bank and its offices generally, then or very soon after, were in a condition to do extensive business, had the situation of the country permitted it. But the commerce of the country became perfectly stagnant. Money was a drug. The bank, to keep up its business as far as possible, discounted long

paper, say at four and six months, and perhaps longer. It was even proposed, with the same object, to lower the rate of interest to five per cent. I believe local banks at Boston did, in some instances, discount at that rate. In Philadelphia, I think, the local banks discounted paper having nine months to run, and perhaps more. The commerce of the country was reduced from a state of great excitement, such as we have just witnessed, to a state of collapse, such as I fear we may soon suffer. Under these circumstances the discounts fell off, the bank was too safe. It had, at times, I believe, as much specie, perhaps more, in its vaults than it had notes in circulation. Under this want of demand for money, I was so fortunate as to obtain the public loans, to the amount of six millions of dollars, which the bank was able to pay for, and retain an abundance of specie in its vaults."

Such is the testimony of Mr. Cheves, and thus easily and rapidly did the recuperative energies of this young, vigorous, athletic country recover from the depression and desolation of that day. The effect cannot be different now; on the contrary, the recovery must be more rapid and easy; for the distress now is not the tythe of what it was then; the real money in the country, the gold and silver, was not the fourth part then of what it is now; the distress then was *all* real, and no part of it assumed, pretended, artificial, forced, and fictitious, contrived with malice aforethought, to govern elections and politics, and to coerce the revivification of a national bank.

I remember the times of which Mr. Cheves speaks. I came to the Senate in 1820; and I know that his picture of the abundance of money, the facility of getting loans, and the low rate of interest, is entirely just. Our own legislation proves it; for a loan of three millions was authorized in the session of 1819–20, and another at the ensuing session for five millions, both expressly to defray the current expenses of the Government; and both loans were eagerly bid for by capitalists, and at rates considerably below six per cent. It was six millions out of these eight that Mr. Cheves congratulates himself for having been fortunate enough to obtain for the Bank of the United States. The picture drawn by Mr. Cheves is correct as applicable to the Atlantic board for which he intended it; it is not correct as applicable to the West, and was not so intended by him. That great region did not recover for several years after 1819. It had been eviscerated of its gold and silver to sustain the Bank of the United States! It had been sacrificed to save that bank! At the time that Mr. Cheves refers to, it was, so far as the precious metals were concerned, the empty skin of an immolated victim, sacrificed upon the altar of salvation to a foreign institution. Not so now. Thanks to the ever-glorious Treasury order! That order has saved the West from the fate which overwhelmed her for so many years after the revulsion of 1819. She is not now, in respect to money or any thing else, the empty skin of a sacrificed victim. She has her fair proportion of all the blessings of good government, as well as her fair proportion of all the blessings of Heaven. She is able and willing to pay her share of the public revenue in solid money. The sales of the public lands, since the suspension of specie payments, are fully equal to what they were in the best years before the two years of bank expansions and mad speculations. These sales have gone on in June, July, and August, at a rate to yield near four millions per annum, which is equal to the best years before 1835 and '36. Mr. Cheves was right in his picture of the moneyed plethora on the Atlantic board. It was a drug there in less than one year after the great catastrophe of 1819; it will be a drug there again, and from the same causes—stagnation of trade and collapse of business—within a few months. It is on the Atlantic board that these Treasury notes will be borrowed. Money will be loaned upon them. They will be taken as investments, to be laid by; not as currency, to be shovled into circulation.

The bill has been denounced as the germ of a new national debt. It certainly proposes the creation of a debt. But for what purpose, and under what circumstances? To comply with the maxim, that a public debt is a public blessing?

By no means! But to relieve the States from being called upon for a reimbursement of any part of the twenty-seven millions of dollars which have been deposited with them—to relieve the merchants from an immediate payment of four millions—and to relieve the late deposit banks from an immediate press for six millions. This is the object. The loan of ten millions on the Treasury notes comes in place of the four and six millions due from merchants and the banks. It is because we cannot collect one, that we create the other. If we had the ten millions from the merchants and the banks, we should not want the Treasury notes; not being able to collect those ten millions, we give time to our debtors, and borrow an equivalent sum. The outstanding debt due to the United States is equal to the debt created; it will be a fund to pay it, interest and all; for the merchants and banks are to pay interest; and then the Treasury note debt becomes a mere nominal transaction, so far as debt is concerned, being no burden to the United States, and a relief to her debtors.

This is the object of this nominal debt, and under what circumstances is it created? Under the same which occasioned eight millions to be borrowed by direct loan in the two succeeding sessions after the catastrophe of 1819. We have run the career of that period over again, and the parallel is exact in every particular. Then, as now, we had had our dream of inexhaustible surpluses, and were wakened up to the reality of an empty treasury. Then, as now, we had our forty-seven millions of revenue; our nine millions of annual surplus—our bank expansions—our mad speculations—our bloated and delusive prosperity; and then, as now, we were called together to borrow eight millions for the support of the Government, to hear the cries of distress, and the calls for relief. The eight millions borrowed then, and borrowed with the approving voice of some who now stigmatize a similar loan, under similar circumstances, and for the same object, was not considered as the germ of a new national debt, neither will our loan be so considered by the country.

I trust I have vindicated the bill from the stigma of being a paper currency bill, and from the imputation of being the first step towards the creation of a new national debt. I hope it is fully cleared from the odium of both these imputations. I will now say a few words on the policy of issuing Treasury notes in time of peace, or even in time of war, until the ordinary resources of loans and taxes had been tried and exhausted. I am no friend to the issue of Treasury notes of any kind. As loans, they are a disguised mode of borrowing, and easy to slide into a currency: as a currency, it is the most seductive, the most dangerous, and the most liable to abuse of all the descriptions of paper money. "The stamping of paper (by Government) is an operation so much easier than the laying of taxes, or of borrowing money, that a Government in the habit of paper emissions would rarely fail, in any emergency, to indulge itself too far in the employment of that resource, to avoid as much as possible, one less auspicious to present popularity." So said General Hamilton; and Jefferson, Madison, Macon, Randolph, and all the fathers of the republican church, concurred with him. These sagacious statesmen were shy of this facile and seductive resource, "so liable to abuse, and so certain of being abused." They held it inadmissible to recur to it in time of peace, and that it could only be thought of amidst the exigencies and perils of war, and that after exhausting the direct and responsible alternatives of loans and taxes. Bred in the school of these great men, I came here at this session to oppose, at all risks, an issue of Treasury notes. I preferred a direct loan, and that for many and cogent reasons. There is clear authority to borrow in the Constitution; but, to find authority to issue these notes, we must enter the field of constructive powers. To borrow is to do a responsible act; it is to incur certain accountability to the constituent, and heavy censure if it cannot be justified; to issue these notes is to do an act which few consider of, which takes but little hold of the public mind, which few condemn and some encourage, because it increases the quantum of what is vainly called money. Loans are limited

by the capacity, at least, of one side to borrow, and of the other to lend; the issue of these notes has no limit but the will of the makers and the supply of lampblack and rags. The continental bills of the Revolution, and the assignats of France, should furnish some instructive lessons on this head. Direct loans are always voluntary on the part of the lender; Treasury note loans may be a forced borrowing from the Government creditor—as much so as if the bayonet was put to his breast; for necessity has no law, and the necessitous claimant must take what is tendered, whether with or without interest—whether ten or fifty per cent. below par. I distrust, dislike, and would fain eschew, this Treasury note resource. I prefer the direct loans of 1820-21. I could only bring myself to acquiesce in this measure when it was urged that there was not time to carry a loan through its forms, nor even then could I consent to it until every feature of a currency operation had been eradicated from the face of the bill.

I have spoken to the points which induced me to rise, and might here terminate my remarks; but the committee, of which I am a member, has been assailed, and, being on my feet, I will say a word in its defence. Senators have said that the committee has reported nothing for the relief of the country—nothing, in fact, of any value or consequence. With deference to their judgments, I presume to think otherwise, and, with the indulgence of the Senate, will undertake to convince them of their mistake. First, there is the merchants' bond bill; it relieves a class of debtors to the amount of four millions of dollars, and through them it relieves many others. This bill also grants additional credits on bonds to become due for a year hence, and in that grants further relief to the same class and to their numerous dealers. Then there is the deposit bank relief bill. This gives time to another class of debtors to refund six millions, and through them it relieves all their debtors, and besides, enables them to give temporary assistance to the country generally. Then comes this Treasury note bill; a measure of relief to the States to the amount of ten millions, and through them a relief to all their citizens, by supplying the Treasury from our own resources; and thus staving off the contingency on which they became subject to re-imburse ten, out of the twenty-seven million deposit, while still in the very act of receiving it. The Senate, on the motion of the Senator from Pennsylvania, who sits over the way, (Mr. Buchanan,) has since abrogated this contingency, and substituted the will of Congress; but this change, while it admonishes us to say, *farewell—a long farewell to the twenty-seven millions!* and even to fear the approaching departure of the nine millions, cannot diminish the merit of the committee, which had first deferred the contingency before the Senator's motion abrogated it for ever.

These are instances of direct relief—large as well as direct—and extending into all the ramifications of society. It is four millions to the merchants, six millions to the banks, and ten millions to the States—in all, twenty millions; and, though nominally, to the merchants, the banks, and the States, it is in reality to the whole body of the community—to all the citizens to whom merchants, banks, and States resort to collect the money which is to be paid over to the Federal Treasury. To these three bills of immediate, direct, large, and positive relief, the committee have added two others, less general in their scope, and more indirect in their action, but still well entitled to be classed among relief measures—one to abolish credits at the custom-houses, after a given time; and the other to relieve this city, and these ten miles square, in which Congress has exclusive jurisdiction, from the evils of an irredeemable paper currency, and the pestilence of paper ticket change.

The divorce bill—the bill to dissolve the connection between Bank and State—and to enable the Government to keep in its own hands its own means of existence—will certainly be a relief to one of the parties, if not to both. These bills have been reported by the Finance Committee, and will enable the country to judge how far they are obnoxious to the charge of reporting nothing for relief, and nothing of any value. They are six in

number—of great value and efficacy in my estimation—and they comprise all the subjects on which that committee were expected to produce any thing for the action of the Senate.

There is another bill which may come from another committee, the Judiciary, and which I shall rejoice to see come from it—a bill of most potential and universal relief to the whole country! to relieve us from a most crying imposition, which now afflicts and oppresses every thing in our America, from the Federal and State Governments, and their elevated functionaries, down to the tub of the washerwoman and the cart of the drayman. It is the bill to apply the penalties of bankruptcy to their ancient, original, appropriate, and primitive subject, and the one from which the law itself takes its name. Broken bank!—*bancus* and *ruptus*—is the Roman designation of the law. Broken banks, and not broken merchants, broken tailors, broken lawyers, and broken farmers, were the Roman, the Grecian, the Asiatic, and the Egyptian subjects of this law. The English, and other moderns, have diverted it to humbler game; and President Van Buren is the first in the list of Executive magistrates to propose to restore it to its original and most appropriate subjects. I shall rejoice to see that bill come in. It will be tidings of forthcoming relief to an afflicted and prostrate empire. It will fix the day for the general resumption of specie payments, and will furnish a rule, and provide an engine, for separating the solvent from the insolvent, "*promisers to pay.*"

That bill has been denounced in advance upon this floor, and war to the knife has been declared against it. The assault has even assumed the character of a combined movement against the nervous system of the friends of the measure. It seems as if they would terrify us. I have not communed with others to learn how they stand the shock of this precocious assault; but, for one, my nerves remain unaffected, and my feet do not feel as if they meditated flight, and intended to bear off my body from the perils of the coming conflict.

That bill has been denounced in an unusual, unexpected, and precipitate manner. I do not return the denunciation, nor do I now undertake its defence, by obliquing into an argument foreign to the question before the Senate; but I am free to declare myself friendly to the measure, and ready to support it as soon as it is brought forward. I am not deterred by the imposing apparition of sovereign States, engaged in the trade, or associated in the business, of banking. My own State, even Missouri, has embarked in the perils and mysteries of this trade. She has chartered a moneyed corporation, and gone into partnership with it; and if ever that concern shall dishonor its "*promises to pay,*" I, for one, shall be ready to apply the penalties of bankruptcy to the whole establishment, and shall make no discrimination between the effects of individual stockholders and the effects of the State embarked in the partnership.

I say this, not in defiance, but in candor, in sincerity, and in openness of heart. I am for the measure, and avow it in my place here; and if the consequences of this avowal should be what some seem to think—an extinction of political existence, and a perpetual exclusion from the purlieus of this TEN MILES SQUARE—I stand here now ready to do the deed, and to pay the forfeit—to vote for the bill without faltering, and to march from this Capitol without looking back.

#### APPENDIX TO MR. BENTON'S SPEECH ON THE TREASURY NOTE BILL.

Having pointed out, in this speech, the similitude between the catastrophe of 1819 and of the present year, (1837,) Mr. B. republishes, in an appendix, the remarks which he made upon that point in a speech on the rescinding resolution of Mr. Ewing at the last session of Congress.

"Mr. B. wished to point out to the Senate the great similitude which existed between the present state of things in our country, and that which existed about twenty years ago. There was instruction to be derived from the retrospect, and he would use the highest authority for the fidelity of the picture which he proposed to recall. He would have recourse to the highest official papers—the message of Presidents to Congress—and would read the parts which were applicable to his purpose. He read:

*Extract from President Madison's annual Message at the meeting of Congress, the first Monday of December, 1816.*

"It has been estimated that, during the year 1816, the actual receipts of revenue at the Treasury, including the balance at the commencement of the year, and excluding the proceeds of loans and Treasury notes, will amount to about the sum of \$47,000,000; that during the same year, the actual payments at the Treasury, including the payment of the arrearages of the War Department, as well as the payment of a considerable excess, beyond the annual appropriations, will amount to about the sum of \$38,000,000; and that, consequently, at the close of the year, there will be a surplus in the Treasury of about \$9,000,000."

*Extract from President Monroe's annual Message, the first Monday of December, 1817.*

"A considerable and rapid augmentation in the value of all the public lands, proceeding from these and other obvious causes, may, henceforward, be expected. The public lands are a public stock, which ought to be disposed of to the best advantage for the nation. The nation should, therefore, derive the profit from the continual rise in their value."

*Extract from President Monroe's annual Message, the third Monday of November, 1818.*

"The sale of the public lands during the year has also greatly exceeded both in quantity and price, that of any former year, and there is just reason to expect a progressive improvement in that source of revenue."

This is the picture for 1816, '17, and '18, and a glowing one it is. The Treasury full and overflowing; forty-seven millions of revenue in one year; thirty-eight millions paid out; nine millions of surplus on hand; public lands selling with unprecedented rapidity, the sales for 1818 being seventeen millions of dollars, which, in proportion to the population, were larger sales than those of the last year, when twenty-five millions were received. At the end of the year 1818, this gorgeous picture of prosperity still augments, and the President so elated with the prospect of income from the lands, that he advises their price to be raised from two dollars per acre, which was then the minimum, to a sum not stated in his message, but understood to be five dollars; and concludes with expressing his opinion that there was just reason for expecting a progressive improvement in the sales of these lands. Now, (said Mr. B.) let us resume our readings, and see what manner of picture is presented by the same President in the ensuing Messages. He read:

*Extract from President Monroe's annual Message at the meeting of Congress, Dec. 1819.*

"Although the pecuniary embarrassments which affected various parts of the Union, during the latter part of the preceding year, have, during the present, been considerably augmented, and still continues to exist, the receipts into the Treasury to the 30th of September last have amounted to \$19,000,000."

The causes which have tended to diminish the public receipts could not fail to have a corresponding effect upon the revenue which has accrued upon imports and tonnage during the first three quarters of the present year. The great reduction in the price of the principal articles of domestic growth, which has occurred during the present year, and the consequent fall in the price of labor, apparently so favorable to the success of domestic manufactures, have not shielded them against other causes adverse to their prosperity. The pecuniary embarrassments which have so deeply affected the commercial interests of the nation, have been no less adverse to our manufacturing establishments in several sections of the Union. The great reduction of the currency, which the banks have been constrained to make in order to continue specie payments, and the vitiated character of it where such reductions have not been attempted, instead of placing within the reach of these establishments the pecuniary aid necessary to avail themselves of the advantages resulting from the reduction in the prices of the raw materials and labor, have compelled the banks to withdraw from them a portion of the capital heretofore advanced to them. That aid which has been refused by the banks has not been obtained from other sources, owing to the loss of individual confidence from the frequent failures which have recently occurred in some of our principal commercial cities."

And recommends encouragement to manufactures.

*Extract from President Monroe's annual Message at the meeting of Congress, December, 1820.*

"The receipts into the Treasury from every source (including a loan of three millions) to the 30th of September last, amount to \$16,794,107; whilst the public expenditures to the same period amount to \$16,871,534. The sum of three millions authorized to be raised by loan, by act of the last session of Congress, has been obtained on terms advantageous to the Government. It is proper to add, that there is now due to the Treasury, for the sale of the public lands, \$22,996,545. In bringing this subject to view, I consider it my duty to submit to Congress, whether it may not be advisable to extend to the purchasers of these lands, in consideration of the unfavorable change which has occurred since the sales, a reasonable indulgence. It is known that the purchases were made when the price of every article had risen to its greatest height, and that the instalments are becoming due at a period of great depression. It is presumed that some plan may be devised, by the wisdom of Congress, compatible with the public interest, which would afford great relief to these purchasers."

What a change of language! said Mr. B. It looks like enchantment! and all to take place between the meeting of one session of Congress and the meeting of the next! What a change! No more forty-seven millions of income; no more surpluses; no more seventeen millions from public lands; no more propositions to raise their price; no more of all this glowing picture! But the income from customs fallen down to thirteen millions; the income from lands to less than one million; a loan of eight millions authorized to carry on the Government; all the public expenditures cut down to the lowest point; universal distress; banks failing; currency deranged; prices depressed; manufactures sinking; and calling for a new tariff; relief to them recommended; the purchasers of the public lands twenty-three millions in debt to the Government, unable to pay, calling for relief, and relief recommended and granted; the twenty-three millions of debt for lands either released, or payment deferred on extended credit; and the minimum price, instead of being raised to five dollars per acre, reduced to one dollar twenty-five cents. Such was the change of picture which it was the fate of the same President to present in the short interval which elapsed between two sessions of Congress! and what is the instruction which we should derive from it! Certainly, that similar effects follow similar causes, and that the past should be a lesson and a warning for

the future. We are now in the circumstances of 1816, '17, '18; overflowing Treasury, large surpluses, great sales of the public lands; the price of every thing high. And what made that state of things? Bank issues; bank expansions; bank loans; bank facilities! And what made the cruel reverse which took place in 1818-19? Contraction of bank issues; contraction of expansions; curtailment of loans; withdrawal of facilities; and the explosion of innumerable banks! The paper system—the paper system—was the real and sole cause of the illusive and deceptive prosperity which, for a while, smited treacherously upon the country, and was so suddenly followed by a sad and real distress. And are we not at this moment, and from the same cause, realizing the first part—the deceptive, the illusive, the treacherous part—of this picture? and must not the other part, the sad and real sequel, inevitably follow? Mr. B. said it must follow, and went over several reasons to show it to be more certain now than in 1818-19. In the first place, there were three times more banks now than then, and increasing much faster now than they did then, and dealing in millions now for hundreds of thousands then. In the next place, there is now a great political party, confederated with a powerful moneyed institution, to produce derangements of the currency, and pecuniary distress in the country, and to lay it upon the Government, when no such party existed in 1816, '17, '18. In the third place, the business of banking is now carried on in a more complex and critical form than formerly, by institutions using each others notes as cash; issuing notes at one place payable at another, and a distant place, and entering into temporary and voluntary arrangements for keeping up the credit and circulation of their notes at places where payments of them are not exigible by law. These are points in which the present trade of banking is more dangerously exposed, and more critically situated, than it was twenty years ago. On the other hand, there are some safeguards now which did not exist then; *first*, the great amount of specie, now near eighty millions of dollars, which the wisdom of President Jackson's administration has accumulated in the country; *secondly*, the avoidance, thus far, of the error of former administrations in using local paper for a national currency; *thirdly*, the Treasury order of July 11th, 1836, which saved the western banks last fall, and which it is the object of this bill to rescind and supersede. Two of these safeguards are in danger of being removed by law—the second and the third of them. The first will remove itself whenever the premium on foreign exchange rises to 10, (at which point it is profitable to export specie,) and that premium is now at near 10, and rising; and it will remove itself whenever the Federal Government, relapsing into the fatal error of receiving and paying out paper money, shall cease to create a home demand for the employment of gold and silver. The day of revulsion, said Mr. B. may come sooner or later, and its effects may be more or less disastrous, but come it will, and disastrous to some degree it must be. The present blot in the paper system cannot continue; the present depreciation of money, exemplified in the high price of every thing dependent upon the home market, cannot last. The revulsion will come, as surely as it did in 1819-20. But it will come with less force if the Treasury order is maintained, and if paper money shall be excluded from the Federal Treasury. But, let these things go as they may, and let reckless or mischievous banks do what they please, there is still a refuge for the wise and good: there is still an ark of safety for every solvent bank, and for every prudent man; it is in the mass of gold and silver now in the country—the seventy odd millions which the wisdom of President Jackson's administration has accumulated—and by getting their share of which, all who are so disposed can take care of themselves."

### REMARKS OF MR. DUNCAN, OF OHIO.

In the House of Representatives, September 11, 1837.  
On the following resolution offered by Mr. Smith, of Maine:

*Resolved*, That the action of the several standing committees of this House, on all matters not embraced by the Message of the President of the United States to the two Houses of Congress, communicated on the second day of the current session, be suspended until the commencement of the annual session of Congress, in December next; and that the consideration of all petitions on such suspended matters be also postponed to the period above specified.

Mr. DUNCAN, said he did not rise for the purpose of wasting the time of the House, but he felt himself bound to do his part towards sustaining the present resolution, for he considered it one of great importance to the people and to the Government. To the people, because its adoption was calculated to bring the session to a speedy close, and thereby save a vast expense that the country was illly able to incur at this time. To the Government, because it would receive the immediate benefit of early legislation on the weighty and important matter that had rendered it necessary to convene Congress at this unusual season. Mr. D. said he came here entertaining very different views from some gentlemen who had addressed the House on this and some other propositions. He came for the purpose of relieving the Government, or the Treasury thereof, from the embarrassments produced by the suspension of specie payments by the banks, and to afford such relief to other interests in the country as may be found within the power of

Congress. In the language of the President's Message, "The act of the 23d June, 1836, regulating the deposits of the public money, and directing the employment of District, State and Territorial banks, for that purpose, made it the duty of the Secretary of the Treasury to discontinue the use of such of them as should at any time refuse to redeem their notes in specie, and to substitute other banks, provided a sufficient number could be obtained to receive the public deposits upon the same terms and conditions therein prescribed. But a state of things has occurred which the wisdom of Congress had not anticipated. The wholesome provisions of the act for the security of the public revenue, and regulation of the deposits, was at once defeated by the act of the banks all suspending payment at or about the same time. The collection of the revenue which, under such a state of things, must, of necessity, be in nothing but gold or silver, became extremely difficult—so much so that the Executive had found it necessary to give indulgence on duty bonds. Nor was the collection more difficult than the safe keeping and transmission to places to be used when collected.

Owing to the diminution of the revenue, in consequence of this general suspension and embarrassment of the country, it has become a question whether it is proper or not to deposit with the States the fourth instalment of the surplus of last spring, according to the provisions of said act, which, if deposited, would require of the Government to contract a loan equal to the amount of said instalment. These, said Mr. D. are a part of the great and weighty matters that superinduced the call of Congress at this unusual time, and it seemed, in his humble opinion, that the occasion justified the end; and it was, if possible, to remedy these evils, that they were convened. But gentlemen seemed to think otherwise, and talked of every thing but the real object. Some talked as though they had come there to vote money into the pockets of the distressed people. A very humane object! laudable indeed! He went in for the people. But did gentlemen reflect that they must first vote it out of their pockets?—a policy by which the States have been enriched by the deposits! Other gentlemen, one would think, came expressly to abuse the administration and the democratic party. He asked what words in the English vocabulary had been more used, and were more common in the mouths of such, since they had assembled, than "Executive patronage," "Executive corruption of the people and of the press," "Executive influence over the majority in this House, 'misrule,'" "pet banks," "humbug," and "slavish and blind attachment;" and all these poured forth with all the vindictive ness and malignity of party rancor. It seemed to him that resolution after resolution, without meaning and without sense, had been introduced merely for the purpose of giving gentlemen an opportunity, or affording an excuse, to make a speech abusing the administration with these opprobrious terms. He said it was not necessary to come there, at so vast a public expense, to hear the party in power (placed there, too, by a majority of the freemen of the nation,) abused day after day with these terms, and in this kind of language. They could hear such stuff at home from every poor, lean, lank, and corrupted stipendiary, that fed upon the crumbs which fell from the table of the banks—and they might read the same kind of bilingsgate—as elegant in every particular—in the filthiest sheets of any country editor who had been bought with gold. One gentleman told them that the people had been humbugged for the last ten years. Pray, sir, how have the people been humbugged? He supposed by Gen. Jackson and his administration. What had been the leading measures of that administration to which gentlemen have alluded as the means of humbugging the people? Were they its efforts to prevent the public money from being squandered, in the construction of unconstitutional and worse than worthless internal improvements, projected for the purpose of carrying certain distinguished gentlemen into office, such as the veto on the Maysville road bill? Was it the official course against the recharter of the United States Bank? Was it the hostility to the

continuation of exorbitant duties, mis-called "the great American system?"

These he had understood to be the great sins of the first term of the late administration. How was the President sustained? To deprecate those measures at this day was to assail directly the intelligence of the people, to denounce their honesty, and was no less than a direct charge that they had humbugged themselves. The recharter of the bank was the question in 1832, in which all questions of a party or political character were merged. Gen. Jackson had vetoed the bill to recharter that institution on the 4th of July next preceding the election. The question was fairly presented to the American people, and they were all attention to the subject. Bank documents and panic speeches flew through the country thick as leaves in autumn. The merits and demerits, the advantages and disadvantages, the constitutionality and the unconstitutionality of the bank, were proclaimed from the stump, the stand, the pulpit, and in the columns of the press. The people heard, read, reasoned, and judged for themselves. To say they were not prepared to act on that important question, is to assume the high-toned federal doctrine that they are incapable of being prepared. But they were prepared, and did decide through the ballot boxes. The result of that decision was the re-election of General Jackson to the Presidency, and the prostration of the bank. This was all the work of the people.

What next? During his second term of service, he committed in the estimation of gentlemen the still greater sin of removing the "deposits" from the Bank of the United States. And in that again, the people humbugged themselves, by sustaining the measure, notwithstanding the notes of panic were raised, and solemnly as the tune of Old Hundred mournfully sung throughout the land. That was not all: the foolish people still continue to humbug themselves. They had recently elected Martin Van Buren to the Chief Magistracy, who stood openly and avowedly pledged, by practice, by his professions, and upon principle, to sustain the same policy and great leading measures that had distinguished the administration of his illustrious predecessor. Sir, his election was predicated upon that very pledge. And now, notwithstanding the land is filled with federal mourning and crocodile whimpering, the great body of the people are unmoved. But in all this, according to the opinion of gentlemen, they were still humbugged. Agreed: be it so. It was the people's work, and he (Mr. D.) had implicit confidence in their judgment and their honesty. There was a certain party who think otherwise—who believe that the common people could be better ruled by those that are a little uncommon than by themselves. Some of the democratic members of this House had been asked if they were "not chafed?"—"if they were not unwilling to draw longer in the old team." Mr. D. said, freemen never permitted themselves to be trained; the democracy required no harnessing; their principles were natural to them; and all that was wanting to apply them to the best practical purposes, in a political sense, was independence and a love of liberty; and thank God they had both. The same principles, and the same maxims, had governed the democratic party from the commencement of the Government to this time; and they had always been known by one name. This would always continue to be the case, for the simple reason that their principles have their foundation in nature, and formed a part of the natural laws that governed freedom. But, he said, how was it with the party to which the gentleman belonged who had made this degrading inquiry? Had they borne the same name ever since they existed as a party? Had they been governed by the same open and avowed principles? and were they composed of one entire body, governed by those principles? If so, why was it that they had changed their name with the return of almost every annual election, and their policy and principles, when necessary, to secure such elections? But there was a sign by which they and their principles might always be known, and it was their universal and uncompromising hostility to, and personal abuse of, the democratic party, its men, and its measures. So far as his experience went, the inquiry of the

gentleman or his party was in bad time. He would ask, in return, of what was the gentleman's party composed? Was it not of the odds and ends of the factions and fractions of all parties and all opinions? What kind of disciplining was necessary to keep such a party together, and to secure their united strength? It was well known that there were factions and malcontents under various names, and disposed to be governed by different principles. When such factions spring up, they are put to the off wheel. If there is any disposition to back, they are held by the breeching—if disposed to be restive and run forward, a taught rein restrains them. In the absence of a disposition to pull true, or as the Dutch teamster expresses it, "if they take the stud," the timely application of the lash makes all right. A discipline of this kind soon fits them for the single line: a few such lessons prepares them soon to go without any line at all. "Pet banks," the "experiment" and its "currency." How often had these terms been thrown at the administration, and its supporters in the most taunting tones of insult from the first day of this session? He had been provoked (new and inexperienced as he was in the science of Congressional legislation) to inquire of gentlemen who indulged in their tirades, whose *pets* the local banks were? If gentlemen meant to throw them on the administration, on the democratic party, as their *pets*, he repelled the charge as false and unfounded, and as a base slander against the party in power; and to sustain him, needed but an exposition of their principles. Hostility to banks, banking institutions, monopolies, and exclusive privileges, were watchwords with the democracy; and to oppose them in every shape that the interests of the country would permit, was a paramount duty. Let them examine the facts in relation to the local banks, and it would not be difficult to decide with which party to place them, or who were their *creators*. Let the petitions in the archives of the State Governments be examined. They would there find that two-thirds of all the signers to all the petitions for local banks were, and ever would be, opposed to the present administration. Examine the stock books of the banks, and they would find that two-thirds, or more, of the stock was owned by enemies of the democracy. Examine the institutions in a political aspect, and they would find that two-thirds of the directors and officers that control them, were the inveterate enemies of the democracy. Lastly. Examine the internal and secret operations of those institutions, and it would be found that two-thirds of all the loans were made to enemies of the administration. Why, then, were they called *pets* of the administration? Why a part of its experiment? Why were the filthy and deceitful rags of such a creation and parentage called the currency of the administration?—when it was well known that, from the commencement to the last official act of his administration, it was General Jackson's object to establish the constitutional currency—a currency of gold and silver—a currency that was durable, of intrinsic value, and uniform.

The majority of the House had been charged as being under Executive influence, and the people of being corrupted by the same influence, he had little to say, so far as personally concerned; (other members might take care of themselves;) his conduct was before the country; his constituents had that to decide upon; on their judgment he felt disposed to rely; and to treat the accusation, coming as it did, as he did the thousand other slanders that were put afloat with intentions the most corrupt and poisonous, but which carried with them their antidote. As to the people, however, he had something to say; and by way of retort, he would not enumerate the number of presses and their dependants that had been bought, corrupted, and subsidized by the Bank of the United States, and the party that wants to get into power. But he asked if the democracy of the country had been corrupted by Executive influence? He said the democracy of the country could make and unmake Presidents when they pleased; they were composed of the farmers and mechanics who obtain their living by the sweat of their brows; who are the supporters of the country in peace, and its defenders in war. What did such men want of Executive patronage? What

use could they make of it, and what would it amount to? Why, sir, if the whole amount of it were distributed in equal parts, it would not give each democrat the value of one gill of new whiskey, and he thought a freeman could hardly be purchased with so small a bribe. Sir, the people are out of the reach of Executive influence. They are above any price that the Executive is able to give. They are unpurchaseable—he meant the democracy. Political men sometimes placed themselves in market. When such an individual wishes to place himself under the hammer, he usually changes his principles, or rather disavows principles that he had professed. Before he can be made the subject of bribery and corruption, he must first divest himself of every principle (and usually of the name) of democracy—a thing, to be sure, sometimes done, but the case was very rare with the true democracy. He had known some wolves in sheep's clothing. Such soon declare themselves. At a time when the black clouds of prophesied pecuniary desolation hung over the country, (he meant the panic era between 1832 and '34,)—when bribery was the order of the day—when he who could bribe highest and corrupt most, stood highest with the enemies of democratic principles; when he who could slander, detract, and calumniate most, was most in favor; when the contents of every reservoir of filth and abomination were emptied upon the administration of their choice, through the filthy sewers and polluted columns of bought presses, he had seen the true democracy stand firm to their principles; they faltered not; they were neither to be bought, sold, bribed, flattered, frightened, or corrupted. Sir, Executive *patronage* cannot corrupt such a democracy.

Before he took his seat, he would disabuse Ohio of some portion of the shattered and beggarly garb in which panic and distress gentlemen had attempted to clothe her, in connection with other States. The gloomy and distressing account which is given here of the pecuniary desolation, of the commercial ruin, and the individual suffering, may be true as to other States and the country generally, but it was not true of Ohio; and he claimed it of gentlemen hereafter, when they undertook to degrade the country, to blast its reputation, and add to the evils of a fraudulent suspension by the banks, by injuring mercantile credit, to confine their observations to their own constituents, where personal interests and local jealousies may give wings to all that may be said to their prejudice, especially by their own citizens and representatives. He begged of them, in all their future tirades, to save and except Ohio, for she never was in a more flourishing condition than at the present time. True, she felt the commercial embarrassments produced by the suspension of specie payments by the banks, and a highly respectable portion of her citizens labored under great inconvenience in consequence of it—particularly those who owed foreign debts. He believed, however, that the inconvenience consisted chiefly in the difficulties attending the exchanges—general confidence was not destroyed. The paper of the local banks in Ohio most men believed would be ultimately redeemed. They reported themselves solvent. He thought their notes were none of them more than ten per cent. below par, and even that, he would admit, was a bad state of things, and one which ought not to exist. But Ohio might thank the foresight of Andrew Jackson, in directing the Specie circular, that it was not worse. When the time came, and the opportunity presented itself, he should endeavor to exert the influence he possessed for the relief of the commercial interests of his country and constituents. But he repeated, that the true and real interests of Ohio were never in a more prosperous and flourishing condition than at this time. He believed most of the embarrassments under which a portion of her citizens had labored, was in consequence of over-issues by banks, and the speculating mania that had prevailed, and which had led to overtrading and extravagance in eating and drinking, in costly apparel, and purchases of "paper cities." Such of his constituents as were wise, had seen the necessity of retrenchment and prudence in these particulars, and to relieve themselves, had turned their at-

tention to the plough; and it seemed that Providence in mercy to their former weakness, extravagance, and folly, had been more than usually bountiful in its favors. Ohio's fields groaned with redundant crops—her barns overflowed with a rich harvest—her soil was still fertile—her mines inexhaustible, and her democracy not ashamed to work them. Her turnpikes at this time are crowded with waggons—her canals with packets—her lakes and rivers with vessels and steamboats, laden with the products of the soil and the fruits of the labors of her yeomanry.

### SPEECH OF MR. RARIDEN, OF INDIANA,

In the House of Representatives, September 25, 1837—  
Upon the bill to postpone the payment of the fourth instalment of the surplus revenue.

The amendment of Mr. THOMPSON of South Carolina being under consideration in Committee of the Whole on the state of the Union—

MR. RARIDEN rose and said: Sir, I feel great reluctance in obtruding any remarks of mine upon this House at any time, but especially at this early period of my congressional life. But, said Mr. R. I came here, resolved that upon all and any measures effecting the weal or woe of this Government, to act upon the suggestions of my own understanding, regardless of the quarter from whence they might originate, or the friends or party who might advocate or oppose them. Yes, sir, I came here with a full purpose of heart to give the administration a fair hearing, and a bona fide support in all measures which, in my opinion, would redound to the interest of this nation; and having made up my opinion upon this bill adverse to the Executive recommendation, it behooves me to show some good reason for that opinion, or I might subject myself to the charge of wanton opposition.

Sir, said Mr. R. I am aware, too, of the delicacy of the situation in which an humble individual places himself, when he sets up his opinion in grave matters of State against those of men exalted to the highest places upon the credit of superior endowments, and more than common devotion to the good of the country. I am aware, too, sir, that my position is less eligible for a correct conclusion—that I am less removed from causes which might mislead the judgment, than is the Chief Magistrate; and was there not a very decided preponderance in my mind against the measure recommended and embraced in this bill, I might surrender my own judgment and acquiesce, but upon this occasion I cannot; but I am disposed to accord to the Chief Magistrate the same purity of motive in the recommendation, that I claim for myself in opposing it, and place the whole upon the ground of an honest difference of opinion.

Sir, I cannot view this bill as simply intending to withhold from the States the fourth instalment of the surplus revenue. This is a false and mistaken view of it. This will not be its practical effect, for it must be kept in mind that this surplus, the payment of which to the States is to be indefinitely postponed by this bill, is already with the States in the deposit banks, and is the basis of a portion of the circulating medium of the States; and to postpone its payment to the States by the National Treasury, means nothing more or less than to withdraw from the States this basis of their circulating medium, by withdrawing from the deposit banks in hard money a sum equal to the amount to which each State is yet entitled, under the provisions of the deposit law; and whilst this ruinous measure, which will be most sensibly felt by the western and southwestern States, is pressed forward, we find another measure, (claiming the same fraternity)—(referring to the bill to postpone the collection of merchants' bonds)—the effects of which will be to leave with certain States several millions of money, of which the Treasury is at this time in want, and to which, under existing laws, it is now entitled.

The few remarks which I design to make are with a view to illustrate the positions just assumed.

This question has been discussed by some gentlemen as though there was an angry and rival inte-

25th Cong....1st Sess.

Postponement of fourth instalment—Mr. Atherton.

H. of Reps.

rest involved in the action of this House between the General and State Governments, and some seem to feel that they have specially in charge the interest of the former. For my part, I do not view it in that light, nor do I feel myself more the friend and agent of the State which sent me here, than the friend and agent of the General Government. I feel that in this matter I am the common friend of both, and that the action of this House is paternal; that in a controversy like this, for the possession of a fund which each claims as trustee, that the adjustment of the difference is referred to us and the co-ordinate branches for an adjustment upon principles of political equity, looking to the convenience and well being of both claimants.

I cannot comprehend how the General Government has any adverse or paramount rights in this fund to the people of the States. It was they who infused into it all its life and vigor, and bestowed upon it all its capacities, among which was the power to levy and collect a revenue off themselves, to such amount as was necessary to carry on and carry out the functions they had bestowed upon it, and predestined it to fulfil for their own good.

Now, sir, if from accidental causes in the due execution of the established revenue laws, more has been collected than was necessary for purposes of Government, to whom does it belong—the agent who collected it, or the principal of whom it was collected? I, sir, consider it a common right of the people in a common surplus in the safe keeping of the United States, the accumulation and inactivity of which, at the time Congress acted upon it, was paralyzing the enterprise and industry of the country. Money, we know, sir, is the generator of enterprise, and had this fund been permitted to have remained an inactive accumulating mass in the National Treasury, it would, in all probability, have checked the industry and enterprise of the country, as injuriously as its subsequent removal to the State banks stimulated them, and thereby greatly diminished the natural resources of the Treasury.

Add to this, sir, that it was a source of jealous watching with our intelligent countrymen, lest its influence might have been diverted to party purposes, instead of National. Indeed, sir, I have heard whispers that the party who once had the entire control of it, were less successful in elections since it has been wrested from their control, but whether there be any foundation for the uncharitable surmises that this fund had any agency in the success, I know not, and therefore cannot say.

Nor can I pretend to say positively that had this surplus remained in the Bank of the United States, the result would have been different from that which followed its deposit in the State banks—if the Bank of the United States was managed by fallible human agents, and it is probable, at least possible, that they were liable to the influence of the same passions and frailties which characterized the agents of the State banks.

This is all possible, but not necessary to determine now. The surplus was removed to the State banks, which cannot now be undone or recalled.

Congress, in the passage of the deposit law, seemed to have in view to ward off from the country the injurious effects of that disposition of them.

To ascertain the real effect of that disposition, we should inquire, how those deposits found those State banks and the business of the country dependant upon them, and how did they leave them?

Sir, the deposits found them doing a neat and profitable business, upon their own actual capital, and affording the country a paper currency, convertible at all times, and almost at all places, into hard money. The country was full of hard money. The business pursuits were prudent, safe and economical. Few ventured beyond their means. But when this surplus insinuated itself into the operations of those State banks, they grew mad with avarice. Agents were employed to sue at the Treasury for favors, and when obtained, they poured their issues upon the country, based upon those favors, until they maddened it with the spirit of wild and reckless speculation. Discounts were increased, merchants enlarged their stocks, and their customers enlarged their purchases. Farmers enlarged their opera-

tions; and speculators theirs; and the spirit of the times, and the facility of obtaining accommodations, seduced some of the best men in the country from the occupations of their whole lives, into hazardous and profitless enterprises, and thus seemed to be going wild the whole business of life.

Congress seeing this, and correctly appreciating the cause, passed this deposit law as a corrective. I suppose it was in the contemplation of Congress, that, by withdrawing the deposits from the State banks, it would necessarily decrease their issues, and subject them to call in those which was based upon the surplus, and that by parcelling it among the States, at about the same ratio it had been collected of them, it would in some measure replenish the circulating medium, which would be constantly running into those banks, to enable them to meet their engagements to the Government.

The western States, or at least Indiana, was peculiarly situated at this time, and under peculiar embarrassments. In addition to her State debt, her citizens owed an immense private bank debt, based upon this same surplus, and which was contracted in the days of the experiment, and induced by the action of the Government, by throwing the immense surplus into the State banks, and stimulating their action, with a view to supplant the receding issues of the United States Bank, lest the people might mourn its loss.

Now, sir, this basis of the bank issues is withdrawn, and the notes of our people are in those banks to redeem those issues, and a large surplus portion of the same issues have run into the National Treasury through the land offices; and is there a charge against our banks, as deposits; it is the National Treasury that the banks must raise funds for, which we are told must be paid in hard money? From whence are those banks to derive this hard money but from the people, whose notes they hold; and they, in turn, must coerce hard money from their debtors; and so the process must go on, raking together the whole amount of hard money in the country, to be placed in the Treasury, and from thence issued out to those in the employment of Government? Add to this, sir, the constant drain that is running from our pockets, in hard money, through the land offices, to the same point, and for the same purpose. Both those drains, sir, are too much for any country to bear, especially in times of depressed markets.

Sir, it was with an eye to adjust this state of thing that Congress passed this remedial, beneficent and parental deposit law, and directed this surplus, which had done so much harm, to be delivered over to the States, the effect of which was to make the banks debtor to the States instead of the National Treasury, and thus to change the direction of the golden current.

But some gentlemen tell us now that that there is no surplus; that the act is spent, and nothing remains for it to operate upon. Why so? Where has it gone to? Was not the action of Congress based upon a visible and tangible fund, to be in the Treasury on a certain day? And was it not there on that day? So says the Secretary's report. And disposed of by the act? If so, then it is a Congressional disposition of the public money; like all other dispositions, a fair and permanent charge upon the Treasury; and if misdirected by the agents of the Government, or absorbed by other appropriations, it is a fair demand of the States upon the Treasury, and so far remains to be executed.

Sir, it is important to my State that it should be executed. Much of her legislation is based upon its reception; her institutions of learning look to it; her system of internal improvements looks to it; and her citizens look to it as a fund to resuscitate, in some degree, the fountain of their currency in these dark days.

And as it is submitted to us, as the common arbiters of the General and State Governments, let us adjust it in such way as the least inconvenience will result from it; and in doing this, we need not consider for a moment the condition of the national Treasury. It can speak money into existence with our assent; and in doing so, it will increase both the quantity and quality of the circulating medium, now oppressively deficient. In deciding this question, it is unimportant to me whether

one or the other side is correct in their deductions from the Secretary's finance report. The currency of the State which I have the honor in part to represent is not kept flush by disbursements from the National Treasury, as are some of the Atlantic States. We have no army or navy to supply or pay off; no breakwaters or buoys to erect; no light houses, no harbors; not any thing, indeed, but a small appropriation from the two per cent. fund on the Cumberland road. It is not that I would impute to Congress or the Executive partiality in those things; not so: it grows out of the nature of our position. But it is true, that those States favorably situated in regard to disbursements from the National Treasury, do not feel the effect of those drains of their circulating medium that we do.

Sir, putting aside all other considerations, to retract the legislation of the last year would be disreputable to the nation, whether the policy of the act was wise or unwise. It would be a confession that this grave body and the co-ordinate branches had had acted upon a mistaken assumption of facts, or that they were so short-sighted that they could not appreciate the real condition of the Treasury or wants of the Government. For my part, whether the Treasury be flush or empty, I am for this money going to its predestined object. It will there do much good, and prevent much harm, and its absence from the National Treasury can work no inconvenience; for, I again repeat, we can speak money into the Treasury; and we who are for the democracy of numbers can have no objection to obtaining it in that way; for by parcelling it out with the States, it goes into the hands of the necessitous and borrowing class, and will tend to keep up the price of labor and produce; and when it is to be refunded in the redemption of Treasury notes, it comes from the pockets of the wealthy—those who "clothe in purple and fine linen, and fare sumptuously every day." When things resume their natural tone, it will be time enough to talk about legislating it from the State Treasuries.

Such are my views.

#### POSTPONEMENT OF DEPOSITE.

#### REMARKS OF MR. ATHERTON, OF NEW HAMPSHIRE,

*In the House of Representatives, Sept. 21, 1837.—*

In Committee of the Whole, on the bill to postpone the deposit of the last instalment with the States.

MR. ATHERTON said he had endeavored, yesterday, to obtain the floor, to ask the indulgence of the committee while he offered for their consideration a few remarks; and the remarks which he had then intended to make would now be much abridged, on account of what had been said by his honorable friend from Virginia, (Mr. Jones,) who had enforced, with so much more eloquence and ability than he could pretend to, so many convincing arguments in favor of the bill before the committee. Complaint had been made by the gentleman from Pennsylvania, (Mr. Biddle) of the confusion existing in the Report of the Secretary of the Treasury, and the impossibility of understanding its details, so as to arrive at a definite conclusion in respect to the existing state of the Treasury; and a reference was made to an admission of the gentleman from Ohio, (Mr. Hamer,) that it was incumbent on the friends of this bill to make out satisfactorily the propriety of passing it. In allusion to this, the gentleman from Pennsylvania asserted that he was in doubt, and that it was evident others were also, as to the state of the Treasury; and, therefore, the case of the friends of the bill was not made out. Now, even on this ground, he (Mr. A.) viewed the matter in a different light, and considered that a case of doubt as to the condition of the Treasury would make out affirmatively the propriety of adopting this measure; nay, would compel us to it as a duty: for the question would then be, whether, when it was doubtful whether we should need our own funds, or not, we should place them out of our disposal? But what doubt is there on the subject? No one denies that, whether the Secretary's report be understood or not, and whether the last instalment be postponed or not, we

must have recourse to some method of raising money for the exigencies of the Treasury. How, then, can it be said that the Treasury does not need this money?

One chief argument, however, advanced by the opponents of the bill, is, that it does not appear that the sum in the Treasury is less than what would be required for the payment of the last instalment. He contended that it did so appear, and that the conclusions of the Secretary were stated definitely and explicitly, and the details leading to those conclusions must appear clear and consistent to those who would give to the report that attention which the nature of the subject demanded. He had drawn up a statement, based on the report, which, in his opinion, sufficiently showed this, and which he had intended to lay before the committee; but as the committee were already wearied with the subject, and the matter had been so ably stated by the gentleman from Virginia, he would forbear from inflicting it on them. But it seemed to him that the gentleman from Pennsylvania had admitted a principle which at once decided this question. That gentleman, in reference to various statements of the condition of the Treasury made upon this floor, tending to support the report of the Secretary, has denied that they have any weight, or ought to have any, because they have not the seal of responsibility—they contain no assurance from any officer responsible to the House. Now, sir, we have a statement from an officer responsible to the House—from the Secretary of the Treasury. He is the officer to whom we, as a branch of this Government, apply for information on the state of the Treasury, and on whose information we must base our proceedings. If he deceive us, he is liable to impeachment. Can it be asserted that this officer has not better means of knowing the state of the Treasury than any member on this floor? What does the Secretary say? He declares that the whole amount in the Treasury at the time his report was made, was only a little over eight millions of dollars, and this includes both available and unavailable funds. Any person, he believed, must, on carefully perusing the report, arrive at the same conclusion. It must also be evident that, after taking out the excess of the expenses over the receipts for the month of September, the balance on the first of October will be not much above six millions of dollars; and of this balance, the available funds will be only about two millions of dollars.

In whatever light it may be viewed, the question seems to be, whether we shall borrow money for the sake of depositing it with the States. The gentleman from Pennsylvania, (Mr. Sergeant,) who addressed the committee some days since, was understood to admit there would be a deficiency in the Treasury, but to contend that the Secretary was bound to make this deposit, if there were no action of Congress on the subject; and that the question was whether we would stop this appropriation. Now he (Mr. A.) thought it incumbent on gentlemen to say how the Secretary could, by any possibility do this, unless there be some action of Congress on the subject. He thought it incumbent also on those who contended there is such a vast amount of money in the Treasury, to inform the Secretary where it may be found. Nor could he conceive it to be other than a misapplication of terms to call this an appropriation.

The gentleman from Tennessee (Mr. Bell) has said that he views the question of making the deposit of the last instalment with the States as a question of faith, like that of making payment to any other creditor. To him, (Mr. A.) the position that this was a contract, seemed utterly untenable. Are the States our creditors to the amount of the last instalment? What consideration have we received for it? Has the money already deposited, gone to pay our debts to the States? The gentleman from Ohio (Mr. Loomis) contends that the States furnish a consideration, because they are obliged to agree to accept the money, and to pledge the faith of the States for its repayment. Now, this fact, to Mr. A's mind, showed it to be a deposit, else why so much caution as to securing the repayment of the money when needed? All the guards and securities to this end, prove that it was

the money of the United States, and not that of the States. The deposit law of 1836, both in its letter and in its spirit, is a law for the safe-keeping of the money of the United States. We have power to withdraw the money after its deposit, if we need it, and, of course, to withhold it. The law was based on the supposition of a surplus in the Treasury, and an available surplus.

The gentleman from Tennessee has said that he considered this a question whether our expenditures were to be reduced now or never, and contends that the expenditures under existing appropriations can be so reduced as to supersede any necessity of postponing the last instalment. It seemed to him (Mr. A.) that this is shown to be utterly impracticable. All expenditures have already been postponed in the Secretary's estimates, which, after a most careful investigation, it was found could properly be dispensed with for the present. It must be apparent that the greatest reduction which could, by any possibility, be made in the expenditures of the last three months of this year, would not affect the balance in the Treasury to an amount sufficient to make any difference in the aspect of the question under consideration. As to the reference made by that gentleman to the sum in the hands of disbursing officers, it seemed only necessary to recollect that this sum is not in the Treasury, and can in no manner be made applicable by the Secretary in the manner contended for. Money in the hands of disbursing officers is charged, at once, to appropriations which are, by that, so much reduced; and of the amount returned by the last reports as in the hands of those officers, half of it is actually expended, and all the remainder contracted for. Should works under contract be stopped, every one must perceive, it would be a source of great expense and loss. We should be beset with application after application for damages on account of breaches of those contracts; and it requires but very little acquaintance with such subjects to convince once that the responsibilities and the expense thus incurred would, by far, counterbalance any advantage that could accrue to the Treasury. He (Mr. A.) believed that a large majority of the friends of the administration would be found as ready as the gentleman from Tennessee to do all in their power to prevent extravagant appropriations. That gentleman has said that the professions of economy of this administration, like those of the last, were hollow. In regard to the professions of the last administration, perhaps he [Mr. A.] ought to defer to the greater experience of the gentleman from Tennessee, and his superior opportunities of judging. He had, however, been inclined to believe them sincere, and before he admitted the justice of the gentleman's imputation, he would like to inquire whether the friends of the gentleman, the National Republicans of the north, who have been characterized by the gentleman from South Carolina (Mr. Pickens) as having reform on their lips and extravagance in their hearts, had nothing to do with these extravagant appropriations. But it did seem to him (Mr. A.) that of all the extravagance ever heard of, of all the extravagance which it ever entered into the heart of man to conceive, the greatest is that proposed by the opponents of this bill. It is to borrow money for the purpose of giving it away—according to the views of the gentleman from Kentucky (Mr. Underwood) who contends that the States have a right to retain this money after they once get it—or to borrow money and pay interest for it, that it may be kept safely for us by the States, who pay no interest! In either view of the subject, he called on gentlemen to show that this is not the worst of extravagance.

The gentleman from Pennsylvania (Mr. Biddle) had said that those voting for this bill, in its present shape, would subject themselves to the charge of insincerity, and of a low and hollow device, because, while it professed merely to postpone, its real effect would be to repeal, the deposit law, so far as relates to the last instalment. He (Mr. A.) could not see how this charge could be sustained. If there be insincerity chargeable anywhere, it would seem to him to apply much more forcibly to those who advocated the passage of the law of 1836 as a deposit law, and now contend that it

should be construed as a distribution law. It is within the knowledge of all that the passage of that law was urged on the ground that it was merely a law to regulate the deposits of our own money, and they are the persons who really manifest hostility to the principles of that law, who now view it in another light. By this they go far to sanction the justice and force of the arguments used by the opponents of the law against its adoption; for it was earnestly contended, in opposition to its passage, that it would prove to be not what it professed to be, but a distribution law.

As measures contained in other bills reported by the Committee of Ways and Means had been alluded to, he might be permitted to notice a remark of the gentleman from Tennessee, that the true object of the administration was to establish a Treasury bank, and that this object was already indicated by a proposition for the issue of a large amount of Treasury notes for a currency. It was unnecessary to refer to the various precedents of such issues by the Government, when no such imputation was ever dreamed of. These precedents are familiar to all. But how does the matter stand? If the bill before the committee pass, there will be a necessity for the issue of only ten millions, while, if the bill be defeated, an amount of twenty millions of notes will be required. Thus it seemed to him (Mr. A.) that this charge would apply with much more force to the opponents, than to the friends of the bill before the committee.

It was not without some surprise that he heard a call made on those in favor of State rights to oppose this bill. It seemed to him that nothing could so effectually destroy State pride, and the rights of the States, as to make them the eager and humble expectants of the bounty of the General Government; to introduce them here as requesting the Government to borrow money for the purpose of distributing it among them. The very worst feature of the principles of those who have upheld what they call the American system is here discernible; that which indicates the disposition to keep up a high tariff for protection, and to disregard the true doctrine of limiting our revenue to our expenditures—an earlier observance of which would have preserved us from many, if not all, of the difficulties with which, of late years, this Government has had to contend.

Nor could he admit that the argument drawn from the fact, that a postponement of the last instalment might interfere with the domestic arrangements of the States, as to its disposition, was a legitimate argument. The States had no reason to consider the money as their own, and any legislation founded on that supposition was, thus far, improvident legislation. No one certainly regretted any inconvenience to which the States might be subjected more than himself. His constituents would suffer their share of any such inconvenience. It was his opinion, and he doubted not that he agreed in this with a large majority of his constituents, that we have no constitutional right to raise money for the purpose of paying over this last instalment; and were the inconveniences which would result them to far greater, he could confidently say they were too patriotic, and too much attached to the Constitution of their country to desire the violation of so important a principle. But the inconvenience would, in no case, be very general or very great. This money goes in too many instances into the hands of a limited number of favored individuals, and in some States to the use of corporations; and its distribution is, at best, a taxation of the many for the benefit of a few.

As allusions had been made to the Message of the President, and to the existing embarrassments of the country, together with the means of relieving them, Mr. A. would briefly advert to these topics. We had heard it said by gentlemen of the opposition that they did not come here prepared to introduce or suggest any measures of relief; yet they had animadverted with the greatest severity on the Message of the President as proposing no such measures. Unless they knew of some measure proper to be suggested, would they be so unjust as to condemn the President for not suggesting it? Yet it has been here stated more than once

that they would suggest nothing. It seemed to him (Mr. A.) that they were reduced to the dilemma of either acknowledging that they had no measure which they could suggest, or that their favorite measure is such that they shrink from presenting it before the people.

We have, indeed, heard a caution given to the gentlemen of the opposition, not to bring forward any proposition for a national bank, because such a measure was odious to a majority of the people. But, sir, thanks to the frankness of the gentleman from Kentucky (Mr. Underwood) and the gentleman from Pennsylvania, (Mr. Biddle) there is no longer any doubt or concealment upon this subject. The embarrassments of the country, which those gentlemen represent in the most vivid colors, are all ascribed to the destruction of the United States Bank; and the establishment of such an institution is set forth as the panacea which is to restore every thing to health, and bring back our former high and palmy state of prosperity.

The gentleman from Kentucky has asserted that the great cause of mischief was the veto of 1833, occasioned by that clause in the Constitution which makes the will of the President, in the exercise of the veto power, paramount to the will of the representatives of the people. Had it not been for this, said the gentleman from Kentucky, we should now have a national bank. He (Mr. A.) viewed the matter differently. The exercise of the veto power in that instance by the President, who, in this respect, acted as the agent of the people who elected him, prevented the representatives from fastening, by an accidental majority, an odious and irresponsible moneyed oligarchy on the people, against their will. And in that provision of the Constitution he (Mr. A.) saw a wise provision, which prevented the will of the people from being thwarted by accidental circumstances, and secured to it, in the end, its full force and effect.

The issue is now fairly presented, and (said Mr. A.) let it be proclaimed to the people of the country that the true issue to be tried is, a Bank of the United States, or no bank. The gentleman from Pennsylvania had referred to the recent election in Maine in connection with the doctrines of the Message, and had adverted to that election as showing the rise of a "star in the East." The doctrines of the Message had been termed on this floor revolutionary. He thought that those doctrines were the doctrines really deserving that epithet, which would lead us to overturn the Constitution and to do that which we have no constitutional right to do. He (Mr. A.) believed that the doctrines of the Message were such as a vast majority of the people would approve, and that the sentiments there avowed would find a hearty and cordial response in their bosoms. It was just such a message as was earnestly and ardently desired and expected by the people; and the President, in sending forth that able and admirable document, had done that without which no one can obtain permanent greatness or renown—he has identified himself with the spirit of the age.

There are gentlemen on this floor, representing the State of Maine, abundantly able to speak in her behalf; but he (Mr. A.) knew a little of the spirit of the democracy of the North, and he would venture to say, that, let the true issue be presented to them, and the principles of the Message be well weighed and understood, and they would rise, and, to a man, they would gird on their armor and bare their blades, and, shoulder to shoulder, they would again fight the battle of liberty. And he could tell the gentleman from Pennsylvania that, ere another year, his "star in the East" will have proved but an ignis fatuus which has deceived him with a false and delusive hope, and the true star in the East will re-appear—the star of the morning—the harbinger of full and glorious day.

He hoped he might be pardoned by the committee if he alluded briefly to the imputations which have been made on the Secretary of the Treasury. That distinguished officer was a native of his (Mr. A's) native State, and of his native county. One imputation which has been thrown out is, that the Secretary is opposed to the deposit law, and that he has (if he, Mr. A. understood the charge) thrown a large amount of money into the hands

of disbursing officers, so that it could not be available for the purpose of paying the fourth instalment. If gentlemen would take the trouble to examine the information communicated by the Secretary of the Treasury on the subject, they would discover the injustice of this imputation in the fact that the amount in the hands of disbursing officers is less than it was in May last, the time of the suspension of specie payments. He would also remark that the complaint which has been so earnestly made concerning extravagant appropriations, seems hardly consistent with another source of complaint against that officer, who has also been accused of taunting Congress with the fact that their appropriations were larger than he had recommended or could approve. He thought that some observations which have been made here in relation to the Secretary might well have been spared.

Is there any secret cause of sensibility which prompts these attacks on the part of the friends of the Bank of the United States? Do they result from the fact which is before the committee, in an answer to the resolution of inquiry proposed by the gentleman from Pennsylvania, (Mr. Biddle,) that the Secretary of the Treasury has paid large classes of public creditors in gold and silver, while this favorite Bank of the United States, in violation of its charter and of the plainest moral obligations, refuses to pay one single dollar?

That individual, said Mr. A. needed not the aid of his humble vindication: his distinguished career is well known to the nation. In his native State, as an advocate, he had few equals, and no superiors at a bar, which, for learning and talent, is unsurpassed by that of any State in the Union. Elevated to the bench at a very early age, his dignity, impartiality, and varied legal attainments, secured the respect of that bar, and the confidence of the suitors in his court; and his published legal opinions are justly admired for their clearness of conception, their correct diction, and their profound learning. Having filled the chair of Chief Executive Magistrate of his State, he was elected to the Senate of the United States; and in that body, amidst a constellation of talent never surpassed, he stood in the very first rank as a statesman and debater; and in the administration of two departments of this Government, and especially of the Treasury Department in the late difficult crisis, his eminent abilities, aided by that without which the greatest abilities are of little avail—his persevering and untiring industry—have placed him on an enviable eminence in the eyes of the American people—an eminence far above the reach of the shafts which have been, or may be, aimed at him.

#### REMARKS OF MR. BELL,

OF TENNESSEE.

*In the House of Representatives, Tuesday, September 19, 1837.*—The House having resumed, in Committee of the Whole on the state of the Union, the consideration of the bill from the Senate to postpone the payment to the States of the fourth instalment of the deposits under the distribution act of 1836.

Mr. BELL, of Tennessee, said, that although this was one of a series of measures, the tendency of which was to consummate an important and favorite policy of the administration, or for that reason might afford any latitude of debate that might be desirable to those who wished to enter into the discussion of any one or all those measures, yet he should not avail himself of this liberty. He considered the question directly connected with the measure proposed in the bill under consideration of great importance enough to engage his attention on this occasion. Again: the other measures to which he had alluded, and which were proposed in connection with this one, as different parts of one and the same general system, were each of them of weight and interest enough to demand and receive a separate discussion, and a separate determination of the questions they involved.

It cannot be disguised, said Mr. B. that the bills already reported in this House, and which received the sanction of the Senate, whatever gentlemen

might profess, and whatever some of them might perhaps very honestly think, were so many features of a project which found extensive countenance, and the object of which was to establish, in fact, a national bank—a Treasury bank of deposit and issue. Disguise it as they may, such a plan has been conceived, and not only conceived, but actually embodied to a considerable extent in the bills which have been reported from a committee of this House. The plan is to establish a Government bank under the proper disguises for the present, and through its agency to substitute a circulating medium composed of Federal Government paper, instead of the notes of State banks. We have the germ of this bank now before us; its parts are already sufficiently developed to indicate its true character. At another session, or in another Congress, by one or another addition, by way of amendment, we shall eventually behold the monster developed in all its frightful proportions. Such a subject is surely of consequence enough by itself to occupy the attention of the House, without connecting it with the less important subject under consideration.

But the questions presented by this bill are of great interest to the country. It is true, the object to be accomplished by it has less connection with the great results to which I have alluded, than any one of the other measures proposed for our adoption; and I believe it will be found, upon examination, to have originated more from the settled hostility of the administration to the policy of the deposit law of 1836, than from any actual necessity of the Government, or its tendency to promote the favorite fiscal policy of the Executive; but still it is of a piece with the general conduct and policy of those in power. One question which will be found to arise under the present bill, involves the public faith. The question is presented, whether Congress or the Federal Government is not bound to keep its promise, or comply with its engagements with the States of the Union, by obligations as strong as any that can exist between it and its creditors, of any other nature or description. It is a question whether, if the States agreed to accept the deposit of the surplus in the Treasury, according to the terms of the act of 1836, by which it was tendered to them, there was not, from that moment, a contract between them, as obligatory as any other compact between the Government and the States can be. Can the General Government, without consulting the other parties to this arrangement, dissolve it without a breach of faith?

But, sir, there is another and a much more impressive and important inquiry which presents itself in considering the effect of this bill—I mean the great question whether the expenditures of this Government are to be reduced now or ever? This is now the issue, and it is to be determined almost exclusively by this House. We already know the determination of the Executive branch of the Government, and all the influence attached to it; and we know, too, the decision of the other branch of the National Legislature. It devolves upon this House, I repeat, to settle the issue, whether the expenditures of this Government, after having been increased nearly threefold within the last few years, are to be reduced now or ever. These are questions, truly, which may command our exclusive attention for a season. With these convictions, and a corresponding determination, I shall proceed to make as succinct a statement of what I believe to be the existing condition of the Treasury as I can, that it may be seen whether the repeal of the act of 1836, proposed by the bill under consideration, is demanded by the state of the Treasury, or by the public interest; for, if it be so, I shall be prepared to give it my support.

Much confusion was produced yesterday by the mere statement of the condition of the Treasury, which was presented to the House by the chairman of the Committee of Ways and Means, (Mr. Cambreleng.) I do not mean to say that the statement of that gentleman varies materially from that of the Secretary of the Treasury, but certainly it was well calculated to add to the difficulties which all must have felt in coming to any satisfactory conclusion as to what is the real state of the National Treasury.

25th CONG....1st Sess.

Postponement of fourth instalment.—Mr. Bell.

H. of Reps.

I propose to present a statement based upon the facts and estimates contained in the several reports made by the Secretary of the Treasury at the present session, which I believe may be relied upon. At all events, I shall be obliged to any gentleman who shall detect any error in my statement to point it out to me as I proceed.

The whole amount chargeable by law upon the Treasury, during the present year, (1837,) is - \$85,621,228

Viz: The amount ascertained to be in the Treasury on the 1st Jan. 1837, after reserving \$5,000,000, according to the act of 23d June, 1836, providing for the deposit and distribution of the surplus in the Treasury among the several States, - \$37,468,859

Balance of appropriations of former year remaining unexpended on 1st January, 1837, - 16,752,282

Appropriations for the ordinary service of the current year, (1837,) - 31,400,087

Aggregate charge upon Treasury, - 85,621,228

The whole amount of moneys in the Treasury during the present year, (1837,) and applicable by law to the payment of the charge upon it, above stated, is 64,326,178

Viz: The sum ascertained to be in the Treasury on the 1st January, 1837, - 42,468,859

Additional sums ascertained by subsequent returns from banks to have been in the Treasury on the same day, - 1,670,137

Receipts into the Treasury from the customs, sales of public lands, and other sources, during the two first quarters of the current year, (1837,) - 13,187,182

Receipts into the Treasury, estimated for the two last quarters of the current year, (1837,) upon the supposition that the merchants' bonds will be extended for six months - 7,000,000

Add this further amount, ascertained to have been received into the Treasury during the two first quarters of the year, and omitted to be stated in carrying out his aggregate of receipts, in the report of the Secretary of the Treasury, by mistake - 513,263

Making the aggregate of means in the Treasury during the year - 64,839,441

By this statement it appears that the means in the Treasury, during the current year, will fall short of the amount chargeable by law upon it by 20,781,787

But it has happened that, at the end of every year, for several years past, there was a large amount of the charges existing against the Treasury by law, which were not demanded within the year; and the Secretary of the Treasury states in his report to the House, dated the 11th of September instant, (1837,) that he has already ascertained that the sum of 15,000,000, included in the amount above stated as chargeable by law upon the Treasury, will not be wanted or called for during the year. This sum may, therefore, be deducted from the amount first stated as the

aggregate of the charges against the Treasury during the year, which will then leave an actual demand against the Treasury during the year amounting to - 70,621,228

And exhibit a deficit of means in the Treasury to meet the actual demands of it during the year, amounting only to the sum of - 5,781,787

But this deficit is more apparent than real; for we think there is a large sum of money in the hands of superintendents of public works, of officers attached to the subsistence department of the army and navy, and disbursing officers generally, which ought, in truth, to be put to the credit of the Treasurer, and be stated as a part of the moneys in the Treasury, but which, in fact, is not so stated. The Secretary, in his report of the 11th of September, instant, admits that the sum of \$5,000,000 was then in the hands of disbursing officers. If this sum be added to the amount of moneys above stated to be in the Treasury during the year, the amount will stand thus:

Amount of actual demands against the Treasury during the current year, (1837,) - \$70,621,228

Actual amount of money in the Treasury to meet the demands upon it during the year - 69,839,441

Deficit - - - \$781,787

This small defalcation, let it be borne in mind, is brought out by a statement based exclusively upon the statements and estimates of the Secretary of the Treasury. For the most obvious reasons, his estimates of receipts into the Treasury, as well as his estimate of the probable expenditure during the remainder of the year, must be viewed as having been made upon the minimum basis as to receipts into the Treasury, and the maximum as to expenditures. I do not, indeed, deny that this was his duty. He should always make his calculations so as to have means enough to meet all probable demands; but in this case there has been a more powerful motive than usual to underrate the receipts, and to overrate the expenditures—the interest felt in making out a case which will justify the repeal of the deposit act of 1836; at least so far as the future and last payment to the States is concerned. But for this interest, there can be but little doubt that he could have ascertained that some seventeen or eighteen millions of the existing charges against the Treasury might be postponed until next year, instead of the \$15,000,000, as stated in his report; perhaps even 20 millions or more might have been stated as the probable amount of unexpended balances at the close of the present year. The same remarks will apply to his estimate of the probable receipts into the Treasury during the two last quarters of the year. I have taken his estimate of seven millions; but really, whether any greater indulgence is given on duty bonds or those he has recommended, or not, it seems to me that his estimate is too small. But without noticing this point further at present, I proceed to make a statement of the expenditures of the present year, founded also upon the facts and estimates of the several reports of the Secretary of the Treasury. Any statement of the expenditures only answers the purpose of elucidating and verifying the statement already made of the actual and probable demand upon the Treasury during the year. Such a statement will serve only to show the different items of which the charges admitted to exist against the Treasury consists.

Whole amount of expenditures for the current year, 1837, as appears from the several reports of the Secretary of the Treasury, will be - \$70,545,098

Viz: Amount already expended or withdrawn from the Treasury between the 1st of January and the 11th of September instant, and now being expended, for the ordinary service of the current year, 1837 - 24,075,239

The amount drawn from the Treasury and paid to the States, or for which transfer drafts have issued and

stand charged to the States under the act of the 2d of June, 1836 - 28,101,645

Aggregate expenditure of all descriptions between the 1st of January and the 11th of September instant - 52,176,884

Estimated amount of expenditure for the remainder of the year, or until the 1st of January, 1838, viz:

For the ordinary service of the Government - 9,000,000

For the payment of the 4th instalment due the States under the act of the 23d of June, 1836 - 9,367,214

Total of expenditures for the current year, [1837,] and which will be seen to be equivalent to the total amount of the actual demands or charges against the Treasury, as already stated in another form - 70,545,098

Difference between the expenditures, actual and required, during the year, and the amount of moneys actually at the disposal of the Government, as before stated - 781,787

This, then, is a true exhibition of the Treasury, and of its ability to meet the demands against it during the present year, including the 4th instalment due the States under the act of 1836, according to the statements and estimates of the Secretary of the Treasury himself. The only exception which can be taken to the statement which I have made, is, that the amount of \$5,000,000 in the hands of disbursing officers, which I have stated as being at the disposal of the Government, and which ought to have been enumerated as a part of the moneys on hand to meet accruing expenditures, is already expended, or at all events cannot be made liable for any other object of public expenditure, than those to meet which they were drawn from the Treasury. I insist, sir, that these moneys are an actual subsisting and on hand, and constitute a part of the actual and available means of the Treasury, as any other moneys of the same amount. It is true that amount of money has been drawn from the Treasury, to be expended upon certain specific objects; but what are those objects, and how do they differ from those objects which call for expenditures in some one or all of the remaining months of the year? Those objects upon which a great part of the nine millions, the estimated amount of expenditures for the two last quarters of the year is to be expended? They are the same; and to make these moneys actually available within the year, it is only necessary to require of the disbursing officers attached to the various departments of the public service, to exhaust the funds already in their hands, before they apply to the Treasury for any new supply. In this way we shall find that the Treasury is, and has for several years been, richer by five or six millions than in fact it has been represented to be by the Secretary. I have heretofore denounced this practice of keeping out five or six millions in the hands of disbursing officers as a gross abuse, and one which calls for redress. It has only sprung up within the last few years, and is only one of a great number of similar abuses which have arisen from a redundant Treasury.

In former times, some half million or a million of dollars was regarded as a large amount to be outstanding, and unexpended in the hands of disbursing officers. Scarcely any contingency can arise at a time when the Government has so many depositories of the public moneys, situated in every part of the Union, that a greater amount than half a million could be required to be placed, at any one time, in the hands of disbursing agents or officers. It is a practice not only dangerous to the safety of the public funds, but which gives rise to the increase of favoritism, and an extension of the Government patronage connected with the Treasury, in a form the most corrupting, as well as injurious to the public service. It was stated towards the close of the year 1835, by the newspaper organ of the Government, printed in this city, that the amount then in the hands of the disbursing officers of the Government, unexpended, was about six millions of dollars. Upwards of five millions are stated to have been in their hands, by the Se-

cretary of the Treasury, on the 1st of May last, and a similar amount is admitted to have been in their hands on the 11th of this month. In truth, sir, this has now, in practice, become a standing dead fund, so far as the public use of it is concerned. Instead of lying in the hands of disbursing agents, or being deposited to their credit in the banks from month to month and from year to year, I wish it brought forth, and *actually* expended during the present embarrassed condition of the Treasury and the country. It is now contemplated that this amount, or an average amount, will be in the hands of disbursing agents at all times, and it is upon this calculation that it is contended that this fund will add nothing to the means stated to be in the Treasury. I affirm, that if you will require these five millions to be actually expended, to the dregs, during the remaining quarter of the present year, it will diminish the estimated demands upon the Treasury during that period, by that amount. I insist, too, that this is the proper time to cure this evil. It has already been shown, that if this amount can be applied to the public service during the year, besides what is not yet drawn from the Treasury, the fourth instalment can be safely paid to the States, without leaving any material deficit in the Treasury, even admitting the receipts for the two last quarters of the year to be no more than they are estimated by the Secretary himself.

But it is contended by the chairman of the Committee of Ways and Means, (Mr. Cambreleng) that at least one million of the moneys in the Treasury should be reserved for the purposes of the Mint. I say, sir, that at such a crisis in our fiscal affairs, it is idle longer to be deluded by the expectation that the country or its currency is to be relieved by the operations of the Mint! We have had quite enough of such experiments already. It is said, however, by the gentleman, that five hundred thousand dollars are already in the Mint. In reply, I say let us un-mint it, then, if I may coin a word; and I am sure my coin is in quite as good taste as the new gold and silver coins which have issued lately from the Mint. I say, can we not reach this fund by law, if necessary? Let us reduce the amount employed in the Mint for the present, and until we shall have the means of carrying out the policy of recouping all the gold in this country, or that can be got from other countries.

[Mr. MERCER informed Mr. BELL that the amount formerly required for the use of the Mint was only 200,000 dollars.]

We have only, then, (continued Mr. BELL,) to bring back the operations of the Mint to the standard which answered so well until the recent experiment commenced upon the currency.

The gentleman from New York [Mr. Cambreleng] also contends that we must provide the means of keeping a contingent fund of four or five millions always in the Treasury; and he reminds us that that amount was required to be reserved in the Treasury by the deposit act of 1836. Does the gentleman mean to say that this fund must *always* be in the Treasury? Does he regard it in the light of a *fixture*, which, for the honor and safety of the Treasury, is never to be removed or disturbed? Sir, for what purpose is a contingent fund desirable or useful, but to meet just such a crisis—just such an emergency, as the present? It is the very purpose of its creation to meet unexpected calls upon the Treasury—to supply unexpected deficiencies at periods like the present. No such absurd idea as that which seems to have weight with the gentleman from New York, ever entered the heads of those who recommended the policy of always keeping a contingent fund of any amount in the Treasury.

[Mr. MERCER here informed Mr. B. that the amount formerly regarded as a sufficient contingent fund was only two millions.]

And even that amount, said Mr. B. was designed to answer demands upon the Treasury, when there should happen to be no other funds on hand.

It has been argued that in any form in which the means of the Government can be presented, there will be a deficit, or an excess of the amount chargeable by law upon the Treasury during the year over the moneys at the disposal of the Govern-

ment. This is true, if we include the fifteen millions chargeable upon the Treasury, which the Secretary himself admits may be postponed until the next year, (1838;) but, sir, we are called here to provide the necessary means to carry on the Government and to pay all demands upon its Treasury during the present year. It is not our business to anticipate the future demands upon the Treasury, and to provide for them, though we are providing an ample fund for that purpose, if we postpone the collection of all the outstanding duty bonds until the next year. It will be the proper business of the next session of Congress to provide for the expenditures of the year 1838; and we shall then do it, after having the benefit of another report from the Secretary of the Treasury, in which it will be his duty to point out the ways and means of meeting the expenditures of the next year. We have enough to do now, to provide the means necessary to meet the expenditures for the remainder of the present year.

It is true, Mr. Chairman, that we have now an estimate before us for an additional expenditure for the support of the war against the Indians in Florida of \$1,600,000. If this was not anticipated and included in the estimates of the expenditures for the remainder of the present year, submitted by the Secretary of the Treasury in his report to the House, it will increase the deficit or balance of charges upon the Treasury during the year, over the means at the disposal of the Government, by that amount. But, sir, even with that addition, the deficit will not be serious, and will constitute no substantial obstruction to the payment of all demands upon it. A small amount of receipts into the Treasury during the two last quarters of the year, or if half the amount of the Treasury protested drafts admitted in the report of the Secretary (4,000,000) to be now in circulation should continue, which will no doubt be the case, there will still be no actual want of means in the Treasury during the year.

In the statement I have made of the condition of the Treasury, it must be remembered, I have taken the statements and calculations of the Secretary of the Treasury as the basis.

But let us see what sort of a report upon the financial condition of the country we might have expected, and would probably have received, from an administration which was not hostile to the policy of the act of June, 1836, and which had no interest in embarrassing the States, and in making the distribution act unpopular; or, if such an interest was felt, was too magnanimous and patriotic to be actuated by such motives.

A truly republican and patriotic Executive, I can readily suppose, would have made some such statement as the following:

Whole amount chargeable by law upon the Treasury during the year 1837, inclusive of the amount due the States under the act of June, 1836—viz: balance of appropriations of former years remaining unexpended on the 1st of January, 1837, \$16,752,283  
Appropriations for the year 1837, exclusive of the Post Office Department - 31,400,087  
\$48,152,370

From this amount, however, may be deducted the following sums, viz: amount of appropriations for the year 1836, and the present year, which will probably not be required during the present year, \$16,500,000

The amount of appropriations for the years 1836 and 1837, which may be withheld from the objects to which they were appropriated if Congress shall consent, without any material injury to the public service - 5,500,000

Making an aggregate of \$22,000,000

Which being deducted from the sum stated as the whole amount chargeable upon the Treasury during the present year, will leave a balance of

existing appropriations which will probably be required to be expended for the ordinary service of the year (1837) amounting to \$26,152,370  
Add the amount of the 4th instalment due the States under act of 23d June, 1836, which is yet unpaid - 9,367,214

And the whole amount of the actual demands upon the Treasury during the current year will be - 35,519,584

To supply this necessary demand upon the Treasury, the following means may be stated as at the disposal of the Government during the current year—viz: balance in the Treasury on the 1st January, 1837, after setting apart the amount due the States according to the act of 23d June, 1836 - \$6,690,137

Receipts into the Treasury during the two first quarters of the current year - 10,700,445

Estimated receipts during the two last quarters of the current year - 10,000,000

The amount of the 4th instalment due the States under the act of 23d June, 1836, which was set apart on the 1st January, 1837, and which has not yet been drawn from the Treasury - 9,367,214

The amount remaining in the hands of disbursing officers, which, though drawn from the Treasury, is unexpended, and may fairly and perfectly be regarded as at the disposal of the Government, and applicable to the service of the current year, 5,000,000

Aggregate of means, \$44,737,406

By this statement, it appears that there will be a surplus in the Treasury amounting to \$9,218,822.

The only explanations which this statement may seem to require relate to the estimate of receipts for the two last quarters of the year, and the proposed reduction of the expenditures.

I have estimated the receipts into the Treasury from all sources during the two last quarters of the present year at \$10,000,000, or at the rate of \$20,000,000 for the whole year. I observe that the chairman of the Committee of Ways and Means estimates the receipts for the last quarter of the year at \$4,000,000, which is only one million less for the quarter than the estimate I have stated. He gives us no estimate of the receipts for the third or current quarter of the year, nor does the Secretary of the Treasury favor us with his estimate for the third quarter. He contents himself by stating the probable receipt in one contingency at \$9,000,000; in one other contingency, at \$7,000,000; and in still another, at \$4,500,000. The amount is undoubtedly contingent, but I think the estimate of the Secretary is too low, in any event affecting the revenue that is at all probable. But, suppose, sir, that I have overrated the receipts for the two last quarters of the year by \$3,000,000, and that the expenditures have been estimated too low by an equal amount, there will still be an excess in the Treasury of \$3,218,822.

But the reduction I have proposed in the expenditures of the year demands a fuller explanation. It will be seen that I have stated the unexpended balances at the end of the present year at sixteen millions and a half. This is less than the amount remaining unexpended at the close of the year 1836, and it ought to be borne in mind that most of the items of appropriation which remained unexpended at the close of last year are still outstanding, and must, of necessity, compose the principal of the fifteen millions which the Secretary admits will not be called for during the present year. The appropriations for the present year, applicable

to a great variety of objects, are unusually large and extravagant. In stating a much lower estimate of expenditures for the present year than that submitted by the Secretary of the Treasury, I have supposed that there might be a decided determination in this House, under the extraordinary circumstances of the times, to insist upon a very considerable reduction of the expenditures of the Government. I am sorry that the Secretary has not thought proper to make a more detailed statement to the House than he has done upon the subject of the unexpended balances of existing appropriations, that we might speak and act upon this subject with greater certainty. I beg leave, however, to submit a statement of appropriations for the present year to a great many objects, amounting in the whole to a much larger sum than I have stated in the general estimate I have just presented; which, in my opinion, may be properly dispensed with during the present year, either in whole or in part, and which, I venture to say, do not constitute any material proportion of the fifteen millions which the Secretary supposes may be safely postponed till the next year.

For public buildings in the city of Washington	357,000
For various additions and improvements connected with the Mint	202,500
For surveys of public lands	147,500
For national armories	360,000
For the armament of fortifications	200,000
For arsenals	373,000
For constructing new wall, &c. at Harper's Ferry	53,000
For arming and equipping the militia	100,000
For ordnance and ordnance stores	72,000
For improvement of navy yards	538,550
For building two sloops of war	280,000
For six vessels of war, &c.	400,000
For construction and repair of certain roads	462,496
For removal of obstructions in and at the mouths of certain rivers, harbors, &c.	1,912,188
For new light-houses, light-boats, &c.	921,000

Aggregate amount \$6,376,734

I have made out this statement of the principal items of the appropriations for the present year, which caught my eye in running hastily over them, and which appeared to me might be retrenched with the least injury to the public interest. The sum might be easily swelled, by addition of various other appropriations of a similar character, to eight or nine millions. (Mr. B. was here reminded, by gentlemen sitting near him, of the exploring expedition, the new custom-houses, &c.) I am aware that I have omitted in the statement I have presented a large number of appropriations equally extravagant and uncalled for. But to illustrate the general character of these appropriations, I would call the attention of the committee to the fact, that although we have been repeatedly informed from the proper department of the Government that light-houses had been multiplied beyond any actual necessity upon our Lake and Atlantic coasts, yet we find nearly a million appropriated to new ones during the present year. Except the improvements of this nature projected in the entrance to the harbor of New York, I venture to assert, that scarcely one of the numerous new light-houses embraced in the last light-house bill is of any real importance. The members of the late Congress will sustain me in the statement that the appropriations for the present year were enlarged to a most unusual and extravagant amount, for the purpose of exhausting the surplus which it was supposed might accumulate in the Treasury during the present year; and I appeal to the House whether there is not now an ample pretext, in the reduced state of the finances of the country, to repeal at least so much as appears evidently excessive and extravagant.

I feel very sensibly, Mr. Chairman, the advantages which the gentlemen connected with the administration may have in the argument upon this point. I neither know, nor have I the means of knowing, so long as the Secretary of the Treasury shall delay his report upon the subject, what portion of the appropriations I have alluded to for the

present year have already been expended; and what portion besides may be required to fulfil contracts or engagements, which are binding upon the Government. I submitted a resolution at an early day of the session, with a view to get information from the Treasury on this point. I am aware that it may be in the power of the chairman of the Committee of Ways and Means to rise in his place, and declare that the whole or the greater part of the sums I propose to retrench are already bound by contract; but I can remind the gentleman that if he shall do so, he will find some obstacles in his path likewise. He informed us, the other day, that the unexpended appropriations in the month of March last, of the present year, were twenty-eight or nine millions. We all must remember well that, in the month of April following, the pressure in the money market had already increased to such extent as to shake, in some degree, the general credit of the country; some of the largest failures had already taken place in New Orleans, and one at least in New York. What followed in May, June, and July, I forbear to rehearse. We know, however, that in these months there was a general wreck of commerce and bank credit. Can it be possible that the Secretary of the Treasury, and the other departments of the Government, under the existing state of the country, and of its financial condition and prospects, did feel it to be their duty to hasten the expenditure of the extravagant appropriations for the year—to expedite and precipitate contracts and engagements; that three thousand superintendents of public works, engineers, and other agents engaged in the expenditure of the public moneys were instructed to make immediate engagements to the extent of the moneys appropriated?

At such a crisis can it be possible that any of the heads of the Executive Departments could have been so regardless of the true interest and condition of the country as to have encouraged or even permitted any new contracts or engagements, after it became at least doubtful whether the banks which held so large a portion of the public funds might not prove wholly insolvent, or, at all events, be so crippled in their means as to afford no certain prospect of being able to pay their debts to the Government? Yet, sir, unless this reckless and indefensible course has been pursued by the Government, there are no considerable engagements existing for the expenditure of the appropriations of the present year, except for indispensable objects connected with the support of Government, and the maintenance of the Army and Navy. But we shall see how this is, I hope, in due time. We know one thing, that a wise and provident administration, under the circumstances of the country, and after the true complexion of the crisis was developed last spring, would have permitted no engagement for the expenditure of money, except for indispensable objects: But, whatever may be the amount or nature of existing engagements, I trust the sum of five millions and a half may, and I believe will, still be found free from any such impediment, and that we may retrench at least that amount of the appropriations for the present year.

I have now presented such a statement, founded upon the report of the Secretary of the Treasury, as I think will be seen to be in strict accordance with the facts therein stated. I have also exhibited a statement of the condition of the Treasury, based upon my own estimates, both of the probable receipts and expenditures for the two last quarters of the year, which varies materially from the views of the Secretary of the Treasury. The explanations I have given of the different conclusions to which I have arrived, I hope will be regarded as at least deserving the attention of the House. But before I proceed to notice, a little more in detail, what I consider the most material questions connected with this bill, and to which I have more than once alluded already, it is proper that I should notice the statement presented by the Chairman of the Committee of Ways and Means; and I will remark, in the outset, that, however widely his statement may at first view appear to differ from the one presented by me upon the basis of the Secretary's report, there will, upon examination, be found to be but

little substantial difference, so far as regards the actual means in the Treasury.

According to the statement of that gentleman (Mr. Cambreleng) there will be in the Treasury on the 1st October next the following means, viz:

Specie	\$1,500,000
Balance undrawn in the deposit banks	5,000,000
Instalment due from the United States Bank	1,500,000
Aggregate, according to estimate of the chairman of the Committee of Ways and Means	\$8,000,000
Add the amount admitted to be in the deposit banks, which has been drawn upon, but which is not paid, and does not constitute a specific fund from the payment of the drafts	4,500,000
And it will appear that the actual amount of means in the Treasury on the 1st of October will be	12,500,000
Deduct the amount of the first instalment due from the United States Bank, which it is supposed will be paid in protested Treasury drafts, and may therefore be unavailable	1,500,000
And the aggregate of available means in the Treasury on the 1st October will appear to be	11,000,000
The receipts into the Treasury, estimated for the last quarter of the year by the chairman of the Committee of Ways and Means, will be	4,000,000
Making an aggregate of means in the Treasury to meet the demands upon it during the last quarter of the current year, amounting to	15,000,000
Add the means in the hands of disbursing officers, and which may be applied to the public service during the last quarter of the year	5,000,000
And the aggregate of means already at the disposal of the Government during the same period, will be	20,000,000
The expenditures of the last quarter of the year, exclusive of the amount obtained from the Mint, the amount required to take up protested drafts and contingent fund, according to the statement of the Committee of Ways and Means, are as follows, viz:	
For the ordinary service of the last quarter of the current year, (1837,)	\$9,000,000
For the support of the Florida war	1,600,000
Aggregate,	\$10,600,000
Add amount of fourth instalment due the States under the act of 23d June, 1836,	9,367,214

Real aggregate, 19,967,214  
Showing a surplus of means at the disposal of the Government during the last quarter of the current year, amounting to 32,786

Some explanation may be necessary to be given of the alterations I have made in the estimate submitted by the chairman of the Committee of Ways and Means, in relation to the amount on deposit in the deposit banks, and which has been drawn upon by drafts from the Treasury. The honorable gentleman from New York thinks that this money, amounting to about four millions and a half, should no longer be accounted a part of the means in the Treasury. I affirm that they are as much means as they were before they were drawn upon. If they had been paid out to the drafts which were drawn upon them, his view would certainly be correct; but, because drafts had been drawn upon these funds, which have been prohibited and are now in circulation, it by no means follows that these moneys cease to be a part of the means of the Treasury. They may be paid out to other drafts, or arranged so as to pay that amount to other creditors of the Government, while the drafts originally drawn upon them are gradually absorbed in payment of duties and for public lands, or taken up at the Treasury.

I have omitted to notice in the version I have given of the statement of the chairman of the Committee of Ways and Means the fact that he sets down the whole amount in the banks, except what appears to be regarded in the light of special deposits in specie, as unavailable funds; and he contends that the available funds actually on hand on the 1st of October will be only 2,000,000! With what propriety or consistency can the gentleman insist upon such a statement as being correct? When did all the moneys in the deposit banks cease to be available? Since the 15th of August it appears that the amount deposited in the banks has been diminished some three or four millions. Does not the gentleman know that in many, if not in every, quarter of the country these funds in the banks are made available? They are this day as available as they have been within the last three or four months. The notes of the deposit banks have actually been received by a class of the public creditors at par, in some sections of the Union, and the drafts of the Government upon these banks have been notoriously sought after. How, then, can the gentleman state such fund as unavailable? It is only unavailable to answer the purpose of argument here, and to lead Congress into the measures proposed by the Government. If the States shall be tendered drafts upon the balances remaining in the hands of the deposit banks, in payment of the fourth instalment due the States under the act of 1836, and they shall refuse to receive them, then, with some color of propriety, these funds may be stated to be unavailable; but not till they shall be brought to some such test can they be regarded as unavailable.

I have now, sir, shown that, taking the statements of the several reports of the Secretary of the Treasury as correct, if the funds lying dead in the hands of disbursing officers be brought forth and applied in aid of the expenditures of the last quarter of the year, as they should be, the fourth instalment due the States can be paid, with all other actual demands against the Treasury during the year, and not scarcely more than a nominal deficit; but if, as has always been the case heretofore, a portion of the actual demands upon the Treasury shall not be presented for payment at the depositories of the public money within the year, there will be a surplus, in fact, still left in the Treasury at the end of the year.

I have also, as I believe, shown, that regarding the estimate of the chairman of the Committee of Ways and Means as correct, if we are permitted to employ the amount in the hands of disbursing officers, the Treasury will still be able to meet all demands upon it, including the fourth instalment due the States, and leave a small surplus in the Treasury. But these several results are not only denied, but it is contended by those who have the direction of the public Treasury, that even the passage of this bill, and thereby relieving of the Treasury from a charge amounting to \$9,367,214, will not supply a sufficient fund for the expenditures of the remainder of the present year. A bill is brought into the House, and there appears to be a great probability that it will pass, authorizing the issue of twelve millions of Treasury notes! And how will the fund of the Treasury stand then, according to the showing of the officer at the head of the Treasury himself?

The deficiency in the means of the Treasury, after paying all demands upon it during the current year, (1837,) including the fourth instalment due the States, is stated in the report of the Secretary at the sum only of - - - \$5,876,565

If the bill now under consideration shall pass, it will relieve the Treasury of a charge during the year amounting to \$9,367,214, which will leave, instead of a deficit, an actual surplus in the Treasury amounting to - - - 3,490,649

If the bill authorizing the issue of Treasury notes to the amount of 12,000,000 shall pass, it will swell the surplus means in the Treasury to the sum of - - - 15,490,649

If to this we further add the means in the hands of disbursing officers, the aggregate surplus in the Treasury will then be - - - 20,490,649

The measures proposed by the Government, if sanctioned by this House, will lead to this result. Instead of an embarrassed Treasury, we shall find the Government again in the possession of a surplus of twenty millions in the Treasury! Where, then, the necessity of withholding from the States the sum which was provided and set apart by past laws for the States? Is it desirable to keep up a surplus in the Treasury? Is it desirable that the administration shall be encouraged by the possession of ample means still to go forward in their ruinous experiments? If we look—as we have a right, as it is proper we should look—to the source from whence this measure comes, we shall find ample reason to distrust the intention of those who support it, or the soundness of the arguments by which they attempt to prove the necessity of it. The proposition to postpone, or rather to repeal, the deposit act of 1836, comes from a source which was originally and eminently hostile to that law; which has never ceased to make war upon it and all those of the opposition who favored its passage, ever since. One great aim of their policy, from that time to the present, has been to thwart its operation, and to make it odious with the people. The notorious and fatal Specie circular was conceived in a spirit of hostility to the deposit act of 1836; and I am firmly persuaded that most of the evil which has since befallen the country may be traced to the manner in which the Secretary of the Treasury executed the provisions of the law. In his zeal to make it be felt rather as a curse than a blessing, he contributed to bring upon the country the curse of a depreciated currency. We ought to remember that it is the same party which now brings forward this proposition, which, before the deposit act became a law, preferred to vest the surplus moneys in the Treasury in State stocks, in railroads to carry the mail, in fortifications that never would be necessary for the defence of the country, in useful public works, and in works of no use, rather than see it distributed among the States. Ought we to place much confidence in the arguments or representations coming from a quarter so partial, and unyielding in opposition to the original act which is now sought to be repealed?

Some of the gentlemen who supported the act of 1836, when it was known that there was a large surplus in the Treasury, as a choice of evils between the extravagant expenditures which they foresaw would be the certain consequences of its remaining in the Treasury, and the distribution among the States, seem to be under the impression that they are under some obligation of principle, now that it seems to be doubtful whether there are moneys enough in the Treasury to meet all the demands upon it, to vote in favor of the repeal of it. I warn those gentlemen not to be too easily persuaded that they take the right view of the subject. A little reflection will satisfy them that principle is now altogether against the present bill. Those gentlemen are not now the same free agents in regard to this subject that they were before the act of 1836 was passed. Another and quite as important a principle stands in the way of their support of this bill as that which determined them to support the act of 1836; and in one view of the subject the principle is the same, as I will presently show.

The question now is, whether the States have not acquired rights under the act of 1836, which it is not competent for Congress to annul or defeat without their consent. It is a question of power and of right in the General Government whether, after the States have accepted the terms of the deposit act; after many of them have anticipated the funds which they expected to receive in payment of the fourth instalment, and made other important arrangements connected with their financial interests and condition, they will not have just cause to complain of a breach of faith, if this Government shall now proceed to abrogate the compact by legislative action merely, and without any communication with the States. I call upon those gentlemen especially, who hold to what is called the State rights party, to say upon what grounds they

can support the bill under consideration? Will it not be a usurpation, a clear assumption of power on our part, and an insulting disregard of the State sovereignties, if, after deluding them with promises of these funds upon certain conditions, which have been acceded to by the States, we should claim the power to postpone the execution of the compact, or to annul the whole proceeding unconditionally, without reference to their wishes or interests, and even without consulting them.

But, sir, we have the same grand object, inviting us to reject this bill, which operated with many gentlemen in giving their support to the deposit act of 1836. The question is now, as then, whether we shall set about curtailing the extravagance and profligacy of the Government in its expenditures. We have tried every other plan, every other occasion, in vain. If we would prove ourselves what we profess to be—if we be ourselves in earnest—if we are seriously the advocates of retrenchment and reform, we can never hope, in our time, a more propitious season to make one bold and determined effort. "Now's the day, and now's the hour." If we suffer ourselves to be deluded by the arguments and the devices of the advocates of power, and shall let this opportunity pass, we need never hope again. There is only one expedient left, and that is to withhold the supplies; stop the money; keep the Treasury drained and low; cut off the means; and I engage that the expenditures, for once, shall be reduced to the actual wants of the Government. I call upon the experienced of this House—the observation of them, and there are some who have had seats here for more than twenty years—to say, if any time could be so fit, or promise equal success, in effecting this great object, as the present. I repeat, if the means are not supplied, the expenditures must cease. But how are we to account for the course of the Executive?

The Secretary has taunted us with our extravagance. He has told us, to our teeth, in his report, that the appropriations of the present year exceeded the amount he recommended by five or six millions; but how is it that we hear not one word from that high officer upon the subject of retrenching those appropriations, and thereby relieving the Treasury to that amount? How does it happen that we have no estimate laid before us of that nature? So far from it, that we cannot even draw from him, by order, in the shape of a resolution of this House, any statement upon this subject. Are we not bound to conclude, from the course of the administration upon this subject, that the determination still to sustain the late extravagance and profligacy, as a means at once of patronage and power, is inflexible? But what becomes of the professions of the President upon this point? In his late message he repeatedly adverts to the virtues of economy in the expenditures of the Government—the necessity of reducing the revenue to the actual wants of the Government; yet we do not hear of the first step taken by his supporters in the House to carry out his views upon this subject; but, instead of retrenchment, the cry is still for more money. Are we destined for ever to be imposed upon and deluded by hollow professions—by promises of reform and retrenchment, which are ever to be repeated, and as often broken? Are we to have under this administration, as under the late one, the constant avowal of the sternest republican principles, but in practice the grossest infraction of every maxim of a free Government?

Is it in this respect that the President intends to imitate and walk in the footsteps of his distinguished predecessor? Has he not already insulted us, by telling us that the late trouble and ruinous revulsion in trade, and the prostration of every interest connected with it, were the result, in a great degree, of much extravagance? Have we not seen the Chief Magistrate of this Republic condescending to rebuke and insult the inhabitants of the large cities for their extravagance, and the luxurious indulgence which the Government has set the example in all the modes of extravagance known in the practice of any Government, and is itself, at this moment, the greatest prodigal in the land! Witness the prodigal waste of money upon every branch of the public service, upon the public works in every quarter of the Union, and espe-

cially in this city, and under the eye of the President himself. I say, shall this be endured, that such charge shall come from the same source which requires us to repeal the deposit law, because it is said there are no means in the Treasury? which asks us also to give them the power to issue a Government paper to pay the charges upon the Treasury, and yet never *himself* at any plan of retrenchment and reform? I repeat, shall we never be exempt from the mockery of a constant profession of the principles of economy and reform, and the uniform disregard of both in the actual administration of the Government?

Mr. Chairman, the only consolation I have felt in the survey of the wide-spread mishaps which have grown out of the late mal-administration of public affairs, particularly in relation to the currency and finances of the country—the individual depression and suffering—the public loss of character: the only solace I could take to myself in being called at this unfriendly season of the year to this seat of national legislation was, that perchance a favorable opportunity had presented itself—a most propitious conjuncture in our affairs had arisen, for one further effort to bring back the Government to that real “*republican track*” which was promised us with so much seeming sincerity in 1829, and which the country at this time, and all the best and dearest interests connected with it, so imperiously demands. Our expenditures have more than doubled since that period. I am not so impracticable as to ask that we should be brought back to the standard of the expenditures of the administration of the distinguished and venerable gentleman who sits over the way, (Mr. Adams.) The average annual expenditures during his administration, exclusive of the public debt, was \$13,500,000. I admit a necessity for some enlargement beyond that standard. Our country has grown in population and resources greatly since that period, and I would be content if we could retrace our steps only so far as to adopt the standard of 1833 and 1834. Then, sir, our expenditures did not exceed seventeen or eighteen millions of dollars annually. But what hope is there that even this moderate reform can be accomplished, when we seem determined to grant the Government all the money they ask, and not to retrench one cent of the expenditures of the present year, though they are expected to be upwards of thirty-three millions of dollars!!

Mr. Chairman, in conclusion I shall say, that I look upon the decision of this House upon the present bill with deep interest and powerful anxiety—not so much by reason of the interest or the profit the States have at stake in the question, but because I shall regard the vote of this House as decisive of the course of the Government, and of the course of purity and economy in its administration. If this manner of compelling the Government to curtail its extravagance by refusing the means of its indulgence, and by acting upon the maxim that an impoverished Treasury is better than one overflowing with means, be not resorted to, I shall despair of success in any less favorable conjuncture.

#### REMARKS OF MR. DUNCAN,

Of Ohio,

In the House of Representatives, September 20, 1837.—  
On the bill to postpone the 4th instalment of the public deposits.

Mr. DUNCAN said he was anxious for the passage of the bill; there was more than one consideration that operated on his mind and induced him to support it. The object of the deposit act was to relieve the Treasury of the surplus revenue—a surplus which, as he would attempt to show, grew out of a policy the most dangerous and disastrous in its character, and which, if it had been persisted in, would have, in all probability, severed this Union—he meant the unequal and inequitable policy misnamed “the American System,” which had for its object the official elevation of its projectors and zealous supporters, and which, in its operation, was at the same time beneficial to one portion of the Union and destructive to another. The surplus was

now disposed of, and the object for which the deposit law was made, is accomplished, and it was of no further use. He hoped it would take its place among the things that had been and are not, and that the policy which gave rise to its necessity would share the same fate.

The question involved in the bill was simply whether the Government shall deposit nine millions of dollars with the States, in proportion to their representation in Congress, when, to enable him to do it, she must borrow a sum equal in amount, to supply her own wants during the current year.

The first fact upon which the question depends is, does the Government want the money? And if she does, is it not better that she should keep her own and use it, than to deposit it with the States and run in debt for an equal amount to supply her own wants? To convince the committee that the amount of the fourth instalment of the deposits would be wanted by the Government for her own use, he had prepared a statement, which was the result of a calculation from the facts stated in the Report of the Secretary of the Treasury, and he believed it would be found correct, and conclusively show that Government would want the full amount of the fourth instalment. In submitting the statement, he would acknowledge his obligation to the worthy and distinguished gentleman from Maryland, (Mr. McKim,) for the assistance he had received from him in preparing the statement.

Whole amount of money in the Treasury, 1st January, 1837.

Whole amount of available money in the Treasury 1st of January, 1837, applicable to public purposes	\$42,468,859 97
Deduct the sum reserved by law	5,000,000 00
	\$37,468,859 97

Which amount of \$37,468,859 97 was, under the provisions of the act of June 23, 1836, to be placed in deposit with the States, and it is ascertained that there has been deposited	27,063,430 80
	\$10,405,429 17

The amount of the third instalment, the deposit of which has not been acknowledged, is	1,165,575 18
--	--------------

Amount of fourth instalment, not deposited	\$9,239,853 99
--	----------------

The amount reserved in the Treasury on the 1st January, 1837, has been increased from \$5,000,000 to	6,670,137 52
--	--------------

The receipts in the first half year are as follows:

From customs	\$7,234,451
From lands	5,307,731
From miscellaneous sources	512,263
	13,050,445 00

To which add \$600,000 in hand, and \$50,000 in the hands of collectors, subject to draft	650,000 00
---	------------

If no further postponement be granted on duty bonds, it is estimated that the whole amount of receipts of the last half year will be about	9,500,000 00
	29,870,562 52

Deduct postponement on bonds to the 15th November	2,500,000 00
---	--------------

Total amount of moneys estimated to be received in 1837	\$27,370,562 52
Expenditures for the first six months of the year 1837.	
Civil, miscellaneous, and foreign intercourse	\$2,812,540 40
Military, including pensions	10,603,361 49
Naval	3,297,149 69
Public debt	20,832 75
	16,733,884 33

Expenditures required to meet ex-

isting appropriations during the last half year, will, as computed, equal the sum of	16,000,000 00
--	---------------

Amount of receipts ascertained and computed for the year 1837	27,370,562 00
	\$5,363,322 33

This is an actual deficit, notwithstanding there ought to be a sum equal to this always in the Treasury, which really shows a deficit of above \$10,000,000.

Whatever expenditures shall arise within the year upon new appropriations which Congress may think proper to make, will require a corresponding addition to this amount; but without them, it will constitute an excess of \$5,363,322 33 of expenditures over both the receipts and the balance at the end of the year, besides not leaving at the close of the year any thing in the Treasury or Mint for future uses, or to meet contingencies.

State of the Treasury up to the first of October.

By the Treasurer's report on the 30th of August past, it appears that the balance in the Treasury, including what was in the custody of banks, the mint, and collecting officers, was then	\$14,596,311
That the amount of this sum subject to immediate draft, was only	8,928,072

This is the amount of all drafts of all kinds outstanding, viz:	5,668,239
Drafts on banks and mint for debts	3,877,468

Drafts on banks for transfers to States,	1,165,575
Drafts on receivers and collectors, 28th Aug.	625,000
	5,668,043

Leaving subject to draft near Sept. 1st as above	8,928,072
Expenses in Sept. about 2,500,000, with receipts	2,500,000

Leaving 1st Oct. in banks, mint, and receivers' and collectors' hands	6,428,072
---	-----------

Of the amount in banks, not over one or two millions are available, leaving four millions unavailable	4,000,000
---	-----------

For the mint, which cannot be used immediately	500,000
--	---------

Amount of cash funds in the Treasury, 1st of October next	1,928,072
---	-----------

If, said Mr. D. the report of the Secretary of the Treasury is a correct and true exposition of the state of the Treasury and the finances of the nation, then his statement proved, beyond all doubt, that the money proposed to be deposited as a fourth instalment was required for the use of the Government, and it disposed of the main question.

Before he went into the other questions involved in the passage of this bill, he felt himself bound to discharge an obligation he was under to redeem a friend from some unkind remarks indulged in by gentleman from South Carolina, (Mr. Pickens.) The gentleman had represented the honorable Secretary's report as obscure and unintelligible, as full of errors in point of its arithmetical calculations and its grammar, and had thrown out the insinuation that Congress could not make a more fit appropriation, or one more useful, than for the purpose of his instruction in those branches of science. He regretted to hear the literary character of one of the principal Executive officers of the Government thus assailed, and attempted to be degraded. Such statements did not merely strike at the reputation of the distinguished individual against whom they were spoken, but they were calculated to reflect discredit upon the party in

power, through whose instrumentality he held this high and responsible station; nor did they stop there—they embraced the Government, on whom its effects were more fatal, being calculated to bring it into contempt with the people, to destroy confidence in its reputation, and to strip its Executive officers of that respect which was due to the stations they occupied, and which was so essential to the discharge of their high and responsible trusts with credit to themselves and to the best interests of the public. He did not concede to public officers any privileges or immunities in this respect that did not belong to any other citizen, but he thought they were entitled to the same respect and courtesy. He always felt himself bound to protect and defend the reputation of a friend, when assailed in his absence, more especially when assailed on this floor unjustly, because official station here gave privileges that did not belong to any but members. Was it a fact that there were errors in the report of the Secretary? If there were, he had not discovered them. Was it a fact that there were grammatical errors in the report? He had seen no violation of any rules of grammar that he had ever learned. Perhaps, however, arithmetic and grammar in O. D. (Mr. D.'s residence) and New Hampshire (the residence of the Secretary) were not the same things that they were in South Carolina. If so, the gentleman was not in fault. If otherwise, he had better brush the cobwebs out of his own *garret*, before he charged the honorable Secretary with a benighted brain. Mr. D. said he was of opinion that Congress could make a more profitable appropriation than the one suggested by the gentleman, viz: to give its members clear heads. Of such an appropriation he (Mr. D.) would lay claim to a large proportion for his own use.

But, *was it a fact* that the Secretary who controlled the financial interests of this nation and people, was unacquainted with the two first rules of common arithmetic, addition, and subtraction? for the report from which the gentleman seemed to have formed his opinion, required the exercise of no other rules. He repeated the inquiry: is it possible that the Secretary of the Treasury who had been one of the first graduates of as good an institution as the nation affords, regularly bred to the profession of the law, who had practiced with honor to himself, who had presided in the Supreme Court of his native State, on whose learning depended the property, liberties, and often the lives of her citizens; who had finally filled her Executive chair for years, and whose present elevated and distinguished station is the proof, the fruit and reward of the ability and fidelity with which he has discharged the official duties of every proud and responsible station, assigned to him by his country—is it possible that he is unacquainted with the first principles and rules of grammar and arithmetic? Such poison going forth with the report carries its own antidote. Should an appropriation ever be made such as the gentleman recommends [Mr. D.] should be unwilling that the gentleman [Mr. P.] should receive any portion of it as the Secretary's *tutor*, until he had seen some new evidence of his capacity to teach him. He had manifested some warmth, and he hoped he would be excused, for such feelings and such a disposition constituted a part of his nature, and the exercise of such feelings, he felt proud to say had been and would continue to be his practice. Should charges of a like character, or any other which were unjust, and calculated to injure or impair the reputation of the gentleman from South Carolina, or any other gentleman, in whose honesty he had confidence, be made on this floor, or elsewhere in their absence, he [Mr. D.] if present, would exert his feeble efforts to defend him or them. He who attacks an absent friend, or who does not defend him when attacked by another, or who yields even a silent assent, when his friend is calumniated, must be regarded as wholly unworthy of confidence or esteem.

But to return to the subject of this bill. Is it good policy for the Government to deposit her money with the States for their use, when she wants to use it herself? The decision of this question seemed to him a small business. Present the naked question, and there was no schoolboy in the

district he had the honor to represent who did not carry the answer on the end of his tongue. What was there about the question that prevented it from being a plain, easy question to answer? We are told that there exists a contract between the Government and the States, that is binding in law, in equity and in conscience. That Congress, by a solemn act, had agreed to deposit the surplus revenue with the States for safe keeping, provided the States would agree to receive it, and that the States had agreed to the only condition necessary to complete the contract, viz: to receive them. Therefore, the States were entitled to the full benefit of the contract, and in good faith the money ought to be paid over. What miserable sophistry!! What pitiful subterfuge to cover nakedness and deformity, and how far from every true principle connected with the question. What is the title of the deposit act? "An act to provide for the deposit of the surplus revenue, and safe keeping of the same." Is there any thing in the title of this act that authorizes the belief that Congress intended that the States should have any other benefit from the public moneys, than a depositor should have from any general deposit? Is there any expression in the body of the act that conveys any other meaning? On the contrary, is it not full of provisions by which such inferences are studiously foreclosed and avoided? Does not the act provide the manner in which the Secretary of the Treasury shall recall them whenever the circumstances of the Government may require? Did the supporters of that law attempt to convey the idea, or advance the argument, when it was under consideration, that the surplus revenue, in the form of a deposit, was really to be a gift to the States? No, sir. At the time the bill was under consideration there was no idea held out or advanced, other than that the money was to be placed with the States for safe keeping. But gentlemen who rejoice at the embarrassed state of the Treasury, and who are shouting that their former predictions of misrule and ruin are verified, are willing, in violation of the meaning, spirit, and express words of the deposit law, to withhold from Government the necessary funds of conducting its only legitimate operations, and that, too, for party effect; so that possibly what they heretofore predicted, and now declare has happened, may yet, peradventure, prove true. But in what section, sentence, word, or syllable of that act is the provision to warrant the statement that the Government is pledged to deposit with the States the means of *her own*, which are necessary to conduct her own concerns? Sir, such a construction of the act, and such a policy, is revolting to every economist and correct judge of ordinary dealings and business habits. In what, he again asked, did the plighted faith of Government consist? It seemed to him to have all the characteristics and features of any individual transaction, and all the rules of justice, honor, and equity, that apply in one case will apply in the other. Suppose (said Mr. D.) I tell a friend and relative that I shall, at a given time, have more of the needful than I shall want for my own use, and knowing that he has a better way of securing and keeping it than I have, I will deposit it with him for safe keeping. That I will deposit my money with him in instalments, as it accrues upon my stocks, my farms, and from my factories; provided he will accept it and safely keep it until I want to use it. That, in conformity with the proposition thus made by me, and acceded to by my friend, I had made deposits at three different times; but before the time arrived for making a fourth, according to the terms of my proposition, my income is cut off; my factories are consumed by fire; the crops on my farm are destroyed; and the value of my stocks deteriorated by some accidental or unaccountable circumstance; should I be bound in law, in equity, or morals, to complete the fourth deposit, at the expense of my business, my prosperity, my happiness, my domestic comfort, or my business reputation? No man in his senses would say that I should. All the reasons to excuse the compliance with the proposition to deposit in the individual case supposed, will apply to the proposition of the Government contained in the deposit act.

But before I conclude this part of my remarks,

let me ask where would be the advantage to the States and people if they adopted and acted upon the propositions and principles of the gentlemen opposed to the bill, by fully executing the deposit act? It had been shown that Government must contract a loan, in some form, equal to the amount to be paid; and who must pay it? Where is the money to come from when pay day arrives? Why, the people. What advantage to them to make the payment to the States, and then turn round shortly and levy a tax upon the people who compose the States for whose benefit alone the law is to be executed? Is there any good to be derived by an odious, and dangerous, and unconstitutional, and deceiving exercise of the power to levy money? Has not our Government been shaken, and the very existence of our happy Union already threatened, by a policy of this description—odious to every friend of equal rights, and as unconstitutional as odious? His objections to incur a debt to enable them to make the deposit, appeared to him of great weight. He thought it would indirectly establish the fact that the Federal Government had the right to levy taxes in the form of a "tariff"—which is an indirect tax upon the people, and in its effects as oppressive as a direct one—and thereby to collect money from the people to bestow on the States.

And here, sir, said Mr. D. is where the great secret lies; this is the mainspring of all the hostility to the bill. If its opposers, who were the enemies of the administration, and represented the party that had been striving to aggrandize the Federal Government at the expense of the reserved sovereignty of the States, and to strip them of their independent rights, ever since the formation of the Union, could succeed in preventing the passage of the bill, they will have achieved a great and important point—an exercise of power no less than that of taxing the people at will, and of providing the means of subjugating them and the States with their own money. And the failure of the bill would exhibit a standing record of a precedent and warrant that the Government possessed the right of exercising such a power henceforth and forever, which would be felt so far as the influence of those composing the body would extend. Sir, look at the ridiculous predicament in which the General Government and States will be placed by the failure of the bill and a resort to a loan. First, the Government borrows money on interest, and deposits it with the States for their use without interest. The people at least lose the interest in this ridiculous operation.

But the States must have receiving officers who must be paid; they must have disbursing officers, and they must be paid: thus the money is diminished by per centage and fees, in addition to the loss of interest. They may also employ dishonest men as their agents, and thus entirely lose the principal. Again: if Government has to make a loan, there must be officers employed for that purpose. These will sweat away a little of the cash in fees and salaries. When pay day comes there must be paymasters and receivers: here must be fees also, and the fund is sweated again. It may be that the Federal Government, by dishonest hands, may lose the principal fund when paid back and diminished, as I have shown it must necessarily be; or she may lose large sums when borrowed, that will never get into the hands of the States. If the bill does not pass all the honest drains which I have noted, and perhaps more, must occur, and the dishonest ones may occur. I put it to the good sense of every individual who hears me, if it is not better that the General Government keep its own money, and use it for the purposes for which it wants money, and must have it? Mr. D. said he was not only in favor of this bill, now the surplus revenue was disposed of, but he was opposed to the policy out of which it grew. The unequal, extravagant, and excessive tariff; the system misnamed "the Great American System;" a system which he hoped, as he hoped for the preservation of the Constitution, the support of our free institutions, and the perpetuity of the Union, never to see again revived but from imperious necessity, which he hoped and believed never would exist. He would not leave the subject without recurring to the motive which had originated the

policy that created the surplus. He said it had ever been the object of the opposers of the administration (he meant the federal party, for he liked to call things by their right names) to enrich the Federal Government, and thereby diminish the reserved sovereignty and independence of the States, and consequently the liberty of the people. They were the same party, and governed by the same principle, which wanted, at the inception of the Union, "a limited monarchy, and a Senate for life;" and after failing in that, had striven from that time to this for a Government as nearly monarchical as possible; a rich and powerful, great and consolidated Federal Government will suffice, provided nothing better can be had. He asked the friends of liberty how long it would be before that class of politicians would have what they wanted as a substitute for a limited monarchy, provided it were once determined that the General Government had the power of raising, by direct tax or indirect tax, any sum beyond what was really necessary for the exercise of its constitutional duties, how long before the prostration of the State Governments, except in form, would be effected? For, the moment they admitted a dollar could be raised for any other purpose, they admitted a principle by which any number of millions might be levied. Where, then, would be their personal liberty, their State sovereignty? What would have been gained by their independence? Gone, sir! gone for ever—swallowed up and merged in the great vortex of federal wealth and power. Sir, (said Mr. D.) when our gallant ancestors shook off the fetters and shackles that bound them to the British throne, the aggregate amount of freedom and independence then belonged to the people in their individual capacity, and to the emancipated colonial Governments. When the union of the colonies formed the Federal Government, the colonial Governments, under the designation of States, each surrendered a portion of its sovereignty, or rather yielded certain of its State rights, to the Federal Government; but there was no increase or diminution of power; it was no more than a transfer of the right to exercise power. It took of the power which the States had derived from the people, and gave to the Federal Government; and what was not transferred was reserved.

Mr. D. said, "*money is power*;" that as an individual, a State, or a nation became rich, it became powerful; that as a Government became rich, (when it was made so by taxes,) so in proportion did the people become poor; that in proportion as the Federal Government became powerful in this respect, so did the State Governments become weak and dependent, because the amount of power thus derived was taken from them. The diminution in their strength might be measured by their indebtedness. If the Federal Government is unrestricted, and may collect taxes from the States and people, she must become rich and powerful at their expense, unless she pays it back. He hardly thought many of the people would be willing to have a collection of a sum made from them, that a part of it might be paid back.

He thought it very important that the State and General Governments should each be confined to the objects for which they were created. If they were permitted to pass their bounds, there could be no calculation as to the result. It was clear to his mind that the United States had no powers not granted in the Constitution, and there could not be found therein the grant of any power to loan or levy money to give away, or to afford the opportunity of having it well kept. Usurpations are dangerous; he would never tread on even doubtful ground, if he could avoid the necessity. If the General Government assumes the exercise of powers not expressly granted by the Constitution, she comes in collision with the reserved rights of the States. If the State Governments assume the exercise of powers which have been surrendered to the General Government, or which have never been surrendered by the people, they come in collision either with the General Government or the liberties of the people. If the constitutional bounds in either case are overleaped, what assurance have the people that their liberties and reserved rights may not be imperceptibly frittered away and swal-

lowed up by the Governments created originally for their protection, and they stripped naked as a Danish boor or a Russian serf, especially if the United States may tax them, and the States may tax them, when neither tax is to be levied for either National or State purposes. It was by gradual usurpations that any Government became tyrannical. No people ever gave up at once more of natural and inherent rights than was necessary to protect the residue. Mr. B. repeated he should vote for the bill, because he was opposed to the policy out of which the surplus grew.

I go for it, because the purposes for which the deposit act was passed have been accomplished, viz: the disposal of an accumulated fund. I go for it, because the Government wants the use of the money, and must have it, and has no right to supply its place, if not used, by a tax or loan. He acted in this matter without any instructions from his constituents; all that guided him was his own judgment, and a knowledge of the fact that he had the honor to represent a high-minded and honorable people, who stood ready, at all times, to maintain their Government—a people who did not carry their patriotism in their pockets; whose love of liberty did not consist in the enjoyment of a few dollars and cents, but in love of country, in an attachment to her institutions, and in a disposition to sacrifice every selfish and personal consideration to the shrine of correct principles—a people who do not live for themselves, but for their friends, their country, and posterity.

### REMARKS OF MR. CALHOUN, OF SOUTH CAROLINA.

*In Senate, September 19, 1837.—On the bill authorizing an issue of Treasury notes.*

MR. PRESIDENT: An extraordinary course of events, with which all are too familiar to need recital, has separated, in fact, the Government and the banks. What relation shall they bear hereafter? Shall the banks again be used as fiscal agents of the Government? Be the depositories of the public money? And, above all, shall their notes be considered and treated as money, in the receipts and expenditures of the Government? This is the great and leading question; one of the first magnitude, and full of consequences. I have given it my most anxious and deliberate attention; and have come to the conclusion that we have reached the period when the interest both of the Government and the banks forbid a remission. I now propose to offer my reasons for this conclusion. I shall do it with that perfect frankness due to the subject, to the country, and the position I occupy. All I ask is, that I may be heard with a candor and fairness corresponding to the sincerity with which I shall deliver my sentiments.

Those who support a reunion of the banks and the Government, have to overcome a preliminary difficulty. They are now separated, by operation of law, and cannot be united while the present state of things continue, without repealing the law which has disjoined them. I ask, who is willing to propose its repeal? Is there any one who, during the suspension of specie payments, would advocate their employment as the fiscal agents of the Government, who would make them the depositories of the public revenue, or who would receive and pay away their notes in the public dues? If there be none, then it results that the separation must continue for the present, and that the reunion must be the work of time, and depending on the contingency of the resumption of specie payments.

But suppose this difficulty to be removed, and that the banks were regularly redeeming their notes, from what party in this body can the proposition come, or by which can it be supported, for a reunion between them and the Government? Who, after what has happened, can advocate the reunion of the Government with the league of State banks? Can the opposition, who for years have been denouncing it as the most dangerous instrument of power, and efficient means of corrupting and controlling the Government and country? Can they, after the exact fulfilment of all their predictions of disastrous consequences from the connexion, now turn round and support that which they have so long and loudly condemned? We have heard much from the opposite side of untried experiments on the currency. I concur in the justice of the

censure. Nothing can be more delicate than the currency. Nothing can require to be more delicately handled. It ought never to be tampered with, nor touched, until it becomes absolutely necessary. But if untried experiments justly deserve censure, what condemnation would a repetition of an experiment that has failed deserve? An experiment that has so signally failed, both in the opinion of supporters and opponents, as to call down the bitter denunciation of those who tried it. If to make the experiment was folly, the repetition would be madness. But if the opposition cannot support the measure, how can it be expected to receive support from the friends of the administration, in whose hands the experiment has so signally failed, as to call down from them execrations deep and loud?

If, Mr. President, there be any one point fully established by experience and reason, I hold it to be the utter incompetency of the State banks to furnish, of themselves, a sound and stable currency. They may succeed in prosperous times, but the first adverse current necessarily throws them into utter confusion. Nor has any device been found to give them the requisite strength and stability, but a great central and controlling bank, instituted under the authority of this Government. I go further. If we must continue our connexion with the banks—if we must receive and pay away their notes as money, we not only have the right to regulate and give uniformity and stability to them, but we are bound to do so, and to use the most efficient means for that purpose. The constitution makes it our duty to lay and collect the taxes and duties uniformly throughout the Union; to fulfil which we are bound to give the highest possible equality of value throughout every part of the country, to whatever medium it may be collected in; and if that be bank notes, to adopt the most effective means of accomplishing it, which experience has shown to be a bank of the United States. This has been long my opinion. I entertained it in 1816, and repeated it in my place here on the deposit question in 1834. The only alternative then is, disguise it as you may, between a disconnection and a bank of the United States. This is the real issue to which all must come, and ought now to be openly and fairly met.

But there are difficulties, in the way of a national bank, no less formidable than a reconnexion with the State banks. It is utterly impracticable, at present, to establish one. There is reason to believe that a majority of the people of the United States are deliberately and unalterably opposed to it. At all events, there is a numerous, respectable, and powerful party (I refer to the old State rights party) who are, and ever have been, from the beginning of the Government, opposed to the bank; and whose opinions, thus long and firmly entertained, ought at least to be so much respected as to forbid the creation of one, without an amendment of the constitution. To this must be added the insuperable difficulty, that the Executive branch of the Government is openly opposed to it, and pledged to interpose his veto, on constitutional grounds, should a bill pass to incorporate one. For four years, at least, then, it will be impracticable to charter a bank. What must be done in the mean time? Shall the Treasury be reorganized to perform the functions which have been recently discharged by the banks, or shall the State institutions be again employed until a bank can be created? In the one case, we shall have the so much villified and denounced sub-treasury as it is called; and in the other, difficulties insurmountable would grow up against the establishment of a bank. Let the State institutions be once reinstated, and reunited to the Government as their fiscal agents, and they will be found the first and most strenuous opponents of a national bank, by which they would be overshadowed and curtailed in their profits. I hold it certain that in prosperous times, when the State banks are in full operation, it is impossible to establish a national bank. Its creation, then, should the reunion with the State banks take place, will be postponed until some disaster, similar to the present, shall again befall the country. But it requires little of the spirit of prophecy to see that such another disaster would be the death of the whole system. Already it has had two paralytic strokes—the third would prove fatal.

But suppose these difficulties were overcome, I would still be opposed to the incorporation of a bank. So far from affording the relief which many anticipate, it would be the most disastrous measure that could be adopted. As great as is the calamity un-

der which the country is suffering, it is nothing to what would follow the creation of such an institution, under existing circumstances. In order to compel the State institutions to pay specie, the bank must have a capital as great, or nearly as great, in proportion to the existing institutions, as the late bank had, when established, to those of that day. This would give it an immense capital, not much less than one hundred millions of dollars, of which a large proportion, say twenty millions, must be specie. From what source is it to be derived? From the State banks? It would empty their vaults, and leave them in the most helpless condition. From abroad, and England in particular? It would reproduce that revulsive current, which has lately covered the country with desolation. The tide is still running to Europe, and if forced back by any artificial cause, before the foreign debt is paid, cannot but be followed by the most disastrous consequences.

But suppose this difficulty overcome, and the bank re-established, I ask what would be the effects under such circumstances? Where would it find room for business commensurate with its extended capital, without crushing the State institutions, enfeebled by the withdrawal of their means in order to create the instrument of their oppression? A few of the more vigorous might survive but the far greater portion, with their debtors, creditors, and stockholders, would be involved in common ruin. The bank would, indeed, give a specie currency, not by enabling the existing institutions to resume, but by destroying them and taking their place.

Those who take a different view, and so fondly anticipate relief from a national bank, are deceived by a supposed analogy between the present situation of the country and that of 1816, when the late bank was chartered, after the war with Great Britain. I was an actor in that scene, and may be permitted to speak in relation to it with some little authority. Between the two periods there is little or no analogy. They stand almost in contrast. In 1816, the Government was a debtor to the banks—now it is a creditor: a difference of the greatest importance, as far as the present question is concerned. The banks had over-issued, it is true, but their over-issues were to the Government—a solvent and able debtor, whose credit, held by the banks in the shape of stock, was at par. It was their excessive issues to the Government, on its stock, which mainly caused the suspension; in proof of which, it is a remarkable fact, that the depreciation of bank paper under gold and silver was about equal to the proportion which the Government stock held by the banks bore to their issues. It was this excess that hung on the market and depressed the value of their notes. The solution is easy. The banks took the Government stock payable in twelve years, and issued their notes for the same payable on demand, in violation of the plainest principles of banking. It followed, of course, that when their notes were presented for payment, they had nothing but Government stock to meet them. But its stock was at par, and all the banks had to do was to go into market with the stock they held and take up their notes, and thus the excess, which hung upon the market and depressed their value, would have been withdrawn from circulation, and the residue would have risen to par, or nearly par, with gold and silver, when specie payments might be easily resumed.

This they were unwilling to do. They were profiting every way—by drawing interest on the stock, by discounting on it as capital, and by its continued rise in the market. It became necessary to compel them to surrender these advantages. Two methods presented themselves—one a bankrupt law, and the other a national bank. I was opposed to the former then, as I am now. I regarded it as a harsh unconstitutional measure—opposed to the rights of the States. If they have not surrendered the right to incorporate banks, as is conceded, its exercise cannot be controlled by the action of this Government, which has no power but what is expressly granted, and no authority to control the States in the exercise of their reserved powers. It remained to resort to a national bank, as the means of compulsion. It proved effectual. Specie payments were restored; but, even with this striking advantage, it was followed by great pressure in 1818, '19, and '20, as all who are old enough to remember that period must recollect. Such, in fact, must ever be consequence of resumption, when forced under the most favorable circumstances; and such, accordingly, it proved even in England, with all her resources and with all the caution she used

in restoring a specie circulation, after the long suspension of 1797. What, then, would be its effect in the present condition of the country, when the Government is a creditor, instead of a debtor; when there are so many newly created banks without established credit; when the over-issues are so great; and when so large a portion of the debtors are not in a condition to be coerced? As great as is the tide of disaster which is passing over the land, it would be as nothing to what would follow were a national bank to be established as the means of coercing specie payments.

I am bound to speak without reserve on this important point. My opinion then is, that, if it should be determined to compel the restoration of specie payments by the agency of banks, there is but one way—but to that I have insuperable objections. I mean the adoption of the Pennsylvania Bank of the United States as the fiscal agent of the Government. It is already in operation, and sustained by great resources and powerful connexions, both at home and abroad. Through its agency specie payments might undoubtedly be restored, and that with far less disaster than through a newly created bank; but not without severe pressure. I cannot, however, vote for such a measure. I cannot agree to give a preference and such advantages to a bank of one of the members of this confederacy over those of others—a bank dependant upon the will of a State and subject to its influence and control. I cannot consent to confer such favors on the stockholders, many of whom, if rumor is to be trusted, are foreign capitalists, and without claim on the bounty of the Government. But, if all these and many other objections were overcome, there is still one which I cannot surmount.

There has been, as we all know, a conflict between one of the departments of the Government and that institution, in which, in my opinion, the department was the assailant; but I cannot consent, after what has occurred, to give to the bank a triumph over the Government, for such its adoption as the fiscal agent of the Government would necessarily be considered. It would degrade the Government in the eyes of our citizens and of the world, and go far to make that bank the Government itself.

But, if all these difficulties were overcome, there are others, to me, wholly insurmountable. I belong to the State rights party, which, at all times, from the beginning of the Government to this day, has been opposed to such an institution, as unconstitutional, inexpedient, and dangerous. They have ever dreaded the union of the political and moneyed power, and the central action of the Government to which it so strongly tends; and, at all times, have strenuously resisted their junction. Time and experience have confirmed the truth of their principles, and this, above all other periods, is the one at which it would be most dangerous to depart from them. Acting on them, I have never given my countenance or support to a national bank, but under a compulsion which I felt to be imperious, and never without an open declaration of my opinion as unfavorable to a bank.

In supporting the bank of 1816, I openly declared that, as a question *de novo*, I would be decidedly against the bank, and would be the last to give it my support. I also stated that, in supporting the bank then, I yielded to the necessity of the case, growing out of the then existing and long established connexion between the Government and the banking system. I took the ground, even at that early period, that so long as the connexion existed; so long as the Government received and paid away bank notes as money, they were bound to regulate their value, and had no alternative but the establishment of a national bank.

I found the connexion in existence and established before my time, and over which I could have no control. I yielded to the necessity in order to correct the disordered state of the currency, which had fallen exclusively under the control of the States. I yielded to what I could not reverse, just as any member of the Senate now would, who might believe that Louisiana was unconstitutionally admitted into the Union, but who would, nevertheless, feel compelled to vote to extend the laws to that State, as one of its members, on the ground that its admission was an act, whether constitutional or unconstitutional, which he could not reverse.

In 1834, I acted in conformity to the same principle, in proposing the renewal of the bank charter, for a short period. My object, as expressly avowed, was to use the bank to break the connexion between the Government and the banking system gradu-

ally, in order to avert the catastrophe which has now befallen us, and which I then clearly perceived. But the connexion, which I believed to be desirable in 1816, has now been broken by operation of law. It is now an open question. I feel myself free, for the first time, to choose my course on this important subject, and, in opposing a bank, I act in conformity to principles which I have entertained ever since I have fully investigated the subject.

But my opposition to a re-union with the banks is not confined to objections limited to a national or State banks. It goes beyond, and comprehends others of a more general nature relating to the currency, which to me are decisive. I am of the impression that the connexion has a most pernicious influence over bank currency; that it tends to disturb that stability and uniformity of value which is essential to a sound currency; and is among the leading causes of that tendency to expansion and contraction, which experience has shown is incident to bank notes as a currency. They are, in my opinion, at best, without the requisite qualities to constitute a currency even when unconnected with the Government; and are doubly disqualified by reason of that connexion, which subjects them to sudden expansions and contractions, and exposes them to fatal catastrophes, such as the present.

I will explain my views. A bank note circulates not merely on account of the credit of the institution by which it is issued, but because Government receives it like gold and silver in all its dues, and thus adds its own credit to that of the bank. It, in fact, virtually endorses on the note of every specie-paying bank, "receivable by Government in its dues." To understand how greatly this adds to the circulation of bank notes, we must remember that Government is the great money dealer of the country, and the holder of immense public domains, and that it has the power of creating a demand against every citizen as high as it pleases, in the shape of a tax, or duty, which can be discharged, as the law now is, only by bank notes or gold and silver. This, of course, cannot but add greatly to the credit of bank notes, and contribute much to their circulation, though it may be difficult to determine with any precision to what extent. It certainly is very great. For why is it that an individual of the first credit, whose responsibility is so indisputable that his friend of equal credit endorses his note for nothing, should put his with his friend's, being their joint credit, into a bank, and take out the notes of the bank, which is, in fact, but the credit of the bank itself, and pay six per cent. discount between the credit of himself and his friend and that of the bank? The known and established credit of the bank may be one reason, but there is another and powerful one: the Government treats the credit of the bank as gold and silver in all its transactions, and does not treat the credit of individuals in the same manner. To test the truth, let us reverse the case, and suppose the Government to treat the joint credit of the individuals as money, and not the credit of the bank; and is it not obvious, that, instead of borrowing from the bank, and paying six per cent. discount, the bank would be glad to borrow from them on the same terms. From this we may perceive the powerful influence, which bank circulation derives from the connexion with the credit of the Government.

It follows, as a necessary consequence, that to the extent of this influence, the issues of the Banks expand and contract with the expansion and contraction of the fiscal action of the Government; with the increase of its duties, taxes, income, and expenditure; with the deposits in its vaults acting as additional capital, and the amount of bank notes withdrawn, in consequence, from circulation; all of which must directly affect the amount of their business and issues, and bank currency must of course partake of all those vibrations to which the fiscal action of the Government is necessarily exposed, and, when great and sudden, must expose the system to catastrophes such as we now witness. In fact, a more suitable instance cannot be selected to illustrate the truth of what I assert, than the present; as I shall proceed to show.

To understand the causes which have led to the present state of things, we must go back to the year 1824, when the tariff system triumphed in Congress—a system which imposed duties, not for the purpose of revenue, but to encourage the industry of one portion of the Union at the expense of the other. This was followed up by the act of 1828, which consummated the system. It raised the duties so extravagantly, that out of an annual importation of

sixty-four millions, thirty-two passed into the Treasury; that is, Government took one half for the liberty of introducing the other. Countless millions were thus poured into the Treasury beyond the wants of the Government, which became in time the source of the most extravagant expenditures. This vast increase of receipts and expenditures was followed by a corresponding expansion of the business of the banks. They had to discount and issue freely to enable the merchants to pay their duty bonds, as well as to meet the vastly increased expenditures of the Government. Another effect followed the act of 1828, which gave a still farther expansion to the action of the banks, and which is worthy of notice. It turned the exchange with England in favor of this country. That portion of the proceeds of our exports, which, in consequence of the high duties, could no longer return with profit, in the usual articles which we had been in the habit of receiving principally from that country in exchange for our exports, returned in gold and silver, in order to purchase similar articles at the North. This was the first cause which gave that western direction to the precious metals, the revulsive return of which has been followed by so many disasters. With the exchange in our favor, and consequently no demand for gold and silver abroad, and the vast demand for money attendant on an increase of the revenue, almost every restraint was removed on the discounts and issues of the banks, especially in the northern section of the Union, where these causes principally operated. With their increase, wages and prices of every description rose in proportion, followed of course by an increasing demand on the banks for further issues. This is the true cause of that expansion of the currency, which began about the commencement of the late administration; but which was erroneously charged by it to the Bank of the United States. It rose out of the action of the Government.

The bank, in increasing its business, acted in obedience to the condition of things at the time, and in conformity with the banks generally in the same section. It was at this juncture that the late administration came into power—a juncture remarkable in many respects, but more especially in relation to the question of the currency. Most of the causes which have since terminated in the complete prostration of the banks and the commercial prosperity of the country were in full activity.

Another cause, about that time, (I do not remember the precise date,) began to produce powerful effects. I refer to the last renewal of the charter of the Bank of England. It was renewed for ten years, and, among other provisions, contained one making the notes of that bank a legal tender in all cases except between the bank and its creditors. The effect was to dispense still further with the use of the precious metals in that great commercial country, which, of course, caused them to flow out in every direction through the various channels of its commerce. A large portion took their direction hitherward, and served still further to increase the current, which, from causes already enumerated, was flowing so strongly in this direction; and which still further increased the force of the returning current, on the turn of the tide.

The administration did not comprehend the difficulties and dangers which surrounded it. Instead of perceiving the true reason of the expansion of the currency, and adopting the measures necessary to arrest it, they attributed it to the Bank of the United States, and made it the cause or pretext for waging war on that institution. Among the first acts of hostility, the deposits were removed, and transferred to selected State banks, the effect of which, instead of resisting the tendency to expansion, was to throw off the only restraint that held the banking institutions of the country in check; and of course gave to the swelling tide, which was destined to desolate the country, a powerful impulse. Banks sprung up in every direction; discounts and issues increased almost without limitation; and an immense surplus revenue accumulated in the deposit banks, which, after the payment of the public debt, the most extravagant appropriations could not exhaust, and which acted as additional banking capital. The value of money daily depreciated; prices rose; and then commenced those unbounded speculations, particularly in public lands which was transferred, by millions of acres, from the public to the speculators for worthless bank notes, till at length the swelling flood was checked, and the revulsive current burst its barriers, and overspread and desolated the land.

The first check came from the Bank of England, which, alarmed at the loss of its precious metals, refused to discount American bills, in order to prevent a further decrease of its cash means, and cause a return of those which it had lost. Then followed the execution of the deposit act, which, instead of a remedial measure, as it might have been made if properly executed, was made the instrument of weakening the banks at the point of pressure, especially in the great metropolis of the Union, where so large a portion of the surplus revenue was accumulated. And, finally, the Treasury order, which still further weakened those banks, by withdrawing their cash means to be invested in public lands in the west.

It is often easy to prevent what cannot be remedied, which the present instance strongly illustrates. If the administration had formed a true conception of the danger in time, what has since happened might have then been easily averted. The near approach of the expiration of the charter of the United States Bank would have afforded ample means of staying the desolation, if it had been timely and properly used. I saw it then, and purposed to renew the charter, for a limited period, with such modifications as would have effectually resisted the increasing expansion of the currency; and, at the same time, gradually and finally, wear out the connexion between the bank and the Government. To use the expression I then used, "to unbank the banks;" to let down the system easily, and so to effect the separation between the bank and the Government as to avoid the possibility of that shock which I then saw was inevitable without some such remedy. The moment was eminently propitious. The precious metals were flowing in on us from every quarter, and the vigorous measures I purposed to adopt in the renewal of the charter, would have effectually arrested the increase of banks and checked the excess of their discounts and issues; so that the accumulating mass of gold and silver, instead of being converted into bank capital and swelling the tide of paper circulation, would have been substituted in the place of bank notes, as a permanent and wholesome addition to the currency of the country.

But neither the administration nor the opposition sustained me, and the precious opportunity passed unseized. I then clearly saw the coming calamity was inevitable, and it has neither arrived sooner, nor is it greater, than what I expected.

Such are the leading causes which have produced the present disordered state of the currency. There are others of a minor character, connected with the general condition of the commercial world and the operation of the Executive branch of the Government, but which, of themselves, would have produced but little effect. To repeat the causes, in a few words, the vast increase which the tariff of 1824 and 1828 gave to the fiscal action of the Government, combined with the causes I have enumerated, gave the first impulse to the expansion of the currency. These, in turn, gave that extraordinary impulse to overtrading and speculation (they are effects and not causes) which has finally terminated in the present calamity. It may thus be ultimately traced to the connexion between the banks and the Government; and it is not a little remarkable that the suspension of specie payments in 1816 in this country, and that of 1797 in Great Britain, were produced by like causes.

There is another reason against the union of the Government and the banks, intimately connected with that under consideration, which I shall next proceed to state. It gives a preference to one portion of citizens over another; that is neither fair, equal, nor consistent with the spirit of our institutions.

That the connexion between the bank and the Government, the receiving and paying away their notes as cash, and the use of the public money from the time of the collection to the disbursement, is the source of immense profit to the banks, cannot be questioned. It is impossible, as I have said, to ascertain with any precision to what extent their issues and circulation depend upon it, but it certainly constitutes a large proportion. A single illustration may throw light upon this point. Suppose the Government were to take up the veriest beggar in the street, and enter into a contract with him that nothing should be received in payment of its dues or for the sales of its public lands in future, except gold and silver and his promissory notes, and that he should have the use of the public funds from the time of their collection until their disbursement.

Can any one estimate the wealth which such a contract would confer? His notes would circulate far and wide over the whole extent of the Union; would be the medium through which the exchanges of the country would be performed; and his ample and extended credit would give him a control over all the banking institutions and moneyed transactions of the community. The possession of a hundred millions would not give a control more effectual. I ask, would it be fair, would it be equal, would it be consistent with the spirit of our institutions, to confer such advantages on any individual? And if not on one, would it be if conferred on any number? And if not, why should it be conferred on any corporate body of individuals? How can they possibly be entitled to benefits so vast, which all must acknowledge could not be justly conferred on any number of unincorporated individuals?

I state not these views with any intention of bringing down odium on banking institutions. I have no unkind feeling towards them whatever. I do not hold them responsible for the present state of things. It has grown up gradually, without either the banks or the community perceiving the consequences which have followed the connexion between them. My object is to state facts as they exist, that the truth may be seen in time by all. This is an age of investigation. The public mind is broadly awake upon this all important subject. It affects the interests and condition of the whole community, and will be investigated to the bottom. Nothing will be left unexplored, and it is for the interest of both the banks and of the community, that the evils incident to the connexion should be fully understood in time, and the connexion be gradually terminated, before such convulsions shall follow as to sweep away the whole system, with its advantages as well as its disadvantages.

But it is not only between citizen and citizen that the connexion is unfair and unequal. It is as much so between one portion of the country and another. The connexion of the Government with the banks, whether it be with a combination of State banks or with a national institution, will necessarily centralize the action of the system at the principal point of collection and disbursement, and at which the mother bank, or the head of the league of State banks, must be located. From that point the whole system, through the connexion with the Government, will be enabled to control the exchanges both at home and abroad; and with it, the commerce, foreign and domestic, including exports and imports.

After what has been said, these points will require but little illustration. A single one will be sufficient; and I will take, as in the former instance, that of an individual.

Suppose, then, the Government, at the commencement of its operation, had selected an individual merchant, at any one point in the Union, say New York, and had connected itself with him, as it has with the banks, by giving him the use of the public funds from the time of their collection until their disbursement, and of receiving and paying away, in all its transactions, nothing but his promissory notes, except gold and silver. Is it not manifest that a decisive control would be given to the port where he resided, over all the others; that his promissory notes would circulate every where, through all the ramifications of commerce; that they would regulate exchanges; that they would be the medium of paying duty bonds; and that they would attract the imports and exports of the country to the port where such extraordinary facilities were afforded? If such would clearly be the effects in the case supposed, it is equally clear that the concentration of the currency at the same point, through the connexion of the Government with the banks, would have equal if not greater effects; and that, whether one general bank should be used as an agent, or a league of banks, which should have their centre there. To other parts of the country, the trifling advantages which a branch or deposit bank would give, in the safe keeping of the public revenue, would be as nothing, compared to the losses caused to their commerce by centralizing the moneyed action of the country at a remote point. Other gentlemen can speak for their own sections; I can speak with confidence of that which I have the honor in part to represent. The entire staple States, I feel a deep conviction, banks and all, would, in the end, be great gainers by the disaversion, whatever might be the temporary inconvenience. If there be any other section in which

the effects will be different, it would be but to confirm the views which I have presented.

As connected with this, there is a point well deserving consideration. The union between bank and Government is not only a main source of that dangerous expansion and contraction in the banking system, which I have already illustrated, but is also one of the principal causes of that powerful and almost irresistible tendency to the increase of banks, which even its friends see and deplore. I dwell on this point on a former occasion, (on Mr. Webster's motion to renew the bank charter in 1833,) and will not repeat what I then said. But, in addition to the causes then enumerated, there are many others very powerful, and among others the one under consideration. They all may be summed up in one general cause. We have made banking too profitable; far, very far, too profitable; and, I may add, influential. One of the most ample sources of this profit and influence may be traced, as I have shown, to the connexion with the Government; and is, of course, among the prominent causes of the strong and incessant tendency of the system to increase, which even its friends see must finally overwhelm either the banks or the institutions of the country. With a view to check its growth, they have proposed to limit the number of banks and the amount of banking capital by an amendment of the constitution; but it is obvious, that the effects of such an amendment, if it were practicable, would but increase the profits and influence of bank capital; and that, finally, it would justly produce such indignation on the part of the rest of the community against such unequal advantages, that in the end, after a long and violent struggle, the overthrow of the entire system would follow. To obviate this difficulty, it has been proposed to add a limitation upon the amount of their business; the effects of which would be the accommodation of favorites to the exclusion of the rest of the community, which would be no less fatal to the system. There can be, in fact, but one safe and consistent remedy; the rendering banking, as a business, less profitable and influential; and the first and decisive step towards this, is a severance between the banks and the Government. To this may be added, some effectual limitation on the denomination of the notes to be issued, which would operate in a similar manner.

I pass over other important objections to the connexion; the corrupting influence and the spirit of speculation which it spreads far and wide over the land. Who has not seen and deplored the vast and corrupting influence brought to bear upon the legislatures to obtain charters, and the means necessary to participate in the profits of the institutions. This gives a control to the Government, which grants such favors, of a most extensive and pernicious character; all of which must continue to spread and increase, if the connexion should continue, until the whole community must become one contaminated and corrupted mass.

There is another, and a final reason, which I shall assign against the reunion with the banks. We have reached a new era with regard to these institutions. He who would judge of the future by the past, in reference to them, will be wholly mistaken. The year 1833 marks the commencement of this era. That extraordinary man, who had the power of imprinting his own feelings on the community, then commenced his hostile attacks, which have left such effects behind, that the war then commenced against the banks, I clearly see, will not terminate, unless there be a separation between them and the Government—until one or the other triumphs—till the Government becomes the bank, or the bank the Government. In resisting their union I act as the friend of both. I have, as I have said, no unkind feeling toward the banks. I am neither a bank man, nor an anti-bank man. I have had little connexion with them. Many of my best friends, for whom I have the highest esteem, have a deep interest in their prosperity, and as far as friendship or personal attachment extends, my inclination would be strongly in their favor. But I stand up here as the representative of no particular interest. I look to the whole, and to the future as well as the present; and I shall steadily pursue that course which, under the most enlarged view, I believe to be my duty. In 1834, I saw the present crisis. I in vain raised a warning voice, and endeavored to avert it. I now see, with equal certainty, one far more portentous. If this struggle is to go on—if the banks will insist upon a reunion with the Government, against the sense of a large

and influential portion of the community—and, above all, if they should succeed in effecting it, a reflux flood will inevitably sweep away the whole system. A deep popular excitement is never without some reason, and ought ever to be treated with respect; and it is the part of wisdom to look timely into the cause, and correct it before the excitement shall become so great as to demolish the object, with all its good and evil, against which it is directed.

The only safe course for both Government and banks, is to remain as they are, separated—each in the use of their own credit and in the management of their own affairs. The less the control and influence of the one over the other the better. Confined to their legitimate sphere, that of affording temporary credit to commercial and business men, bank notes would furnish a safe and convenient circulation in the range of commerce and business, within which the banks may be respectively situated, exempt almost entirely from those fluctuations and convulsions to which they are now so exposed; or if they should occasionally be subject to them, the evil would be local and temporary, leaving undisturbed the action of the Government, and the general currency of the country, on the stability of which the prosperity and safety of the community so much depend.

I have now stated my objections to the reunion of the Government and the banks. If they are well founded; if the State banks are of themselves incompetent agents; if a bank of the United States be impracticable, or if practicable, would, at this time, be the destruction of a large portion of the existing banks, and of renewed and severe pecuniary distress; if it would be against the settled conviction of an old and powerful party, whose opposition time cannot abate; if the Union of Government and banks adds to the unfitness of their notes for circulation, and be unjust and unequal between citizen and citizen, and one portion of the Union and another; and, finally, if it would excite an implacable and obstinate war, which could only terminate in the overthrow of the banking system, or the institutions of the country, it then remains that the only alternative would be permanently to separate the two, and to reorganize the Treasury so as to enable it to perform those duties which have heretofore been performed by the banks as its fiscal agents. This proposed reorganization has been called a sub-treasury—an unfortunate word, calculated to mislead and conjure up difficulties and dangers that do not in reality exist. So far from an experiment, or some new device, it is only returning to the old mode of collecting and disbursing public money, which for thousands of years, has not the practice of all enlightened people till within the last century.

In what manner it is intended to reorganize the Treasury by the bill reported, I do not know. I have been too much engaged to read it; and I can only say, that for one, I shall assent to no arrangement which provides for a Treasury bank, or that can be perverted into one. If there can be any scheme more fatal than a reunion with the banks at this time, it would be such a project. Nor will I give my assent to any arrangement which shall add the least unnecessary patronage. I am the sworn foe to patronage, and have done as much and suffered as much in resisting it as any one. Too many years have passed over me to change, at this late day, my course or principles. But I will say, that it is impossible so to organize the Treasury for the performance of its own functions, as to give to the Executive a tenth part of the patronage it will lose by the proposed separation, which, when the bill for the reorganization comes up, I may have an opportunity to show. I have ventured this assertion after much reflection, and with entire confidence in its correctness.

But something more must be done besides the reorganization of the Treasury. Under the resolution of 1816, bank notes would again be received in the dues of the Government, if the banks should resume specie payments. The legal, as well as the actual connexion, must be severed. But I am opposed to all harsh or precipitate measures. No great process can be effected without a shock, but through the agency of time. I accordingly propose to allow time for the final separation; and with this view, I have drawn up an amendment to this bill, which I shall offer at the proper time, to modify the resolution of 1816, by providing that after the first of January next, three fourths of all sums due to the

Government may be received in the notes of specie-paying banks; and that after the 1st of January next following, one half; and after the first of January next subsequent, one fourth; and after the 1st of January thereafter, nothing but the legal currency of the United States, or bills, notes, or paper issued under their authority, and which may by law be authorized to be received in their dues. If the time is not thought to be ample, I am perfectly disposed to extend it. The period is of little importance in my eyes, so that the object be effected.

In addition to this, it seems to me that some measure, of a remedial character, connected with the currency, ought to be adopted, to ease off the pressure while the process is going through. It is desirable that the Government should make as few and small demands on the specie market as possible during the time, so as to throw no impediment in the way of the resumption of specie payments. With this view, I am of the impression that the sum necessary for the present wants of the Treasury should be raised by a paper, which should at the same time have the requisite qualities to enable it to perform the functions of a paper circulation. Under this impression, I object to the interest to be allowed on the Treasury notes, which this bill authorizes to be issued, on the very opposite ground that the Senator from Massachusetts bestows his approbation. He approves of interest, because it would throw them out of circulation into the hands of capitalists, as a convenient and safe investment; and I disapprove, because it will have that effect. I am disposed to ease off the process; he, I would suppose, is very little solicitous on that point.

But I go farther. I am of the impression, to make this great measure successful and secure it against reaction, some stable and safe medium of circulation, to take the place of bank notes in the fiscal operations of the Government, ought to be issued. I intend to propose nothing. It would be impossible, with so great a weight of opposition, to pass any measure without the entire support of the administration; and, if it were, it ought not to be attempted where so much must depend on the mode of execution. The best measure that could be devised might fail, and impose a heavy responsibility on its author, unless it met with the hearty approbation of those who are to execute it. I then intend merely to throw out suggestions, in order to excite the reflection of others on a subject so delicate, and of so much importance, acting on the principle that it is the duty of all in so great a juncture to present their views without reserve.

It is, then, my impression, that, in the present condition of the world, a paper currency, in some form, if not necessary, is almost indispensable in financial and commercial operations of civilized and extensive communities. In many respects, it has a vast superiority over a metallic currency, especially in great and extended transactions, by its greater cheapness, lightness, and the facility of determining the amount. The great desideratum is, to ascertain what description of paper has the requisite qualities of being free from fluctuation in value, and liability to abuse, in the greatest perfection. I have shown, I trust, that the bank notes do not possess these requisites in a degree sufficiently high for this purpose. I go farther. It appears to me, after bestowing the best reflection I can give the subject, that no convertible paper, that is, no paper whose credit rests upon a promise to pay, is suitable for currency. It is the form of credit proper in private transactions between man and man, but not for a standard of value, to perform exchanges generally, which constitute the appropriate functions of money or currency. The measure of safety in the two cases are wholly different. A promissory note, or convertible paper, is considered safe so long as the drawer has ample means to meet his engagements; and in passing from hand to hand, regard is had only to his ability and willingness to pay. Very different is the case in currency. The aggregate value of the currency of a country necessarily bears a small proportion to the aggregate value of its property. This proportion is not well ascertained, and is probably subject to considerable variation in different countries, and at different periods in the same country. It may be assumed conjecturally, in order to illustrate what I say, at one to thirty. Assuming this proportion to be correct, which probably is not very far from the truth, it follows that, in a sound condition of the country where the currency is metallic, the aggregate value of the coin is not more than one in thirty of the aggregate value of the property. It also

follows that an increase in the amount of the currency, by the addition of a paper circulation of no intrinsic value, but increases the nominal value of the aggregate property of the country in the same proportion that the increase bears to the whole amount of currency; so that, if the currency be doubled, the nominal value of the property will also be doubled. Hence it is, that when the paper currency of a country is in the shape of promissory notes, there is a constant tendency to excess. We look for their safety to the ability of the drawer, and so long as his means are ample to meet his engagements there is no distrust, without reflecting that, considered as currency, it cannot safely exceed one in thirty in value compared to property; and the delusion is further increased by the constant increase in value of property, with the increase of the notes in circulation, so as to maintain the same relative proportion. It follows that a Government may safely contract a debt, many times the amount of its aggregate circulation; but, if it were to attempt to put its promissory notes in circulation in amount equal to its debts, an ex-losion in the currency would be inevitable. And hence, with other causes, the constant tendency to an excessive issue of bank notes in prosperous times, when so large a portion of the community are anxious to obtain accommodation, and who are disappointed when negotiable paper is refused by the banks, not reflecting that it would not be safe to discount beyond the limits I have assigned for a safe circulation, however good the paper offered.

On what, then, ought a paper currency to rest? I would say on demand and supply simply which regulates the value of every thing else—the constant demand which the Government has on the community for its necessary supplies. A medium, resting on this demand, which simply obligates the Government to receive it in all of its dues, to the exclusion of every thing else, except gold and silver, and which shall be optional with those who have demands on Government to receive or not, would, it seems to me, be as stable in its value as those metals themselves, and be as little liable to abuse as the power of coining. It would contain within itself a self-regulating power. It could only be issued to those who had claims on the Government, and to those only with their consent, and, of course, only at or above par with gold and silver, which would be its habitual state; for, as far as the Government was concerned, it would be equal, in every respect, to gold and silver, and superior in many, particularly in regulating the distant exchanges of the country. Should, however, a demand for gold and silver from abroad, or other accidental causes, depress it, temporarily, as compared with the precious metals, it would then return to the Treasury, and as it could not be paid out during such depression, its gradual diminution in the market would soon restore it to an equality, when it would again flow out into the general circulation. Thus there would be a constant alternate flux and reflux into and from the Treasury, between it and the precious metals; but if at any time a permanent depression in its value be possible from any cause, the only effect would be to operate as a reduction of taxes on the community, and the only sufferer would be the Government itself. Against this, its own interest would be a sufficient guarantee.

Nothing but experience can determine what amount and of what denominations might be safely issued; but it may be safely assumed that the country would absorb an amount greatly exceeding its annual income. Much of its exchanges, which amount to a vast sum, as well as its banking business, would revolve about it, and many millions would thus be kept in circulation beyond the demands of the Government. It may throw some light on this subject to state that North Carolina, just after the revolution, issued a large amount of paper, which was made receivable in dues to her. It was also made a legal tender, but which, of course, was not obligatory after the adoption of the federal constitution. A large amount, say between four and five hundred thousand dollars, remained in circulation after that period, and continued to circulate for more than twenty years at par with gold and silver during the whole time, with no other advantage than being received in the revenue of the State, which was much less than \$100,000 per annum. I speak on the information of citizens of that State, on whom I can rely.

But, whatever may be the amount that can be circulated, I hold it clear that, to that amount, it would be as stable in value as gold and silver itself,

provided the Government be bound to receive it exclusively with those metals in all its dues, and that it be left perfectly optional with those who have claims on the Government to receive it or not. It will also be a necessary condition that notes of too small a denomination should not be issued, so that the Treasury shall have ample means to meet all demands, either in gold or silver, or the bills of the Government, at the option of those who have claims on it. With these conditions no farther variation could take place between it and gold and silver, than that which would be caused by the action of commerce. An unusual demand from abroad for the metals, would, of course, raise them a little in their relative value, and depress, relatively, the Government bills in the same proportion, which would cause them to flow into the Treasury, and gold and silver to flow out; while, on the contrary, an increased demand for the bills in the domestic exchange would have the reverse effect, causing, as I have stated, an alternate flux and reflux into the Treasury, between the two, which would at all times keep their relative values either at or near par.

No one can doubt that the fact of the Government receiving and paying away bank notes in all its fiscal transactions, is one of the principal sources of their great circulation; and it was mainly on that account that the notes of the late Bank of the United States so freely circulated all over the Union. I would ask, then, why should the Government mingle its credit with that of private corporations? No one can doubt but that the Government credit is better than that of any bank—more stable and more safe. Why then should it mix it up with the less perfect credit of those institutions? Why not use its own credit to the amount of its own transactions? Why should it not be safe in its own hands, while it shall be considered safe in the hands of eight hundred private institutions scattered all over the country, and which have no other object but their own private profits, to increase which, they almost constantly extend their business to the most dangerous extremes? And why should the community be compelled to give six per cent. discount for the Government credit blended with that of the banks, when the superior credit of the Government could be furnished separately, without discount, to the mutual advantage of the Government and the community? Why, let me ask, should the Government be exposed to such difficulties as the present, by mingling its credit with the banks, when it could be exempt from all such by using by itself its own safer credit? It is time the community, which has so deep an interest in a sound and cheap currency, and the equality of the laws between one portion of the citizens and the country and another, should reflect seriously on these things; not for the purpose of oppressing any interest, but to correct gradually disorders of a dangerous character, which have insensibly in the long course of years, without being perceived by any one, crept into the state.

The question is not between credit and no credit, as some would have us believe, but in what form credit can best perform the functions of a sound and safe currency. On this important point, I have freely thrown out my ideas, leaving it to this body and the public to determine what they are worth. Believing that there might be a sound and safe paper currency founded on the credit of Government exclusively, I was desirous that those who are responsible and have the power, should have availed themselves of the opportunity of the temporary deficit of the Treasury, and the postponement of the fourth instalment intended to be deposited with the States, to use them as the means of affording a circulation for the present relief of the country and the banks, during the process of separating them from Government; and, if experience should justify it, of furnishing a permanent and safe circulation, which would greatly facilitate the operations of the Treasury, and afford incidentally much facility to the commercial operations of the country. But a different direction was given, and when the alternative was presented of a loan or the withholding the fourth instalment from the States, I did not hesitate to give a decided vote for withholding it. My aversion to a public debt is deep and durable. It is, in my opinion, pernicious, and is little short of a fraud on the public. I saw too much of it during the late war not to understand something of the nature and character of public loans. Never was a country more egregiously imposed on.

Having now presented my views of the course and the measures which the permanent policy of the country, looking to its liberty and lasting prosperity, requires, I come finally to the question of relief. I have placed this last, not that I am devoid of sympathy for the country in the pecuniary distress which now pervades it. No one struggled earlier or longer to prevent it, than myself; nor can any one more sensibly feel the wide spread blight, which has suddenly blasted the hopes of so many, and precipitated thousands from affluence to poverty. The desolation has fallen mainly on the mercantile class—a class which I have ever held in the highest estimation. No country ever had a superior body of merchants; of higher honor, of more daring enterprise, or of greater skill and energy. The ruin of such a class is a heavy calamity; and I am solicitous, among other things, to give such stability to our currency as to prevent the recurrence of a similar calamity hereafter. But it was first necessary, in the order of things, that we should determine what sound policy, looking to the future, demands to be done at the present juncture, before we consider the question of relief; which, as urgent as it may be, is subordinate and must yield to the former. The patient lies under a dangerous disease, with a burning thirst and other symptoms, which distresses him more than the vital organs which are attacked. The skilful physician first makes himself master of the nature of the disease, and then determines on the treatment necessary for the restoration of health. This done, he next alleviates the distressing symptoms, as far as is consistent with the restoration of health, and no farther. Such shall be my course. As far as I possibly can, consistently with the views I entertain, and what I believe necessary to restore the body politic to health, I will do every thing in my power to mitigate the present distress. Farther I cannot go.

After the best reflection, I am of the opinion that the Government can do but little in the way of relief, and that it is a case which must be mainly left to the constitution of the patient, who, thank God, is young, vigorous, and robust, with a constitution sufficient to sustain and overcome the severest attack. I dread the doctor and his drugs much more than the disease itself. The distress of the country consists in its indebtedness, and can only be relieved by payment of its debts. To effect this, industry, frugality, economy, and time, are necessary. I rely more on the growing crop—on the cotton, rice, and tobacco of the South—than on all the projects or devices of politicians. I am utterly opposed to all coercion by this Government. But Government may do something to relieve the distress. It is out of debt, and is one of the principal creditors both of the banks and of the merchants, and should set an example of liberal indulgence. This I am willing to give freely. I am also prepared to vote freely the use of Government credit, in some safe form, to supply any deficit in the circulation during the process of recovery, as far as its financial wants will permit. I see not what more can be safely done. But my vision may be obtuse upon this subject. Those who differ from me, and who profess so much sympathy for the public, seem to think that much relief may be afforded. I hope they will present their views. I am anxious to hear their prescriptions, and I assure them, that whatever they may propose, if it shall promise relief, and be not inconsistent with the course which I deem absolutely necessary for the restoration of the country to perfect health, shall cheerfully receive my support. They may be more keen-sighted than I am, as to the best means of relief, but cannot have a stronger disposition to afford it.

We have, Mr President, arrived at a remarkable era in our political history. The days of legislative and executive encroachments, of tariffs and surpluses, of bank and public debt, and extravagant expenditure, are past for the present. The Government stands in a position disentangled from the past, and freer to choose its future course than it ever has been since its commencement. We are about to take a fresh start. I move off under the State rights banner, and go in the direction which I have been so long moving. I seize the opportunity thoroughly to reform the Government; to bring it back to its original principles; to retrench and economize, and rigidly to enforce accountability. I shall oppose, strenuously, all attempts to originate a new debt; to create a national bank; to reunite the political and money powers (more dangerous than Church and State) in any form or

shape; to prevent the disturbances of the compromise, which is gradually removing the last vestige of the tariff system; and mainly, I shall use my best efforts to give an ascendancy to the great conservative principle of State sovereignty, over the dangerous and despotic doctrine of consolidation. I rejoice to think that the Executive Department of the Government is now so reduced in power and means, that it can no longer rely on its influence and patronage to secure a majority. Henceforward it can have no hope of supporting itself but on wisdom, moderation, patriotism, and devoted attachment to the Constitution, which I trust will make it, in its own defence, an ally in effecting the reform which I deem indispensable to the salvation of the country and its institutions.

I look, sir, with pride to the wise and noble bearing of the little State rights party, of which it is my pride to be a member, throughout the eventful period through which the country has passed since 1824. Experience already bears testimony to their patriotism, firmness, and sagacity, and history will do it justice. In that year, as I have stated, the tariff system triumphed in the councils of the nation. We saw its disastrous political bearings—foresaw its surpluses and the extravagances to which it would lead. We rallied on the election of the late President to arrest it through the influence of the Executive Department of the Government. In this we failed. We then fell back upon the rights and sovereignty of the States, and by the action of a small but gallant State, and through the potency of its interposition, we brought the system to the ground, sustained, as it was, by the opposition and the administration, and by the whole power and patronage of the Government. The pernicious overflow of the Treasury, of which it was the parent, could not be arrested at once. The surplus was seized on by the Executive, and, by its control over the banks, became the fruitful source of Executive influence and encroachment. Without hesitation, we joined our old opponents on the tariff question, but under our own flag and without merging in their ranks, and made a gallant and successful war against the encroachments of the Executive.

That terminated, we part with our late allies in peace, and move forward, lag or onward who may, to secure the fruits of our long but successful struggle, under the old republican flag of '98, which, though tattered and torn, has never yet been lowered, and, with the blessing of God, never shall be with my consent.

### SPEECH OF MR. JONES, OF VIRGINIA.

*In the House of Representatives, Wednesday, September 20, 1837.*—On the bill to postpone the fourth instalment of deposit with the States.

MR. CHAIRMAN: In submitting for the consideration of the Committee the views which I propose to present, it is not my intention to enter upon the wide field of discussion to which the remarks of other gentlemen would seem to invite me; but to confine myself to the subject intended to be embraced by the bill now under consideration. This I propose to do, because the very wide range of debate which has been indulged in by honorable members who have preceded me, seems to have for its object the investigation of subjects which appear to me to have no connection whatever with the one now under consideration, and is not, therefore, likely to aid in the accomplishment of the great object which I have in view, which is, to ascertain the real condition of the finances of the Government, and thus to put it in the power of the representatives of the people understandingly to act upon the very important and delicate subject which has for several days called forth the most anxious deliberation of Congress. This bill has for its object, at present, to withhold from the States the fourth instalment of the surplus revenue, which was directed by the deposit act of the 23d of June, 1836, to be passed over to the States, to be held by them on deposit, upon the terms and conditions specified in that act; and the question arises whether the existing state of things in reference to the financial condition of the Treasury, renders such a measure necessary on the part of the Government, and if necessary, whether Congress can rightfully exercise the power to control that instalment in the

way proposed by the bill; and with a view to a correct understanding of the subject in all its bearings, it may not be amiss now very briefly to advert to the condition of the Treasury at the time of the passage of the deposit act, and to what was likely to be its condition at the close of the present year.

In the month of June, 1836, it had been distinctly ascertained, that at the close of that year there would be in the Treasury near forty millions of dollars of surplus revenue, over and above what would be required for the legitimate wants of the Government, and the accruing revenue for the present year was regarded by all as abundantly sufficient to meet every demand upon the Treasury down to the close of the year.

This surplus, it would be recollected, had not been produced by legislation which had for its object the accumulation of so large an amount, but by causes which have had their due influence in bringing about that general state of embarrassment which it has been alleged now extended itself over the whole country. Into an examination of these causes, it is not my intention now to enter; but it is notorious that, in the face of predictions again and again sent forth to the world from this Capitol, that we should have an empty Treasury and a bankrupt Government, at the time referred to nearly forty millions of dollars of surplus had accumulated in the Treasury in the form of revenue! There it was; and the question was, what was to be done with it? To permit it to remain in the deposit banks was not only to hazard the loss of a very large portion of it, but the banks using it as so much banking capital, on which to extend their issues, loans and discounts, were, by means of these issues, loans, and discounts, receiving from it the most inordinate profits, to be divided among the stockholders; and, at the same time, swelling the flood of depreciated paper money with which the country has been deluged, and thus contributing, as much, perhaps, as any other single cause, to produce that wide-spread embarrassment which has swept over the whole land. It was not, therefore, either safe or prudent to permit it to remain on deposit with the banks.

To loan it to the States was to place it beyond the reach and control of the General Government, to which it rightfully belonged, since the Constitution has, in my opinion, wisely omitted to provide any tribunal, at whose bar one of the sovereign States of this Union can be arraigned to answer for an alleged violation of its contract with the General Government; and to give it to the States was at once to establish a precedent, fraught alike with mischief and with danger.

These are some of the difficulties, on every hand presenting themselves, when it became the duty of Congress to act upon the subject of the surplus revenue. It was in view of these difficulties that the deposit act of June, 1836 had received the sanction of Congress. That act merely provided for the deposit of the surplus revenue with the States, without interest, thus giving to the States the use of the money, without charge, until the necessities of the General Government should render necessary its return, either in part or in whole; and for its punctual return, whenever the necessity should arise, the faith of the States should be solemnly pledged.

We have, then, Mr. Chairman, the question presented, whether the existing state of things in reference to the financial condition of the Treasury, renders it necessary to withhold the fourth instalment in the way proposed by the bill now under consideration.

I am aware, sir, that the examination of this branch of the subject renders necessary a resort to details which will probably be uninteresting to the committee; but the subject is complex in its nature—so much so, that we have heard it again and again repeated by gentlemen in debate, that such was the confusion and obscurity thrown over it by the report of the Secretary of the Treasury, that they could find no data leading to conclusions which enabled them to determine, in their own minds, what would be the actual condition of the Treasury at the close of the present year. As a member of the committee from which this bill has been reported, it became my duty to

give to the report of the Secretary an attentive and patient examination, which has resulted in a conviction upon my own mind that many, if not all, of the difficulties which seem to lie in the way of gentlemen, may very readily be removed by a like attentive and patient investigation on their part. It has also satisfied me that the means at the control of the Secretary are not only insufficient to meet the existing demands upon the Treasury, but that there will be at the close of the present year a deficiency of several millions of dollars. This I think I shall be able to make manifest to the committee from the report of the Secretary, for it is upon that document, confused and obscure as some gentlemen represent it to be, that I shall base the whole of my reasoning.

The Secretary is an officer of the Government, selected to fill that high station, not only on account of his moral virtues, but because of a reputation which he has earned in the service of his country, and which has justly secured to him a large share of public confidence. I, sir, am content to take the official statement of such a man, at least until proof, clear and convincing, shall be adduced that he has erred; then, but not till then, will I consent to throw discredit upon his official conduct. I beg leave then, sir, for a moment, to call the attention of the committee to a short statement I have prepared, and which presents fairly, and, I think, clearly, the liabilities of the Government, with its means of meeting them, and which can scarcely fail to satisfy every candid and unbiassed mind, that its means of payment are not equal to its liabilities by more than six millions of dollars, after excluding from the estimate fifteen millions of dollars of unexpended appropriations, postponed to the next year, but which still remains a charge upon the Treasury.

In the Treasury 1st January, 1838,	\$42,468,859 97
Increased this sum by subsequent returns	1,670,137 52
Receipts for first half year as per Secretary's report	13,187,182 00
Estimated receipts for last half year, including merchants' bonds	9,500,000 00

66,826,179 49

#### Expenditures made, and chargeable on the Treasury.

Three first instalments of deposits	\$27,063,430 80
Balance of third instalment outstanding	1,165,575 18
Expended in first half year	16,733,884 33
Estimated expenditures for last half year	16,000,000 00
For Florida war	1,600,000 00
Expenses of present session of Congress, say	500,000 00
Outstanding balance of appropriations chargeable on the Treasury	16,000,000 00
Fourth instalment of surplus revenue	9,367,214 00

88,430,104 31  
66,826,179 49

Deficit on 1st January, 1838 - 21,603,924 82

Unexpended appropriations postponed to next year, but still a charge on Treasury - 15,000,000 00

6,603,924 82

Error in addition in Secretary's report - 512,263 00

Deficit in Treasury on the 1st day of January, 1838, after postponing \$15,000,000 of unexpended appropriations, as above 6,091,661 82

Mr. Chairman, it is with great deference that I have submitted for the consideration of the committee the foregoing statement; differing as widely as I do, with gentlemen whose opinions are entitled to great respect. With the same document for our guide, the honorable member from Tennessee (Mr. Bell) and myself are almost as wide asunder as the

poles. That gentleman, upon his basis of calculation, makes the surplus in the Treasury on the 1st day of January, 1838, more than twenty millions of dollars; and I show a deficit of almost as large an amount.

[Here Mr. BELL said, the gentleman from Virginia did him injustice in supposing that they had arrived at such opposite conclusions from the same documents; that the surplus shown by him was documented not alone from what appeared in the report of the Secretary, but by going out of that report; and that so far as the gentleman from Virginia had gone, their results were very nearly the same.]

Mr. Chairman, I will never, intentionally, do injustice to the member from Tennessee, either here or elsewhere; and if he had exercised a little patience, I should very soon have relieved him from all apprehensions on that subject, as it was my intention to present the principal points of difference between us, that the committee might have afforded to them an opportunity of deciding for themselves who it was that had fallen into error.

The first position taken by the gentleman from Tennessee (Mr. Bell) was, that the sum of five millions of dollars, which appeared to be in the hands of disbursing officers of the Government, was subject to the control of the Secretary, and should be regarded as so much money in the Treasury. That this amount cannot be regarded as money in the Treasury is obvious, because it had been drawn out by those officers of the Government, on whom the authority was conferred, to meet appropriations made by law, and was not, in point of fact, in the Treasury at the time the report was made. This I regard as a very sufficient answer to the ground which has been relied on. Again: the five millions of dollars in the hands of these disbursing officers must be included, either in the expenditures for the first half of the present year, or else in the estimated expenditures of the last half; and consequently cannot change the result, shown by the report of the Secretary, at the close of the year. But, sir, I have looked back into the past history of the Government, and I believe that no period can be pointed to when there was not a very large amount in the hands of disbursing officers. How could it be otherwise? The officers and soldiers of the army have to be paid through their paymasters; those of the navy through their purser; pensions to be satisfied, treaties carried into execution, and contracts to be complied with. How are these things to be done, without passing over into the hands of disbursing officers money for the purpose? It is true that the amount in the hands of these officers is large, but not so large as it was during the early part of the year, as appeared by a more recent report of the Secretary, lying on the tables of members, and which had been called for by the gentleman from Tennessee; and certainly not more than would seem to be necessary, when it was recollected that the amount appropriated by Congress, at the last session, exceeded thirty-two millions of dollars, and that to be disbursed in almost every section of the Union.

The honorable member from Tennessee (Mr. Bell) has also contended, that the estimates of receipts into the Treasury, for the last half year, was not as large as it should have been, by three millions. By referring to the report of the Secretary, it will appear that the receipts in the first half year, deposited in banks, and paid on drafts by collectors and receivers, amounts to \$13,699,445; and the Secretary adds, if no further postponement be granted on duty bonds, it was estimated that the whole receipts for the last half year, from all sources, would be about \$9,500,000; but if the brief extension of the present postponement, brought into view thereafter, and favorably regarded, be directed by Congress, the receipts would probably be about \$7,000,000; while by a postponement of the whole to another year, they would not be likely to exceed \$4,500,000. Here then we have the authority of the Secretary for saying, that in no event will the receipts for the last half year exceed \$9,000,000, while the strong probability is, that they will be reduced to \$4,500,000. And if any thing is to be inferred from what is passing around us, it will certainly warrant the conclusion,

after extending the payments on duty bonds, beyond the present year, as proposed by a bill which has passed the Senate, that the receipts into the Treasury for the last half year, will not exceed \$4,500,000. But the gentleman from Tennessee, to produce his surplus, estimates them at \$10,000,000, making a difference between his estimates, and those of the Secretary, of \$5,500,000 which I consider a fair deduction from the amount of surplus which he supposes will be in the Treasury at the close of the present year.

The gentleman from Tennessee (Mr. Bell) has presented to the committee a statement of items of appropriation, for the present year, amounting to more than six millions of dollars: five millions of which, he contends, may be retrenched, without injury to the public interest. They are appropriations for the building of light-houses, beacons, buoys, the improvement of rivers, harbors, &c.

I concur, sir, entirely with the member from Tennessee, in his opposition to this whole class of appropriations; and, with him, have uniformly voted against them. I am opposed to most of them upon constitutional grounds; but, if I entertained no doubt upon the constitutional question, still I should have been opposed to them; because they lead to wasteful and extravagant expenditures of the public money; and if the member from Tennessee will devise some plan, submit some practicable scheme, by which they can be reached, I will most willingly co-operate with him in the accomplishment of the object he has in view. But is that to be expected? have we not had the aid of the talent and ability of that gentleman in resisting the very laws which provide for these appropriations? have they not been resisted by us both, at every stage? and can he have forgotten the small minority in which we found ourselves on every question? How, then, can he now expect to succeed in cutting down these expenditures, when he has so signally failed in resisting the laws which provide for them. Should he make the attempt, he would, in all probability, be told that some of these works were commenced, some completed, and that others were under contract. Sir, the golden harvest is maturing, and carefully watched over, by those into whose granaries it is destined to go.

I shall notice but one other item in the statement, which has been submitted by the honorable gentleman from Tennessee, (Mr. Bell,) and that is the item of \$12,000,000, based upon the supposed issue of Treasury notes to that amount. He maintains that if the bill authorizing the issue of Treasury notes to the amount of \$12,000,000 shall pass, it will swell the surplus in the Treasury to more than \$20,000,000; so that in order to make up this very large amount of surplus, the gentleman from Tennessee is driven to the necessity of taking into his estimate \$12,000,000, which are not only not in the Treasury, or under the control of the Secretary, but which cannot be placed there without creating a debt, for the payment of which the people are to be ultimately responsible; and here allow me to inquire whether it was ever intended by those who supported the deposit act to incur a debt, in order to make the deposit with the States? To that inquiry I am well assured that all will answer no.

If then, Mr. Chairman, I have succeeded in showing that the sources relied upon by the gentleman from Tennessee are deceptive and fallacious, I must, I think, have succeeded in establishing the truth of my own position, that instead of there being a surplus in the Treasury on the 1st day of January, 1838, there will be the deficit shown in the statement to which I have already had occasion to advert.

An honorable member from Kentucky (Judge Underwood) appears to have satisfied himself that there are other means at the control of the Government, with which to make the fourth instalment with the States. There are, he informs us, held by the Government, three bonds due from the Bank of the States, for the payment of about \$6,000,000 in three equal annual instalments, which will fall due on the 1st of October in the years 1828, 1839, 1840; and he proposes that these three bonds shall be brought into the market, and sold, I presume, under the hammer, to the highest

bidder; and the proceeds of sale passed over to the States, under the deposit act of June, 1836.

I am opposed, Mr. Chairman, to the proposition of the gentleman from Kentucky, for reasons which I will proceed very briefly to assign; in the first place I am opposed to it, because I am unwilling to see the Treasury of the United States converted into a shaving shop; and also because of a conviction upon my own mind, that if they shall be disposed of in the way proposed, it is scarcely to be hoped that they will command their full value. For at no former period of our history, has there been a time when the derangement in the moneyed concerns of the country had been so universal; at no time have the people been borne down by so heavy a weight of debt; at no time has it been more difficult to command money. The cry every where to be heard is, relief, relief. Let these bonds then be brought into the market at such a time, and under such circumstances, and who are to be your bidders? where is the man or set of men to be found, who can advance two millions of dollars to make the purchase? They may be called for, but it will be like calling spirits from the vasty deep: they will not come. One bidder there will be—the Bank of the United States; and unless the agent authorized to make the sale shall be laid under conditions, the bank will dictate the terms, and become the purchaser at its own price.

Again: the Secretary of the Treasury, in reply to the inquiry, "What objects of public expenditure can, with the least injury to the public service, be either wholly dispensed with during the present year, or bear any material reduction?" has informed us that enough of it could and would be postponed till the next year to amount to about fifteen millions of dollars; but that sum will still remain a charge upon the Treasury, to be paid out of the accruing revenue for the next year, or provided for in some other mode; and if the bonds due by the bank be now sold, and the proceeds deposited with the States, the strong probability is, that the Government will be driven to the necessity of resorting to an additional loan to meet the demands upon it.

If, then, it were in the power of the Secretary to control the whole amount now on deposit with the banks, and which is known to be there locked up and wholly unavailable, such has turned out to be the reduction of the revenue, from various sources, during the present year; and such the crippled condition of the finances, growing out of the embarrassed situation of the mercantile community, which has rendered necessary an extension of the time of payment upon their bonds, that it is not possible to make the transfer of the fourth instalment of the surplus revenue to the States without incurring a national debt. The surplus expected to have been in the Treasury on the 1st of October, in point of fact, is not there; nor are there any means at the control of the Government with which to meet the demand. It would seem to me, therefore, that the necessity has arisen when it would become the duty of the Secretary, (if the whole amount had been paid over to the States,) to require its repayment upon the terms prescribed in the act of June, 1836.

Having now shown, as I think I have done, that the necessity exists, I shall proceed to examine the question, whether Congress can rightfully exercise the power to control the fourth instalment, as the bill under consideration proposes. This leads me to examine for a moment the deposit act of June, 1836. What was that act but a temporary expedient, to meet a most unexpected and extraordinary state of things? A measure adopted not to give away, or to loan out, the surplus then in the Treasury; but to place that surplus on deposit with the States, without interest, until the necessities of this Government should render necessary its return.

I know, Mr. Chairman, that there are gentlemen who now choose to regard it as a distribution act; but do they not know, that in that form it could never have received the sanction of Congress, or the approval of the President? And I now invite all who entertain that opinion, carefully to examine the law, and say whether plainer language to exclude such a conclusion could have been employed.

But it is contended by others, that as the law provided that all the money which should be in the Treasury on the 1st day of January, 1837, reserving the sum of five millions of dollars, should be deposited with the States, that the faith of the Government was thereby pledged to execute the deposit act to the letter; and that, whatever may be the necessities of the Government, it can exercise no control whatever over the subject, until the deposit shall have been actually made with the States.

I, Mr. Chairman, would be one of the last, I could hope, sir, the very last, who would be willing to do any act, the tendency of which was, to violate the pledged faith of this Government: if all besides shall be lost, let us maintain untarnished our honor. And if gentleman can satisfy me, that there is any thing in the act of June, 1836, which imposes an obligation, either legal or moral, to make the deposit of the fourth instalment with the States, I will willingly abandon all the opinions I now entertain upon the subject, and in good faith execute every provision of that law to the letter; but if this can not be shown, as I think it can not, what good and sufficient reason can be assigned for incurring a debt, which must be paid by taxation on the people, under a system which is unequal in its operation, unjust in its principles, and absolutely ruinous to the great agricultural interests of the country.

A more rigid rule of interpretation than that contended for, could not be applied to the most highly penal statute; an interpretation which would defeat entirely the plain and obvious spirit and intent of the law, if it did not lead to a violation of the Constitution; and I call upon gentlemen to show what constitutional authority Congress has to pass a law to raise money, not in execution of any of its conceded powers, but for the avowed purpose of making a deposit with the States.

I do not desire to be understood as maintaining that an inconvenience merely, attending any given construction of a law, is sufficient to show such construction to be false, or that to be the true construction which would avoid inconvenience. Where the language of a law is explicit, and the intention evident, whatever may be the inconvenience, such inconvenience must be borne. But in the interpretation of a statute not penal in its character, the plain object of its framers should never be lost sight of; and in order to ascertain what was really intended by those who framed the deposit act, I know of no safer guide than to refer to contemporaneous expositions of it, given at the time of its passage: and I ask, sir, if there was one man at that time who advocated it upon the ground that it was a distribution act? Not one. Does any one now deny that the surplus is the money of this Government? or did it ever enter into the mind of any man that it was to be placed where the Government could not control it?—that it was to be paid over to the States at every hazard, regardless of what might be the wants of the General Government? Such an opinion could not have been seriously entertained by any one; and Congress, with a view to make the operation as easy a one as possible with the deposit banks, provided for its transfer, by instalments, on the first of January, the first of April, the first of July, and the first of October, upon the supposition that at these several periods there would be in the Treasury the respective sums proposed to be transferred. And must not that have been the expectation of the States? In other words, did the General Government intend to do more than merely to transfer the surplus revenue? and could the States have expected more? To suppose that more than this was designed, would be to suppose that Congress intended to incur a debt, for no other purpose under heaven except to deposit it with the States for safe keeping alone.

If, then, Mr. Chairman, I am right in the interpretation which I have placed upon the deposit law, that law has now fully answered its end; it has rid us of the surplus; and there no longer exists an obligation upon the Government, either legal or moral, to transfer the fourth instalment to the States. But again: suppose the transfer shall now be made, would not the Secretary of the Treasury

have the right immediately to require of the States to pay it back? This, I presume, will be admitted by all; and if the power exists to call it back, what good and sufficient reason can be assigned against withholding it?

It has been contended, however, that an expectation has been raised on the part of the States, that the transfer would be made; that upon the faith of that expectation, the States had actually gone on to appropriate the amount; and that such expectation should not now be disappointed. This, sir, may be true, and I doubt not is true, as to many of the States. It may be that the course of legislation on the part of the States may subject them to very serious inconvenience, and possibly to loss; but the inquiry immediately recurs, whose act was it that produced the difficulties with the States? It was the action of the States themselves, through their legislatures; action, too, taken by them, with full knowledge that the money so applied was neither given or loaned, but merely deposited; liable to be called for at any moment, when the wants of the Government should render necessary its return. And the argument from inconvenience, if it be worth any thing, is just as conclusive to prove that the amount, when deposited, could at no future day be called for; for I presume it will never be entirely convenient to pay back the amount. It proves that what was intended, and declared to be a mere deposit for safe keeping, was in truth and in fact a gift, absolute and unconditional. That such was never the intention of Congress, is rendered too plain by the terms of the law itself, to admit even of doubt.

But suppose it shall now be determined to pay over the fourth instalment to the States, how is the amount to be raised? It is not in the Treasury; for, to all practical purposes, we have very nearly an empty Treasury: by this I mean that the available means at the disposal of the Secretary, are not sufficient to meet the demands upon it. How then is the money to be raised? I presume by a loan of some kind, with the faith of the Government pledged for its redemption, but ultimately to be discharged and paid off through the ordinary channels of taxation upon the people. It follows, then, that the people are to be taxed to raise money to distribute among the people. You most graciously give them with one hand, and take back with the other, a like amount; increased, however, by the costs and charges of collection, and also by the amount of interest that may have accrued on the loan. The conclusion seems to me inevitable, that the passage of the bill now under consideration will give to the fourth instalment its proper direction, by placing it in a condition to be applied to the legitimate purposes of the Government for which it was originally intended.

Sir, I have never belonged to that old school of politicians (the federalists) who believed that a national debt was a national blessing. I consider a national debt a national curse, never to be saddled upon my country except under circumstances of the most overruling necessity.

Mr. Chairman, I have heard from every rank of the opposition, the most unqualified condemnations of all the measures proposed by the administration for the relief of people; their condemnations have been poured out in one unbroken torrent upon them; from every quarter we have heard the charge, wrung upon every key, that the measures proposed would afford no relief. I, sir, am not one of those who believe that the halls of legislation are the places to repair the ruined fortunes of men; I hold the doctrine taught by those who are the most revered on the list of our statesmen, that Government shall extend its powers no further than may be necessary to protect individuals in the enjoyment of their constitutional rights and privileges; always guarding them against fraud and violence, but leaving each and every one to the enjoyment of his own industry, and to pursue his own happiness in his own way. Such a Government is not only free, but the most precious of human blessings; to leave man to reap, under its benign protection, the rewards of virtue, industry and prudence, is the precious inheritance of the free-men of this land, purchased at the price of treasure and of blood.

I, sir, admit that it is the duty of the administration to propose measures of relief. Those measures have been offered, and are now before the country, and will be passed upon by the people. But, sir, is it true that they propose no relief? What is the object of the bill now before you, but to apply the money which the people have already paid to the legitimate purposes for which it had been raised, and thus to relieve the country from a national debt, which must, at some future time, be paid through the ordinary channels of taxation? What is the bill by which it is proposed to issue twelve millions of Treasury notes, but additional relief to that large and respectable class of our citizens, the merchants, upon whom has fallen so heavily the present wide-spread and calamitous embarrassments, supplying a substitute for gold and silver with which to meet their engagements with the Government, to aid them in the payment of their foreign debt—while it holds out to all classes important advantages? What is the bill upon your table, which proposed to extend the time of payment on duty bonds—postponing beyond the year the payment of millions of dollars—but relief, substantial relief, to the merchants; relief which places it in their power to extend like relief to their debtors? What is the bill for adjusting the remaining claims on the late deposit banks, but a measure affording similar relief to those banks, and thus putting it in their power still further to accommodate their dealers? Yes, sir, relief to those very banks selected as the depositories of the public money, which, in a time of profound peace, with eighty millions of dollars of specie in the country, had closed their doors against the Government and against the people. In short, sir, what debtor of the Government is it whose case has been regarded with indifference, or to whose petition a deaf ear has been turned? And yet gentlemen can discover no relief in all this.

We know that, in times of sudden embarrassment and distress, all communities are but too apt to look to the Government for too much; and whenever the Government undertakes to interfere in the private pursuits of men, it must, of necessity, in endeavoring to relieve one class, violate the rights of another, holding equal claims upon it. This, sir, has been felt in all its overwhelming force, under your system of tariff laws, which, for years past, has borne down, and oppressed, the people of the South, drawing from their pockets the hard earnings of their honest industry, to sustain (without any adequate return) in another quarter of the Union, the great manufacturing interests which have grown up under it. It has been felt, too, in the exclusive privileges conferred upon the Bank of the United States, now again struggling for existence, and openly advocated here, upon the ground that it is a panacea for every political disaster, and for every national calamity; but I forbear to go into these topics. Let us adopt the measures which have been proposed, and rely, for further relief, upon the enterprise, industry, and frugality of the people. Sir, it is not so much to legislation, as to the growing crop of cotton, tobacco, wheat, and rice that I look for substantial relief. It is the productive labor of the country that is to dispel the gloom that hangs over it, and relieve the embarrassments which press so heavily upon us.

But still, say gentlemen, there is no relief proposed. It is an easy task to find fault with every thing that is the work of man, but somewhat more difficult to remedy the defects complained of. Let those who make the charge devise a better scheme; let them present it, compare it with the one which has been offered, and, if it shall afford more solid and substantial advantages, come from what quarter it may, I, for one, will give to it my humble support.

An honorable member from Pennsylvania (Mr. Biddle) has characterized this bill as another experiment, informing us at the same time that he was heartily sick of experiments. What, I would ask of that gentleman, is the bill under which he now claims for his State one million of dollars, but one of these much abused and untried experiments? an experiment, however, when viewed through the captivating and dazzling medium of a million, is

disarmed of all its terrors. What was our Government itself, as received from the pure hands of our fathers; without a parallel in the annals of the world, but an experiment? What has been the history of the most important measures of the Government, from its foundation down to the present day, but a history of experiments? And, Mr. Chairman, experiments for what? To establish the great truth that man is capable of self-government—a truth that is carrying conviction to the minds of men throughout the civilized world, destined at no distant day to make tyrants tremble on their thrones, while it holds out to the enslaved nations of the earth a plan of political salvation, by which to break the chains that bind them, and elevate them to the condition of freemen.

Mr. Chairman, I am not yet tired of such experiments, but shall give to the bill my cordial support.

### REMARKS OF MR. POTTER, OF PENNSYLVANIA.

*In the House of Representatives, Wednesday, Sept. 27, 1837—On the "bill to postpone the fourth instalment of deposit with the States."*

A desire to give my reasons for my vote on this question, so that it may appear in a correct point of view before the tribunal of the people of my district, has overcome the reluctance I feel at this period in trespassing on the time of the House.

Until recently I could not have imagined that, on the floor of an American Congress, we would hear the clarion notes of triumph, and the shout of joy, at the embarrassments of the National Treasury, produced by the pecuniary distress of the people, and the derangement of the monetary affairs of the country. The question has been discussed as one of an entire withdrawal from the States of a part of the boon proffered them by the deposit act. Not so in my views. Bills are on our files giving time to the merchants and the deposit banks to pay the debts due the Government; and all that is contemplated by that under consideration, is to delay the time of deposit with the States until the situation of the Treasury will warrant it being made, without conflicting with other and pressing interests. The action proposed by the various bills reported, is a plan, taken in unison, to relieve the pressure on the people, by interposing the credit of the nation, and giving time for the panic to allay itself, and confidence be restored in the community. The States are required to bear a portion of the inconvenience for the relief of the people. My sensibilities are enlisted in favor of the States, and none regret more deeply the temporary embarrassments which they may labor under by the postponement of the deposit of the fourth instalment. As they have received three instalments of the surplus, which remain with them untouched, and in future will, in all human probability, receive the fourth, as a measure of relief to the people I go for the bill. As one of the representatives from Pennsylvania, I am constrained to declare my dissent from the opinion expressed, that if it had not been for the wisdom and foresight of the Executive of our State, Pennsylvania would now be looking with "anxiety and trepidation" to the discussions in this House. With her resources, her high credit, her untarnished honor, and unblemished faith in the fulfilment of every engagement, the postponement of the deposit of about nine hundred thousand dollars in her treasury, never could have caused the enterprising and intelligent people of this great State either "anxiety or trepidation!" The ability of Pennsylvania to command any money necessary to carry out her magnificent plans of public improvements, stands upon a proud and lofty eminence, not to be shaken for any such reason, or by any such cause; nor can my concurrence be given to the encomium bestowed upon the foresight of our Chief Magistrate for his veto of the improvement bill, although, if consistent with my ideas of right, nothing would be more gratifying than to place that officer, or any other citizen of my State, on such vantage ground. That measure was political, and intended to procure a different distribution of the funds, appropriated to different ob-

jects at the close of the session, so as to further the interests, and gratify the wishes, of certain leading partisans of the State administration. The result was, that the banks in Philadelphia reaped the benefit, and the people sustained the injury, by this boasted policy and forecast of our "sagacious Chief Magistrate!"

The accumulation of unavailable funds in the National Treasury has induced a syncope, which requires an immediate remedy. This disease has been attributed to an unwise change in the depositary of the public money, and the veto of the bill rechartering the Bank of the United States by the late President. In my mind, the causes of the evil, can be traced to other sources. If the depositary had not been changed, and the bank rechartered, the only difference in our situation would have been that the unavailable funds would have accumulated in one, instead of various banks. The Bank of the United States, under the direction of the same master spirit, with increased powers, is yet in full existence. Was it able to withstand the storm; and has it been exempt from the destiny that overturned, and laid prostrate the other banking institutions of the country? Ah, no! It has shared the fate of its compeers, has also dishonored its bills, and suspended specie payment, with an exhibit of a specie basis to meet its engagements, judging from the last return made to our Executive, which rendered that measure, as necessary for that, as any other bank in our State. It is asserted, this would not have occurred, if it had been a national institution. Authority is at hand, which pronounced, on a memorable occasion, "*that the new charter had the advantage over the old one.*" This was the deliberate judgment of the distinguished and able president of the late and present Bank of the United States. The reasons he assigned for this preference were, "in its longer duration; in the enlargement of its powers; in confining the rate of discount at half per cent. for thirty days to loans in the State of Pennsylvania, leaving the bank elsewhere to the rate of interest fixed by the local laws; in its exemption from the expenses of doing the business of the Government; in its total separation from all the officers of the Government; an *unnatural connection*, beneficial neither to the bank nor to the Government; in its not being obliged to incur the expense of establishing branches." If this experienced and unrivalled financier was right in his appreciation of the State charter, the new bank was stronger, more efficient, and better able under it to sustain itself at a dangerous crisis, and on an imminent emergency, caused by the convulsions and storms in the commercial world, than under the charter offered by Congress. The current of events has proved that with all the advantages enumerated, the bank was unable to maintain its credit and redeem its obligations. What prospect was there, that, as a national bank, with powers diminished, onerous duties to perform, and heavy expenses to be incurred, it could have saved itself from the violation of moral duty, and legal restraint, committed by the suspension. Reasoning by analogy, the only true test applicable to the case, it must be conceded that the same causes which prostrated a stronger institution, would inevitably, under similar circumstances, have produced like results on a weaker bank. Doubtless the President of the United States will be gratified, and his friends encouraged, by the coincidence of views entertained by the great banker in common with the Chief Magistrate, on the important question of a divorce of that "*unnatural connection*" between the Government and the banks, and felicitate themselves with the hope, that this high authority will convert myriads of the devoted followers and faithful admirers of the president of the Bank of the United States to the doctrines of the Message. It is due to candor to admit, that the president of the bank, on the remarkable epoch of the suspension, announced, "*that had it (the bank) consulted merely its own strength, it would have continued its payments without reserve.*" The same reliance cannot be accorded to this declaration. In my judgment, it was but an apology for the suspension, and a part of the process used to bolster up the credit of the institution, and detract from the shock feared on the suspension of this great moneyed leviathan. If its strength would, in fact,

have warranted a fulfilment of its obligations, every inducement of interest and reputation was in favor of the effort. A successful attempt would have avoided the danger of a forfeiture of its franchises, under the provisions of its charter; again have secured, by the act of 1836, the deposit of the public money in its vaults, and escaped the other penalties inflicted by its charter for a violation of its privileges. The peculiar situation in which it stood with a majority of the people of Pennsylvania, was persuasive cause for its straining every nerve to pay its obligations in gold and silver. By the act of suspension, if the bank, at the period of its occurrence, had abundant means to fulfil its engagements, the restrictions of law and moral duty were unblushingly violated without the existence of an overruling necessity, the only excuse that can be tolerated for such conduct. The high minded and honorable citizens of my native State, who compose the directory and officers of that institution, were driven to a suspension, by dire, dire necessity. It was a misfortune which all lament, "but its continuance will be a reproach which all true men must rally to save" our country from. When the hour of rally came, when a measure was recently proposed, calculated to relieve our country from this foul stigma, did this powerful institution unite in the attempt? No! Under her leading, the Philadelphia banks declined a participation in the effort. Improvident as has been the course of the banks, injurious as their over issues to our common country, ruinous as the wild spirit of speculation fostered and cherished by them, has been to the community, evil as the example set by a violation of legal and moral principle, in the refusal to pay their debts, yet, if all this was done, by any one or all of them, with abundant means, and "*strength without reserve*" to redeem their obligations, what was such a suspension, but a fraudulent conspiracy to withhold the payment of just claims? In that aspect of the case, the strong and indignant language used by a venerable gentleman, then and now a member of this House, (Mr. Adams) and which I always deemed harsh and unmerited, when he asks, "What difference is there between the president and directors of such a bank, and the skillful artist who engraves a bank bill, a fac simile of the one signed by the president and cashier, and saves them the trouble of signing, by doing it for them," would have been just and appropriate.

If I comprehend the fiscal situation of the Treasury, from the report of the Secretary, there would not, on the 1st of October, be sufficient available funds in the department to pay the amount transferable to the States, by the deposit act, by one third. Congress must, in that event, provide the funds, to enable the Treasury to make the deposit with the States; and when that sum is provided, at the close of the year, unless further provision is made, the Treasury would be empty, and the operations of Government suspended. Not a dollar would be left to supply the mint, to meet contingencies, or the current expenses. Under this state of the Treasury, the question is presented, Is the nation bound by contract, express or implied, to deposit these nine millions with the States? If she is, a high sense of duty imperatively commands a fulfilment of the bargain. Nay, if the faith of the nation is pledged, so that it would be dishonorable to make a temporary postponement of the deposit, the pledge must be redeemed. That the deposit act created no obligatory compact with the States, seems clear. The act of 1836 had two objects in view: 1st, to secure a safe depositary for keeping the public money, under specific regulations by law. 2d. A large surplus had accumulated in the Treasury, not immediately wanted for the exigencies of the nation. It was to be so deposited, as, in the interim, to be used for the benefit of the people. The 13th section, after a reservation of five millions from the surplus, directed the remainder to be deposited with the States. What were the States to receive? The surplus remaining in the Treasury. If none remained, the proposed deposit never could be made. The measure would, in that result, have had no operation. This act did not, nor could it prevent Congress, after its passage, and before the 1st of January, from appropriating part, or the whole amount in the Treas-

sure for the support of the Government, the defence of the country, or its security and prosperity. A new era existed in the financial situation of the country. The national debt was extinguished—the Treasury overflowing. A rapid reduction of the revenue would have prostrated great and important interests, built up on the faith of previous legislation. What was to be done with the money? Objections of a serious nature arose to almost every plan proposed for its disposition: At last, the mode of making the States the depository was agreed upon. They were “to keep it safely, and repay it whenever required for the purpose of defraying the wants of the Treasury.” Do these terms partake of the character of a contract? Are they not the mere expression of a deposit for safe-keeping? No mutual equivalent exists; no *quid pro quo*, which constitutes the essence of a contract; no consideration on which an obligation can be founded. At what time was the contract consummated? At the passage of the act, at the period of legislative action by the several States, or on the report of the Secretary ascertaining the amount for distribution? The act was passed on the supposition that a surplus would, on a given day, be found in the Treasury. If the Secretary had ascertained that no surplus was there at the period fixed, what claim would the States have had on the nation to raise a surplus, and what amount of surplus would have been necessary, to satisfy that claim? Their expectations would have been excited, and their hopes raised, by the passage of the law. Suppose the Secretary, in ascertaining the surplus, had committed an error, and instead of *thirty-seven millions*, there had actually been but *twenty-eight*—would the act, and the proceedings under it, created an obligatory contract, binding the nation to raise, by loan or taxation, the additional nine millions to deposit with the States? If not, where is the distinction between it and the reduction of the surplus in the Treasury by the convulsion of the times? The wants of the Government, to relieve the people in a period of great pecuniary embarrassments, render it necessary, for a time, to divert a portion of the surplus which the act contemplated depositing with the States. Is Congress bound to go through the farce of handing it over to-day, for the sole purpose of demanding it back to-morrow? The requiring a certificate, with the usual and legal obligations, pledging the faith of the States “for the safe-keeping and repayment of the money,” negatives the idea of its being either a gratuity or an appropriation. When an appropriation is made, the money drawn from the Treasury, and expended, it is gone for ever, never to be refunded or repaid. The obligation created by the act of 1836, may be legitimately classed with that order termed imperfect obligations, requiring their fulfilment, if an unforeseen difficulty had not occurred before the period of performance arises, which would have prevented the proffer from being made, if known at the time. Civilians term these “a promise made with fairness and a real design of accomplishing it, but without any intention of giving the person to whom it is made a right of demanding its performance.” What an extraordinary and dangerous state of affairs is presented, if the time of deposit is not postponed—the United States laying and collecting taxes, or borrowing money, to deposit, when collected, with the States. In my judgment, no power is granted by the Constitution to Congress to draw money from the people for any such purpose. To deposit money for safe keeping, is not to pay a debt, nor is it necessary for “the common defence.” If constitutional, its fatal and blighting operation upon our institutions might well be feared. To teach the State sovereignties to look up to the National Government as the great reservoir to supply them means of support, instead of a reliance upon the people, would inevitably destroy their independence, and introduce a system of extravagance and corruption which would speedily produce the ruin of the Republic. The deposit act was a temporary expedient to meet an extraordinary crisis in the fiscal concerns of the country. The causes which gave it birth no longer exist. Postpone its operation until a similar occasion arises; then, according to the provisions of the act, let the surplus be deposited with the States. This will be

doing justice to them, and redeeming honorably and fairly the hopes excited by the passage of the law. The people are the true and legitimate objects of the care of the National Government, within the sphere of its action. Their interests, their welfare, should be the primary object of our legislation. To lay taxes and collect them, with the deduction of forty per cent. from the amount assessed, expended in the process of collection, would be adding a fearful addition to the burden they already bear; and to entail upon them a debt at a period of profound peace would be equally unjust, unless the money is wanted to pay a debt contracted, or for the general defence and common welfare.

### SPEECH OF MR. STRANGE,

OF NORTH CAROLINA,

In Senate, September 21, 1837.—On the bill imposing additional duties on certain officers, as depositories in certain cases. Mr. CALHOUN'S amendment being under consideration.

Mr. STRANGE said:

Mr. PRESIDENT: That our country is now in a most extraordinary and interesting crisis, seems to be conceded on all hands; and the public mind is greatly distracted as to the causes of this crisis, its nature, and the course it behoves Congress to pursue under it. In this state of things, every man to whom a high trust is committed in relation to these subjects, and especially each member of this body, ought openly and frankly to offer his views and opinions concerning them. By public opinion all the measures adopted by Congress must ultimately be tested, and that public opinion may have fair play, and our constituents an opportunity of judging of the fidelity of their representatives, on every measure so important as the one under consideration, the reasons which have determined them should accompany their votes. It is this consideration that impels me to ask the attention of the Senate on the present occasion, for I know full well that I might as well address the marble pillars which surround us, as this honorable body with any reasonable hope of bringing conviction to a single mind. But I am solicitous that public opinion should be sound in the State which I have the honor in part to represent, and while I bring my own opinions in review before my constituents, I shall make an effort, feeble though it may be, to furnish them with the reasons on which they are founded.

I have said, sir, that three questions naturally arise out of this crisis. First: Its causes, about which there is much contrariety of opinion. Many resorting to the method so common with those who are determined to find fault, of using some general terms of censure, calculated to catch the public ear, and carry away the judgment, without presenting it with any distinct object upon which it may exercise itself, charge it to *tampering with the currency* by the Executive of the Union. This form of expression, like most others, upon political subjects, in use among us, is borrowed from England. It was freely used in that country during Mr. Vansittart's administration, when (as now with us) the paper currency being greatly inflated, an effort was made by those who saw the vortex of ruin towards which the nation was tending, to rescue it, with Mr. Canning at their head, and these were branded by the minister himself as *tamperers with the currency*. Experience, however, triumphantly vindicated the former and convicted the latter of the rankest empiricism in matters of currency. Our modern politicians, not content with the use of the term as it originally came from the lips of the British minister, have degraded it to a more fit expression of their own bitterness, and called it *tinkering with the currency*, as if they sought to lower the Executive of their country to equality with the mean and contemptible employment of a *tinker*. Others come forward and boldly specify the measures of Government which, as they say, have produced all this mischief. Of this latter course no one can complain. It is a fair and manly mode of treating the subject. It appeals to the high and intellectual faculties of our nature, and not to our low passions and ignoble prejudices. I hope never to see the day when the

measures of any administration are not to be arraigned at the bar of public opinion, and fairly tried by the people of this country and approved and applauded, or condemned and abandoned; and, if either the past or present administration has made any false step, I care not how soon it is pointed out and every man in the country made to see it.

The immediate cause of our difficulties, every one, I believe, admits to be an undue spirit of speculation and overtrading. But it is said that the Government itself has stimulated that spirit, and given to it its undue action. That such, to some extent, may have been the accidental effect of the removal of the deposits, and the consequent destruction of the United States Bank, in suffering numerous local banks to come into existence, which could not else have lived, and thus swell the paper currency, is not improbable. But then it is to be remarked that this would have been very inefficient, without the co-operation of other causes much more powerful, which I shall notice presently, and with which there can be no pretence for charging the administration; and besides, it was not the direct action of this measure adopted by the administration, but the conduct of the States themselves, in the exercise of their free, sovereign power, in chartering banks over which the administration could exercise no control, which armed the measure with all its supposed power of mischief.

The next measure which can properly be called an administration measure, to which mischief is imputed, is the Specie circular; and I, for one, am altogether willing that the present and past administration should be made fully responsible for it. If it be true, (and no one, I fancy, can deny it,) that the evils of the times are the offspring of speculation and overissues of banks, it would seem to follow that any thing which had a tendency to check these causes in the full tide of their action, must have mitigated the evils they were producing, and partially averted the catastrophe they were preparing. Surely the land speculations have contributed largely to the evils of the times; surely extravagant bank issues have stimulated, if they have not been the very food, of the land speculations, besides having been the parent of other great and numerous evils. Did not the Specie circular check the land speculations? Did not the Specie circular check the banks in their career of expansion? If it did not this, it did nothing, and is an idle subject, either for praise or censure. But it did this, to some extent, and in so doing effected good; and my only regret is, it was capable of doing so little. Its effects have, I believe, been overrated, both by its friends and its enemies.

I know of no other measure which can justly be imputed to the administration, and to which any effect can be ascribed in the production of the present crisis. But there are two measures, which I shall notice in their order, having vast efficiency in bringing it about. The first is the act of Congress, passed in 1834, for altering the relative value of gold and silver. This measure met, I believe, with favor from all parties. In the pre-existing state of things, we seemed to be yielding to other nations a portion of the gold, which, of right, belonged to ourselves, and all parties patriotically united in reclaiming our banished treasure, and cordially adopted the gold bill as it is called. Nothing could be more specious than the advantages this measure seemed to promise us; and I will not say yet that its ultimate effect will not be beneficial. But its primary effect was to disturb that equilibrium which the currency had found under the existing state of things, and like elevating or expanding any portion of a fluid body, the effect was that it came pouring over to find its level, and flowed freely into this country. Other causes were in action to promote this tendency. American stocks and American bonds were freely discounted upon in England, and as the paper currency of England could not be used here, the proceeds came over in gold. This influx of gold, in place of occupying the channels of trade, which it must have done, had they not been pre-occupied by paper money, flowed into the banks, who, as well from the natural struggle between their paper and the gold to occupy the aforesaid channels, as from the confidence with which the presence of the

gold inspired them, continually expanded their paper issues, what the more gold came, the more paper soas thrown out to force it out of circulation and into the banks. Meantime the Bank of England found her specie leaving her, so that from October 1, 1833, when it was £10,900,000, it was reduced by December 27, 1836, to £4,300,000, making a reduction in a little upwards of three years of £6,600,000, or within a little more than £300,000 of two-thirds of its whole specie. Well might the Bank of England become alarmed; and she did become alarmed, and refused further discounts for American purposes. What could be more productive of dismay to all connected with that kind of business, than this determination of the Bank of England? Not only were expected future supplies cut off, but, as the natural consequence of the cessation of supply, return was demanded of what had been already furnished, at the first moment it could lawfully be done. Can any man fail to see in this abundant cause for the mercantile distress which followed? If there is any cause for wonder, it is that the distress has not been greater, especially when we look to another measure in this country, which must have accelerated the catastrophe, and greatly added to its violence? This is the second of the two measures before alluded to, and is commonly called the deposit or distribution law.

This was no measure of the administration; on the contrary, the administration is known to have been hostile to it; but it was passed almost by acclamation by all parties in Congress, and received the unwilling assent of the Executive. Here is a cause adequate to have deranged the currency of the country in the most prosperous and tranquil times. It will be remembered that the opposition insist that the mere potential removal of the deposits of Government from one side of a street to the other, in the same city, which deposits did not, at the utmost, exceed three millions of dollars, was competent to the production of the utmost derangement and distress in the money market. What, then, must have been the effect of the removal of near forty millions from place to place; scattering it from one end to the other of this wide continent; subtracting it from those channels of trade, where, by the laws of commerce, it had found its way, and forcing it where no channels were open for its reception, and where, consequently, they must be created by law, through schemes hurried into existence merely to find employment for the unexpected treasure? You find the States in different parts of the Union, beset with devising plans for disposing of the money so unexpectedly poured into their lap, while those from whom it was subtracted are parting, as it were, with their very life-blood to supply it to those who have no use for it. Meantime the money lies idle until the States have devised some plan for its absorption into the local circulation.

And do gentlemen rack their imaginations in search of causes, when one so adequate for the production of all the phenomena before us is so ready at their hand? And when complicated as it is with the operation of the gold bill, as I have already presented it, is not the wonder rather that matters are no worse? But when we bring these causes into union with the general causes which seem to have agitated the whole commercial world, beginning I believe in China, and affecting all Europe, both continental and insular, nothing it seems to me, but an anxious desire to find fault, would seek for the causes of the crisis in the measures of the Government only.

But I believe, sir, that the foreign causes which have affected us, and those measures at home to which I have adverted, would have passed by us altogether innocuous, or nearly so, but for another cause. Gentlemen have only adverted to what the physicians call the exciting causes of the disease; they have overlooked the far more important and radical cause—an injury which has been suffered by the constitution of the patient, and such an one as has been far more instrumental in the production of the present crisis than all the exciting causes before noticed. The history of our country has presented in its brief course more numerous and interesting crises than other nations have done who could boast cen-

turies of duration. This is probably the joint result of the rapidity of our course and the novelty of the political problem we have been engaged in working. Launched by the result of our revolutionary struggle upon the wide waters of an untried political sea, we were without charts, and the voice of experience was heard in no distinct accents to direct our movements. Nothing, therefore, was left to us but to exercise the faculties we possessed in drawing upon analogy for guides in our trackless way. But I pause to correct myself; we had a chart, the most clear and explicit that the timid or skeptical could desire. But, alas! not one of those to whom has been committed the helm of State, has scrupulously steered according to its indications, but, trusting to his own sagacity, has given to the vessel a wide berth, regardless of consequences; and the result has been, that amid clear skies and smooth waters, some hidden rock or shoal, against which the slightest attention to his chart would have secured him, has brought up the astonished steersman in his confident career. But the vessel has proved staunch; and with nothing more than a change of hands for the control of her movements, she has stemmed every difficulty, and pursued her gallant course, the pride of her crew, and the admiration of the world. The improvident steerage of its predecessors had thickened dangers around her, more numerous than those which beset the fugitives from the destruction of Troy, when the late administration came to the helm; it is not to be wondered at, therefore, that it could pursue no direct and onward course, but was compelled to adopt expedients to shun this rock, and escape that shoal, according to the circumstances in which it found itself. Yes, Mr. President, it is to departures from the strict requirements of our Constitution, that the chief, if not all, of our difficulties as a nation may be attributed. It is true that disappointment and calamity are the lot of man, whether we view him nationally or individually; but generally, if not invariably, the inquisitive mind may trace calamities to the sufferer's own neglect, or wilful transgression of the laws of prudence. Happily, in both cases, timely repentance is competent to defeat the worst consequences of transgression; and if the troubles in which we are now involved shall bring us to a conviction of our errors, and to sober resolution to sin no more, they will have answered a most invaluable purpose, and arrested us in a mad career, before we have involved ourselves in irretrievable ruin. Suppose no tariff for protection had filled our coffers with useless and dangerous treasure—no United States Bank had triumphed over the Constitution, and the currency it had provided—no systems of internal improvement by the General Government, with all its attendant extravagancies, had been adopted—how invulnerable should we have been to the evils of which we now complain! But all these things were done, and our Constitution, for the formation of which the blood and toil of our forefathers had been so liberally poured out and expended, was fast becoming an unmeaning thing—a dead letter; but the present crisis awakens us to a sense of our present condition, and brings us to reflection. A literal construction of that sacred instrument which we have all sworn to support, is, in my humble judgment, the only rational ground of hope for our happiness as a nation, the only guaranty against the evils of anarchy, violence and fraud, with which we are threatened.

Having thus glanced at the causes of this crisis in which we find ourselves, I come next to consider briefly its nature. But yesterday we boasted of an overflowing Treasury; and were at our wit's end for a place into which it might pour its superfluous riches. Real property was in demand at most extravagant prices; labor was high, and the products of the soil repaid to their hearts' content its industrious cultivators; our merchants were daily becoming millionaires, rivaling in splendor and luxury the princes of lands where that title may be borne. Suddenly, as though smitten by the hand of some offended deity, or as if all that we beheld was a fairy fabrication dependent upon some dissolving spell, the whole scene is reversed. Our bloated Treasury has collapsed; the millions we were beseeching somebody to keep for us, have

disappeared, and the public creditor applies in vain for payment in the constitutional medium. The possession of real estate but marks the poverty of him who owns it; the laborer is without employment, or toils for half his accustomed compensation; our products linger upon our hands, a prey to corruption and the moth; and our merchants send forth one universal wail from Maine to Florida. These are the gloomy features in the crisis, and by many they only are seen in their unmitigated darkness; but to me there are gleams of the most cheering brightness gilding the gloom, and, like the struggling rays of the sun upon the dark cloud of evening, come to the heart reflecting promises of hope and joy for the approaching morrow. The crisis is full of assurance that the wounds of the bruised and battered Constitution will be healed, and that, stripped of all the extraneous appendages which have obscured its beauty and simplicity, it will be restored to its legitimate control over the affairs of this nation. So far as the Executive is concerned, he makes to us the declaration that the Constitution will, in its literal simplicity, be the standard of his actions; and it remains for the two houses of Congress to decide whether they will stand by him in the noble resolution. I trust they will, and, in that trust, I feel that this crisis is one for any thing but despair to the heart of the patriot.

I have now adverted to the causes and nature of the present crisis, matters in themselves of little consequence, and altogether inadequate to the time they have consumed, except so far as they may assist us in the determination of the third question, namely: what it behooves us to do in the present exigency. The evils we have seen are twofold: first, to the United States Government as a body politic—affecting its vital principle, the very current of its existence, its fiscal soundness; secondly, to the individuals, or some of them, composing the nation—in blasting their present pecuniary prosperity and their hopes for the future. These it behooves us to consider with a due sense of our responsibilities, and, if in our power, to provide for them a remedy; and here permit me to remark that the President has been most unjustly accused of having recommended nothing adequate to the occasion; of having indicated no relief for the sufferings of the people. Will no relief be found, I ask, in the emission of \$10,000,000 in Treasury notes to be thrown into circulation? If the want of a sound circulating medium be part of the distress, will it not be thus supplied to the amount I have mentioned? And will it not be farther, beneficial in infusing more vigor into the whole mass of the circulating medium in increasing the proportion of undepreciated currency to that which is already depreciated? Is there no relief in extending for four, six, and nine months, the credits upon the duty bonds? Is there no relief in giving to the deposit banks additional time for settling the balances they owe? Let not gentlemen say, because the relief does not tally with their own unreasonable expectation, that therefore no relief at all has been extended. Great relief has, in my humble judgment, been afforded, and all that I think could in reason have been asked. But our first inquiry is, what it behooves us to do in reference to the revenue. And it is evident that the first thing is to make immediate provision for the supply of the exhausted Treasury, and put aside such claims as in the present state of things ought not to be made upon it. This, so far as the action of this House is concerned, has already been done in the passage of the bills for the suspension of the fourth instalment to the States under the deposit law, and the emission of the ten millions of dollars in Treasury notes, as before mentioned; and it is next to be decided what course shall be taken to avert, if possible, a recurrence of the present catastrophe to the revenue. For this three plans are presented to our consideration: First, a national bank; secondly, a continuance of the present deposit bank system, with some modifications; and lastly, the plan recommended by the President and Secretary of the Treasury, and proposed by the Committee on Finance, of an INDEPENDENT TREASURY. The first of these has probably but few advocates, and has

not been distinctly brought forward by any one, but we well know that the anxious eyes of some of this body are turned to it as the panacea, the great catholicon, for all political disorders—as the only instrument through which the country can be saved; and we have heard as much from the gentleman who has just taken his seat. But to this measure many objections present themselves: First, public opinion is, as I believe, decidedly against it, and that, as I have already said, is at last the test to which every act of this body must be brought. Secondly, the present Chief Magistrate of the nation stands solemnly pledged against it, and must, of necessity, veto a bill for its establishment, even if a majority of both Houses of Congress could be induced to unite in its passage; and no one has the rashness to assert that it is to be spoken of as a possibility that two-thirds of these bodies would concur in overruling the President's veto. Thirdly, such a law would, in my humble judgment, be in conflict with the Constitution of the United States. Tell me not that the contrary has been settled by authority. The simplicity of that instrument was never designed to be marred by the comments of the learned upon it. It was intended for the perusal of the plainest man in the country, and that he should understand it without any farther help than a knowledge of his vernacular tongue. Tell me not that in process of time the readings upon it are to be so multiplied, that, instead of a pamphlet of a few pages, volumes must be read to find out its meaning. No authority for a United States Bank is to be found in the language of the Constitution; and I, for one, will listen to no sophistical refinements which may seek to place it there by inference. Fourthly, such an institution is altogether inexpedient, and totally inconsistent with the healthful action of our political system. As well might we expect the globe we inhabit to pursue the orbit marked out for it by the hand of its Creator, should some mighty comet come within the sphere of its attraction, as that our political system should quietly perform its proper functions with such a *magnum imperium* within its *impero*. There is another reason urged with great force by the Senator from South Carolina, who sits near me, and that is the triumph which would thus be achieved by the bank over the Government. The attitude assumed by that Senator in relation to this whole subject, is one of high moral sublimity, in which he has nobly sustained himself, both by his matter and his manner; and the argument coming from him, that he would not yield to such a triumph over the Government of his country, is an argument which does credit to the heart which conceived, and the lips which uttered it.

The second plan is the one proposed by the Senator from Virginia, to which he will not find many supporters from any real regard to the plan itself; and if he succeeds in procuring its adoption, it must be through the instrumentality of those into whose motives it does not become me to inquire. But as that Senator has addressed his old friends, he will allow me in their name to address him in return, and to warn him that when with foreign aid he shall have succeeded in beating down his old allies, it will not be long ere he will hear the shout of triumph from the marble palace at Philadelphia. We would gladly, if we could, make common cause with him upon the ground he has assumed; but believing it untenable, we have retreated within the ramparts of the Constitution, and should they be battered into fragments about our ears, and we ourselves prostrated and vanquished, we will still cry out "Live the Constitution! live the Republic!" I have said to the Senator from Virginia, that we think his ground untenable, and now proceed to offer some of the reasons for our so believing. "Thou hast been weighed in the balance, and found wanting," was a portion of the sentence written by the fingers of an unseen hand upon the wall, against the King of Babylon, which caused that monarch's knees to smite together, and the sounds of guilty revelry to cease; and with great emphasis may we address the same language to the deposite banks. This the Senator from Virginia denies, and insists that the experiment has not failed. What would that Senator call a fail-

ure? Does he require that their buildings should be razed from their foundations, and made an heap, and that their piles of paper money should be committed to the flames, before he will acknowledge that they have failed? When a merchant in any mercantile community neglects to meet his engagements with punctuality, who pretends to question his failure? But these banks have not only failed to meet their engagements, but have flatly declared their determination not to meet them until it suits their own perfect convenience. What has brought us to our present condition, but leaning upon these broken reeds? but imprudent confidence in these faithless agents? Should we have experienced any difficulty in meeting our fiscal engagements if they had, in fulfillment of theirs, promptly paid up the drafts of the Treasury upon them? Would the merchants have found any difficulty in paying up their duty bonds, had the banks, by redemption of their notes, preserved to them a found currency in which to comply with their obligations? The application of the merchants for indulgence is based upon the ground that their inability to make payment is entirely owing, not to the want of funds, but of such funds as the Government would be willing to receive. Where is the individual who, having trusted a private banker with his funds, would trust him further, after his suffering draft after draft to come back dishonored, declaring publicly that he had the money to pay with, and justly owed the debt, but that he did not think it his interest to do so, nor would he do it, unless his depositor would make arrangements with all persons in whose favor he should draw, to take the banker's own notes, and consider them as payment? Motives of friendship or of policy, or facility of disposition in a private individual, might induce a continuance of the trust, after it had been thus abused, upon proper concessions, and a reasonable assurance that faith would thereafter be kept. But are the depositories of a nation's faith—the trustees of a nation's wealth—to be moved by such considerations to lend a credulous ear to such promises? We have had such promises already, and have we any security that they will in future be more faithfully kept? Have not the banks pleaded the tyrant law of necessity to excuse their fault, and will necessity be less imperious in future than we find it now? It is folly to expect it. But while the Senator from Virginia is in one breath denying the failure of the banks, in the next he is offering apologies for that, upon the existence of which he is vainly striving to close his eyes. He attributes it in the first place to some great mysterious convulsion, which he does not attempt to define, and which he assures us is never likely to occur again. Next, he refers to the deposite law and the specie order, as furnishing sufficient apologies for most eccentric movements in the pecuniary affairs of the country. But chiefly he imputes the failure of the banks to the withdrawal of the confidence of the Government, and insists that its restoration is all that is wanting to set all things right. But how, I would ask, is confidence to be created where it does not exist? Like love, and hope, and fear, it must be the spontaneous offspring of the bosom it inhabits. As well might the assassin, in a paroxysm of penitence, seek to rekindle the spark of life in the body of his victim, as this or any other legislative body to restore confidence to existence, after it has been murdered, either through accident or design. But grant that we could by the fiat of this Legislature wake up confidence to renewed existence in the bosoms of the people, ought we to do so, when we ourselves have not confidence? Would it not be a legislative fraud? Could we say to them, You ought to have the most implicit confidence in these banks as perfectly safe depositories of your wealth; as sound regulators of the commercial affairs of the country; as prudent circulators of paper which they have at all times the power to redeem; unless we ourselves felt this confidence? And do we feel it? I for one must confess that I do not, and would be putting my signature to a solemn falsehood were I to say that I did. The Senator declares that the only reason why specie payments were maintained in England and suspended in this country, is, that in the one confidence was sustained by the Government,

and in the other prostrated. I have no hesitation in admitting that, but for the failure of confidence, the banks in this country could have maintained specie payments longer, and that the failure of confidence must necessarily precede the stoppage of specie payments. But the true question is not whether confidence existed or not, but the causes of its failure or continuance. Now it is manifest, as I conceive, why it continued in England, and perished in this country; not, as the gentleman supposes, by reason of the different action of the two Governments, but on account of causes which had passed beyond the reach of control from either Government.

Nature, by mysterious and immutable laws, has connected causes with their effects; and one is followed by the other with all the certainty of the revolving year; and he who finds a cause adequate to the production of a given effect followed by that effect, may fearlessly conclude that the latter is the offspring of the former.

It is equally a rule of sound philosophy, that nothing which does not in its nature appear adequate to the production of a given effect, is to be taken as its cause however immediately it may precede it. Now what act of the Government was adequate to the destruction of confidence? The most that can be said is, that some of its acts may have been calculated to enfeeble, but not one can be pointed out adequate to its destruction. But there are two causes immediately before us, sufficient, as I think, to account for the different effects upon confidence in the two countries when alarm was excited. The first is, that England was a creditor country, and this a debtor country. The debtor could never draw from the creditor against his will, while the creditor had a right to draw upon the debtor to the uttermost farthing of his indebtedness. When, therefore, alarm was excited, the Bank of England had nothing to fear but from her own citizens; while in this country, the banks were threatened with a drain from England as well as from their own countrymen. Standing as a creditor, the Bank of England was receiving more than she was paying out, and every day her situation was continually growing better, and if she was able to meet the engagements of to-day, she would be still better able to meet those of to-morrow. Not so with the American banks; theirs would be drain without replenishment; and looking before them to a vast chasm yawning for the reception of their specie as fast as they could tell it out, despair seized upon them, confidence expired, and they refused to engage in a work in the accomplishment of which they must perish. Grant, say they, I am enabled to meet the engagements of to-day; those of to-morrow will be still more numerous and importunate. The balance of trade will give to our riches wings by which they must fly across the Atlantic, and be no more seen. We will take our stand at once, then, and not voluntarily pour out our own life-blood; but if it is taken from us, let it be by some slow and lingering process which will prolong our existence until some providential or fortuitous circumstance may interpose to save us from destruction. What more could be desired to account for the different course of the banks on the two sides of the Atlantic? But yet there is another circumstance, which, as a co-operating cause with the other, doubtless precipitated the stoppage of specie payments in this country, which had no existence, and consequently, could have no action, on the other side of the water. The Bank of England is alone—an unit, an autocrat. She had but one will to consult, and that will could act at the critical moment when its action might be necessary. She could continue to pay out her four millions of specie until the last million was invaded, and then, if she thought it expedient, could cry "hold! enough!" But the banks in this country were legion; with them it was a Bladensburg race, each afraid that the other, in the struggle for specie, might exhaust its store, and crush it for ever; mutual fears prompted mutual forbearance, which could only be granted by a general stoppage; and the impatience of each to escape from the danger that threatened it, hastened a catastrophe which might otherwise have been longer deferred, if not altogether avoided. But whatever apologies

may be offered for the failure of the banks, they have failed, signally failed; and if, as has been strongly remarked by the Senator from South Carolina, it be folly to try untried experiments, it is madness to repeat those which have already failed.

But if we shut our eyes to experience, we must be deaf also to the lessons of sound theory, if we adopt the system proposed by the Senator from Virginia. Not only have the banks failed, but the principle of failure is incorporated in their very natures. The system of banking, as practised in this country, never can be safe until it is radically altered. The best of them issue from two and a half to three paper dollars for one of specie, and some have even gone as high as seven; and as long as the physical laws of nature continue to act, it is manifest that the banks must depend upon the whim, the caprice, the hopes, the fears, the clemency, if you will, of their bill holders, for their existence. And can that depository be deemed safe which carries within it such elements of self-destruction? But let us look a little farther. The banks will not take your deposits upon any other condition than that of predicated upon them a circulation of their notes. How then does the case stand? They take your deposits, and promise you to return them whensoever demanded; but at the very same moment they issue notes to twice or thrice the amount of their promise to you, by which they engage to pay to A, B and C the identical sum they have promised to repay to you. And does not every one see the utter impossibility of their meeting three or four different engagements to pay the same identical money? What then are they doing but running the gambling risk that they will be called upon for but one of these sums at a time? But we are told, when they issued their notes to A, B and C, they took in exchange A, B and C's notes, well secured, for a like sum. Grant it to be so, and that A, B and C's notes are certainly ultimately good, is it not manifest that A, B and C's notes are on time, and are not immediately convertible, and in fact that they would not be given but on time, while the notes of the bank are payable the moment they are issued, and all three sets might be immediately demanded. And why should they not be? The gambling hazard is taken that they will not. But furthermore, is it not perceptible that this increase of the circulating medium must greatly increase the nominal value of property, and that property holders will thereby acquire a false reputation for wealth, which, acting upon themselves and others, must lead them into speculations which, upon any sudden *dénouement* of affairs, bringing property to the specie standard of value, (and even below it, from the sudden panic produced,) will leave the banks not only unable to meet promptly the demands of the depositor, but even, after a great lapse of time, able only but partially to return the principal sum?

The banks have not only failed, then, but from their very nature are prone to failure, and a still further objection to the plan proposed, is drawn out of the natural liability of all the banks in the country to be operated upon by any cause injuriously affecting one. So that however scattered your treasure may be, the same fell swoop which robs you of it in New York, does the same for you in New Orleans—the same reversed alchemy which converts your gold and silver to inconvertible and worthless paper in the one city, does so at nearly the same moment in the other. Your loss is not partial, but comes upon you in one sweeping desolation.

Again: if the misfortunes before referred to were most likely to happen at those times when the Government could best bear disappointment, it might be less imprudent to encounter the hazard. But the reverse precisely is the case. It is in times of difficulty and public distress, when the means of replenishing from other sources the failing supply of the revenue are cut off, that the banks will be most likely to disappoint you in their engagements. A war, for instance, is foreseen, and the Government has been hoarding its revenue to meet the exigency. It has laid up its millions in the deposite banks, and is only waiting until they have accumulated sufficiently to proclaim defiance, and chastise the insult-

ers of the national flag: it is done. The cost has been counted, and it has been found that we have money enough and to spare for the projected enterprise. The star-spangled banner is given to the breeze, and the heart of every American is bounding with the pride of country. But, alas! the treasure upon which we had counted is deposited in the banks, and they have discounted freely upon it. War and commerce cannot go together, and commerce is the sole stay of inflated credit. Bill-holders become alarmed; and each one rushes in with breathless haste, fearful of being the last to present his claim. The banks, in their best condition, can do no more than pay about forty per cent. upon their circulation; and their specie, of course, must be immediately swept, or they must take a determined stand, and refuse payment. In this state of things, the Government draws upon the banks for some large sum to pay for the outfit of her army and her navy. The banks offers it in paper; but this will not answer, and they have nothing else that they are both able and willing to give you. I leave imagination to finish the picture.

The banking system, as practised in this country, is, in my judgment, one vast bubble; and it is not improbable that those now living will witness its bursting; and when the explosion has taken place, as without reform at no very distant day it must, the men who succeed us will look back upon our present infatuation with as much amazement as we do upon that of the adventurers in the South Sea scheme.

But I object farther to the plan proposed, on account of its tendency to place the Government in the power of a party. You have seen the natural effect of a foreign war upon commerce and the banks. Is it to be expected then that a commercial community could be calculated on as friendly to a war even when necessary and just? I am the son of a merchant, and it cannot therefore be supposed that I would willingly cast reproach on the tomb of my father. I should be recreant to all the best feelings of the human heart were I to deny to the merchants, that intelligent and worthy class of citizens, all the commendation they may so justly claim. Among them still live some of the best and dearest of my friends; but still they are frail humanity; and who is there that can wish his interest and his duty to be brought in collision? It is in mercantile communities chiefly, if not altogether, that banks are to be found, and in these, under the deposite bank system, your treasure must be placed. A war is thought necessary, but the interests of a mercantile community are opposed to it; and how easily therefore would they persuade themselves, as many of them did in the glorious strife of 1812-15, that it was unnecessary, unnatural, and unjust, and how naturally would they unite themselves with that opposition which is never inconsiderable in any free country? Money is the sinews of war, and with how little trouble might an opposition cut those sinews at the very moment you were about to make use of them by causing the deposite banks to suspend their payments? And, ere a sense of their country's honor, and the danger of their fellow citizens could triumph over their calculations of interest, and awaken that patriotism which was overlaid but not extinguished, the nation's flag might be dishonored, and her enfeebled army cut to pieces.

But a yet stronger objection than all that have preceded it, and that, indeed, upon which they mainly depend, is the difficulty of compelling these corporations to perform their engagements, should they choose to neglect, or find it inconvenient to meet them. He who expects them punctually to meet their engagements, might as soon look for the rain to descend upon his thirsty fields at his bidding. The absolute control of wealth is essential to its enjoyment, either for a Government or an individual. That man is poor, and poor as winter, who calls countless millions his, which are yet beyond his reach, while hunger and thirst pinch him, and the inclement seasons beat upon his defenceless body. No man in his senses would willingly place himself in this situation; but yet it is precisely the predicament in which the Government is asked to place itself. What means have you to compel an unwilling corporation to surrender up

its hoard? Do not reason and experience unite in teaching us that, as corporations are constituted and treated in this country, sums deposited with them, are placed measurably, if not absolutely, beyond the control of the proprietor? Look to the United States Bank, the creature of your own hands, and therefore, as was once vainly imagined, subject to your own control. But you found yourself in your attempt to control it in the situation of the hero of one of Godwin's novels, (Faulkenstien, if I mistake not in the name,) who, having acquired some magic power, created a monster, and infused into him the Promethean spark. He doubted not that the same hand which had created, could control. But that position is true in reference to one Power only. The monster of Faulkenstien turned upon its creator, and compelled him to fly for his life. In like manner did the creature of your hands defy your power, and continues to defy it, holding on with the grasp of death to the treasure you have vainly striven to wring from it. With how much better reason then can you calculate on effectual control over lesser monsters which you did not create, and have no right to destroy? The truth is, they have already defied you, and you find yourself powerless before them. They have defied the true majesty of the country, its whole people. And have you still the vanity to suppose that, with powers so properly restrained and circumscribed as yours, with strength, gigantic as it may be, bound and shackled in the massy fetters of the Constitution, you can bend to submission that which has defied the untrammelled might of the body from whom you derive the whole of your strength? But grant to yourself, if you please, power as extensive as you can well imagine, the laws of nature must be yet stronger than you, and these the banks, as constituted, will always be enabled to bring in conflict with you; nay, even to induce your own masters—those in whose breath you live, and move, and have your being, to array themselves against you for that brief and critical moment which embraces the main issue of such a struggle. For example: by extensive discounts and emissions of its paper, a bank may create such a demand upon its specie funds as to sweep them in a moment beyond your reach, and thus anticipate any process of seizure you could possibly devise, and leave nothing for you to reach but irredeemable paper. Nay, even with issues at the most prudent rate, it might find its interest in the expenditure of its whole specie in the purchase of stocks, or other paper, not immediately convertible, and with the innumerable agents it could command, in the most secret manner convey it away while you were demanding payment, and thus foil you by that inflexible law that impossibilities can be wrought by no man; that payment cannot be forced from him who has parted with the means of payment. But grant that the specie remains in the banks now, and its managers should deem it inexpedient, as now, to use it in the fulfilment of its engagements; by the use of no other art than that already so successfully practised, by interweaving with its own pecuniary interests of the vicinity in which it might happen to be placed, it could cause every member of that community to spring forward as one man in its defence, and manly bosoms and warm hearts excited and misled for the occasion, would present a living wall, over which you would not pass, if you could, to get at the insolent corporation defying your just claims. Did you not hear the Senator from South Carolina over the way, telling us a few days ago of the ramifications, not of the branches only, but of the roots also, of these institutions, penetrating as those of a tree do the natural soil, the whole ground of individual interest; tearing and subverting it whosoever they are touched? What then must you expect when you shake them for fruit, whether full or empty? What agitation, what commotion, what confusion, will not make, when time shall have given to these roots a yet wider spread and a firmer hold? When you have fixed chains upon the viewless winds, and dragged them in triumph at the wheels of your chariot, then may you find the power of controlling corporations, after you have trusted them, without violating and trampling under foot principles held sacred in the hearts of the American people.

You stand in an attitude with these corporations, like that of a man who is engaged in strife with a woman; he may have the physical power to subdue her in a moment, but there are moral barriers stronger than any brute force, which surround and protect both the one and the other, and secure to them the victory in every contest. A wise man carefully avoids placing himself in the dishonorable and unprofitable belligerency before mentioned, and there is a similar chapter for us in the book of prudence. Neither will your boasted machine of a bankrupt law, such as has been proposed, avail you in the strife. It is not often that I differ from the Senator from Missouri, or the present Chief Magistrate of the nation, but I am compelled to say that, according to my present belief, no such bankrupt law as the one proposed, can be constitutionally passed. Congress has power, under the Constitution, to establish uniform laws on the subject of bankruptcies throughout the United States; but its power is limited to the passage of uniform laws. It admits of very grave question whether any law can be considered uniform which is limited to particular classes of such persons as may be the subject of it. I know that it is insisted that bankrupt means *ex vi termini*, a broken bank; and perhaps that may have been originally the sole use of the term; but I am induced to believe that in the construction of language we must take the one we now speak, as understood by those from whom we have derived it, our Anglo-Saxon ancestors. At any rate, we must look to the signification of language at the time it was used in the instrument to be construed, and we well know that at that time, all persons who dealt on credit were held to be liable to bankruptcy; and, unless all such persons were made subject to the law, it might well be questioned whether it is uniform. But even if we allow that a law would properly be called uniform which contained the same provisions for every State in the Union, still, being a debatable question, it would excite the public mind, and in favor of the banks the law would be rendered powerless by public opinion. This, then, is a mechanical power upon which you cannot rely, and none other is left to aid you in coercing the will of those corporations to the performance of duty.

I have thus suggested some of the objections which present themselves to my mind, to two of the plans; and the question may be asked, and it is proper it should be answered, whether any of them apply to the third and only remaining alternative measure? and my response is, no. It is not, like the United States Bank, at war with any declaration of public opinion. To that ordeal it is yet to be submitted, and I am well content that it shall be brought to so just a standard, and that it shall be pressed no longer than it is found in accordance with it. It has no hostility from the Executive to encounter, for it is his own offspring, and he stands pledged to give it a fair chance for existence. It implies the assumption of no powers not clearly granted by the Constitution; and whether expedient or not, is the only question for which, I trust, before I have finished, I shall have succeeded in making at least a show of probability. It has never failed; for, so far as this Government is concerned, it is yet a matter of trial, and we are doomed to hear, in relation to it, the cry of *experiment! experiment!!!* until the ear aches with the sound. Like every thing human, it is liable to mal-administration, and of course to failure; but it carries within itself no principle of inevitable fallibility like the banking system. Scattered as your treasure will be, under it, from one end of the continent to the other, it will not be likely to meet with any coextensive agent of destruction; and, although some inconsiderable rill may be dried up here and there, the great river of your revenue will be supplied from others, and flow on copiously and freely. Times of difficulty will not disappoint you in the use of your fund in hand, for it will be in the solid metals—the most unchangeable and indestructible of sublimity things—and therefore so fitly chosen as standards of value. Being in the hands of the immediate agents of the Government, no party combination can be strong enough, without an actual revolution, to divert it from the use to which the people, through

their constituted representatives, shall think proper to direct its application, and thereby subject those representatives to other domination than that of the will of their constituents, constitutionally expressed. Neither can any great difficulty be interposed by those who may be your depositories, in the way of delivering it up. There will be no middle man to stand between the actual custodian of the money and responsibility; there will be no community to back him in contumacious refusal to comply with his duty; no real or fancied inability to meet your demands can be offered in extenuation of neglect; no honest men unconsciously enlisted by interest, by gratitude, by innumerable insidious appeals to ardent natures, be induced to step forward, and oppose their loyalties to the execution of the laws. No party spirit can be rallied in behalf of the delinquent. No shout of party triumph will be heard to animate his soul to bold defiance; but he will stand alone, a conspicuous mark for that approbation which fidelity is sure to win, or the sober condemnation which is as certainly visited by enlightened public opinion upon a faithless or factious public servant.

The plan is recommended to us by its simplicity, according, in this, with the whole genius of our institutions. One main object of our political forefathers was to deprive Government of all that mysticism with which kingcraft had invested it. It was intended that our system of government should be so simple that every citizen (as all take part in its action) should be capable of comprehending it; that whosoever could read, or hear read, our excellent Constitution, should understand its meaning, and be able to judge of the fidelity of those to whom its administration was committed. The simplicity of this plan, then, is in beautiful conformity with the rest of the system of which it is intended to constitute a part.

But it has the decision of time in its behalf. For aught we know to the contrary, it has been substantially the practice of all Governments, except our own, up to the present day. To various modifications it has doubtless been subjected; but even in England, a wide space is kept between the Exchequer and the bank.

The perfect accessibility of the Government to its proper funds is a circumstance against which it would take much to weigh with any prospect of overbalancing it. Yet objections have been urged to the plan, and it is proper we should consider them. And first, it is said the revenue will be exposed to speculation much more than it is at present. Why so? It is pertinently asked by the President in his Message, do vaults become less secure in a Treasury Department than when located in a banking house? And it might have been also asked, do men change their natures less from becoming officers in a bank than in the employment of the Government? Surely, the same securities can be provided in the one case as in the other. Nay, is not the advantage on the side of the Government? There is no limit to the penalties you may impose upon an unfaithful public agent. You may bind him hand and foot, and cast him into the most loathsome dungeon; and if that be not enough, you can doom him to a felon's death, fasten upon him a stigma which will not leave him even in his festering shroud, but cling with relentless hold to his children after him. It is true, you can not make men honest by legislation, but you can make it so obviously their interest to be so, as to enable them to overcome the temptations which beset them. It is the hope of escaping detection, for a length of time, and thereby increasing the probability of escaping altogether that most commonly sustains men in the perpetration of deeds of fraud; but in the present admirable system of accounting with the Treasury of the United States, detection would be likely to follow so soon upon the commission of the offence, that little inducement would be found to engage in it. If it is to be received as a settled truth, that men cannot be trusted with money under any of the sanctions which the law is able to impose for its safe keeping, we may as well make up our minds to abandon civil society at once as an impracticable absurdity. But the Senator from Virginia insists that experience is against us, and cites an instance from his own State, where high character and reputed integrity in the officer, had

not been sufficient to protect the public treasure; but instances might likewise be cited, were I disposed to do so, where defalcation had taken place where it was the custom to make deposits in a bank, which custom was enforced by law. There is less danger it is said to the public under the banking system, although the stockholders may be exposed to the losses which would have otherwise fallen upon the Government. In answer to this, I say, in the first place, there never has yet been a winding up of the transactions of the Government with the banks, so that it is impossible to say what have been its losses; but granting the position to be correct, I answer farther, that in a national point of view, one evil is nearly as great as the other. But after all, the same officers whom you are now required to trust with the collection of the money, and whose honesty must, of necessity, be subjected to that test, are those who under the plan proposed would be its depositories, and but little additional demand would therefore be made upon their integrity. Yet, for the sake of the argument, let it be conceded that each particular portion of the public Treasury would be subjected to some additional hazard; it seems to me, altogether indisputable that the aggregate would be infinitely less exposed to be lost, or rendered useless; and who is there who would not be willing to put a portion of his estate in greater hazard, to render the balance more secure, or even to make an absolute loss by paying an insurance? This consideration alone is, I think, altogether sufficient to dispose of the argument.

I am glad to find that no gentleman has in debate seriously relied upon the additional expense to which the sub-treasury system, as it has been called, would subject the nation; but it has been adverted to in the newspapers, and we may perhaps yet hear it on this floor. It is shown to be very inconsiderable; and, even if it were much greater, the advantages proposed are nothing if that expense, in being weighed against them, would not be as a feather to a pound weight.

The Senator from Virginia objects to the plan proposed on account of its tendency to produce another charter for a United States Bank. In the depreciation of such a result, I will most cordially unite with that gentleman, but I differ with him altogether in his anticipations of the *modus operandi* of the two plans upon the public mind. I can see in the plan to which he clings with so much tenacity, the most direct tendency to the re-establishment of that institution so odious to us both. Let the maxim once be settled that the fiscal concerns of this Government cannot be managed without bank agency, and the blade of wheat does not more certainly spring from the grain deposited in the earth, than a United States Bank will spring into being from that maxim. Every one must see, every one will come to see, that if this bank agency be necessary, a bank deriving its existence and form, and the law of its action, from the Government which uses it, must possess advantages over every other, and the Constitution will be moulded to meet this conviction. But the direct tendency of resorting to an independent treasury, will be to impress the public with the belief that the Government can manage its affairs without a bank. If the plan operates successfully, this belief will gather strength from day to day, and anti-bank habits become established, while these institutions, deprived of the stimulus which the Government deposits have ministered, will gradually diminish in number until they become apportioned to the real commercial demands of the country. At the worst, should our scheme fail, it will merely bring us back to the position that bank agency is necessary for conducting the fiscal concerns of the Government, and we shall only have reached that degree of approximation to a United States Bank at which the Senator from Virginia sets out.

It is objected to the plan proposed, that it will increase Executive patronage. With a certain class of politicians, this has been a matter of vast alarm, and they have become so much accustomed to associate with this expression certain most deplorable incidents, that they can never hear it without having this horrible array presented to their imaginations. Now men are exceedingly prone to mistake names for things; and although there is

something very imposing in the name of patronage, yet I am vastly mistaken if the Executive patronage of this Government is not to him who wields it, a principle of weakness rather than of strength. For every one on whom it is in his power to confer an office, ten greedy expectants are disappointed, and feel that some great personal merit has been overlooked in them, or some important service ungratefully forgotten. How can one admire and support the man who has so little discernment as to be blind to one's merits, or so little heart as to be insensible to the zeal and devotion with which one has advocated his cause? And what is still worse, it is by no means certain that the prizeholder will be true to his allegiance. So far as my experience goes, in a large majority of cases, a man no sooner receives an appointment than he becomes adverse to the administration from which he received it. This, at the first blush, may seem a little remarkable; but our wonder diminishes when we advert to the deceitfulness of the human heart, and find how large a portion of it is in the quiet possession of personal vanity and pride. Generally speaking, the incumbent has reached the acme of any reasonable expectations he could form, and hope, therefore, no longer keeps him steadfast with promises for the future; there is nothing then but the fear of removal, and this power of the Executive is watched by the public with so much jealousy, that few are willing to exercise it without some apparent and satisfactory reason. The mere change of political opinion will seldom do for a reason, and is therefore seldom relied upon. The danger, therefore, is just enough to enable a man to take credit to himself for great independence, who can say, "You see I am an office holder, but that does not hinder me from differing from the Government, and finding fault when I see occasion." And what is there human with which one cannot find fault who has fame or any thing else to gain by so doing? But, granting that the patronage of the Executive was an available means of increasing his partisans, how much more efficient could that means be rendered through the instrumentality of the banks, than when brought directly to bear upon the individuals who might be applicants for office, as is urged, with great force and propriety, in the President's Message. But this brings me to a view of the subject, startling in the highest degree, in the contemplated continuance of the league of banks in connection with the revenue of the country. At present, the President and the money power of the country are in opposition, and happy will it be if they always remain so. But do you not see that the system proposed will have the tendency, in the end, to bring them to co-operation and alliance? Parties in this country may be subdivided as you please, but the grand distinction at last is that between those who are in favor of a strong and splendid central Government, absorbing all the sovereign powers once possessed by the States, by the most liberal and enlarged construction of the Constitution of the Union, and those who are in favor of a limited and economical Federal Government, exercising no more powers than those expressly conferred by the Constitution, and leaving all beyond to be exerted by the States. To the former of these, the mercantile classes, comprehending nearly all the moneyed power of the country, will generally be found to belong, and if you want a proof of this, you will find it in their habit of looking up to this Government, as the great *parens patrie* in all emergencies, as on the present occasion. Accustomed to handle large sums of money, which they accumulate without much bodily toil, living in ease, and splendor not enjoyed by any other large class of community, the common principles of human nature incline them to aristocratic feelings. From whence, I pray you, is the failing aristocracy of England replenished, but from the mercantile classes; acquiring by their wealth, consequence, and purchasing therewith baronial estates, the title in some way or other frequently follows. From the beginning of history to the present day, merchants have become princes, and constituted the aristocracy of their respective countries. Now one of the dangers to which our institutions are exposed, and that of which many politicians feel or affect to feel the greatest dread is, from Executive usurpation, ending in the assumption of regal, imperial

or dictatorial power. To this, while the moneyed power of the country is adverse to him personally, it will present a most formidable barrier, and in its bold struggle in defence of its own liberty, will secure that of the whole nation. Who contributed so much to curbing the regal power in England, and placing the liberties of the people upon a firm basis, as the merchants of London? Mankind must ever be their debtor for their noble efforts in favor of free principles. But a President who would desire to make himself a monarch would seek to surround himself with an aristocracy devoted to his will; and where would he so naturally seek for one as in the moneyed power of the country? while, at the same time, by using it, he would be disarming the very opposition to his plans from whom he would have most reason to fear a defeat. But, stopping far short of that, in the nature of things, we might suppose the Executive of the country well disposed to give vigor to the central Government, and an union between him and the moneyed power of the land would, in the pursuit of such common design, go very far in its accomplishment. I believe the strife between the two great parties in this country one of the best securities for the liberties of the nation, and I do not desire that it should ever cease. Nature and art, in all their operations, proceed upon opposing to each other antagonist principles; the ship makes her way towards her destined port by means of the antagonistic action of her rudder and the wind; and the wise politician in this country will not desire to see an union of interest between the Government and its great moneyed power. Rather let them be kept in direct opposition, and never let them be brought into united action.

Another objection which has been urged against the plan under consideration is, that it would be a virtual surrender to the Executive of the purse; and the old cry is raised of the union in the same person of the purse and the sword. Upon this point I have only to say, if it be so, it is the fault of the Constitution itself. By it, only three classes of public agents are recognised—the executive, the legislative, and the judicial. The latter is out of the question so far as the present matter is concerned, and, as respects the legislative, it is sufficient to say that it was never intended its sessions should be perpetual; and when those sessions are dissolved for any purpose of immediate action, the Legislature has no existence. Mean time, the treasures which it has raised must be in the custody of some branch of the Government; and, from what has been already said, this can be the Executive only. No fourth estate, no bank power, is created or recognised by the Constitution for this purpose, and its provisions are only fulfilled when the revenue goes into the hands of the Executive; But, under the name of the Executive, it is the President only who is pointed at in the expression of fears for the possession of the purse. And why should such fears be entertained? The President would be as far removed as now from any personal contact with the public treasure. The machinery is now in operation, (and, if it requires improvement, so let it be done,) by which the public treasure is to be received and paid out; and the hand of the President could not control a dollar, except for purposes prescribed by law, without committing a burglary or a great public fraud. There would be at least two persons between him and the public money—the Secretary of the Treasury and the Treasurer—and it would be, I should think, a violent presumption, and one little creditable to us as a people, if one to whom we have confided so high and dignified a trust as the Presidency of these States could be guilty of a burglary or a great public fraud.

The Senator from Virginia has appealed to the wisdom of past ages, and meekly offers to subdue the dictates of his own judgment to their decisions; and, amongst others, he refers to the great apostle of liberty, Thomas Jefferson. The opinions of that distinguished man upon political subjects have always, with me, the greatest weight, and I think it will be found, that whenever in a situation to express his own deliberate convictions upon this important subject, they have uniformly been in our favor.

As a member of the first cabinet formed under our Constitution, he recommended a plan similar

to ours to President Washington, and in a comparatively recent letter written upon this subject, his sentiments are all with us. I will take the liberty of reading a portion of this letter to the Senate, and I will read the more of it because some few sentences have a bearing upon a subject discussed a few days ago, relative to the issue of treasury notes. (Here Mr. S. read from the fourth volume of Mr. Jefferson's works, letter the 90th, to John W. Eppes, which is published as an appendix to this speech. When Mr. S. had finished reading, he proceeded.) I have thus, Mr. President, read from this letter, for the double purpose of showing Mr. Jefferson's views upon the matters in question, and of fortifying myself with his authority in an opinion expressed by me some time ago, that the banking system, as now practised in this country, is a manifest absurdity. I have now closed all that I have to say upon the matter under consideration, as touching merely the fiscal concerns of the Government, and will proceed to bestow a few reflections upon them as affecting the currency of the country, and its commercial prosperity.

I am next, as briefly as possible to consider the subject as relates to the currency; and upon this point, I agree fully with the President that there is no constitutional power in Congress to regulate the paper currency of the States. The Constitution truly has given the power to Congress to coin money, and regulate the value thereof, and of foreign coin. The power conferred then is over coin only; and whatever verbal disagreements may have arisen among us, no one, I presume, will contend that any species of paper money is included under the term coin. So much for the letter of the Constitution; and the spirit of it, I think (if gentlemen will insist that it has a spirit) is equally against it. Any one who will examine its various provisions, cannot fail to perceive that its wise and sagacious framers looked with the most jealous eye upon a paper currency, and fixed their hearts upon the precious metals, the as only proper circulating medium for this great Union, as sanctioned by public authority. To the General Government no power was given (and as the history of the time shows us, was purposely withheld) to create corporations without the District, where its legislative power is absolute. The same power never having been taken from the States, (as has been expressly decided,) was left to them within their respective limits, and all of them have exercised it. To them, therefore, it belongs to regulate, if they can, these creatures of their own hands; certain it is no power is conferred upon us by the Constitution to do so. It is contended, however, that although we have no direct power to regulate the paper currency of the States, we may do so indirectly. I admit that if in the pursuit of our legitimate objects we should incidentally adopt measures affecting the currency, we shall not be subject to blame, and if they affect it beneficially, so much the better. But we have no right, under the mere pretence of furthering an object placed by the Constitution within our control, to be aiming in fact at the regulation of another not so placed. It is a fraud upon the nation, upon our constituents, and ourselves. Such was the process by which the odious, unjust, and unconstitutional measure of a tariff for protection was fastened upon us, in the resistance of which a portion of this Union was placed in hostile attitude against the remainder. Akin to this is the proposal of imposing a stamp duty on all bank notes below a certain denomination, and all other measures for the potential exercise of powers that we cannot openly claim.

But if you had the constitutional power, you have not the physical power, to control a currency furnished by corporations. I have already made myself intelligible, I trust, upon that point, and shown that a bankruptcy law, the most probable means of control, is not within your reach. The plan proposed by the Senator from Virginia is altogether inadequate; it wants both vigor and quickness of action, and in my judgment he might as well attempt to sweeten the bitter waters of the Dead Sea, by dropping in lumps of sugar, as to infuse health and soundness into the diseased paper circulation by his feeble process. It can only operate upon those banks who agree to receive your deposits, and whose paper you agree to receive in

the payment of public dues. The notes of banks issuing small notes will either be taken by them, or they will not; if they do take them, they become as current as their own, and have within them as many principles of currency. If they do not receive them, they will still be current, and the more so, as the banks in league with the Government will be removed from competition in the small note circulation. The argument of the Senator from South Carolina who sits near me, was misunderstood by me, or it has been misunderstood by others, with regard to the currency of bank notes. He has been supposed to have said, that bank notes owe their whole currency to their being receivable in debts to this Government. I did not so understand him, and I do not admit the truth of the position. They unquestionably owe the larger portion of their credit to this cause, but then they derive a good portion of their credit from their being receivable in debts to the State Governments—to the confidence which many will always have in the institutions which issue them—to the established custom of the country which has rendered them current—and to the eagerness with which every thing at all akin to money is laid hold of when offered, lest nothing better may be presented, and the chance of getting even that pass away. These considerations will continue long to sustain the circulation of small notes, and many banks will find it too profitable to issue them to be tempted by any prospect of gain which you hold out to them in the plan of the Senator from Virginia to abandon it. Add to this, that while you continue your connection with banks, you will never accomplish one of the great purposes of legislation—public repose, and quiet. What we now do, ought, if possible, to be well done; and it is far more important than that it should be done hastily. In your partnership with the banks they will always find subjects of complaint against you, make one concession the ground of right to demand another, and whenever refused raise a clamor which will excite the elements of political strife from one end of the continent to the other.

I have said that it does not belong to this Government to regulate credit and paper currency, and I insist further that if this were an absolute, unlimited Government, it would be expedient for it to interfere as little with such matters as possible. In the first place it is a subject to which nature herself has furnished laws, a few of which are simple and well understood; but many of them are very occult, and scarcely perceptible, and the most sagacious mind is incapable of foreseeing the result even of a few of their combinations, and must therefore act with great rashness in meddling unnecessarily with matters in which great evils may be produced in the end, without any well-founded confidence of advantages in anticipation. The most enlightened writers on political economy, in modern times, denounce the ignorant quackery which formerly shackled trade with multifarious laws and regulations, and have discovered that freedom is her element. Every attempt to control her, diminishes her freedom; and those who are now beseeching Congress to take her under its special charge, would, if their prayer were granted, ere long discover, that when trade lays herself at the footstool of power for protection, she has deserted her native element, has voluntarily torn away the plumage which sustains her in her prosperous flight, and having become faint and languishing, will sigh vainly for the return of her health and buoyancy. We are told too of the value of credit and its connection with freedom; and if I may be allowed to refer to a letter made public some weeks ago, coming from a high quarter, I will take the liberty of saying that a clink of words, and apparent beauty of sentiment which it contains, is calculated to bear away the public mind to wrong conclusions. It is there said "that credit distinguishes the free Government from the despotic," and the connection in which the expression is used, would lead one to suppose that the truth of the sentiment implied that to keep a nation free, you must maintain credit; whereas the real beauty of the remark is found in the truth being precisely the other way. You can not make a nation free, by giving her credit,

but you can give her credit, by making her free. Let us not mistake the relationship of freedom and credit; it is not collateral, but lineal; and it is likewise important that we should not mistake the child for the parent. Credit is the offspring of freedom, and not freedom the offspring of credit. God forbid that I should be an enemy to credit; but I am desirous to see a natural, spontaneous credit, resting upon a sound basis; not a spurious, factitious credit, swelling like a balloon, with nothing but wind—as buoyant and as frail. You cannot legislate credit into healthy existence; but in the attempt to do so you may give it temporary plethora, destined to end in apoplexy and death. Credit is most delicate in its nature, and few hands are gentle enough to touch it. The slightest causes elevate or depress it. Its extreme sensibility is strikingly illustrated by a passage in Roman history, which now occurs to my mind. It was during what is called the piratical war, or the war against the pirates. Provisions at Rome and in the surrounding country had become extremely scarce, and could only be had at enormous prices. The supplies for the army and navy were nearly exhausted, and there was but a cheerless prospect of having them renewed. At this crisis, the Senate resolved to appoint Pompey the Great generalissimo of the expedition against the pirates, merely in reference to his military talents and successes; but strange to tell, prices immediately came down, and provisions were abundant. Here, then, was a cause instantly and powerfully affecting prices and credit, which no one could have foreseen; and yet the writers of the day assure us it is so. And is it possible, while this Government remains so intimately connected with the paper currency and credits of the country, that it can fail greatly to affect them by every movement? Like a great giant, it has only to move one of its mighty legs or arms, and all the elements around it are immediately thrown into convulsions. This dangerous juxta-position, therefore, ought to cease—so embarrassing to the Government and threatening to the paper currency and credit. No matter how urgent the necessity may be in other respects, Government must move with caution, or not move at all, lest she may derange the currency; or, if looking solely, or even mainly, to the constitutional ends of its creation, it does act, the air is immediately rent with cries of distress, and the Government is told it has done the mischief and must repair it; that it must bind up the wounds of a bleeding country; nay, and pour into them oil and wine, too, from the Treasury. Such was the outcry on the removal of the deposits; such upon the refusal to recharter the United States Bank; such upon the issue of the Treasury circular; all of them measures strictly political, and adopted with reference to the action of the Government as such; but complicated as it had become with the paper currency and credits of the country, nothing should have been done, every thing should have been left undone, it is said, which, in the end, happened to affect them. What remedy is there for this evil but the disconnection proposed?

But although the Government, whether united or not to the banks in her fiscal operations, can do but little legitimately towards regulating their paper currency, she can, by that union, do much to inflame the evils, and by so doing, work much injustice. She can by that union greatly increase the credit of those institutions, and give a wider circulation to their paper issues, and in this way increase what are called mercantile facilities. The Senator from South Carolina has illustrated this matter by a figure so strong and forcible, that it could not fail, I think, to have brought conviction to all who heard him. Yes, sir, take the beggar from the street, and stipulate with him that nothing but gold and silver and his notes will be received in payment of debts to this Government, and Cræsus himself was never richer than he would instantly become.

But what right have the merchants or the banks to make a profit upon the Government funds, to the exclusion, or nearly to the exclusion, of all other classes? It is vain to set up the plea that the benefit of one class is the benefit of all; for the same plea is equally applicable to any act of inequality

and injustice, however monstrous. Every one knows that bank stockholders are mainly confined to a very few classes, and it is those who make the profits upon the public funds while in the custody of banks. Tell me not that by expansion of the currency, the farmer and the laborer obtain better prices for their produce and their labor. Nominally it is so; but they must, in at least an equal proportion, pay for what they consume; and of those who are fortunate enough to lay aside any thing above their actual expenses, the ordinary subjects of their investments increase in nominal value with the expansion of the currency, and they hold them liable to all the fluctuations of that uncertain element, rendered so entirely for the profit of others. But leaving, as time compels me to do, the inequality of its operations upon individuals, how much more unequal is it in its local operations? Where are the banks? In mercantile communities. Where are our mercantile communities? With a very few exceptions, in our northeastern country. There, not only the bank stockholders and merchants, but all who are near them and around them, partake of the benefit in some degree, as the plat of ground which lies near a stream, although the prolific shower may not fall immediately upon it, is yet refreshed and fertilized by the moisture diffused through the atmosphere. Why is it that plenty and prosperity rest on the bleak and barren hills of the north, while the sunny and alluvial valleys of the South are daily becoming more and more impoverished? What is it but the result of the partial and unconstitutional system under which we have been living? In vain does the Constitution declare that taxation shall be equal, if, when collected, some favored regions are to be fostered and enriched by it, while others are left to struggle on, worse than neglected, with no other benediction but that of nature.

As a sort of balance to this argument, the Senator from Indiana, who has just addressed you, insists that the effect of collecting the Government dues in gold and silver will be to drain all the specie from the West, as little or none of the public expenditures will be in that quarter. Now, I am at issue with that Senator, both as to the fact and the inference he draws from it. I do not agree that the public expenditures have not been in greater proportions on the Mississippi than on the seaboard. If I am correctly informed, more money has been paid to the Indians for extinguishing their title to the lands in that Senator's own State, than the whole are worth; and I remember that no longer ago than last winter, I myself rose in my place, and protested against the whole of the public funds being swallowed up in the great valley of the Mississippi, so large were the appropriations in that direction. Doubtless ample expenditures will be made in the West. But whether or not, if they have demand for specie in the West, thither it will go; and if it does not, it will owe its exclusion to the bank paper which the western people will themselves think proper to substitute for it.

The Government, I have already said, can not continue her connection with the banks without stimulating them into fictitious credit, and increasing the tendency to commercial and speculative enterprise, which is already great enough, Heaven knows, and subtracting from the laboring and productive classes, the real bone and sinew, the true human *matériel* of the country. This is too obvious, and the mischief too great, to require elaboration. But besides this, extravagance will be the natural offspring of the system. We have already seen the tendency of this evil to increase; and increase it will under the continuance of the system, until republican simplicity will be annihilated among us. Extravagance, and its companion, idleness, were the overthrow of all the ancient republics; ay, and of the modern ones too; and little San Marino shines forth a phenomenon for admiration, saved from the wreck which has overtaken others, by her poverty and parsimonious economy.

The union of the Government with the banks is calculated, I have said, greatly to influence the natural evils of the banking system. Some of them I have already mentioned; but one remains for me to advert to, not among the least, if not the very

greatest. This is, the mischief of sudden expansions and contractions. To this mischief no one can be insensible, for all have in one way or other felt its force. It has a tendency to make us a nation of gamblers, by the constant stimulus to that spirit which finds a place in almost every bosom, from the savage to the sage, and which it is one of the great objects of a wholesome education to subdue. But the frequent and sudden reverses to which every man is exposed, of being rendered a nabob to-day by an expansion, and a beggar to-morrow by a contraction, must in process of time engender all that loose morality which characterizes the professed worshippers at the shrine of fortune. Such is the effect upon holders of property; and upon the laboring man it is, if possible, still more baneful; for him there is no hour of prosperity, but he suffers greatly, if not equally, both in the ebb and flow of the tide. In a contraction, money of course becomes scarce, and the laborer, whose only commodity is his labor, is compelled to bring it daily into the market, and take whatever price it may command; while the holders of provisions, less limited in point of time for the conversion of their commodities into money, hold them back, not willing to submit to the diminished prices, and in the meantime the laborer must starve, or buy at the price demanded. On the other hand, when an expansion takes place, and money becomes plenty, labor is the last thing to find the level. The continual necessity which the laborer is under to bring his commodity into the market, prevents any competition in demand, and it is not until the general spring which is given to enterprise has opened for it new resources, that an increased demand for labor makes an increase in price. In the meantime the laborer must purchase those commodities upon which speculation is most apt to seize—the necessities of life. It is impossible for the Government to remain connected with the banks without contributing to this mischief, for when the supplies exceed much the necessities of the Government, they must lie in the banks, whose directors must resist the strongest, or, at least, most general passion of the human heart—cupidity, if they suffer them to remain unused, and in using them, an artificial expansion of the currency is, of course, created. On the other hand, when the Government shall find it necessary to make heavy drafts upon the deposit banks, a great contraction is the inevitable consequence. These are evils which the Government cannot prevent, but she should abstain, as far as possible, from exciting them; and this she can do only by disconnection.

These evils, if they go on to increase, as they must and will do, if the exciting causes are continued in action, and no exciting cause is equal to the union of the banks with the Treasury, will, in the end, bring upon this country a pecuniary catastrophe which it is frightful to anticipate; and so strong, in that event, will be the revulsion of public opinion against them, that their real capacity for utility will be overlooked, and the whole of them cast away among the lumber of past ages. In this view, no sincere and enlightened friend of those institutions should desire a continuance of the imprudent connection. But the separation will not be merely negative in its effects. It will create a demand for specie in this country, and water does not more certainly follow the ditch you excavate below the level of a pond with which you connect it, than specie finds its way wherever a particular demand is created. This specie will naturally flow at first into the banks, and, widening their specie basis, give them additional strength: their notes will still supply as much as ever the ordinary channels of trade, whilst their specie, having no tendency to emigration, will only be drawn out as the Government demands shall accrue. But when thus drawn by the Government into the Treasury, it will not remain there in large quantities, but, being required only for the payment of the Government creditors, will thus, or the greater portion of it at least, be thrown again into circulation by those creditors, (who are seldom hoarders of money,) and gradually find its way back to the banks, to be again drawn out in redemption of their notes; repeat the process of going to the Treasury, to be paid out again to the Government creditor, and be

by him thrown into circulation, to return once more to the banks. This rotation must have a healthful operation upon the currency, and upon those who supply it; and, in addition to this, it will have a tendency to prevent that great aggravator of other evils—banking upon bank paper; for the demands then made not being confined to bank upon bank, cannot be met by the mere presentation of other bank paper; but every bank being liable to be called upon with a considerable portion of its notes for specie, must keep itself prepared to meet them, and must regulate its issues accordingly. Another advantage to the banks, by no means inconsiderable I think, resulting from disconnection, is, that their own operations would be greatly simplified and their perils diminished. No unlooked for treasure would flow in upon them in deposits, demanding some provision for its use, and thus disturbing the even tenor of their course. No sudden demand for what had been deposited would put them at their wit's end for the means of returning it; but, pursuing a regular system, not subject to such unforeseen fluctuations, they would accomplish legitimate, just, and praiseworthy objects—the realization of reasonable profits, with safety to themselves, and convenience to the community.

To these advantages some objections are opposed; and here I must be allowed to say, that from the high-minded, honorable and talented Senator from Virginia, an argument has proceeded, which I am surprised to hear upon this floor, and especially from him. I have seen it among the newspaper slang of the day, to which I had thought it adapted. The Senator from Virginia disclaims it as an *argumentum ad captandam*. I believe him sincere. I am persuaded he did not so intend to use it. But after all it can claim no higher rank. It has a specious acceptability to the popular ear, but embodies no element of sound argumentation. It is, that, by the adoption of the system proposed by the committee, with the amendment offered by the Senator from South Carolina, one currency would be provided for the Government, and another for the people—the better for the former—the inferior for the latter. I am sickened and amazed at a practice recently but too fashionable, and upon which my colleague has already so properly and forcibly remarked, of treating the Government as something alien from the people. What is the Government, and who compose it? Is not the Government a mere agency created by the people, for certain specified purposes—a perfect nonentity beyond those purposes? Is it a thing which can have interests separate from the mass of the people? Are not the individuals in whose persons this ideal existence is temporarily incorporated themselves portions of the people? and are not the interests which they have in their national existence, as a portion of the people, infinitely beyond any separate one they can possibly claim for the brief hour in which they strut and act their parts upon this elevated stage? This is the people's Government; it exists but by their will, and when they have done with it, or it acts in opposition to that will, they can dissolve it as by a breath. Resistance on its part would be as vain as that of a school boy with a reed to a Roman soldier in full armor. Government can have no interests but those of the people; but the people themselves have interests as a body politic, and they have interests as individuals; the former mainly are committed to us, and the latter to the respective States. But how, I pray you, upon this imaginary division of interests, is there proposed by the measure a sounder currency for one than for the other? Does the gentleman admit that the paper money is inferior in value to the gold and silver? If he does so, is not the admission *felo de se* to his proposal—which is defended, if I have understood him, upon the ground that paper is not depreciated, and can be saved from depreciation, and is therefore equal to gold and silver? And, between equal things, how can the terms better and worse, inferior and superior, be applied? But I do not admit that they are equal; and it is mainly upon the ground that they are not equal, and—although men may so imagine—that they can never be really so, that I am opposed to this scheme. For the people, as individuals, I have

no right to legislate, and I therefore leave them in the enjoyment of their birthright, to take what they please, and call it money. But for this Government, Congress has a right to legislate; and I esteem it, for one, a part of my duty, as a portion of that body, to demand for the people, in their political character, the currency which the Constitution acknowledges; the currency which admits of least fluctuation; the currency which the public creditor has a right to demand, and that which can be collected and disbursed with least injury to the public. But, in pressing the argument, it is said the public creditors, while thus nominally receiving their stipulated dues, are in fact receiving more. Which, I pray you, is the standard of value—gold and silver, or paper? If the latter, it is idle to argue; and if the former, I would further ask if it is not in that you have promised to pay them? And if so, is it a ground of complaint that you have fulfilled your engagements? If you paid the public creditor by force in paper, he might well complain that you had paid him so much per centum less than you had promised; but it never could justly be said, when you paid him in gold, that you had paid him more. But a fancy picture has been drawn of the officers of Government filling their coffers with golden deposits, which they receive in compensation for their services. Is it not a picture merely imaginary, contradicting all truth and experience? It is notorious that public men, both in England and this country, (exclusive of the pension system, which is there in extensive use,) who are dependent upon their compensation, seldom know affluence; on the contrary, that they live from hand to mouth. Every dollar they receive is spent as soon as they receive it, and, such as it is, enters into the general circulation, through their tailors, their shoemakers, their butchers, their bakers, &c.; and, so far from hoarding, they are lucky if they do not of necessity anticipate their means, and plunge themselves in debt; and if the public does not bury them when they die, it is because it will not, and leaves it to private charity to perform that office.

But the time is deemed unsuitable for any change in the measures of the Government. It is said the country is now in great agitation and distress, and we ought to postpone any important change to a season of more quiet and prosperity. Now, sir, it strikes me that the very time for a change of measures is when the country does not seem to be happy under those which are in operation, and that nothing could be more unwise than to make changes when the country was quiet and reasonably prosperous. What would be thought of the physician who, being called to the bed-side of a sick man, should say to him, "My friend, you are quite sick, it is true, but I do not think this the time to give you medicine. Were I to do so, it would irritate your stomach, and throw your system into commotion, and you would probably feel even worse than you do now. For the present, therefore, I will leave you to your chance, and you may possibly die; but should you be so fortunate as to get better, why then I will physic you." Such seems to me to be in substance the argument against present action upon the important alternatives before us.

The wisdom of the past, the practice of our own and other nations, is cited against the plan of an independent Treasury. Our own nation, I believe, stands alone in the intimate connection which exists between the banks and the Treasury; and I have already shown, by the letter which I have read to the Senate, how much our practice is at war with the considerate opinion of one of the most enlightened of our statesmen. In England, too, where the connection is much less intimate than here, many of her wise men do not hesitate to pronounce it, such as it is, injurious both to the bank and the State. In other nations, I believe the connection is unknown.

The measure, finally, is spoken of as being considered a war between the Government and the banks; and this, it is said, is a false issue. I agree, Mr. President, that it is a false issue—a very false issue; so false that I, for one, would never be a party to it. I would never consent to join the Government in making war upon any class of citizens, or any class of citizens in making war upon the Government. In advocating this measure, I

look to the banks as only incidentally concerned. It is a measure of great public interest, and, as I believe, of great public utility. If the banks should happen to suffer by it, I shall regret it; and if they are benefitted by it, it will add to the satisfaction I expect to derive from its otherwise benign operation.

In conclusion, I must object, with my colleague, to the gloomy colors in which the condition of the country has been drawn. Some difficulties, some distresses, there may be; but the great elements of prosperity are yet rife in our land; we have yet the genial skies and fertile soil with which nature blessed us; the flag of our country yet waves proudly in the face of the world, and she may turn, as did the Roman matron, to her industrious, talented, and gallant sons, and as Cornelia did not to her beautiful and virtuous daughters, exclaiming, "These are my jewels." While these remain to her she can never be ruined; never justly complain that she is unhappy.

#### APPENDIX.

I am sorry to see our loans begin at so exorbitant an interest. And yet, even at that, you will soon be at the bottom of the loan-bag. We are an agricultural nation. Such an one employs its sparings in the purchase or improvement of lands or stocks. The lendable money among them is chiefly that of orphans and wards in the hands of executors and guardians, and that which the farmer lays by till he has enough for the purchase in view. In such a nation there is one, and one only, resource for loans sufficient to carry them through the expense of a war; and that will always be sufficient, and in the power of an honest Government, punctual in the preservation of its faith. The fund I mean is the mass of circulating coin. Every one knows that, although not literally, it is nearly true, that every paper dollar emitted banishes a silver one from the circulation. A nation, therefore, making its purchases and payments with bills fitted for circulation, thrusts an equal sum of coin out of circulation. This is equivalent to borrowing that sum, and yet the vender, receiving payment in a medium as effectual as coin for his purchases or payments, has no claim to interest. And so the nation may continue to issue its bills as far as its wants require, and the limits of the circulation will admit. Those limits are understood to extend with us, at present, to two hundred millions of dollars—a greater sum than would be necessary for any war. But this, the only resource which the Government could command with certainty, the States have unfortunately fooled away, nay corruptly alienated, to swindlers and shavers, under the cover of private banks. Say, too, as an additional evil, that the disposable funds of individuals, to this great amount, have thus been withdrawn from improvement and useful enterprise, and employed in the useless, usurious and demoralizing practices of bank directors and their accomplices. In the war of 1755, our State availed itself of this fund by issuing a paper money, bottomed on a specific tax for its redemption, and, to insure its credit, bearing an interest of five per cent. Within a very short time, not a bill of this emission was to be found in circulation. It was locked up in the chests of executors, guardians, widows, farmers, &c. We then issued bills, bottomed on a redeeming tax, but bearing no interest. These were readily received, and never depreciated a single farthing. In the revolutionary war, the old Congress and the States issued bills without interest, and without tax. They occupied the channels of circulation very freely, till those channels were overflowed by an excess beyond all the calls of circulation. But, although we have so improvidently suffered the field of circulating medium to be filched from us by private individuals, yet I think we may recover it in part, and even in the whole, if the States will co-operate with us. If Treasury bills are emitted, on a tax appropriated for their redemption in fifteen years, and (to insure preference in the first moments of competition) bearing an interest of six per cent., there is no one who would not take them in preference to the bank paper now afloat, on a principle of patriotism as well as interest; and they would be withdrawn from circulation into private hoards

to a considerable amount. Their credit once established, others might be emitted, bottomed also on a tax, but not bearing interest; and, if ever their credit faltered, open public loans, on which these bills alone should be received as specie. These, operating as a sinking fund, would reduce the quantity in circulation, so as to maintain that in an equilibrium with specie. It is not easy to estimate the obstacles which, in the beginning, we should encounter in ousting the banks from their possession of the circulation; but a steady and judicious alternation of emissions and loans would reduce them in time. But, while this is going on, another measure should be pressed, to recover ultimately our right to the circulation. The States should be applied to, to transfer the right of issuing circulating paper to Congress exclusively, *in perpetuum*, if possible, but during the war at least, with a saving of charter rights. I believe that every State west and south of Connecticut river, except Delaware, would immediately do it; and the others would follow in time. Congress would, of course, begin by obliging unchartered banks to wind up their affairs within a short time, and the others as their charters expired, forbidding the subsequent circulation of their paper. This they would supply with their own, bottomed, every emission, on an adequate tax, and bearing, or not bearing, interest, as the state of the public pulse should indicate. Even in the non-complying States, these bills would make their way, and supplant the unfunded paper of their banks, by their solidity, by the universality of their currency, and by their receivability for customs and taxes. It would be in their power, too, to curtail those banks to the amount of their actual specie, by gathering up their paper, and running it constantly on them. The national paper might thus take place even in the non-complying States. In this way, I am not without a hope that this great, this sole resource for loans in an agricultural country, might yet be recovered for the use of the nation during war; and, if obtained *in perpetuum*, it would always be sufficient to carry us through any war: provided that, in the interval between war and war, all the outstanding paper should be called in, coin be permitted to flow in again, and to hold the field of circulation until another war should require its yielding place again to the national medium.

But, it will be asked, are we to have no banks? Are merchants and others to be deprived of the resource of short accommodations, found so convenient? I answer, let us have banks; but let them be such as are alone to be found in any country on earth, except Great Britain. There is not a bank of discount on the continent of Europe (at least there was not one when I was there) which offers any thing but cash in exchange for discounted bills. No one has a natural right to the trade of a money-lender, but he who has the money to lend. Let those, then, among us who have a moneyed capital, and who prefer employing it in loans rather than otherwise, set up banks, and give cash or national bills for the notes they discount. Perhaps, to encourage them, a larger interest than is legal in the other cases might be allowed them, on the condition of their lending for short periods only. It is from Great Britain we copy the idea of giving paper in exchange for discounted bills; and, while we have derived from that country some good principles of government and legislation, we unfortunately run into the most servile imitation of all her practices, ruinous as they prove to her, and with the gulf yawning before us into which those very practices are precipitating her. The unlimited emission of bank paper has banished all her specie, and is now, by depreciation, acknowledged by her own statesmen, carrying her rapidly to bankruptcy, as it did France, as it did us, and will do us again, and every country permitting paper to be circulated, other than that by public authority, rigorously limited to the just measure for circulation. Private fortunes, in the present state of our circulation, are at the mercy of those self-created money-lenders, and are prostrated by the floods of nominal money with which their avarice deluges us. He who lent his money to the public or to an individual, before the institution of the United States Bank, twenty years ago, when wheat was well sold at a dollar

the bushel, and receives now his nominal sum when it sells at two dollars, is cheated of half his fortune: and by whom? By the banks, which, since that, have thrown into circulation ten dollars of their nominal money where was one at that time. —[Jefferson's Correspondence, vol. iv, p. 189.]

#### SPEECH OF MR. BENTON, OF MISSOURI.

In Senate, Thursday, September 22, 1837.—On Mr. CALHOUN's amendment to the bill to provide for the collection, keeping, and disbursement of the public moneys, without the agency of banks. Mr. BENTON rose to offer the aid of his voice in favor of the amendment, and in favor of the bill to which it was proposed to be attached. He considered the amendment and the bill as one measure, indissolubly connected in their nature; and that the bill would be of little value, unless the amendment was made. There might have been some difference of opinion as to the time and mode of adopting the provisions contained in the amendment—whether it should be done at this session, or at the next; and whether it should be effected by an amendatory clause, or by a separate bill. There might have been room for difference of opinion on these points a few days ago; but, since the amendment is offered, and opposed, it must be carried, or the bill itself considered as lost. He held the vote upon the amendment to be a vote upon the life and death of the bill; for it will decide whether the principle of the amendment is to become law; and if it is not, the bill becomes nugatory; for what advantage can there be in having separate keepers of the public moneys if they are only to keep the paper promises of the banks? The banks themselves, who hold the thing promised, will still be the real keepers. They will still be the treasurers. They will hold the substance, and our officers will have the shadow. They will have the money, and our officers will have the promise. They can break the promise at any time, and our officers cannot help themselves. State Legislatures may interpose, and the Federal Government cannot help itself. To make this more clear, let it be supposed that this bill, without the amendment, had been the law of the land heretofore, and had been in force in May last, when the banks stopped payment. There were thirty-two millions of public money in deposit with banks at that time, and not a dollar of real money could be got for it. Now, suppose these thirty-two millions had been received by our own officers in the notes of the banks; the result would have been precisely the same; the banks would not have paid the notes; and the acts of State Legislatures would have sanctioned the refusal; for they were just as applicable to notes as to deposits. Not a dollar could have been got upon them. The banks stopped payment on their notes as well as on their deposits. The holder of their notes, and the depositor, were alike repulsed; and thus our treasurers, holding thirty-two millions of their notes, would have been penniless.

The bill is to divorce the Government from the banks, or rather is to declare the divorce, for the separation has already taken place by the operation of law and by the delinquency of the banks. The bill is to declare the divorce; the amendment is to exclude their notes from revenue payments, not all at once, but gradually, and to be accomplished by the first day of January, 1841. Until then the notes of specie-paying banks may be received, diminishing one-fourth annually; and after that day, all payments to and from the Federal Government are to be made in hard money. Until that day, payments from the United States will be governed by existing laws. The amendment does not affect the Post Office Department until January, 1841; until then, the fiscal operations of that Department remain under the present laws; after that day they fall under the principle of the bill, and all payments to and from that Department will be made in hard money. The effect of the whole amendment will be to restore the currency of the Constitution to the Federal Government—to re-establish the great acts of 1789 and of 1800—

declaring that the revenues should be collected in gold and silver coin only; those early statutes which were enacted by the hard money men who made the Constitution, who had seen and felt the evils of paper money, and intended to guard against those evils in future by creating, not a paper, but a hard money Government.

I am for this restoration. I am for restoring to the Federal Treasury the currency of the Constitution. I am for carrying back this Government to the solidity projected by its founders. This is a great object in itself—a reform of the first magnitude—a reformation, with healing on its wings, bringing safety to the Government, and blessings to the people. The currency is a thing which reaches every individual and every institution. From the Government to the washerwoman, all are reached by it, and all concerned in it, and what seems paradoxical, all are concerned to the same degree; for all are concerned to the whole extent of their property and dealings; and all is all, whether it be much or little. The Government with its many ten millions of revenue, suffers no more in proportion than the humble and meritorious laborer who works from sun to sun for the shillings which give food and raiment to his family. The Federal Government has deteriorated the currency, and carried mischief to the whole community; and lost its own revenues, and subjected itself to be trampled upon by corporations, by departing from the Constitution, and converting this Government from a hard money to a paper money Government. The object of the amendment and the bill is to reform these abuses, and it is a reform worthy to be called a reformation—worthy to engage the labor of patriots—worthy to unite the exertions of different parties—worthy to fix the attention of the age—worthy to excite the hopes of the people, and to invoke upon its success the blessings of heaven.

Great are the evils, political, pecuniary, and moral, which have flowed from this departure from our Constitution. Through the Federal Government alone—through it, not by it—two millions and a half of money have been lost in the last four months. Thirty-two millions of public money was the amount in the deposite banks when they stopped payment; of this sum twenty-five millions have been paid over to Government creditors, or transferred to the States. But how paid, and how transferred? In what? In real money, or its equivalent? Not at all! But in the notes of suspended banks—in notes depreciated, on an average, ten per cent. Here there were two and a half millions lost. Who bore the loss? The public creditors, and the States. Who gained it?—for where there is a loss to one, there must be a gain to another. Who gained the two and a half millions, thus sunk upon the hands of the creditors and the States? The banks were the gainers; they gained it; the public creditors, and the States lost it; and to the creditors, it was a forced loss. It is in vain to say that they consented to take it. They had no alternative. It was that, or nothing. The banks forced it upon the Government; the Government forced it upon the creditor. Consent was out of the question. Power ruled, and that power was in the banks; and they gained the two and a half millions which the States and the public creditors lost.

The Senator from New York, (Mr. Tallmadge,) who has just spoken with so much ability, and who is opposed both to this bill and this amendment, has predicated an argument in favor of the local banks on account of the small amount of the public money which has been lost in their hands; but here is two and a half millions in a single operation, and without going back to the period of bank stoppages in 1819 and 1814. He confines himself to direct losses, but that is a most imperfect view of the question. The full view embraces, besides direct losses, all that are incidental to the use of depreciated paper money; increased prices—disappointed operations by sea and land in time of war—and embarrassed operations in time of peace; percents shaved off at every step; the ignorant, the helpless, the necessitous, imposed upon; and one vast scene of pushing off had paper on each other exhibited all over the country.

I do not pretend to estimate the moneyed losses

direct and indirect, to the Government alone, from the use of local bank notes in the last twenty-five years, including the war, and covering three general suspensions. Leaving the people out of view, as a field of losses beyond calculation, I confine myself to the Federal Government, and say, its losses have been enormous, prodigious, and incalculable. We have had three general stoppages of the local banks in the short space of twenty-two years. It is at the average rate of one in seven years; and who is to guaranty us from another, and from the consequent losses, if we continue to receive their bills in payment of public dues. Another stoppage must come, and that, reasoning from all analogies, in less than seven years after the resumption. Many must perish in the attempt to resume, and would do better to wind up at once, without attempting to go on, without adequate means, and against appalling obstacles. Another revolution must come. Thus it was after the last resumption. The banks recommenced payments in 1817—in two years, the failures were more disastrous than ever. Thus it was in England after the long suspension of twenty-six years. Payments recommenced in 1823—in 1825 the most desolating crash of banks took place which had ever been known in the kingdom, although the Bank of England had imported, in less than four years, twenty millions sterling in gold, about one hundred millions of dollars, to recommence upon. Its effects reached this country, crushed the cotton houses in New Orleans, depressed the money market, and injured all business. Why was this? Why was it that, within two years after resumption, both in England and in our America, these disastrous revolutions ensued? Loss of confidence was the cause; and that loss resulting, not from the act of Government, but from the conduct of the banks themselves. The banks had failed, and, therefore, could fail. The people had seen them fail, and, therefore, they feared they might do so again. There was no confidence in them; no more than the coachman places in the balking horse when he comes to the hill. The gentleman from Virginia (Mr. Rives) wishes the Government to do something to reanimate confidence in these banks. Could a law of Congress inspire confidence into his coachman, and give him faith in the balking horse? No more can it be done in relation to these banks. They have stopped, universally and simultaneously, in a season of profound peace and general prosperity—no war, no pestilence, no famine—with four times as much specie in the country as ever was in it before; and this stoppage has killed confidence. It is dead by the act of the banks, and cannot be legislated into existence again by act of Congress. Confidence is a plant of voluntary, and not of forced existence. It is said by an eminent man to be a plant of slow growth. We all know it to be so; and we know, besides, that when this plant is once pulled up by the roots, it rarely takes root again in the same place.

The Senators from New York and Virginia (Messrs. Tallmadge and Rives) push this point of confidence a little further; they address a question to me, and ask if I would lose confidence in all steamboats, and have them all discarded, if one or two blew up in the Mississippi? I answer the question in all frankness, and say, that I should not. But if, instead of one or two in the Mississippi, all the steamboats in the Union should blow up at once—in every creek, river and bay—while all the passengers were sleeping in confidence, and the pilots crying out all is well; if the whole should blow up from one end of the Union to the other just as fast as they could hear each others explosions; then, indeed, I should lose confidence in them, and never again trust wife, or child, or my own foot, or any thing not intended for destruction, on board such sympathetic and contagious engines of death. I answer further, and tell the gentlemen, that if only one or two banks had stopped last May in New York, I should not have lost all confidence in the remaining nine hundred and ninety-nine; but when the whole thousand stopped at once; tumbled down together—fell in a lump—lie there—and when ONE of their number, by a sign with the little finger, can make the whole lie still, then, indeed, confidence is gone! And this is the case

with the banks. They have not only stopped altogether, but in a season of profound peace, with eighty millions of specie in the country, and just after the annual examinations by commissioners and legislative committees, and when all was reported well. With eighty millions in the country, they stop even for change! It did not take a national calamity—a war—to stop them! They fell in time of peace and prosperity! We read of people in the West Indies, and in South America, who rebuild their cities on the same spot where earthquakes had overthrown them; we are astonished at their fatuity; we wonder that they will build again on the same perilous foundations. But these people have a reason for their conduct; it is, that their cities are only destroyed by earthquakes; it takes an earthquake to destroy them; and when there is no earthquake, they are safe. But suppose their cities fell down without any commotion in the earth, or the air—fell in a season of perfect calm and serenity—and after that the survivors should go to building again in the same place; would not all the world say that they were demented, and were doomed to destruction? So of the Government of the United States by these banks. If it continues to use them, and to receive their notes for revenue, after what has happened, and in the face of what now exists, it argues fatuity, and a doom to destruction.

Resume when they will, or when they shall, and the longer it is delayed the worse for themselves, the epoch of resumption is to be a perilous crisis to many. This stopping and resuming by banks, is the realization of the poetical description of the descent into hell, and the return from it. *Facilis descensus Averni—sed revocare gradum—hic opus, hic labor est.* Easy is the descent into the regions below, but to return! this is work, this is labor indeed! Our banks have made the descent; they have gone down with ease; but to return—to ascend the rugged steps, and behold again the light above, how many will falter, and fall back into the gloomy regions below.

The day of resumption will be a day of peril, and of death to many. It is a penalty which their extraordinary stoppage has imposed. Many must fail in the trial; probably a new panic and pressure take place; and those who must attribute every calamity to the misrule, the ignorance, and the misgovernment of the republican party, had as well be preparing their accusations in advance, for the contingency will come, and a cause for it must be found in the misconduct of the Government. Let them prophesize in advance, and show their capacity for political divination by vaticinating beforehand, and exhibiting now a political cause for an event to arise hereafter out of the natural progress of banking.

Banks of circulation are banks of hazard and of failure. It is an incident of their nature. Those without circulation rarely fail. That of Venice has stood seven hundred years; those of Hamburg, Amsterdam, and others, have stood for centuries. The Bank of England, the great mother of banks of circulation, besides an actual stoppage of a quarter of a century, has had her crisis and convulsion in average periods of seven or eight years, for the last half century—in 1783, '93, '97, 1814, '19, '25, '36—and has only been saved from repeated failure by the powerful support of the British Government, and profuse supplies of exchequer bills. Her numerous progeny of private and joint stock banks of circulation have had the same convulsions; and not being supported by the Government, have sunk by hundreds at a time. All the banks of the United States are banks of circulation; they are all subject to the inherent dangers of that class of banks, and are, besides, subject to new dangers peculiar to themselves. From the quantity of their stock held by foreigners, the quantity of other stocks in their hands, and the current foreign balance against the United States, our paper system has become an appendage to that of England. As such, it suffers from sympathy when the English system suffers. In addition to this, a new doctrine is now broached—that our first duty is to foreigners! and, upon this principle, when the banks of the two countries are in peril, ours are to be sacrificed to save those of England!

The power of a few banks over the whole, presents a new feature of danger in our system. It consolidates the banks of the whole Union into one mass, and subjects them to one fate, and that fate to be decided by a few, without even the knowledge of the rest. An unknown divan of bankers sends forth an edict which sweeps over the empire, crosses the lines of States with the facility of a Turkish firman, prostrating all State institutions, breaking up all engagements, and levelling all law before it. This is consolidation of a kind which the genius of Patrick Henry had not even conceived. But while this firman is thus potent and irresistible for prostration, it is impotent and powerless for resurrection. It goes out in vain, bidding the prostrate banks to rise. A *veto* power intervenes. One voice is sufficient to keep all down; and thus we have seen one word from Philadelphia annihilate the New York proposition for resumption, and condemn the many solvent banks to the continuation of a condition as mortifying to their feelings as it is injurious to their future interests.

Again, from the mode of doing business among our banks—using each others paper to bank upon, instead of holding each other to weekly settlements, and the liquidation of balances in specie; and from the fatal practice of issuing notes at one place, payable at another—our banks have all become links of one chain, the strength of the whole being dependent on the strength of each. A few govern all. Whether it is to fail, or to resume, the few govern; and not only the few, but the weak. A few weak banks fail; a panic ensues, and the rest shut up; many strong ones are ready to resume; the weak are not ready, and the strong must wait. Thus the principles of safety, and the rules of Government, are reversed. The weak govern the strong; the bad govern the good; and the insolvent govern the solvent. This is our system, if system it can be called, which has no feature of consistency, no principle of safety, and which is nothing but the floating appendage of a foreign and overpowering system.

The Federal Government, and its creditors, have suffered great pecuniary losses from the use of these banks and their paper; they must continue to sustain such losses, if they continue to use such depositories, and to receive such paper. The pecuniary losses have been, now are, and must be, hereafter, great; but great as they have been, now are, and may be hereafter, all that loss is nothing compared to the political dangers which flow from the same source. These dangers affect the life of the Government. They go to its existence. They involve anarchy, confusion, violence, dissolution! They go to deprive the Government of support—of the means of living; they strip it in an instant of every shilling of revenue, and leave it penniless, helpless, lifeless. The late stoppage might have broken up the Government, had it not been for the fidelity and affection of the people to their institutions, and the eighty millions of specie which Gen. Jackson had accumulated in the country. That stoppage presented a peculiar feature of peril which has not been brought to the notice of the public; it was the stoppage of the sums standing in the names of disbursing officers, and wanted for daily payments in all the branches of the public service. These sums amounted to about five millions of dollars. They had been drawn from the Treasury, they were no longer standing to the credit of the United States; they had gone into the hands of innumerable officers, and agents, in all parts of the Union, and were temporarily, and for mere safe keeping from day to day, lodged with these deposite banks, to be incessantly paid out to those who were doing work and labor, performing contracts, or rendering service, civil or military, to the country. These five millions were stopped with the rest! In an instant, as if by enchantment, every disbursing officer, in every part of the Union, was stripped of the money which he was going to pay out! All officers of the Government, high and low, the whole army and navy, all the laborers and contractors, post offices and all, were suddenly, instantaneously, left without pay, and consequently without subsistence. It was tantamount to a disbandment of the entire Government. It was like a decree for the dissolution of the body politic. It was

celebrated as a victory—as a conquest—as a triumph, over the Government. The least that was expected was an immediate civil revolution—the overthrow of the democratic party, the change of administration, the re-ascension of the federal party to power, and the re-establishment of the condemned Bank of the United States. These consequences were counted upon; and that they did not happen was solely owing to the eighty millions of hard money which kept up a standard of value in the country, and prevented the dishonored bank notes from sinking too low to be used by the community. But it is not merely stoppage of the banks that we have to fear; collisions with the States may ensue. State Legislatures may sanction the stoppage, withhold the poor right of suing, and thus interpose their authority between the Federal Government and its revenues. This has already happened, not in hostility to the Government, but in protection of themselves; and the consequence was the same as if the intention had been hostile. It was interposition between the Federal Government and its depositories; it was deprivation of revenue; it was an act the recurrence of which should be carefully guarded against in future.

This is what we have seen; this is a danger which we have just escaped; and if these banks shall be continued as depositories of public money, or, which is just the same thing, if the Government shall continue to receive their "*paper promises to pay*," the same danger may be seen again, and under far more critical circumstances. A similar stoppage of the banks may take place again—will inevitably take place again—and it may be when there is little specie in the country, or when war prevails. All history is full of examples of armies and navies revolting for want of pay; all history is full of examples of military and naval operations miscarried for want of money; all history is full of instances of Governments overturned from deficits of revenue and derangements of finances. And are we to expose ourselves recklessly, and with our eyes open, to such dangers? Are we to stake the life and death of this Government upon the hazards and contingencies of banking—and of such banking as exists in these United States? Are we to subject the existence of this Government to the stoppages of the banks, whether those stoppages result from misfortune, improvidence, or bad faith? Are we to subject this great and glorious political fabric, the work of so many wise and patriotic heads, to be demolished in an instant, and by an unseen hand? Are we to suffer the machinery and the working of our boasted Constitution to be arrested by a spring-catch, applied in the dark? Are men, with pens sticking behind their ears, to be allowed to put an end to this Republic? No, sir! never. If we are to perish prematurely, let us at least have a death worthy of a great nation; let us at least have a field covered with the bodies of heroes and of patriots, and consecrated for ever to the memory of a subverted empire. Rome had her Pharsalia—Greece her Chersonesus—and many barbarian kingdoms have given immortality to the spot on which they expired; and shall this great Republic be subjected to extinction, on the contingencies of trade and banking?

But what excuse, what apology, what justification have we for surrendering, abandoning, and losing the precise advantage for which the present Constitution was formed? What was that advantage—what the leading and governing object, which led to the abandonment of the old confederation, and induced the adoption of the present form of Government? It was revenue! independent revenue! a revenue under the absolute control of this Government, and free from the action of the States. This was the motive, the leading and the governing motive, which led to the formation of this Government. The reason was, that the old confederation, being dependent upon the States, was often left without money. This state of being was incompatible with its existence; it deprived it of all power; its imbecility was a proverb. To extricate it from that condition was the design, and the cardinal design, of the new Constitution. An independent revenue was given to it—independent, even, of the States. Is it not suicidal to surrender that indepen-

dence, and to surrender it, not to States, but to money corporations. What does history record of the penury, and moneyed destitution, of the old Confederation, comparable to the annihilation of the revenues of this Government in May last? when the banks shut down, in one night, upon a revenue, in hand, of thirty-two millions; even upon that—which was in the names of disbursing officers, and refuse a nine-pence, or a picaillon in money from that day to this? What is there in the history of the old Confederation comparable to this? The old Confederation was often reduced low—often near empty handed—but never saw itself stripped, in an instant, as if by enchantment, of tens of millions, and heard the shout of triumph thundered over its head, and the notes of exultation sung over its supposed destruction! Yet, this is what we have seen—what we now see—from having surrendered to corporations our moneyed independence, and unwisely abandoned the precise advantage which led to the formation of this Federal Government.

I do not go into the moral view of this question. It is too obvious, too impressive, too grave, to escape the observation of any one. Demoralization follows in the train of an unconvertible paper money. The whole community becomes exposed to a moral pestilence. Every individual becomes the victim of some imposition, and, in self-defence, imposes upon some one else. The weak, the ignorant, the uninformed, the necessitous, are the sufferers; the crafty and the opulent are the gainers. The evil augments until the moral sense of the community, revolting at the frightful accumulation of fraud and misery, applies the radical remedy of total reform.

Thus, pecuniary, political, and moral considerations require the Government to retrace its steps, to return to first principles, and to restore its fiscal action to the safe and solid path of the Constitution. Reform is demanded. It is called for by every public and by every private consideration. Now is the time to make it. The connection between Bank and State is actually dissolved. It is dissolved by operation of law, and by the delinquency of these institutions. They have forfeited the right to the deposits, and lost the privilege of paying the revenue in their notes, by ceasing to pay specie. The Government is now going on without them, and all that is wanting is the appropriate legislation to perpetuate the divorce which, in point of fact, has already taken place. Now is the time to act; this the moment to restore the constitutional currency to the Federal Government; to restore the custody of the public moneys to national keepers; and to avoid, in time to come, the calamitous revulsions and peritous catastrophes of 1814, 1819, and 1837.

And what is the obstacle to the adoption of this course, so imperiously demanded by the safety of the Republic, and the welfare of the people, and so earnestly recommended to us by the chief magistrate? What is the obstacle—what the power that countervails the Executive recommendation, paralyzes the action of Congress, and stays the march of reform? The banks—the banks—the banks, are this obstacle, and this power. They set up the pretension to force their paper into the Federal Treasury, and to force themselves to be constituted that Treasury. Though now bankrupt, their paper dishonored, their doors closed against creditors, every public and every private obligation violated, still they arrogate a supremacy over this Federal Government; they demand the guardianship of the public moneys, and the privilege of furnishing a federal currency; and, though too weak to pay their debts, they are strong enough to throttle this Government, and to hold, in doubtful suspense, the issue of their vast pretensions.

And what new power is this, so formidable, and so daring, and the name of which is not seen in our Constitution? Whence its origin, its progress, and its present pretensions? Sir, its origin is humble; its first progress slow; its vast pretensions of recent date. In the year 1780, the first petition was presented to the Congress of the Confederation for the establishment of a bank; ten years afterwards there were but three in the country; in twenty years more there were only a few dozen; now nearly a thousand, and constantly multiplying. That first petition was bottomed solely upon patriotism, without the

least desirous of pecuniary advantage to the projectors, and intended wholly to aid in furnishing supplies to a detachment of the revolutionary army. I will read the report of the committee of Congress upon that petition, that the Senate may see the progress which banks have made since that day, and the change which has since taken place in their character and views.

CONGRESS OF THE CONFEDERATION, June 22, 1780.

*Report of a Committee.*

"Whereas, a number of the patriotic citizens of Pennsylvania have communicated to Congress a liberal offer, on their own credit, and by their own exertions, to supply and transport three millions of rations, and three hundred hogsheads of rum, for the use of the army, and have established a bank for the sole purpose of obtaining and transporting the said supplies with the greater facility and despatch; and whereas, on the one hand, the associators, animated to this laudable exertion by a desire to relieve the public necessities, mean not to derive from it the least pecuniary advantage, so, on the other, it is just and reasonable that they should be fully reimbursed and indemnified; *Therefore, Resolved*, That Congress entertain a high sense of the liberal offer of the said associators to raise and transport the before-mentioned supplies for the army, and do accept the same as a distinguished proof of their patriotism. *Resolved, further*, That the faith of the United States be, and the same hereby is, pledged, to the subscribers to the said bank, for their effectual reimbursement in the premises."

Such is the recent and humble origin of banking in this country. How gigantic has been its progress since that day! It is now the predominating power in our America. Great as it now is, what must it be in a few years more, if it continues growing and expanding at the same rate? What must it be in a few years, if it succeeds now in this contest with the Federal Government, and imposes its paper currency upon the Federal Treasury, and continues to be the keeper of the public moneys? The administration is accused of making war upon the local banks. Was it war to give them forty millions of money to keep? Was it war to receive their notes in payment of revenue? Is it war now to give them time for the payment of balances? Is it war upon them to ask to be separated from them? Is divorce war? Is it war to decline receiving their paper promises instead of the gold and silver of the Constitution, and to decline the further deposits of public money with them? Is this war? No, sir, it is peace, and the means of preserving peace. It is concord and amity that this Government wants, and is taking the safest way to secure, by declining to have any more causes of collision with them. It is the local banks, and especially the miscalled Bank of the United States, which are pursuing the Federal Government, refusing to let her alone, offering their notes for currency, and their vaults for depositories, and laboring to force these favors upon us. This is the state of the contest. The local banks are the actors, the pursuers, the assailants; the Federal Government is on the defence. All she asks is to be exempted from future causes of collision with them. They have incurred the penalties of separation. They have incurred the penalties. The very act which created them depositories, and made their notes receivable, denounced the loss of both in the event of failing to meet their liabilities in specie. That act is but little more than one year old; it was not a year old when the condition was violated, and which remains yet violated. Separation has resulted from their own conduct; separation now exists; cause for separation still continues; the Government says, let it be perpetual; the banks say, no! Receive us again; receive us before we reform, before we repent, before we make amends; and if you do not, it is war upon us. This is the state of the contest between the Government and the banks. It is attack, or, at all events, forcible embrace and conjunction on their part; it is defence and refusal on ours.

The President, in his Message, recommends four things; first, to discontinue the reception of local bank paper in payment of federal dues;

secondly, to discontinue the same banks as depositories of the public moneys; thirdly, to make the future collection and disbursement of the public moneys in gold and silver; fourthly, to take the keeping of the public moneys into the hands of our own officers.

What is there in this but a return to the words and meaning of the Constitution, and a conformity to the practice of the Government in the first years of President Washington's administration? When this Federal Government was first formed, there was no Bank of the United States, and no local banks, except three north of the Potomac. By the act of 1789, the revenues were directed to be collected in gold and silver coin only; and it was usually drawn out of the hands of collectors by drafts drawn upon them, payable at sight. It was a most effectual way of drawing money out of their hands; far more so than an order to deposit in banks; for the draft must be paid, or protested, at sight, while the order to deposit may be eluded under various pretexts.

The right, and the obligation of the Government to keep its own moneys in its own hands, results from first principles, and from the great law of self preservation. Every thing else that belongs to her, she keeps herself; and why not keep that also, without which, every thing else is nothing. Arms and ships—provisions, munitions, and supplies of every kind—are kept in the hands of Government officers; money is the sinew of war, and why leave this sinew exposed to be cut by any careless or faithless hand? Money is the support and existence of the Government, the breath of its nostrils, and why leave this support, this breath, to the custody of those over whom we have no control? How absurd to place our ships, our arms, our military and naval supplies in the hands of those who could refuse to deliver them when requested, and put the Government to a suit at law to recover their possession? Every body sees the absurdity of this; but to place our money in the same condition, and moreover to subject it to the vicissitudes of trade, and the perils of banking, is still more absurd; for it is the life blood, without which the Government cannot live—the oil, without which no part of its machinery can move.

England, with all her banks, trusts none of them with the collection, keeping, and disbursement of her public moneys. The Bank of England is paid a specific sum to manage the public debt; but the revenue is collected and disbursed through subordinate collectors and receivers general; and these receivers general are not subject to the bankrupt laws, because the Government will not suffer its revenue to be operated upon by any law except its own will. In France, subordinate collectors and receivers general collect, keep, and disburse the public moneys. If they deposit any thing in banks, it is at their own risk. It is the same thing in England. A bank deposit by an officer is at the risk of himself and his securities. Too much of the perils and vicissitudes of banking is known in these countries to permit the Government ever to jeopard its revenues in their keeping. All this is shown, fully and at large, in a public document now on our tables. And who does not recognise in these collectors and receivers general of France and England, the ancient Roman officers of quaestors and proquaestors? These fiscal officers of France and England are derivations from the Roman institutions; and the same are found in all the modern kingdoms of Europe which were formerly, like France and Britain, provinces of the Roman Empire. The measure before the Senate is to enable us to provide for our future safety, by complying with our own Constitution, and conforming to the practice of all nations, great or small, ancient or modern.

Coming nearer home, and looking into our own early history, what were the "Continental Treasurers" of the Confederation, and the "provincial Treasurers and Collectors," provided for as early as July, 1775, but an imitation of the French and English systems, and very near the plan which we propose now to re-establish. These Continental Treasurers, and there were two of them at first, though afterwards reduced to one, were the Receivers General; the provincial treasurers and collec-

tors were their subordinates. By these officers the public moneys were collected, kept and disbursed; for there were no banks then! and all Government drafts were drawn directly upon these officers. This simple plan worked well during the Revolution, and afterwards, until the new Government was formed; and continued to work, with a mere change of names and forms, during the first years of Washington's administration, and until Gen. Hamilton's bank machinery got into play. This bill only proposes to re-establish, in substance, the system of the Revolution, of the Congress of the confederation, and of the first years of Washington's administration.

The bill reported by the chairman of the Committee on Finance (Mr. Wright of New York) presents the details of the plan for accomplishing this great result. That bill has been printed and read. Its simplicity, economy, and efficiency strike the sense of all who hear it, and annihilate without argument, the most formidable arguments of expense and patronage, which had been conceived against it. The present officers, the present mints, and one or two more mints in the South, in the West, and in the North, complete the plan. There will be no necessity to carry masses of hard money from one quarter of the Union to another. Government drafts will make the transfer without moving a dollar. A Government draft upon a national mint, will be the highest order of bills of exchange. Money wanted by the Government in one place, will be exchanged, through merchants, for money in another place. Thus it has been for thousands of years, and will for ever be. We read in Cicero's letters that, when he was Governor of Cilicia, in Asia Minor, he directed his Quaestor to deposit the tribute of the province in Antioch, and exchange it for money in Rome with merchants engaged in the Oriental trade, of which Antioch was one of the emporiums. This is the natural course of things, and is too obvious to require explanation, or to admit of comment.

The Senator from Virginia, who sits over the way, (Mr. Rives) to whose very able speech I listened with great attention, and certainly with instruction on several points, has brought in a bill, antagonistical to the plan of the Government, and going to continue the receivability of local bank paper, and the deposit of the public moneys with the local banks. It is the same bill, with some modifications, which he brought in last winter, and which it was my fortune then to oppose. To speak against the bill of that Senator now, would be to repeat the numerous speeches which I then made, reinforced by the experience of the last four months; an experience compressing into a few months, the events of an age; an experience surpassing all that I then dreaded; an experience transcending all argument, and throwing the public mind a century ahead. I do not design to repeat what I then said on the Senator's plan, wherein it remains unaltered; but there is a feature in it to which I much objected then, and which I find more objectionable now, from the modification it has undergone. I allude to the conditions on which the notes of the local banks were to be received, and which, in my opinion, amounted to a compact with the banks, and a compact of the most disadvantageous kind to the Government. That feature is continued, and aggravated by taking the form which may enable a few strong banks to monopolize the business of furnishing paper currency to the Federal Government. This is what I then said:

"In the next place, he (Mr. Benton) objected to the committee's bill, because it proposed to make a bargain with each of the thousand banks now in the United States, and the hundreds more which will soon be born, and to give them a right—a right by law—to have their notes received at the Federal Treasury. He was against such a bargain. He had no idea of making a contract with these thousand banks for the reception of their notes. He had no idea of contracting with them, and giving them a right to plead the contract clause of the Constitution against us, if, at any time, after having agreed to receive their notes upon condition that they would give up their small circulation, they should choose to say we had impaired the contract by not continuing to receive them; and so, either relapse

into the issue of this small trash, or have recourse to judicial process to compel the United States to abide the contract, and to continue the reception of all their notes. Mr. B. had no idea of letting down this Federal Government to such petty and inconvenient bargains with a thousand moneyed corporations. The Government of the United States ought to act as a Government, and not as a contractor. It should prescribe conditions, and not make bargains. It should give the law."

What I objected to then was the contract, and the paper currency; what I object to now is the same contract, the same currency, and the monopoly which may be given of it to a few strong banks—to the mis-called Bank of the United States, for example, and a favorite selection of its affiliated institutions. This privilege of supplying paper money to the Federal Government, is to be limited to those banks which shall resume specie payments within a given day. The design is to encourage a resumption of payments; but what will be the effect? The effect will be, that the strong will resume, and take the prize! The English connections of the Bank of the United States would throw it tens of millions to enable it to clutch the prize, and to crush competitors. The Senator from South Carolina (Mr. Calhoun) has presented the view of this danger; the Senator from Virginia (Mr. Rives) has disclaimed all intention of aiding that institution, mis-called Bank of the United States. Certainly he needs no disclaimer, neither on this floor, or to the country; his inexorable opposition to that institution, or to any similar one, is universally known. Still his personal intentions cannot control the effect of his bill, if it becomes law; and that effect will go to give a monopoly of the right to supply the Federal Government with paper money to the strongest, or a few of the strongest, of the institutions. The mis-called Bank of the United States will be the monopolizer; for, though the most encumbered with debt of all the institutions, yet her English backers and stockholders, for such a prize as would be presented, would throw in the millions necessary to carry it. The Senator from Virginia (Mr. Rives) cannot see this effect of his bill; but let him look over his right shoulder, and he will see those who do. He will there see the phalanx which supports the Pennsylvania Bank of the United States, all anxiously watching the progress of his bill, and ready to give their votes for it, as the certain means of aiding their great and cardinal object.\*

Objections are taken to the capacity of the country to furnish the quantity of gold and silver necessary to pay the revenues of the Government in coin. It is supposed there is not hard money enough for that purpose. This objection induces two inquiries. *First*, How much specie will be required for that purpose? *Secondly*, what is the present amount in the country, and what the prospect of increase? In reply to the first of these inquiries, it is to be remembered that the President, in his Message, supposes ten millions will be enough; and the Secretary of the Treasury, in his report upon the finances, supposes that eight or ten millions will do. Having paid some attention to this point, I have come to the conclusion that the one-fourth part of the amount of the annual revenue will be sufficient to pay the whole; and this opinion is formed upon an observation of the fact, that in a regular state of the finances, when no more revenue is raised than the Government needs, about one-fourth of the whole is always on hand, of course that not more than one-fourth is taken out of circulation. Upon this data, a revenue of twenty millions would require but five millions to pay it; and a revenue of twenty-five millions would require but six and a quarter millions to meet it. A reduction of revenue to the wants of the Treasury is the policy of the administration; no more surpluses is the language of the republican

party. About twenty-five millions may, therefore, be the maximum; and the payment of this sum, it is shown, will not employ above six or seven millions. Now, what is the capacity of the country to furnish this amount? How much specie have we, and what is the prospect for more? It is well remembered that eighty millions was the computed supply at the end of the last fiscal year; to that amount we have to add the increase of the present fiscal year, being about five millions; namely, an excess of imports over exports of above four millions, and the coinage of near a million of gold. The future prospect is most encouraging. The export of specie is over; it is a drug in London; it can be borrowed there at 2½ per cent per annum, and three per cent. is a common interest. What has been forced out is ready to flow back. A large import must be expected; and if this bill passes to increase the demand for it at home, and if the suspending banks are made to resume payment, not less than fifteen or twenty millions of dollars may be expected within the ensuing year. This, then, is our condition; upwards of eighty millions now in the country, and the means in our power to increase it largely. Now, cannot a revenue of twenty-five millions, which will never require a greater amount than six or seven millions to be taken out of circulation at any one time—cannot such a revenue be met from these resources? I say it can; and I say this upon data, and will exhibit that data to the Senate, that they may judge of the correctness of my opinion. First, I take the evidence furnished by the history of our own country. The first revenue act of 1789 prescribed "gold and silver coin only" for the payment of the federal revenue; the revenue was then about four and a half millions of dollars; and the whole amount of specie in the Union was estimated at ten millions of dollars. Here then was a revenue, nearly half the amount of the specie in the country, ordered to be collected in specie. I speak of the law which ordered it to be so collected, and to which there was no objection, on account of the inadequacy of specie, either in Congress or out of Congress. The revenue was paid without complaint, and without difficulty, and in all probability, did not abstract, at one time, a million of dollars from circulation. But General Hamilton, the Secretary of the Treasury, permitted notes of banks to be received. Certainly he did, and just as certainly, for no reason founded on the inadequacy of the specie circulation to meet the demands of the Government. His reasons, as seen in his report to Congress, were altogether of a different class; they were to enable the banks to increase their paper circulation—to increase paper money—and to diffuse it generally over the Union. There were then but three banks in the United States, and those three to the north of the Potomac; they issued no small notes; their aggregate circulation was inconsiderable; and it was the plan of General Hamilton to increase their number, and diffuse their paper. This was his reason for admitting bank paper to be received; and to do so, he had to nullify, by construction, the clear enactment of positive law.

The next piece of evidence I furnish is drawn from the history of England, in the reign of William III, immediately preceding the establishment of the Bank of England, and the introduction of the paper system, and the funding system, into that kingdom. The taxes were then four millions, and the specie of the kingdom sixteen millions. These taxes were paid without difficulty; for they probably did not abstract one million sterling from circulation. The last data I shall produce is from the history of France, during the first administration of Neckar, which about covered the period of our Revolution. I speak of the first administration of Neckar, and when the finances of France were in a regular state, and not of his subsequent administration, when the extravagances of the day and the subservience of the ministers Calonne and Brienne had involved those finances in a ruin from which the talents of Neckar could not extricate them. What was the revenue and the specie circulation of France at that time? I say specie circulation; for the Mississippi scheme of John Law had cured the nation of paper money, until the assignats of the revolution came upon the stage, and lived their brief day.

What was the revenue, and the specie circulation out of which it was paid, in the prosperous period of the French finances to which I have alluded? Twenty-two millions sterling of revenue—about 110 millions of dollars—and ninety millions sterling of circulation—about 450 millions of dollars. This vast revenue, equal to one-fourth of the whole circulation, was regularly paid; and this establishes the only point for which I refer to it. Now to apply this historical experience to our own country, and to the present times. Our revenue may be about 25 millions; one-fourth of that sum will pay it; we have upwards of eighty millions of specie in the country, annually increasing, and certain to increase to the utmost extent of our wants, if we create a demand for it. One hundred millions of exportable productions will bring back just as much specie as the country wants. The objection, then, to the inadequacy of the specie in the country falls to the ground. We have more than enough for that purpose. We have but two branches of revenue—the lands and the customs, and both voluntary sources of income; for no person is under compulsion to purchase the public lands, and no one is under compulsion to import foreign goods. These are the sources of our revenues. Their payment is voluntary; and even during this summer, since the suspension of specie payments, the income from one of these sources—the lands—has been equal to the best years before the two great years of speculation. I will answer for this branch of revenue. Bring the new lands into market, and reduce the price of the old lands, and the Government will get ten or twelve millions of gold and silver from them in the next year.

I am free to admit that the whole of this eighty millions is not now in the hands of the people—that much of it is locked up in the vaults of the banks. But this is temporary; it cannot last much longer. Public opinion is omnipotent, and must prevail. That opinion is against the conduct of the banks; and in the progress of it they must see their own doom. Their vaults are shut, but their eyes must be opening; and with these eyes they must begin to see what the public is beginning to think of a BANKING SYSTEM which, in a season of peace, tranquillity, and general prosperity, and with a hundred millions of exports, and four times as much specie as ever was in the country before, are either unable, or unwilling, to meet any part of their obligations in specie—even to pay out pica-yunes!—and have driven the people to the use of irredeemable paper, and shin-plasters, and the Federal Government itself to an issue of Treasury notes.

We are taunted with these Treasury notes; it seems to be matter of triumph that the Government is reduced to the necessity of issuing them; but with what justice? And how soon can any Government that wishes it, emerge from the wretchedness of depreciated paper, and stand erect on the solid foundations of gold and silver? How long will it take any respectable Government, that so wills it, to accomplish this great change? Our own history, at the close of the revolution, answers the question; and more recently, and more strikingly, the history of France answers it also. I speak of the French finances from 1800 to 1807; from the commencement of the Consulate to the peace of Tilsit. This wonderful period is replete with instruction on the subject of finance and currency. The whole period is full of instruction; but I can only seize two views—the beginning and the end—and, for the sake of precision, will read what I propose to present. I read from Bignon, author of the civil and diplomatic history of France during the Consulate and the first years of the empire; written at the testamentary request of the Emperor himself.

After stating that the expenditures of the Republic were six hundred millions of francs—about one hundred and ten millions of dollars—when Bonaparte became first consul, the historian proceeds:

"At his arrival at power, a sum of 160,000 francs in money [about 32,000 dollars] was all that the public chest contained."

In the impossibility of meeting the current service by the ordinary receipts, the Directorial Government had resorted to ruinous expedients, and had thrown into circulation bills of various values, and

\* Mr. Rives replied to this allusion, the next day, as if Mr. Benton had said that, by looking over his right shoulder, he would see his guides and leaders. Mr. B. disclaimed both the expression and the thought. Mr. R. answered that he had not heard distinctly what was said, but was informed that such were the expressions. Mr. B. denied them, and said that he only spoke of the effect of the bill, and referred to the support which the friends of the Bank of the United States were giving it, as evidence that they understood its effect as he did.

which sunk upon the spot fifty to eighty per cent. A part of the arrears had been discharged in bills two-thirds on credit, payable to the bearer, but which, in fact, the Treasury was not able to pay when due. The remaining third had been inscribed in the Great Book, under the name of consolidated third. For the payment of the forced requisitions to which they had been obliged to have recourse, there had been issued bills receivable in payment of the revenues. Finally, the Government, in order to satisfy the most imperious wants, gave orders upon the Receivers General, delivered in advance to contractors, which they negotiated before they began to furnish the supplies for which they were the payment."

This, resumed Mr. B. was the condition of the French finances when Bonaparte became first consul at the close of the year 1799. The currency was in the same condition; no specie; a degraded currency of assignats, ruinously depreciated, and issued as low as ten sous. That great man immediately began to restore order to the finances, and solidity to the currency. Happily a peace of three years enabled him to complete the great work, before he was called to celebrate the immortal campaigns ending at Austerlitz, Jena, and Friedland. At the end of three years—before the rupture of the peace of Amiens—the finances and the currency were restored to order and to solidity; and, at the end of six years, when the vast establishments, and the internal ameliorations of the imperial Government, had carried the annual expenses to eight hundred millions of francs—about one hundred and sixty millions of dollars—the same historian, copying the words of the minister of finance, thus speaks of the Treasury, and the currency.

"The resources of the State have increased beyond its wants; the public chests are full; all payments are made at the day named; the orders upon the public Treasury have become the most approved bills of exchange. \* \* \* \* \* The finances are in the most happy condition; France alone, among all the States of Europe, having no paper money."

What a picture! how simply, how powerfully drawn! and what a change in six years! Public chests full—payments made to the day—orders on the Treasury the best bills of exchange—France alone, of all Europe, having no paper money; meaning no Government paper money, for there were bank notes of five hundred francs, and one thousand francs. A Government revenue of one hundred and sixty millions of dollars was paid in gold and silver; a hard money currency, of five hundred and fifty millions of dollars, saturated all parts of France with specie, and made gold and silver the every day currency of every man, woman and child, in the empire. These great results were the work of six years, and were accomplished by the simple process of gradually requiring hard money payments—gradually calling in the assignats—increasing the branch mints to fourteen, and limiting the Bank of France to an issue of large notes—five hundred francs and upwards. This simple process produced these results, and thus stands the French currency at this day; for the nation has had the wisdom to leave untouched the financial system of Buonaparte.

I have repeatedly given it as my opinion—many of my speeches declare it—that the French currency is the best in the world. It has hard money for the Government; hard money for the common dealings of the people; and large notes for large transactions. This currency has enabled France to stand two invasions, the ravaging of 300,000 men, two changes of dynasty, and the payment of a milliard of contributions; and all without any commotion or revulsion in trade. It has saved her from the revolutions which have afflicted England and our America for so many years. It has saved her from expansions, contractions, and ruinous fluctuations of price. It has saved her, for nearly forty years, from a debate on currency. It has saved her even from the knowledge of our sweet-scented phrases: "sound currency—unsound currency; plethora, dopsical, inflated, bloated; the money market tight to-day—a little easier this morning;" and all such verbiage, which the haberdashers' boys repeat. It has saved France from even a discussion

on currency; while in England, and with us, it is banks! banks! banks!—morning, noon, and night; breakfast, dinner, and supper; levant, and couchant; sitting, or standing; at home, or abroad; steamboat, or railroad car; in Congress, or out of Congress, it is all the same thing: banks—banks—banks; currency—currency—currency; meaning, all the while, paper money and shin-plasters; until our very brains seem as if they would be converted into lampblack and rags.

The Senator from New York, (Mr. Tallmadge,) in his very able speech, has referred to the overthrow of Bonaparte, effected by the paper system of England. Without going into the question of the causes of that overthrow—without looking to the ice of Russia and the non-arrival of Grouchy on the field of Waterloo, and without considering the numerous incidents, often trivial in themselves, on which the fate of battles and of empires depend—it will be sufficient to consider what would have been the fate of this paper system of England, if, like the system of France, it had been exposed to the shocks of invasions, conquest, and changes of dynasty; and, leaving out this supposed view, it will still be sufficient to look at it under its real aspect, and to see its present effects on the condition of the British empire. What are those effects? They are, in brief, an increase of taxes from 1694, when the Bank of England was chartered, from four millions sterling (twenty millions of dollars) to forty-five millions sterling, (two hundred and twenty-five millions of dollars); an increase of the public debt from twenty-one millions five hundred and fifteen thousand seven hundred and forty-two pounds, thirteen shillings, eight pence, and two farthings, (to be precise,) in round numbers about one hundred millions of dollars, to near nine hundred millions sterling, or four thousand five hundred millions of dollars; and the increase of pauperism, until three millions of people grace the list. These are some, for I omit, as too well known, the average septennial convulsions of that system: these are some of the evils of the paper system in England. But take another view—take some points of comparison between the national expenditures of France and England, when contending together, and see how the account, in point of economy between paper money and hard money will stand. Let us take the year 1806, when England was subsidizing Russia and other powers against France, and when the Great Emperor frustrated the effect of all these subsidies, and consolidated his power by the victory of Friedland, and the peace of Tilsit. What were the expenses of the two contending empires for that year? They were these: For England one thousand seven hundred and seventy-two millions of francs, (about three hundred and sixty millions of dollars); for France, seven hundred and seventy-eight millions of francs, (about one hundred and sixty millions of dollars): in other words, the expenses of England exceeded those of France by about one thousand millions of francs, or two hundred millions of dollars. Such was the difference between the economy of paper money and hard money; and the same proportion holds good in every station in life, from the Emperor and his empire, to the washwoman and her household.

The amendment now depending, on the motion of the Senator from South Carolina, (Mr. Calhoun) is the same in substance with the bill which I brought in upwards of a year ago, to re-establish the currency of the Constitution for the Federal Government. That bill was in these words:

"That bank notes and paper currency of every description shall cease to be received, or offered in payment, on account of the United States, or of the Post Office, or in fees in the courts of the United States, as follows: of less denomination than twenty dollars, none shall be so offered after the third day of March, eighteen hundred and thirty-seven; of less denomination than fifty dollars, none after the third day of March, eighteen hundred and thirty-eight; of less denomination than one hundred dollars, none after the third day of March, eighteen hundred and thirty-nine; of less denomination than five hundred dollars, none after the third day of March, eighteen hundred and forty; of less denomination than one thousand dollars, none after the third day of March, eighteen hundred and forty-

one; and none of any denomination from and after the third day of March, eighteen hundred and forty-two.

"Sec. 2. And be it further enacted, That any person holding an appointment under the laws of the United States, and any bank employed to keep public moneys, which person or bank shall neglect, evade, violate, contravene, or in any way elude, or attempt to elude, the provisions of this act, shall be guilty of an offence against the laws; and the person so offending shall be liable to be dismissed from the service, and the bank so offending shall, on satisfactory information, be discontinued as a depository of public moneys."

The only direct action of this bill would have been on the receipts of the Federal Treasury. It has been extensively represented as a bill to impose hard money upon the States, but such is not its character, but the reverse; it was to prevent the local paper of the States from being imposed on the Federal Government. Its indirect and consequential action have been to increase the specie circulation of the whole Union, by creating a demand for it. The present amendment will operate the same way: it will increase the quantity of hard money every where. Yet two objections, neither of them well founded, and each inconsistent with the other, have been taken to it: one is, that it proposes to take the better currency for the Government, and leave the baser to the people; the other is, that it is going to impose this better currency upon the people also; and so destroy all paper money at once, reduce every thing to the specie standard, and ruin all debtors. Each of these objections are equally unfounded. Taken singly, they are each erroneous; taken together, as we often find them in the same speech, and they belong that class of arguments which the logicians call the *argumentum ad ignorantiam*; that is to say, an argument addressed to the supposed ignorance of the hearers. This class of arguments has been freely used by gentlemen of the opposition for a long time; with what effect the issue of the elections has often told. It is time to quit it, and to address the intelligence of the community. Take the better currency to itself! Why, the Government does not eat the money, but pays it back again the next day to the people. Impose hard money upon the States! The mere reading of the amendment, or my bill, which is the same in substance, disproves the assertion. No, the effect of the measure will be to increase the gold and silver circulation for the whole country. Thus it has been already. Five years ago, we began our system of measures to revive the gold currency, and to increase the specie circulation. There was then twenty millions of silver in the country, and no gold; there is now upwards of eighty millions, of which fifteen is in gold. True, the banks have suppressed all this circulation for the present; they have shut down the hatches upon the whole of it; but this suppression cannot continue much longer. The law of the land, or of public opinion, will soon prevail, and these institutions will have to submit.

The bill before the Senate dispenses with the further use of banks as depositories of the public moneys. In that it has my hearty concurrence. Four times heretofore, and on four different occasions, I have made propositions to accomplish a part of the same purpose. First, in proposing an amendment to the deposit bill of 1836, by which the mint, and the branch mints, were to be included in the list of depositories; secondly, in proposing that the public moneys here, at the seat of Government, should be kept and paid out by the Treasurer; thirdly, by proposing that a preference, in receiving the deposits, should be given to such banks as should cease to be banks of circulation; fourthly, in opposing the establishment of a bank agency in Missouri, and proposing that the moneys there should be drawn direct from the hands of the receivers. Three of these propositions are now included in the bill before the Senate; and the whole object at which they partially aimed is fully embraced. I am for the measure—fully, cordially, earnestly for it.

Some Senators suppose that it will be a great injury to the local banks to refuse their notes in revenue payments; I think otherwise, and that it will

be a great injury to receive them; for they will be taken out of circulation, and returned in masses on the banks for redemption. They cannot be paid out by the Government, and, therefore, will have to be presented for redemption to the banks. The act of 1836 cuts them off from all payments from the Federal Government, or the post offices. That act contains three limitations upon the payment of these notes: *first*, no note under twenty dollars is to be paid out; and that cuts off the greater number; *secondly*, no note is to be paid out which is issued at one place, and made payable at another; *thirdly*, no note of any kind is to be paid out, unless it is equal to gold and silver at the place where offered, and convertible into specie upon the spot, at the will of the holder, and without loss or delay to him. This is the strongest limitation, and cuts off all payments in notes unless where the bank itself is situated. The three limitations taken together, and they are all in full force, cut off bank paper from nearly every payment to be made, either by the United States or by the Post Office Department.

I do not pretend to exhaust this subject; I only touch the leading objections to the further use of bank notes by the Government, and the future use of banks as depositories of public moneys. It is a practice fraught with mischief to both parties, and has been so proved by repeated experience. To receive the notes of banks for revenue, if they are to be paid in good faith, is merely to take them out of circulation, and to return them in masses for redemption, to the great peril and alarm of the bank; if they are not to be paid, their receipt is a fraud upon the Government. So said Mr. Crawford when he was Secretary of the Treasury, and when members of Congress, marching in column upon him, backed by legislative petitions, were demanding this privilege for so many local banks. Importance and legislative interference most usually prevailed; and in almost every instance to the injury of the bank, and to the loss of the Government. So will it be again, if the practice is resumed.

Again: It is tempting the banks into ruinous expansions thus to give them the credit and the domain of the United States to bank upon. They put out floods of notes, because receivability at the custom-house, the land office, and the post office, gives them credit and circulation. After some months, pay-day comes. Federal credit, which got the notes into circulation, will not pay them; the bank stops; depreciation ensues; the loss falls upon the Government, and upon the uninformed holders of the notes.

Again: It is a false credit given by the Government to the whole issues of any bank whose paper is so received. It is indorsement without responsibility. People take it, because the Government takes it; and when the bank fails, the Government does not indemnify those who have been deceived by an indorsement, valid for deception, and invalid for responsibility.

Again: This Government receivability enables notes to stray from their known orbit of circulation; to go off into distant parts, where they are unknown; to live there a while in the sun-shine of federal favor; to circulate awhile on land office and custom house credit; and, finally, to sink as insolvents upon the hands of strangers.

Again: There must be selection of banks, or universality of reception. If selection, then favoritism, patronage, caprice—refusal to-day, reception to-morrow—imposition on some, undue advantage to others—come into play. If receivability is universal, then a thousand banks now in existence, and thousands more to be created, all become furnishers of federal currency; and in a few years the public lands are changed into paper—the custom-house revenue becomes a bale of paper—and this paper worth as little as it would be if it was decomposed, and restored to its original state of lamplack and rags.

Again: To take the promissory notes of the banks for lands, customs, and postages, is to extend a credit to the banks which is denied to the community. The farmer is required to pay ready money for the public lands; but if the note of the bank is received, this is a credit to the bank—a credit to a barren moneyed corporation, which is

denied to a productive, meritorious citizen. The same of postages; and the same is, in some degree, the case at the custom-houses now, and will be fully, when ready money payments are required there, as another bill before the Senate now proposes.

Again: To make the banks depositories of our moneys, involves the use, or the prohibition of the use, of these moneys. If the former, then the revenues are as much jeopardized as ever; if the latter, then the bank has no benefit from the deposit.

Again: To continue these banks as depositories, is to create an interest—a powerful, active, concentrated interest, in Congress and out of Congress—in favor of high taxes, and low appropriations. The late Bank of the United States was such an interest during the whole time of its existence. It was the ally of high tariffs, and the enemy of appropriation bills. Its principle of action was—*take from the people, and leave with us!* and so it will be with a league of local depository banks. Their presidents, and directors; their stockholders and attorneys, with all their friends and debtors will be a unit, to keep up taxes, and to keep down appropriations. The Government should not create, for itself and for the people, so formidable an antagonist.

The friends of the banks treat it as their ruin, as a grievous outrage and indignity, for the Government of the United States to refuse to take their notes, and to refuse to use them as depositories; yet this was their condition during the whole time of the existence of the Bank of the United States, and yet they made no objection to it then. This is strange! but what is more so is, that while thus struggling against the Government, they are, many of them, in favor of re-establishing a national bank; the first act of which will be to strip them of Government deposits, and exclude their paper from Government receivability!

Congress has a sacred duty to perform in reforming the finances, and the currency; for the ruin of both has resulted from federal legislation, and federal administration. The States, at the formation of the Constitution, delivered a solid currency—I will not say sound, for that word implies subject to unsoundness, to rottenness, and to death—but they delivered a solid currency, one not liable to disease, to this Federal Government. They started the new Government fair upon gold and silver? The first act of Congress attested this great fact; for it made the revenues payable in gold and silver coin only. Thus the States delivered a solid currency to this Government, and they reserved the same currency for themselves; and they provided constitutional sanctions to guard both. The thing to be saved, and the power to save it, was given to this Government by the States; and in the hands of this Government it became deteriorated. The first great error was Gen. Hamilton's construction of the act of 1789, by which he nullified that act, and overturned the statute and the Constitution together. The next great error was the establishment of a national bank of circulation, with authority to pay all the public dues in its own paper. This confirmed the overthrow of the Constitution, and of the statute of 1789; and it sat the fatal example for the States to make banks, and to receive their paper for public dues, as the United States had done. This was the origin of the evil—this the origin of the overthrow of the solid currency which the States had delivered to the Federal Government. It was the Hamiltonian policy that did the mischief; and the state of things in 1837, is the natural fruit of that policy. It is time for us to quit it—to return to the Constitution, and the statute of 1789, and to confine the Federal Treasury to the hard money which was intended for it.

I repeat, this is a measure of reform, worthy to be called a reformation. It goes back to a fundamental abuse, nearly coeval with the foundation of the Government. Two epochs have occurred for the reformation of this abuse; one was lost, the other is now in jeopardy. Mr. Madison's administration committed a great error at the expiration of the charter of the first Bank of the United States, in not reviving the currency of the Constitution for the Federal Treasury, and especially the GOLD currency. That error threw the Treasury back upon the local bank paper. This paper quickly

failed, and out of that failure grew the second United States Bank. Those who put down this second United States Bank, warned by the calamity, determined to avoid the error of Mr. Madison's administration: they determined to increase the stock of specie, and to revive the GOLD circulation, which had been dead for thirty years. The accumulation of EIGHTY millions in the brief space of five years, FIFTEEN millions of it in GOLD, attest the sincerity of their design, and the facility of its execution. The country was going on at the rate of an average increase of TWELVE millions of specie per annum, when the general stoppages of the banks in May last, the exportation of specie, and the imposition of irredeemable paper upon the Government and the people, seemed to announce the total failure of the plan. But it was a seeming only. The impetus given to the specie policy still prevails, and FIVE millions are added to the stock during the present fiscal year. So far, then, as the counteraction of the Government policy, and the suppression of the constitutional currency, might have been expected to result from that stoppage, the calculation seems to be in a fair way to be disappointed. The spirit of the people, and our HUNDRED millions of exportable produce, are giving the victory to the glorious policy of our late illustrious President. The other great consequences expected to result from that stoppage, namely, the recharter of the Bank of the United States, the change of administration, the overthrow of the republican party, and the restoration of the federal dynasty, all seem to be in the same fair way to total miscarriage; but the objects are too dazzling to be abandoned by the party interested, and the destruction of the finances and the currency, is still the cherished road to success. The miscalled Bank of the United States, the soul of the federal dynasty, and the anchor of its hopes,—believed by many to have been at the bottom of the stoppages in May, and known by all to be at the head of non-resumption,—now displays her policy on this floor: it is to compel the repetition of the error of Mr. Madison's administration! Knowing that from the repetition of this error must come the repetition of the catastrophes of 1814—1819—and 1837; and out of these catastrophes to extract a new clamor for the revivification of herself. This is her line of conduct; and to this line, the conduct of all her friends conforms. With one heart, one mind, one voice, they labor to cut off gold and silver from the Federal Government, and to impose paper upon it! they labor to deprive it of the keeping of its own revenues, and to place them again where they have been so often lost! This is the conduct of that bank and its friends. Let us imitate their zeal, their unanimity, and their perseverance. The AMENDMENT, and the BILL, now before the Senate, embodies our policy. Let us carry them, and the Republic is safe.

### SPEECH OF MR. HUBBARD, OF NEW HAMPSHIRE.

In Senate, September 28, 1837.—On the bill imposing additional duties on certain officers as depositories, in certain cases.

Mr. HUBBARD addressed the Senate as follows:

MR. PRESIDENT: Having voted for the act "to regulate the deposits of the public money;" having also voted at the last session for the bill introduced by the Senator from Virginia, "designating and limiting the funds receivable for the revenues of the United States;" and having, at the present session, as a member of the Committee of Finance, agreed to report the bill now under consideration—a bill essentially conflicting with the two bills referred to, I have felt it to be a matter of duty to myself, as well as to those whom I represent, to explain the grounds of my action, and, also, the views which I entertain with reference to the measure now proposed as a substitute for the deposit act of June, 1836. And I will now proceed to submit what I have to offer, if it be the pleasure of the Senate that I should proceed. I can not be insensible, however, that in rising to address the Senate at this time, after their attention has been

riveted for three hours to the able argument of the learned gentleman from Massachusetts, upon the constitutional power of Congress upon the subject of currency and exchange, that I come forward under peculiar disadvantages, but that is wholly a personal affair; and to that I am free to submit. It is not my purpose to reply to that part of the argument of the Senator touching the constitutional powers of Congress. I have risen for no such object; I shall leave that matter to abler minds. The Senator from Massachusetts remarked, "*he would raise no ruthless hand to destroy the local institutions of the country.*" I subscribe most freely and fully to the sentiment. I should be the last man in this body who would wage war with the moneyed institutions of the respective States. The little property which I possess is principally invested in some of the banks in New England. And I should commit a violence upon my own feelings and upon truth, did I fail to bear testimony to the correctness and integrity which has usually marked the conduct of those who have had the direction of those institutions. They may have committed some errors; but, in the main, the course and conduct of the New England banks has been above imputation. In their connections with the Government, they have never failed to discharge their duty, until they became involved in this universal catastrophe; and since this desolation came upon them, they have never refused to answer the drafts of the Government, and to pay them in that currency approved and acceptable in their own sections. Thus much is due to the banks, and I would not, if I could, undertake to interfere with institutions created by State authority. If State banks are an evil not to be endured, the remedial power is with the States themselves, and beyond the jurisdiction of Congress. To the care of the States, I would commit these local institutions, and as far as practicable to separate the patronage and the influence of the General Government from any connection with or participation in their concerns. It is an ill-advised, embarrassing, and disadvantageous connection to both parties—to the Government and to the banks. The Senator from Massachusetts remarked that on the third of March last, the Government completed the forty-eighth year of its existence, and for forty out of the forty-eight, we had enjoyed a currency approved by public opinion; that Congress had passed two acts at different periods of its history, establishing a Bank of the United States: the first in 1791, which expired by its own limitation in 1811; the other, established in 1816, expired in 1836; and that both Houses of Congress, in 1832, renewed the charter of the last bank, which bill was vetoed by the President. *All this is true; and it is no less true* that the action of Congress, and the action of the President, in relation to this subject, were referred to the American people; and their verdict has been returned, and their judgment has been here so distinctly expressed, as to leave no room for doubt as to the present state of popular opinion with respect to the constitutionality or expediency of such an institution.

The Senator remarked, that the present position of things presents this question: That the administration must return either to a United States Bank, or take some new ground; that the total failure of the State bank system presented this issue now to be settled—"a national bank or a metallic currency."

[Mr. WEBSTER here denied that he had referred to the establishment of a United States Bank, or had presented any such issue, as had been stated.]

I may not, Mr. President, have used the precise language of the Senator from Massachusetts, but he certainly did say that the administration were bound to return to an uniform and approved currency, or to a metallic currency; and as the Senator did not see fit to name, in terms, in what the approved currency consisted, and as he had said that for forty years of our national existence we had a currency uniform and approved, and during all that period we had a Bank of the United States, I thought myself justified in inferring that the approved currency to which the Senator referred was the currency established by a Bank of the United States. But in one position the Senator and myself per-

fectly agree: that it will not answer under existing circumstances to constitute again State banks as the depositories of the public funds. In this matter I am constrained, notwithstanding my strong predilections in favor of the State banks, to go with the Senator in opposing the amendment proposed by the gentleman from Virginia, (Mr. Rives.) That system has been tried; it has been faithfully tried; and it has failed, *wholly altogether failed*, to answer the purposes of the Government, and to meet the just expectations of the community.

We have assembled, Mr. President, under circumstances of a most extraordinary and appalling character. We are here amidst a general subversion of the business and currency of our country. Confidence is destroyed; a general distrust pervades the community; commerce and manufactures, the great sources of active and profitable operations, if not entirely prostrated, are crippled and embarrassed to a degree most unexampled in the history of our Republic. At a time of universal peace, when prosperity attended the efforts of our citizens; when wealth seemed to be the portion of every individual—at a time most unexpected and most sudden—pecuniary distress pervades the land, and a general dismay fills the hearts of our people.

The depositories of the public money, with all the banking institutions of the country, have been compelled, as it were, in the twinkling of an eye, to acknowledge themselves bankrupt, and to suspend the payment of the just demands of their creditors.

These awful realities are calculated to break down the courage, and to overwhelm the efforts of the patriot. But if there ever was a time when our country stood in need of aid, when she called most imperiously upon the intelligence and patriotism of her sons to come to her relief, this is that time. We are called upon to lay aside those animosities and bickerings which party feeling never fails to engender, and with one heart and with one mind, to exert our best energies to wipe away the blot which effaces our national character, and to devise, and perseveringly to prosecute, measures which will bring relief to the Government and to the people. This should be our aim and end—and this I trust will be the great business of our session. In view, then, Mr. President, of this whole subject, I propose briefly to examine into the causes which have produced the evils with which we have been visited, and to see if an adequate, a sufficient, a substantial remedy is not within our power. A remedy which, although it may not bring instantaneous relief to the suffering community, yet will afford a safe, sure and permanent relief to the Government and to the people. A remedy which, under existing circumstances, seems to be demanded at our hands; and which, as faithful and patriotic public servants, in the exigency of our public affairs, we can not, *we ought not, to withhold.*

Such is the unexampled and extraordinary embarrassment and distress that exists in our country, that I have found great difficulty in tracing these effects to a sufficient and adequate cause. *In my judgment, however, it is the gross abuse of the credit system which has brought upon us the existing evils.* It cannot be denied, that a little anterior to this general prostration of business and of currency, "that our manufactures and commerce had been greatly extended, and had been mainly conducted on credit." Commerce had brought into our country in 1835, and in the spring of 1836, a most unexampled amount of the products of Europe. The supply greatly exceeded the demand; and at this moment, much of the importations of 1835 and 1836 are upon the hands of the importer, yielding to him no profit, but producing loss, embarrassment, sacrifice, and ruin. An immense foreign debt of more than one hundred millions of dollars had been contracted by the American merchants. Its final adjustment and discharge is a tax upon the productive industry and labor of the country. In addition to all this, a spirit of extravagant speculation pervaded every class of our community. The history of the times shows that there has been a most unprecedented over-trading; that the zeal and all the active energies of the adventurer have been put in requisition. *The influence of this fell spirit has been felt in almost every village*

of our country, and by almost every class of our community. Speculations have been made, not in the public lands only, but in railroads, in canals, in lots, in every description of property that the wit of man could devise; and these speculations have been conducted mainly on individual credit—a credit obtained at the local banks of the country. It was, then, the extraordinary amount of credit at home which produced such a redundancy of paper circulation. It was the extraordinary amount of credit abroad which co-operated in producing the subversion of the business and currency of the country. It was the increasing and enormous amount of unappropriated funds in the Treasury, the great accumulation, from time to time, of the public money in the deposit banks, which induced speculation and over-trading.

On the first of January, 1834, the balance in the Treasury was only eight millions and five hundred and ninety-eight thousand dollars. The national debt was soon extinguished—the compromise acted to the belief that the tariff would remain undisturbed—local banks greatly multiplied—credit was readily obtained, and the receipts from the customs, and from the sale of the public lands, brought into the Treasury by the first day of January, 1835, a balance beyond the public expenditures of nearly twenty-seven millions of dollars; and the operation of the same causes brought into the Treasury, beyond the expenditures, on the first day of January, 1836, over forty-four millions of dollars; and to this may be added, at least, twenty-five millions for the excess of receipts over expenditures from January 1, 1836, to the 23d of June, 1836, the date of the deposit act. These enormous amounts, which filled the public Treasury, were the fruits of speculation in land and in merchandise. They had been carried on by the means of individual credit obtained through local banks. From the facts already stated, it follows that, at the passage of the deposit act in June, 1836, there could not have been less than sixty millions of dollars of public property actually held by the then fiscal agents of the Government, and that whole amount consisted in bank credits in institutions created by, and responsible to, State authority, and beyond the reach and control of the legislation of Congress. In addition to all the other means of these State banks, the balances in the public depositories were actually put out on loan on individual credit. *There can be no doubt of the fact; and hence the extraordinary amount of paper in circulation in the season of 1836, exceeding one hundred and fifty millions of dollars, according to the best estimates of those acquainted with this subject.*

The deposit banks, from the amount of public money, were enabled greatly to extend their line of discounts; and realizing the fact that the public funds in deposit were, day following day, and week following week, constantly increasing in amount, (for we find that between January, 1835, and January, 1836, the balance had been increased more than fifty per cent.) those who had the direction of these selected banks felt a confidence and a security in extending their credits. It was done to their utmost limit. The uncontrolled and uncontrollable spirit of speculation abroad in the country furnished an ample demand, and the banks readily granted a full supply. The country, consequently, was flooded with paper. The desire to make large profits had prompted and governed the action of the deposit banks; while the other local institutions of the States were influenced by the same considerations to extend their business to the greatest possible extent. Such was the state of credit, of business, and of the currency, at the passage of the deposit act in June, 1836. It was not the provisions of that act which induced the action of the banks. The cause of present embarrassments, of existing evils, may well be traced to transactions occurring before its passage. It was the alarming and dangerous amount of paper circulation founded on individual credit anterior to the deposit act of 1836, that has led to the present pecuniary distress, to the general subversion of the business and currency of the country. There can be no reasonable doubt of the correctness of this position. The history of banking

operations clearly shows it. From the passage of that act to the very day of suspending specie payments, the paper circulation has constantly been diminishing. In May last it did not exceed a hundred millions; and it was the act of June, 1836, and the subsequent promulgation of the Specie circular, which first imposed these checks upon bank issues. So far from being the cause of a redundant circulation, they operated as checks to such a circulation. I have stated, and I believe most truly stated, that anterior to June, 1836, the deposit banks had put out on loan every dollar of the public money. They had also, in connection with the other banking institutions of the country, extended their accommodations to the utmost limit of their respective charters.

In order to show the true condition of banks, and of the public funds in deposit at the time of the passage of the act of June 23, 1836, I would refer to some of the provisions of that act, and the subsequent but necessary action of the Department to carry those provisions into effect; from which it will appear that the deposit banks were unprepared for the crisis.

By the first section of that act, the Secretary of the Treasury is required, as soon as may be practicable, to select and employ, as the depositories of the public money of the United States, certain local institutions—one at least in each State and Territory—"and that he shall not suffer to remain in any deposit bank an amount of the public money more than equal to three-fourths of the amount of its capital stock actually paid in, for a longer time than may be necessary to enable him to make the transfers required by the act." And it will very distinctly appear, by a report communicated from the Secretary of the Treasury to the Senate in December last, in answer to a resolution offered by the Senator from Massachusetts, that he commenced immediately making the necessary transfers from those banks where there was too great an accumulation of the public money to the new selected depositories; and, from an examination of this document, it will appear that all the transfers were not promptly answered; but, in repeated instances, the banks on whom the transfer drafts were made, asked indulgences of thirty, sixty, and ninety days, and the request was granted, whenever it could safely be done without disregarding the requirements of the law. The banks were not then prepared for the crisis; the funds of the Government had been disposed of; they were beyond the control of the banks themselves; and until collections could be made—until means could be drawn from the individual debtors of those institutions—they could not, with convenience, answer the claims of the Government. I infer then, Mr. President, from these facts, that the money of the Government which had been deposited with the local institutions, had been loaned prior to the passage of the deposit act; and that the distress which now pervades our country, can not justly be attributed to any action of the Government. The prostration of the business, the disappointment of the hopes, of our community has been the effect of causes which they controlled, and with which the Government had no concern. The deposit act and the specie circular has had no other effect but to hold the banks in check. That circular bears date, July 11, 1836, and it was directed not only to the receivers of the public money, but also to all the deposit banks; and its avowed object and purpose was to discourage the ruinous extension of bank issues and bank credits, by which means speculations and monopolies in the purchase of the public lands were going forward in an alarming extent. The late President, in his annual Message, shows that, "from the returns made by the various registers and receivers, it was perceived that the sales of the public lands were increasing to an unprecedented amount." "In effect, however, the receipts from these sales amounted to nothing more than credits in bank. Those credits were rapidly increasing, and on some of the books of the western banks were greatly beyond their means of payment;" and in consequence of this state of things, to save the public domain, and to preserve in security the public funds, the President directed, that after the 15th day of August, 1836,

gold and silver and Virginia land scrip only should be received for the public lands; and the effect must have been to have checked the sale of the public lands, and to have curtailed the paper circulation. It very distinctly appears, that in June, 1836, the sales of the public lands amounted to three millions, three hundred and seventy thousand dollars, and that the aggregate amount of sales for three months preceding the time when the Specie circular was to take effect, was more than eight millions and six hundred thousand dollars; while the aggregate amount of the sales for the next following three months was about four and a half millions—a reduction of one-half in amount; and the average reduction was still greater for the next following five months, and up to the time of the suspension by the banks of specie payment. Nor could the effect of the circular be to withdraw or to abstract from the banks, such an amount of their specie basis as to embarrass their operations. On referring to a document upon this subject, communicated by the Secretary of the Treasury to the Senate, on the 29th of December, 1836, it will appear, that the whole amount of gold received at the land offices in August, September, October, and November, 1836, was three hundred and sixty thousand and sixty-nine dollars; and that the whole amount of silver received at said offices in the same period of time, was one million four hundred and forty-two thousand and eight hundred and seventy dollars—making a total, in gold and silver, of \$1,802,939. And from the same document it also appears, that, from the 21st of July to the 24th of October, 1836, the certificates granted by the Treasurer of the United States for specie received at the Department, amounted to \$235,200—making, in the whole, a little more than two millions of dollars, which was abstracted from the specie capital for the purchase of public lands, for a period of at least four months; while the whole amount of the sales of the public lands for four months, including the whole of August and November, 1836, amounted to seven millions of dollars. The difference between the two millions paid in specie and the amount of sales must have been provided for, either in Virginia land scrip, or in some other acceptable currency. It is, to my mind, idle to pretend that the employment of two millions of dollars in the purchase of public lands for this period of time—the withdrawal of this amount from the eight millions of specie in the country—could have embarrassed the banks (if no other cause of embarrassment previously existed) in their business operations, or could have tended to have brought upon us the evils under which we are at this time suffering.

If, as it has been contended, that one million of specie purchased three millions of land, it furnishes an additional fact, tending to show the dangerous use of bank credits. In the whole history of our Government, from its foundation, there has never before occurred such an universal wreck of banks and of business as now prevails. In New England no such catastrophe has ever before overwhelmed their local institutions. In the darkest and most discouraging periods of our history, the banks of New England have stood unmoved and undisturbed, secure in their own resources. They never lost the support of public confidence, until this one sad event has happened to them all; and the conviction to which the mind must inevitably come is, that this event has resulted from their connection with the finances of the Government.

It is true, that in New York, and in other sections of the Union, there was a suspension by the banks of specie payment during the war; but that was the effect of a combination of most extraordinary circumstances; and the very fact of that temporary suspension went to sustain the credit of the Government, and bring the war to a favorable termination. But at a time of general peace, of universal prosperity, that this calamity should come upon us, is matter of wonder and astonishment. But its true cause is to be found in the extraordinary issue of bank paper, founded on individual responsibility. In other words, it is nothing more and nothing less than the gross abuse of individual credit. It was not the deposit act, nor was it the specie circular which brought upon us this calamity.

The moving cause was beyond the conception of those measures. But, Mr. President, before I leave this part of the subject, I must undertake once more to say a word or two in defence of the Secretary of the Treasury, who, on this occasion, seems not to find favor with all his old political friends, and who is doomed to incur the severe animadversions of all his old political enemies. I could not have supposed that the Senator from Virginia would have undertaken to have cast any imputation upon the Secretary of the Treasury, for the manner of his executing the deposit act of 1836. That was matter of grave charge against him at the last session, by one of the Senators then representing the State of Ohio, but no longer a member of that body. But, strange as it may seem, the pecuniary distress which now exists in our commercial cities, has been here and elsewhere charged upon the Secretary as the direct effect of the awkward manner of his executing that act. I undertook at the last session to answer the allegations of the Senator from Ohio, and since the report of that distinguished officer was made to the Senate in answer to the call of the Senator from Massachusetts in relation to this subject, I had not heard a word of complaint made against the Secretary of the Treasury, for the manner of his carrying into effect the provisions of the deposit act, until the Senator from Virginia renewed the charge. Mr. President, the Secretary could not have done less, he might have done more.

In the report already referred to, the Secretary remarks, that "on the passage of the deposit law, and in execution of the first section of it, prohibiting any amount over three-fourths of the capital of any bank to be left in it longer than was necessary to select new banks; and to complete the transfers for removing the excess, it became indispensable to transfer for that purpose alone, about \$18,300,000. New transfers for this whole amount became necessary. The Department, therefore, took immediate steps, even before the adjournment of Congress, to comply with this direction of the law. By a reference to the act itself, it will be found that the Secretary had no course to pursue, but the one expressly marked out by the act. It was clearly his duty to select as soon as was practicable, and to employ as the depositories of the money of the United States, such new banks as may be located adjacent or convenient to the points or places at which the revenue may be collected or disbursed. And the act expressly requires that the Secretary shall not suffer to remain in any deposit bank an amount of the public money more than three-fourths of the capital stock actually paid, for a longer time than may be necessary to make the transfers for the purpose of equalization. He could not then have permitted the public money to remain in those deposit banks, where an amount had accumulated beyond three-fourths of their capital stock. He was bound to select new depositories, and to make immediate transfers. He was required to do this for the purposes of equalization. This duty he attempted to execute, and it was performed with as little embarrassment to the banks, and to the commercial community, as possible. If the Secretary had, regardless of the conditions of those institutions, rigidly enforced the provisions of the first section of the act, the deposit banks could not have sustained themselves. The Secretary made no transfers unless absolutely required by the express terms of the act itself. He was compelled at once to remove about eighteen and a half millions of dollars from one set of deposit banks, which then held of the public money more than three-fourths of their capital stock, to new depositories, selected in the different States; and for this duty he is charged with having been unnecessarily instrumental in bringing upon the country the existing prostration of the banks. No man could be less obnoxious to such a charge. The known fidelity, uprightness, and industry, of the Secretary of the Treasury in the performance of every official duty, ought at least to protect him from any such imputations.

From the annexed official statement, which accompanies the Secretary's Report, it very distinctly appears that the amount of deposits had not been withdrawn from the commercial States so as to leave with them a less sum in deposit at the date

of the report, than the same States possessed on the 20th June, 1836; and the same statement will show the amount transferred, for the purpose of equalization, to States, under the first section of the deposit bill, which had none of the public money in deposit at the date of said act.

Thus it appears that the State of New York had in deposit \$12,108,322 at the passage of the act—a sum which could not be there retained without an entire disregard to the provisions of the act; and hence \$534,000 was transferred from New York to New Jersey. It will appear that New York, on the day the report was made to the Senate, had about half a million less in deposit than it had at the passage of the act, while New Jersey held in deposit the difference. The statement is a full commentary on the manner of executing the act by the Secretary, and shows most conclusively that the course pursued by that officer was most favorable to the banks as well as to the commercial community; and is evidence of the truth of the assertion that the Secretary could not have done less without a violation of law—that he could have done more with perfect impunity—and that his forbearance alone saved the banks and the debtors of the banks.

**STATEMENT showing the amounts of public money on deposit in the banks of each State on the 20th of June and the 19th of December, 1836; as well as the proportion these amounts bore at each period to the sum to be deposited with such State under the 13th section of the deposit law, including Michigan, and taking the sum to deposited with the States at \$37,000,000.**

States.	Proportion of each State of \$37,000,000.	Amount on deposit June 20, 1836.	Amount on deposit Dec. 19, 1836.
Maine	\$1,258,503 00	\$231,829 00	\$507,604 00
N. Hampshire	880,932 00	180,200 00	632,235 00

Michigan	377,551 00	1,895,175 00	1,462,222 00

I have now stated the causes which in my judgment have produced the existing evils, and there can be no doubt that something must now be done to sustain the Government and the country.

There seems to be an imperious necessity for further legislation. The acts of Congress establishing local banks as the depositories of the public funds, cannot be executed. The present condition of those institutions, their acknowledged inability to perform the duties imposed upon them, as the fiscal agents of the Government, call upon Congress to provide for the present exigency.

The bill reported by the Committee on Finance, if carried into full effect, can not fail to relieve the Government from present financial embarrassment. I am fully aware that it is the purpose of the chairman of the committee to present his own views in relation to the measure; it will be his province to give a very detailed statement of the character and effect of that bill—its benefits to the Government, to the banking institutions of the country, and to the people themselves. It can not but have occurred, however, to every individual, that if this bill should now be adopted, it would in effect be but the same measure, so far as it relates to the collection and the disbursement of the public money, which has existed almost from 1789 until the joint resolution of April, 1816. This bill, if carried into effect, would give to the Government the certain and absolute control of its own funds. So did the act of 1789. This bill, if adopted, would sever the

Government from any connection with the pecuniary concerns of the local banks of the country. So did the act of 1789; and, notwithstanding the existence of the Bank of the United States from 1791 to 1811, there was no legal provision which created that institution, or any other bank, the receiver and disbursing of the public revenue. If this bill should be adopted, the fiscal agents of the Government will collect, hold, and disburse the public revenues upon their own responsibility. So did the collectors under the act of July, 1789. If this bill be passed, the fiscal agents will be immediately accountable to the Government. So were the collectors of the revenue from the foundation of the Government to the recharter of the United States Bank, in 1816. The advantages the Government will derive from the operation of this measure will be the certain control of its own funds, the direct responsibility and accountability to the Government of its own fiscal agents; and another benefit which will result from the adoption of this measure, will be the unchangeable character of its own means; and the fixed value of its own revenues—not liable to depreciation by the casualties and misfortunes to which the moneyed institutions of the country are more or less liable. The utter failure of this, or the severe losses of that, bank can, in no wise, deteriorate the value of the Government funds. So it was for the first quarter of a century after the adoption of our Constitution. Independent of all banks, we would manage our finances in our own way, and with perfect security to the Government. So it was under the act of 1789. The revenues then were collected and disbursed, independent of the Bank of the United States. These are some of the benefits which would result to the Government by the adoption of this bill; and, acting independent of local banks in the collection and disbursement of the public revenue. It would also, in its operation, be beneficial to the banks themselves. If this measure be carried into effect, no longer will the money of the Government be used by the State banks in their banking operations; no longer will the money of the Government be employed in increasing the paper issues of the banks, by increasing their discounts, and their credits; and certain it is that this deposit with the local banks can not be required for the transactions of the necessary business of a business community. The pecuniary aid of the Government is not needed for the legitimate operation of the local banks. There is not, Mr. President, any want of bank capital in the country; if there was, there is no want of a disposition to create bank capital. The complaint is, and has been, that banks have multiplied too rapidly, and beyond the necessities and wants of a commercial and trading community. The complaint is well founded. Certain the fact is, that there is not at this time, within the limits of New England, any want of bank capital. If this be so, what occasion can there be, where is the necessity, of requiring the deposit of the public money to carry on the proper operations of these local banks? There can be no necessity; and the sound, stable, substantial institutions will be essentially benefited by giving up this trading upon the money of the Government, and by returning to the good old safe practice of managing their own business upon their own capital. There is too much uncertainty attending the use of the public money to justify any bank doing business upon the strength of Government deposits. It is true that a half of a million may be placed with a public depository to-day for safe-keeping; and may it not be so, that a public appropriation for some unexpected and unlooked for event may render it indispensably necessary to withdraw at once the whole amount of such a deposit? and if the bank had previously put this deposit out on loan—as it certainly would do, under the deposit act, to indemnify it against the claim of the Government to interest—might it not be embarrassing to the banks to answer such a call from the Treasury Department?

The great uncertainty, then, both as to amount and to time, which must attend the deposits of the public money, cannot fail to be regarded by sound and well regulated banks as a great objection to the reception of the Government deposits. If the

banks which have been selected under the deposit act of June 23, 1836, should be called upon to answer the inquiry whether the Government money received by them in deposit has been a benefit to their respective institutions, the answer of the solvent and stable deposit banks would be, No, they have been an injury, rather than a benefit. Trace the history of the deposits which have been made with the banks in New England; and it must result, from the great uncertainty and instability which has attended the moneyed operations of the Government, that the deposits have served but to augment their pecuniary embarrassments. Better, then, would it be for them and for the Government to dissolve the connection. And, Mr. President, the people themselves, for whose interest there has been much feeling manifested pending the debate upon this bill, would also participate in the benefits which would result from the adoption of this measure. Men would become steady and settled in their operations; there would no longer be given to property an inflated and fictitious value; business would resume its accustomed channels; and the excitement, always temporary and always dangerous, (the fruit of any extraordinary expansion of paper currency,) would be done away; the spirit of speculation and over-trading would be checked; a sound discretion and a guarded prudence would mark the conduct of business men, and give character to all their operations. There would not, and there could not be, that constant change and revolution in the value of property, necessarily involving in its consequences the fortune and the fate of thousands. Let the Government, through its own agents, collect and hold its revenues exclusively for public purposes; let the Government withhold from the local institutions the use of the public funds, and that wild, extravagant, and adventurous spirit which has pervaded our country for the last two years, will be controlled by the power of sober judgment; and if such would be the consequences resulting from the adoption of this measure, surely the people would greatly participate in the benefits of the system. In my belief, the Government, the banks, and the people, would derive essential advantages from the adoption of this measure. I shall, therefore, Mr. President, give to it my best support. As a member of the Committee on Finance, I agreed to report the bill. The discussion which has taken place since the bill has been before the Senate—to all of which I have given my constant attention—has served to satisfy my own mind of the necessity, policy, and justice, of the measure. I deeply regret that a different view has been taken of this matter by other gentlemen; for whose opinions I have ever entertained a profound respect; but it is, I trust, but an honest difference of opinion on a leading measure of public policy. I have no belief that any change of sentiment can be accomplished; but, sir, I must be excused for noticing some of the objections which have been made on this floor to the bill now under consideration.

First. It is objected that the bill provides that the revenues of the Government should be collected and disbursed in gold and silver; and from the consequence given to this objection to the measure pending the debate, the inference must be that, in this particular, a great innovation upon the practice of the Government is contemplated, and that a new principle is to be introduced into our legislation; but, so far from that being the fact, this same principle—this special provision—has been co-existent with the Government itself. By the act to regulate the collection of duties, &c. approved July 21, 1789, it is provided "that the duties and fees to be collected by virtue of said act, shall be received in gold and silver coin only." And by the tenth section of the act of February, 1791, creating the Bank of the United States, it is provided "that the bills or notes of the said corporation, originally made payable, or which shall have become payable on demand, in gold and silver coin, shall be received in all payments to the United States." The corporation was not, by the terms of its charter, made the fiscal agent of the Government; nor was the bank made the depository of the public revenues. The responsibility of the collec-

tors, created by the act of 1789, was not transferred to the Bank of the United States. They, and they alone, were directly accountable to the Government. Their duties were prescribed by the act, and were not, by the charter of the bank, changed. This feature of the bill, should the amendment of the Senator from South Carolina be adopted, would contain no new principle, or introduce any new practice. From 1789 to 1816, such was the usage of the Government, and such was the law of the land. And I would confidently appeal to the experience of the people, whether the material change in the collection and disbursement of the public revenues which took place on the recharter of the United States Bank in 1816, and the subsequent changes which have taken place, have advanced their peace, prosperity and happiness. Under the system which was established in 1789, and practised on by the Government, the revenues were collected and disbursed in a currency not subject to change or deterioration, by its own fiscal agents, directly responsible to the Government. By the act of 1816, rechartering the United States Bank, that corporation was made the responsible fiscal agent of the Government. All the bills or notes of the corporation, without any discrimination, were made receivable in all payments to the United States. And the act provides further, "that the deposits of the money of the United States, in places in which the said bank and branches thereof may be established, shall be made in said bank or branches;" and "that during the continuance of the act, and whenever required by the Secretary of the Treasury, the said corporation shall give the necessary facilities for transferring the public funds from place to place, within the United States, and for distributing the same in payment of the public creditors, without charge," &c. These provisions were introduced by way of amendments to the bill, after it had been reported by the committee, and were, I believe, proposed by the Senator from Massachusetts—thereby materially, and as it has operated, injuriously, changing the whole practice of the Government in relation to the collection and disbursement of the public funds.

Had the bank been vested with no other powers by the act of 1816, than was conferred by the act of 1791, the evils which have since been experienced would have probably been avoided. It was its intimate connection with the finances of the country—it was the control it possessed over the public funds—it was the political influence it was supposed to exercise—that awakened the jealousy of the American people, and excited feelings, and established opinions, hostile to the continuance of such an institution.

A second objection made to the bill is, that it in effect repeals the act depositing the money of the Government with the local banks, and thereby producing great injury to those institutions. I have already expressed my own views as to the effect this measure would have upon State banks. And all I wish to add is, that, until local banks were selected as public depositories, for the first forty years of the existence of this Government, the local banking institutions of the country did not count upon any such aid from the Government as essential to their prosperity, or necessary to their success.

A third objection to the bill is, that it creates one currency for the Government, and another for the people.

Was there any complaint of this sort made under the act of 1789? Was there then one currency for the Government, and another for the people? If the amendment of the Senator of South Carolina be adopted, after 1841, the revenues will be received in gold and silver only. And what would be the effect of such a proceeding? Would the gold and silver received for the public revenues be abstracted from the general currency? Would it be locked up from circulation? Would it be salted down in the vaults of the Sub-Treasury officer? No, sir: the revenues and the public dues would come from the people, and they would be disbursed to the people. If paid in a metallic currency to our fiscal agents, the same currency would, by the same agents, be disbursed

to the public creditors. The history of the Government shows, that at the commencement of each fiscal year, there is not on average in the public Treasury, subject to draft, a sum exceeding six millions of dollars. If, in the course of the year, twenty more millions have been received, a like amount has been disbursed. A sum not exceeding six millions of specie then, would ordinarily be the balance of the account of receipts and expenditures at the commencement of the fiscal year; and can the abstraction of six from more than eighty millions now in the country, so alarm the fears of gentlemen as to lead them to the conclusion that the consequence of this measure will be the establishment of one currency for the Government, and a different currency for the people? And are not all of the people? Are men holding office a distinct race from the people? And can it be seriously contended that the revenues received and paid out to public creditors is withdrawn from circulation, and from the care of the people? No, sir, it can not. Debtors and creditors to the Government are parts of the same community. They are of the people; and their relation to the Government is constantly changing. To-day one may be a creditor—to-morrow he may be a debtor; and I can not conceive in what way or manner the adoption of this bill would create one currency for the Government, another for the people—would establish those high or low in office—all who have claims upon the Government—as an order of men possessing peculiar and exclusive privileges. It can not so be. The objection has no foundation in truth.

A fourth objection is made, that the bill divorces the Government from the banks. The bill separates the Government from the banks in no other way than it says, that no longer shall the banks have the public depositories for the purpose of expanding and enlarging their paper currency. This is the divorce about which Senators complain. The propriety of such a separation I have already discussed.

Another objection made to this measure is, that it in effect destroys the credit system under which the country has enjoyed so much prosperity.

There can be no doubt that credit, as contradistinguished from cash payment, has been, and may be, attended with consequences most beneficial to the prosperity of a community; that it stimulates enterprise, and, when properly restrained, can not fail to advance private interest; but such a credit system needs not the protecting care of the Government. It is the excess of credit that brings danger, distress, and dismay. It is that uncontrolled and uncontrollable spirit of adventure which leads to disaster, embarrassment, and ruin. It is that bold and daring passion for speculation, sustained for a time on credit, which puts in jeopardy the fortunes of individuals, prostrates the best efforts of enterprise, and scatters firebrands and death among an active business community. Whence this general desolation which now pervades our land? Whence this general, this universal embarrassment, which now prevails through the country? It is to be traced to a most injudicious and unwarrantable expansion of the credit system. This has been the efficient and producing cause of the pecuniary distress which now extends from Maine to Florida. A judicious, a well-regulated system of credit, has its advantages in every community, and among every class of our citizens; but I submit whether, from the woful experience we have had, we ought to wish to return to the local banks the public depositories, if thereby an enlargement of individual credit could be attained, and a corresponding increase of a paper medium? I cannot doubt what would be the response.

Another objection to the bill is, that its tendency is to increase Executive patronage. That objection has been so ably answered by the Senator from Mississippi, that I would not weaken the force of his argument by submitting any additional considerations of my own.

Another objection is urged, that the bill, if adopted, can not, with convenience, or with a proper regard to the security of the public funds, be executed. My answer to that objection is, that no difficulties were experienced under the act of 1789. The principles of this bill were then carried into effect with convenience to the Government and to

the public creditor, and with safety to the public funds; and they may again be so carried into effect.

Another objection is, that this is an experiment, and that experiments with reference to the public finances are not only odious, but dangerous to the security of the public funds.

My answer to this is, what would the gentleman from Massachusetts call upon us to do in the present exigency? Try some other plan? adopt some other expedient? Would any project which the Senator might recommend be any the less an "experiment?" But a further answer to this objection is, that the measure now recommended by the committee is no "untried experiment." It has been practised upon here and elsewhere, and has received the approbation of the people.

The amendment proposed by the Senator from Virginia is to strike out the bill reported by the Committee on Finance, and to insert a "bill designating and limiting the funds receivable for the revenues of the United States." This amendment, if adopted, will continue the local banks as the depositories of the public money, and will justify the Treasury Department in the receipt of the bills of specie paying banks, of certain denominations, and at fixed periods. The Senator from Virginia urges the adoption of his amendment, first, to save the local banks; to induce them to resume specie payments; and also to establish and preserve one uniform currency throughout the country; to continue the practice of the Government which has existed since the joint resolution of April, 1816, so far as it relates to the kind of money to be received for the public revenues; that, by its adoption, not only the banks, but the people themselves, would obtain a sensible relief from existing embarrassments.

The substitute of the Senator's bill for the bill reported by the committee would have no tendency to save the local banks. I have already said that those institutions which are sound and solvent need not this kind of assistance from the Government for their own protection; that there is an abundance of bank capital for the business of the country; if not, there is no want of disposition to create or to hold bank capital; and that so great must necessarily be hereafter the uncertainty as to the amount and duration of these Government deposits in local banks, that to continue them, under the deposit act of 1836, would serve only to embarrass those institutions. Nor is there much force in the reason urged for the amendment—that its adoption would serve to establish and preserve a uniform currency throughout the country. The eighty deposit banks selected by the Government, in the different sections of the Union, amount only to about one-tenth of all the banking institutions now existing by virtue of State legislation, and comprising about one-third of the whole banking capital of the country. The selected banks, scattered, as they are, over the whole Union, acting, as they must do, under their own local charters, and accountable to their own State authorities, with no common interest, but simply performing the conditions and the terms of their respective contracts with the Government, independent of each other, can do but little to regulate the general currency. The bills of specie paying banks in Louisiana, although issued by those institutions selected as depositories of the public revenue, cannot pass and be passed as a currency in New England. The character and capital of these State institutions clearly evinces that their circulation to any great extent can not pass current beyond the boundaries of their own States. The banking system now existing in New England is well arranged for the convenience and the security of that community. It is one of the blessed effects of that system that the paper of our local banks mainly circulates in its own immediate vicinity. The moment the paper of any particular bank is doubted, that moment it ceases to form, to any considerable extent, a part of the circulating medium. It is collected at the commercial capital of New England, and sent home for payment. The paper, therefore, of any local bank, not current at the great market of New England, will no longer be received by any portions of our community. The consequence of the system is, that the bank paper best known and highest appreciated by the community constitutes

almost exclusively the paper circulation among that community. The amendment could have no effect in regulating the general currency of the country. Even if there were a perfect league among all the selected banks, no such effect could be produced. They comprise too small a number and too small a portion of the capital of the local banks, to bring about any such consequence, should they continue to receive and to disburse the public revenues.

There can be no occasion for the amendment, for the purpose of continuing in practice the provisions of the joint resolution of 1816. The bill reported by the committee, left that resolution undisturbed. It also left the act of 1789 in full force. And notwithstanding the speculations of different gentlemen in relation to this matter, there can be no doubt that our collectors and receivers under this bill, if it passes, as under the act of 1789, will act like rational, discreet, accommodating, and prudent officers. Suppose an importer in the city of Boston should have occasion to pay to the collectors, for duties on imports, one hundred thousand dollars, what would be the course? He would at once make an arrangement at the bank where he transacted his business to answer his draft for that sum. The collector, well knowing the character of the merchant, and the condition of the bank, receives the draft, and it is carried as a special deposit to the credit of the collector. Suppose that within two days he receives from the Secretary of the Treasury a warrant to pay a public creditor the same sum, he draws on this deposit, and the bank then satisfies the draft by paying the specie, or by paying out their own paper, at the election of the payee. This would be an every day business—a common transaction; no embarrassment—no delay would attend the operation. But suppose that the collector was authorized or required to receive and disburse in the bills of specie-paying banks; and when the creditor demands payment, he offers him the bills of specie-paying banks, but so remote from the place of the transaction, that before he can present them for redemption, the banks themselves suspend payment, and a creditor of the Government thereby loses a portion of his claim, and this occasioned too by the act of his Government. This is a consequence I would avoid. But suppose that the receivers are required to receive or disburse no bills, except of certain fixed denomination, and on banks where they can be converted at the time and place into specie. No practical convenience would result from any such arrangement. It would then be left to the creditor to take specie, or to take paper convertible into specie; and without any legal provisions, nineteen times out of twenty, such would, in effect, be the course of the receiver as would secure to the creditor that election. The Senator from Virginia has sustained his proposed amendment with his usual ability, and has called upon us to go with him now in the support of that measure, for the reason that, at the last session of Congress, we came in aid of the proposition. This is all true, sir; and if the Senator can, with propriety, urge the same considerations for the adoption of this measure, as were at that time urged upon the Senate, there can be no good reason why we should, at this time, withhold our support. It occurs to my mind that the amendment now offered by the Senator from Virginia is presented under circumstances entirely different from those which existed at the time it was brought forward at our last session. Certain local banks had been selected as the depositories of the public money as early as 1833, and had been established as the fiscal agents of the Government. The deposit act of June 23, 1836, recognised them as such, and went on to increase the number of public depositories, imposing on all new obligations, and subjecting all to new liabilities. They were, to all intents and purposes, as much the receiving and disbursing agents of the Government as the Bank of the United States was under its charter, in 1816. The act, therefore, of the Senate, on the 10th of February, 1837, was not only proper in itself, with reference to the State institutions, but was in perfect accordance with what had been the action of Congress upon the same subject with reference to the Bank of the United States. It

was extending to them no greater favor than was extended to the United States Bank in 1791, when that institution was not under the obligation to perform the duties required of the State banks by the deposit act of 1836; and it was granting to them the same favors, so far as it respected the selected banks, as was granted to the United States Bank in 1816, when similar duties were imposed upon that institution. It seemed to me, therefore, when the proposition was presented at the last session of Congress, to be but an act of common and equal justice to the State banks, to adopt the measure. And for these considerations I did at that time give it my support. But how stands the matter now? Under what circumstances does the Senator now press his proposition? These local banks, these fiscal agents, have entirely failed to perform the duties required of them by the act of June 23d, 1836. Their part of the contract has been disregarded; and shall it be said that the obligation still rests on us to extend to these institutions the same favor? Was not the contract between the Government and the banks, and the obligations growing out of the contract, mutual and reciprocal—binding on both parties, or binding on neither party? The neglect or the failure on the one part, was a virtual discharge and release of the other.

What was required of these banks under the act of June, 1836?

"They were to credit as specie all sums deposited therein to the credit of the Treasurer of the United States, and to pay all checks, warrants or drafts on such deposits, in specie, if required by the holder thereof."

"To give, whenever required by the Secretary of the Treasury, the necessary facilities for transferring the public funds from place to place, within the United States and the Territories thereof, and for distributing the same in payment of the public creditors, without charging commissions or claiming allowance on account of difference in exchange."

And the act further provides: "that no bank which shall be selected or employed as the place of deposit of the public money, shall be discontinued as such depository, or the public money withdrawn therefrom, except for the causes herein after mentioned." "If, at any time, any one of said banks shall fail or refuse to perform any of said duties as prescribed by this act, and stipulated to be performed by its contract; or if any of said banks shall, at any time, refuse to pay its own notes in specie, if demanded, etc. in any such case it shall be the duty of the Secretary of the Treasury to discontinue any such bank as a depository," etc.

The obligations imposed upon the deposit banks by the provisions of this act were explicit, and the duty of the Secretary on their non-performance was equally plain.

But the amendment offered by the Senator from Virginia seeks to renew the connection which has existed between the Government and the banks, on their resuming specie payments; and, notwithstanding their course and their conduct; notwithstanding the Government has performed to the letter its part of the contract; and notwithstanding the banks, for the last four months, have entirely failed, and still neglect, to fulfil the stipulations required by the act and by their contract, yet the Senator asks us to renew our relations with these institutions; to take the lead in this matter; to induce them to resume specie payment by promising to give to them again the public deposits, and to receive for the public dues the bills of those banks which may resume specie payments. And a strong appeal has been made by the Senator from Virginia and the Senator from New York, (Mr. Tallmadge,) to their friends, to give to this proposition their support, as they did in February last. Circumstances alter cases. The condition of our monetary affairs and the present condition of the local banks, seems to my mind to furnish a good and sufficient reason for opposing at this time this same measure, to which at the last session I gave my feeble support; and I think, by taking this course, I am by no means obnoxious to the charge of inconsistency. I then voted as I believed for the best; and I shall now vote, as I think, for the best; but should I now

vote for this amendment, I could not reconcile it to my sense of public duty.

I would respectfully ask the Senator from Virginia if, for six months previous to the passage of the act creating local banks as public depositories, there had been a general suspension of specie payments among all the local banks of the country; that for that period of time they had utterly dishonored their own paper, and disregarded their obligations to the public—would they have been selected as public depositories? Certainly not. Would the Senator have supported a bill legalizing the receipt of their notes, when they might resume specie payments? Certainly not. Suppose that for six months prior to the passage of the act of June, 1836, they had refused to pay specie for their bills, would that act have been passed? Certainly not.

Suppose the same state of things had existed for six months prior to the tenth of February, 1837, would the Senate have agreed to any such bill as that now proposed by the Senator from Virginia? Such would be the state of public feeling, and of public sentiment, towards these institutions, under such circumstances, that no such measure would find favor. It would be a proceeding on the part of Congress directly countenancing such a departure from public duty.

I would ask the Senator, in case he had at any time seen fit to employ an agent to manage his own affairs, under his supervision; had made known to him his duties and his obligations, and had placed with that agent his pecuniary means; and the agent had used those means for his own benefit; that, when required to perform the duties of his agency, he was wholly unable to discharge the obligations imposed upon him—would the Senator very readily consent to a re-employment of the same agent, and again furnish to that agent his pecuniary means, under the same obligations? I think too highly of the discretion and prudence of the Senator to suppose that such would be his course of conduct. There is a moral sense, a moral feeling, which, under such circumstances, would control the action of the Senator?

I am free to admit, as the Senator from Massachusetts has stated, that the late President of the United States, in his last annual Message, and that the accompanying report of the Secretary of the Treasury, gave to these local banks a high character, and detailed with much particularity, their valuable and extensive services; their state and condition, their perfect ability to meet all their liabilities, were distinctly communicated to Congress. In admitting thus much, I by no means agree that these public officers withheld from Congress any fact in relation to these institutions, important or necessary to be communicated. The then state and responsibility of the banks were truly and faithfully made known to Congress. And while the President, in his Message, remarked that "experience continues to realise the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government, he, in the same Message, (speaking of the danger of excessive issues of bank paper,) observed that "it is to be hoped that nothing will now deter the Federal and State authorities from the firm and vigorous performance of their duties to themselves, and to the people in this respect."

Whatever may have been the condition of the banks at the commencement of the last session of Congress, whatever may have been the condition of the banks at the time the Senator from Virginia first presented his proposition, there can be no mistake as to their inability now to meet their engagements. Their acts for the last four months speak a language which cannot be misunderstood; acts which may have been inevitable, but cannot fail to weaken the public confidence in those institutions.

If the amendment of the Senator should be adopted, what would be the effect? The Secretary of the Treasury has necessarily discontinued the local banks as the fiscal agents of the Government. Not until these old agents shall resume specie payments can they be employed; and what does the Senator propose to have done with the public funds in the interim? Certainly the Senator would not wish to have them deposited with the local banks in their present acknowledged state of delinquency; and if that should be the purpose of the Senator,

his amendment does not go far enough; for without some express legal provision to that effect, the Secretary of the Treasury could not, as the law now stands, employ these local banks as fiscal agents. What then does the Senator purpose to do with the public money until the banks shall resume specie payment? It is supposed that so long as specie shall bear a premium in the market—so long as any portion of our foreign debt shall remain unsatisfied—this state of things must continue.

I can not, Mr. President, from any view which I can take of the proposition of the Senator from Virginia, give to it my support.

The Senator from South Carolina has proposed an amendment to the bill, which I shall, with some reluctance, support. I should have much preferred the bill as it came from the hands of the committee. The principle involved in the Senator's amendment was matter of much discussion before the committee, and it was their conclusion, that a regard to the public interests required nothing more of them than to report the bill as it was reported, leaving the law of 1789 and the resolution of 1816 as obligatory as they had ever been. The committee believed that no inconvenience or embarrassment whatever would arise, either to the Government, to the receivers, or to the public creditors, by leaving the law of 1789 and the resolution of 1816 as they now stand; and in my judgment, the bill will not be improved by adopting the amendment proposed by the Senator from South Carolina. It, in effect, re-enacts the law of 1789 after the year 1841; and to a certain extent, it, in effect, re-enacts the joint resolution of 1816 until 1841. Without the resolution of 1816, and without the amendment of the Senator from South Carolina, the practice of the Government would go on as it did anterior to 1816, with a proper regard to individual convenience and to public security.

Mr. President, I voted for the deposite act of June, 1836; and, with the Senator from New York, (Mr. Tallmadge,) I have seen no cause to regret it. That vote was the deliberate act of my best judgment. It was given, not as has been avowed elsewhere, to make a gratuity to the States, or to make a systematic distribution of the common fund among the several States of this confederacy. No, sir, I voted for the deposite act with no such view, and for no such purpose. I voted for it, as it was upon its face, and as it was intended to be—a mere deposite bill. It cannot fail to be recollected, that great amounts of the public treasure had accumulated at particular points; that so great had been the accumulation at the places of deposite in the State of New York, as well as in some other States of the Union, that it was alleged on this floor, that the public funds were thus put in jeopardy; and again and again was it reiterated, that it was the policy of the then administration so to control the public treasure as to influence public politics. This was matter of charge; and to do away so groundless an imputation, and to provide further for a transfer of portions of the public money then in deposite in local banks, to the treasuries of the respective States, I supported the deposite act of June, 1836. Not a sentiment did I then utter, not a vote did I then give, which can be made to conflict with the views I now entertain of that measure. It was a deposite bill throughout.

The Committee on Finance, in relation to this subject, at the present session, have reported a bill providing for the postponement of the fourth instalment with the States, under the deposite act of June, 1836. That bill found favor with me in the committee. I was in favor of reporting it to the Senate. I gave it my vote on its passage; but, sir, were these proceedings irreconcilable with my support of the deposite act of 1836? No, sir, no. I have stated the circumstances which elicited my support of that bill. It was to provide additional and safe depositories for the keeping of portions of the public money. At that time we had in the various depositories more than forty millions of dollars; and on the first of January, 1837, we had in deposite thirty-seven millions; upon which the act was intended to operate. But, sir, notwithstanding the peculiar phraseology of that act, it was never

intended by its friends that the Government of the United States should part with its control over that portion of the public funds which had been, previous to the 1st January, 1837, in deposite with the banks, and was then in deposite with the States. It was the property of the Government, and subject to its control, in accordance with the provisions of the deposite act itself. But it was only that portion of the public money actually deposite with the States, which could be controlled by the terms of that act.

That part of the thirty-seven millions which had not, in point of fact, reached the treasuries of the respective States, could not be controlled by the act of June, 1836. It was subject to public appropriation. It had not been deposite with the States; and the States could not assert any claim to hold the public money under the deposite act, which had not actually been deposite with them. The Secretary of the Treasury had the same control, the same power, over the nine millions then in the local banks, as he had over any other portion of the public funds. It was subject to be controlled by the legislation of Congress: it was nothing more or less than a portion of the public money; and like any other portion, was alike liable to be absorbed by public appropriations.

The Government, then, could rightfully use this portion of the public funds; and consequently, on the 1st of October, 1836, there would be no surplus which could be deposite with the States. The necessary and unavoidable demands of the Government had taken up the whole amount in the Treasury, and hence there could be no surplus; and for one, sir, I could not lend my aid in favor of any measure to borrow money for the purpose of depositing the same money with the States. I therefore voted for the bill to postpone the fourth instalment; and I voted against the amendment offered to that bill by the Senator from Pennsylvania, because I could not give my aid to any proposition which should treat this deposite with the States as a donation to the States, or which should give to the Secretary of the Treasury any less control of that portion of the public funds than he had over any other.

It has been often said during this debate, that the recommendations contained in the Message of the President, and that the measures reported by the Committee on Finance, are not calculated to relieve the people from their present embarrassments; that they look exclusively to the accommodation of the Government. The Senator from Kentucky contended that the postponement of the deposite of the fourth instalment with the States, was calculated to increase the pecuniary pressure, and that the bill providing for the issue of Treasury notes was but the creation of a public debt. That it was prepared to withhold nine millions justly due to the States under the deposite act of June, 1836, and at the same time to impose a direct tax of ten millions upon their industry, for the redemption of the debt to be created by the issue of Treasury notes. Is this a fair and just exposition of the matter? If I am not wholly mistaken in the view which I have taken of this subject, the bill proposing to postpone the deposite with the States of the fourth instalment, is a relief measure not only to the depositories of the public money, but to the people themselves. It has been said here and elsewhere, that the amount required to be deposite with the States on the first of October next, was within the control of the Treasury Department; that there were available means in the Treasury sufficient for the purpose. If the fact be so, Mr. President, the course of the Secretary is plain; his duty is explicit, and that duty will be faithfully performed. If there is no want of means, there is no occasion for the action of Congress; the law is in full force, and the duty of the Secretary of the Treasury is fully set forth.

But the fact is not so; and it is the deficiency of means that has called for the interposition of Congress. If the Treasury was well supplied with available funds, how has it happened that, with so great unanimity, the Senate has, at this session, authorized the loan of ten millions of dollars? If the operations of the Government could be carried forward unaided, why has the Executive been au-

thorized, by the act of the Senate, to issue ten millions of dollars in Treasury notes? There can be no mistake upon this point; it is too plain for argument; and the fact is incontrovertible that, if the fourth instalment shall be required to be deposite with the States on the 1st of October next, Congress must provide the means. They must authorize a loan to some amount for that express object, to enable the Treasury Department to execute the act.

Whether this has resulted from the inability of the deposite banks to fulfil their engagements to the Government, or whether it has happened in consequence of the failure of the merchants to pay their duty bonds, or whether from both causes, it is the same to the Treasury Department. Available means are not there, and will not and can not be in the Treasury on the first of October, sufficient for the object; and hence the necessity of action on the part of Congress, either to provide the means, or to postpone the instalment.

Entertaining this opinion, Mr. President, I must differ with the Senator from Kentucky. I can not but regard the postponement of the deposite of the fourth instalment with the States, at a time like this, as a relief measure—a relief to the local banks, to the depositories of the public money, and, of consequence, a relief to their debtors, to the people themselves.

If nine millions of dollars are to be deposite with the States, that amount must be drawn from the debtors to the Government, from the deposite banks and the importing merchants. If a requisition shall be made on the banks and upon the merchants, they would be compelled to enforce collections from their debtors, and there is scarcely an individual in the community, however obscure, but would feel this postponement as a relief and accommodation to himself. The banks and the merchants are the great creditors to the community, and any and every measure which shall relieve them, is impracticable and in effect a relief to the people.

The postponement bill is a relief measure. The Treasury note bill is a relief measure; it is a mere temporary expedient; an authority to pledge the credit of the Government, until the debtors to the Government can pay their dues. The postponement of the payment of the merchants' bonds is a relief measure—directly to the merchants, but indirectly and in effect to the people.

The accommodation proposed to be extended to the deposite banks is a relief measure, giving time to those institutions, and enabling those institutions to give time to their debtors. The warehouse bill is a great relief measure, requiring cash payment for importations which shall enter into the consumption of the country, and relieving the people and the Government from the very evils under which we are now laboring—the abuse of the credit system.

Each and all these measures look directly to the relief of the Government and the people; and notwithstanding the speculations of gentlemen here and elsewhere, with respect to the true character of these measures, let them but be adopted—the banks, the merchants, the people, will all unite in expressing to their authors their deep sense of gratitude.

#### SPEECH OF MR. NILES, OF CONNECTICUT.

*In Senate, Wednesday, September 20, 1837.*—The bill imposing additional duties, as depositories in certain cases, on public officers, being under consideration.

Mr. NILES said: That he thought the question should not then be taken on the amendment of the honorable Senator from South Carolina, (Mr. Calhoun,) as it contained an important feature in the system of finance which it is the object of the bill to establish, and the whole subject could be more conveniently debated together. He believed there were several gentlemen who intended to address the Senate, and as he proposed to submit his views on the subject, if no other gentleman was prepared, he would go on at that time.

He considered the subject, viewed in all its bearings, in a constitutional, financial, and political aspect, as one of great importance, not inferior, perhaps, to any which, for many years at least, has oc-

cupied the attention of Congress. It was one to which he had given some attention, and on which he had reflected much; yet he should not probably have troubled the Senate with any remarks, had it not been for the observations of his distinguished friend from Virginia (Mr. Rives) in his speech yesterday. That Senator, in support of the bill which he had introduced for designating the public funds, which was similar in its provisions to the bill that passed both Houses of Congress last session, and which he (Mr. N.) and other friends of the administration then supported, made an eloquent appeal to himself and others to come out at this time in support of his present bill, or show good reasons why they could not do so.

Mr. N. said he would respond to the call; he could not support the gentleman's bill, but he would endeavor to give his reasons why he could not. He last session gave his hearty support to the bill referred to, which passed with great unanimity. He did so because he considered that bill as containing no new principle, and only carrying out what was then the established policy of the Government; it left the funds receivable for the revenue as they were placed by the joint resolution of 1816, but contained some provisions intended to operate as inducements upon the State banks to discontinue the issue of notes of the lower denominations. It was true the bill superseded the Treasury circular, and he (Mr. N.) was then disposed to do that, for the same reasons stated by the gentleman from Virginia; he also regarded that as a temporary measure, intended for a particular emergency, to arrest a special mischief. But he could not agree with the Senator in the opinion that the failure of that act, and the continuance of the Treasury order, was one of the causes which had contributed to the pecuniary distress of the country. He had, at the last session, supposed that the exigency which had called forth the order had passed off, but had since become satisfied that he was mistaken; such had been the condition of the finances of the Government, and the monetary affairs of the country, that he was fully persuaded the order had exerted a most salutary influence, alike favorable to the Government and to the country.

It has secured the revenue received from the public lands, and reinforced the western banks with specie, which has enabled them to sustain themselves, until the general storm came upon them, as it swept over the whole country. But had it not been for the operation of the order, the western banks would not merely have suspended payment, but would have exploded months before they, in common with others, suspended payments. Another good effect of the continuance of the order was, that it had drawn specie from the banks all over the country, and thrown it into circulation among the people in the western States, where he understood more specie was to be found in circulation than in any other section of the Union. And the specie which had been received for the public lands had been an important resource to the Government in its present emergency.

Mr. N. said he gave his support to the currency bill because he did not then think the time had come to change the policy of the Government in respect to the funds in which the revenue was collected. Among the reasons why he could not then go with his distinguished friend from Missouri, (Mr. Benton,) who so strenuously opposed the currency bill, was the important fact, that the entire financial concerns of the Government were then conducted through the agency of about ninety banks. It was, in his opinion, in vain to think to change our currency as long as we employed the agency of banks; as all public moneys deposited in them were immediately changed to bank credits. He then believed that, as a preliminary step to the collection of the revenue in specie, we must dispense with the agency of banks.

Sir, the late administration adopted a certain policy in regard to the finances of the Government, and he (Mr. N.) saw no occasion to change that policy at the last session of Congress; and the question on which he and the Senator from Virginia differ, is, whether the great changes which have since taken place, in the prostration, not only of the deposit banks, but of the entire banking system of the country, the serious embarrassments to the finances, and the general derangement of the monetary affairs of the nation, require a change in the policy? Has the deposit bank scheme failed? The Senator from Virginia thinks not; he regards the present derangement as the result of temporary causes, some of which originated in the meas-

ures of the Government; he thinks that, notwithstanding a gust of wind may have capsize the deposit banks, they can be righted, refitted, and again put in service. But he (Mr. N.) thought the banks had failed in their duties both to the Government and to the public. They had proved themselves to be either weak or faithless agents, and perhaps both; they had suspended payment; they had been guilty of a voluntary act of bankruptcy, in a time of profound peace, and immediately following a period of unusual prosperity, (or what was so regarded,) and when they had in their vaults nearly thirty millions of the public funds. This suspension was entirely different from that of 1814, when the Government itself had been the principal cause of the vast and dangerous issues of the banks, by which they were broken down.

Whether the general and simultaneous failure of the banks was voluntary and fraudulent, as supposed by some, or a measure of necessity, arising from the over-action and imprudent management of those institutions, was not very material; in either case they must be regarded as *unsafe* depositories of the public revenues. They might answer in ordinary times, when we had a clear sky and smooth sea; when the commerce and finances of the country were stable and regular; but they could not be depended upon in times of difficulty. And in the present instance they had failed, and violated their engagements to the Government and to the public, without any apparent cause, other than their own mismanagement. He would not charge the banks of having voluntarily been faithless agents; but he would say that they had violated their high and solemn obligations to the Government and to the public, without *any reasonable efforts*—he might almost say without any effort at all—to save their own credit and that of the commercial community. When the crisis came, mainly brought on by their own imprudent action, how did they meet it? Did they breast the storm with the hearts and nerves which the occasion called for? did they make any reasonable efforts to weather it and save the country from the calamities which have overwhelmed it? Far, very far, from this. If we look to the point where the extended line of banks first gave way—the city of New York—we shall discover the strongest evidence of cowardice or treachery. What stand did the banks make? how long did they sustain themselves against a run? The Bank of England, in 1825, sustained itself against a run for an entire year, and when a general panic prevailed. Why, sir, a frail concern, having first given way, and been *Docked*, some of the people, as was natural, became alarmed; but there was no general panic; a crowd gathered round the banks; they were not depositors or persons who had means to acquire any considerable demands against banks; most of them probably were 'boot-blacks,' 'chimney-sweepers,' and 'wash-women,' with a single bill each of the lower denomination; or perhaps they were of that class of citizens, who are becoming very notorious of late—the *loco-focos*; the officers of the banks look out at their windows and see this formidable array of persons, all armed with their "promises to pay," about to make an assault upon the banks. What is to be done? can we make a stand? can we defend ourselves against this formidable enemy? They did not, however, hesitate long; but, concluding that "discretion was the better part of valor," they determined to shut their doors, and keep their creditors out. This was certainly a convenient mode of paying debts. At other places, the shutting up of the banks was equally sudden; and, what is not a little remarkable, and calculated to excite a suspicion that something was wrong, is the fact, that the suspension at New Orleans, Mobile, and other places, occurred a few days after that at New York, but before there could have been any communication. These facts are at least calculated to excite a suspicion that there was a previous understanding among the principal banks in the different cities that they were to suspend payment about the time the explosion took place.

But, however this may be, he would ask whether any one can believe that the banks made any reasonable efforts to sustain their own credit and that of the country? Can the deposit banks, some of which possessed millions of the public money, which closed their doors and stopped payment under such circumstances, be regarded as faithful fiscal agents? Was it not the duty of these corporations to have attempted to sustain their credit, and to have paid out one quarter or one half of

their specie before they shut their doors in the face of their creditors? If they had met the shock resolutely, and with a willingness to incur a sacrifice, who can say that they might not have gone safely through the crisis?

Mr. N. said he had lately seen a report of the Governor of the Bank of France, for the year past. The money pressure has visited that country; not in the same severity that it has prevailed in England and the United States. There the bank prepared itself to meet the shock; instead of contracting, it enlarged its discounts, extended the time of its credits, and, in addition to its own notes, put into circulation more than one hundred millions of francs in specie. To enable it to do this, and arrest a money crisis, it purchased, at a heavy sacrifice, nearly twenty millions of francs of coin and bullion. But what sacrifices did the banks make here, to sustain their own credit, or that of the commercial community and of the Government? In the face of these notorious facts, how can it be denied that the deposit banks have proved faithless and unsafe depositories of the public funds? They have stopped payment in a time of peace, and without an effort to sustain themselves. Can we trust them again under such circumstances? This failure of the deposit banks, and palpable breach of trust, has occasioned serious embarrassments to the Government as well as to the country, and it is the sole cause why we are now assembled here.

Sir, connected with the employment of the State banks as agents of the Treasury, was a purpose of controlling their operations to some extent, and thus improving the paper currency. He believed that this formed no part of the original object of the late President; but it was afterwards engrafted in the system, and regarded by many as an essential part of it. This feature in the deposit bank scheme is what seems so highly to recommend it to the Senator from Virginia. The bill he has now introduced contains provisions intended as inducements to the State banks not to issue notes of the lower denominations. So far as the regulation of the State banks, and a restriction upon their issues, formed a part of the system, what success had attended it? He was sorry to say none, or very little. The hopes which were once entertained in this respect, were now blown to the winds. The Senator from Virginia still thinks that it is the duty of this Government to attempt to control and improve the paper currency of the country by means of its revenues, and that this can be accomplished by employing the State banks as fiscal agents. The gentleman certainly has strong faith, the faith of the grain of mustard seed, to which he so happily alluded in his speech.

Sir, the evils of our banking and paper money system are too deeply rooted and too broadly extended to be corrected or mitigated by any such palliatives. If the inducements, or considerations of interest, held out to the deposit banks, will induce them to give up their small notes, and conduct their business with some little regard to the public interest, how are those banks to influence or control other State banks? Talk about reforming the State banks through the agency of your financial measures! Why, since this attempt commenced, the increase of banking capital and paper issues has greatly exceeded any former period. The tide of paper money has been rising and swelling until its bitter waters have spread over the whole land, leaving behind everywhere the evidences of their corrupting and deleterious influences.

In many of the States the banking capital had been increased one hundred per cent. since 1830, and in others three or four hundred per cent.; and their issues had increased in proportion. It is true that the issue of small bills has been prohibited in several of the States; not in consequence of our fiscal measures, but as the result of the impetus which may here have been given to public sentiment.

But (Mr. N. said) the more he reflected on this feature in the deposit bank scheme, the more he was dissatisfied with it. What is it but an attempt on the part of this Government, indirectly, and through the form of contracts, to supervise and control the local institutions of the States? The object he admitted to be good, although he thought impracticable. But he spoke of the *principle*, which he believed to be unsound and dangerous. The banking corporations are a part of the local institutions of the States, as much as colleges and courts of justice. Can the Federal Government rightfully interfere to impose

restrictions and regulate the action of State institutions? That Congress, or the Executive, can do this *directly*, no one will contend; and can we effect, by indirect means, what we have confessedly no power to accomplish by direct legislation? Can we use the funds of this Government to buy up State institutions, for the purpose of moulding them according to our will? As a friend of the rights of the States, he must say he felt alarmed at such doctrines. The deposit bank system was resorted to in 1833, in a great emergency, when the United States Bank was attempting to crush the State institutions, and at that time was a wise, if not an indispensable, measure; but the object of superintending and reforming the State banks was then no part of the system. It is now abandoned, and he rejoiced at it, considering it impracticable, and resting on very questionable principles.

Whether, therefore, we look to the direct object of the deposit bank system, the safe-keeping and disbursement of the revenue, or the incidental advantage of improving the currency, it was (Mr. N. thought) not to be disputed that the measure had failed. The connexion between the Treasury and the State banks is at an end; it has been dissolved by the banks themselves; and the only question now is, whether it shall be renewed. He, for one, thought not.

The deposit bank scheme being, as he considered, out of the question, there were but two plans remaining for the management of the finances. The first of these is a national bank. He did not know that this exciting question would be agitated at this time; there were some memorials, but no distinct proposition, before us in relation to it; and although a national bank seemed to fall within the scope of the present debate, he was not disposed to go into any general discussion of that question. Of the constitutional and political considerations which belonged to it, he would say nothing; but he would make a few suggestions on one or two financial points. The re-establishment of a national bank is now asked for on new and distinct grounds. It is not as a fiscal agent of the Government; it is not so much for its capacity in facilitating commercial transactions that Congress is now appealed to to establish another bank of the United States; but it is asked for as a *general regulator of the currency of the country*; to regulate, superintend, and control the operations of the State banks. It is on this ground mainly, if not exclusively, that the mercantile community desire the re-establishment of a national bank.

The Board of Trade of the city of New York, in the circular which they have sent all over the country, to set the friends of a United States Bank in motion, say: "Here are several hundred banks, with an indefinite power to issue paper money, and twenty-seven legislatures, possessing indefinite power to create banks at their own will. The banks cannot control each other, nor can the State legislatures control them; so that there is no efficient check on the exercise of this immense power, upon which every man's property depends for its value, and every man's labor for its reward. That their instrumentality has been useful, if not indispensably necessary, is willingly admitted; but to their safe administration it was early deemed essential that the Government, charged with the care of the circulating medium, should, by means of its revenue, superintend, and, to a certain degree, control their movements."

The Board of Trade of our great commercial emporium may be regarded as speaking the sentiments of the commercial class generally in the country; and we see in the public papers, and every where, the almost universal sentiment among the advocates of a national bank, that it is the only regulator of the currency of the country; and it is to the failure to renew the charter of the late Bank of the United States that they attribute the rapid increase of banking institutions in the States the last few years. It would be difficult to use language more condemnatory to the whole banking system than that contained in the circular of the Board of Trade. What are we to think of a system which contains within itself no sustaining or regulating principle? Such an institution must have within itself the seeds of destruction. What are we to think of banks which cannot control themselves, which cannot control one another, and which cannot be controlled by the very power that created them?

But this unmanageable machinery of State banks, which possesses within itself the very principles of disorder, is to be controlled and regulated by a national bank, so as to render it highly useful. That

a large and very respectable portion of the community honestly entertained this opinion, can hardly be disputed. But it appeared to him without any foundation in theory, and not only unsupported, but directly opposed to all experience both in this country and England. How are one set of banks (for a national bank with numerous branches is, for most purposes, only so many independent institutions) constructed on the same principles, and moved by the same impulses and motives, to control and regulate another set of banks every way similar? If we examine the position and the reasons *a priori*, it appears to have no support; and if we view it in the lights of experience, it seemed to him strange that such an opinion should ever have prevailed to the extent it has.

The strong reason now urged for a national bank, was, in his opinion, one of the greatest objections to such an institution. That a national bank has and necessarily must exert great power over many of the smaller institutions of the States, was a point not to be controverted. But the question is, whether this influence tends to give stability to the paper currency, or increase its fluctuations? What are the evils of our paper currency, and indeed of all paper currencies? Its tendency to *excess*, and its ruinous fluctuations, or periodical and almost constant expansions and contractions. Is it not apparent that the concentrated power of a great institution, operating upon this floating mass, must agitate and keep it in constant commotion? And do we not know, in point of fact, that all the great and distressing revulsions in this country since 1816, were preceded by large expansions by the United States Bank? Was not this the case in 1817, and the first half of 1818? From July, 1817, to February, 1818, the discounts of the bank were increased about twenty millions of dollars, or nearly one hundred per cent. This preceded, and in no small degree contributed, to the severe embarrassments and distress which followed, and which lasted nearly three years. The pressure for money in 1826 was preceded by the increased discounts of the bank during 1825, which favored the speculations in cotton, and led to an excess of imports over the preceding years of twenty-five or thirty per cent. The bank, having increased its discounts in 1831, curtailed and brought on a pressure in 1832, and occasioned an excess of importations in 1831 of more than forty per cent. over the ten preceding years, with the exception of 1825. The contraction of about twenty millions after the removal of the deposits in 1833, it is well known, brought on the severe pressure and panic of 1834.

Yet, with these facts staring us in the face, it is seriously contended that a national bank is the only regulator of the currency, and the only thing calculated to restrain and check the action of the local institutions. He considered a national bank dangerous and pernicious under any circumstances; but he should feel much less objection to it if its notes formed the only paper currency. In that case, we should only be exposed to its own contractions and expansions; but with our present system of State banks, there is superadded to its own fluctuations the ebb and flood tides of that immense floating mass of paper supplied by the local institutions.

There was one other point of view in which he would consider a bank of the United States. The re-establishment of such an institution is regarded by many as the most effectual mode of immediate relief to the country, by compelling the State banks to resume specie payments. He concurred with the gentleman from South Carolina, (Mr. Calhoun,) that no measure could operate more injuriously and harshly on present difficulties than this. In 1816, in a state of things somewhat similar, the honorable Senator from Massachusetts, (Mr. Webster,) then in the other branch of Congress, declared that a bank was not the proper remedy. He said, "in my opinion, any remedy to be applied to this evil must be applied to the depreciated mass of paper itself. It must be some measure which would give life to this *mortified mass* of the body politic. This evil was not to be remedied by introducing a new paper circulation. The establishment of a national bank was not, in his opinion, the proper remedy." He said "the whole strength of the Government ought to be put forth to compel the payment of the duties and taxes in the lawful currency of the country. Gold and silver was the law of the land at home, and the law of the world abroad. The only legitimate power of Congress was to interdict the paper of

such banks as do not pay specie from being received at the custom-house."

Mr. N. said these sentiments were sound, and he fully concurred in them; if true and applicable to the crisis in 1816, they were equally so now. And how did the remedy adopted, a national bank, restore to life the "mortified mass" of paper money? Why, in the same manner that a surgeon saves the life of a patient by extensive amputations; an arm, a leg, leaving nothing but the dismembered trunk. If, in that case, the patient survived, his sufferings were great, and for nearly three years he languished in a low and feeble state. The contraction of currency was the most rapid and extensive, and attended by consequences the most afflicting and calamitous of which there are, perhaps, any examples in modern times.

Of the one hundred and ten millions of paper money which was in circulation in 1816, all was annihilated but *forty five millions*, according to the authority of Mr. Crawford. But even this destruction of more than sixty per cent. of the depreciated mass of paper did not give soundness to what remained, until the lapse of nearly four years. In a report made in 1820, Mr. Crawford says, "that in many of the States, the great mass of the currency is not even *ostensibly convertible*," and that, in a "great part of the Union, the convertibility of paper was rather *nominal* than real." Of the deep and extensive distress which this process of restoring the currency occasioned, he says, "all intelligent writers upon currency agree, that when it is decreasing in amount, *poverty and misery must prevail*. The correctness of the opinion is too manifest to require proof. The united voice of the nation attests its accuracy. As there is no recorded example, in the history of nations, of a reduction of the currency so rapid and so extensive, so but few examples have occurred of distress so general and so severe as that which has been exhibited in the United States. To the evils of a decreasing currency are superadded those of a deficient currency. But notwithstanding it is deficient, it is still depreciated. As the currency, at least in some parts of the Union, is depreciated, it must, in those parts, suffer a further reduction before it becomes sound. The nation must continue to suffer until this is effected."

Such was the picture of distress exhibited at the end of four years after the establishment of the United States Bank, which is regarded by some as a universal *panacea*, or sovereign remedy, for all disorders in commercial and monetary affairs. Like a patient slowly recovering from a fever, the whole country languished for three years; its resources exhausted; its industry paralyzed; and its whole energies inactive and dormant. The ruin to private fortunes, and the destruction of property, was immense; almost every description of property fell fifty per cent., and some much more. Every kind of business, except that which is the basis and support of all others, was entirely prostrated; and even agriculture was so depressed, that the prices of the products of the soil fell fifty, and many seventy five, per cent. These were some of the early fruits of a national bank, as a *remedy* for a disordered currency and a deranged state of the commercial interests of the country. In the history of England we have many similar examples of the kind of balm which a national bank pours into the wounds of a bleeding and suffering people; in 1793, 1797, 1814, and 1825. At the latter period of revulsion, nearly forty millions of dollars of currency of the private banks was annihilated, and a scene of distress and ruin presented truly appalling.

Sir, said Mr. N., I have said all I propose to say in regard to two financial schemes, and it now remains for me to take some notice of the third, which the bill before us is intended to introduce. This last is characterized as a novel and untried experiment, although much older than either of the others. It is the system on which the ancient and most modern nations have conducted their finances; it is, at any rate, as ancient as 1789, as old as the constitution which we have all sworn to support and to regard as the rule and guide of our actions.

This plan consists of the employment of federal officers, to execute that portion of the Executive power which pertains to the keeping and disbursement of the revenue. This seems to be the natural course, and is, at least, recommended by its simplicity and conformity to the true spirit of the constitution. Can any one believe, on perusing that instrument, that its framers contemplated the agency

of banks, either State or federal, in the keeping and disbursement of the revenue? Has not the employment of banks, from the first, been a manifest departure from the plain and obvious course indicated by the constitution, and may not this departure be justly regarded as the source of all our financial embarrassments and difficulties?

But is the proposed system *practicable*? This is, perhaps, the most important question connected with the whole subject. Is there any thing in the constitution, or in the nature of the fiscal duties of the Government, that renders the agency of banks appropriate and necessary? If that part of the Executive power which relates to the finances cannot be executed except by bank agency, then a system of banks becomes an essential part of the Government itself, and enters into its very elements. It becomes a bank Government, and cannot exist independent of banks in some form. And if it is not maintained that banks are absolutely necessary as fiscal agents, to insist that their agency is the most *suitable and appropriate means* of executing a portion of the Executive power, would seem to lead to the same conclusion, the same connexion between the Government and banks. But those who profess to be opposed to a bank of the United States, will do well to pause before they come to either of the above conclusions: for if the operations of the Government cannot be carried on without the agency of banks, or if banks are the most suitable and appropriate means for executing the powers relating to the revenue, does it not follow that we must have a *federal bank*? Is it not apparent that to admit that bank agency is necessary in the management of the finances, is the strongest possible argument in support of a national bank? Sir, the two questions are identical; they are but one; for to say that a bank is necessary as a fiscal agent, is to say that we must have a national bank. This, sir, is a complete independent system of Government; it possesses within itself all the necessary functions of a Government. It is in no particular dependant on the States, so far as its own action is concerned; and least of all can it be in so important a function as that of its finances. If it has not within itself the power to manage its finances, then it is no Government; it is dependant on the States almost to the same extent as the old confederation, which had no power over a revenue but by requisitions upon the States: Has this Government any control over the State bank? Has it any right to command their services? And, in times of party excitement, might not many of the States prohibit their banks from acting as agents of the Government? What security can there be in a reliance on State institutions? Who control the banks, and what is their spirit? Do they not present the embodied elements of aristocracy, and have they not usually been opposed to the Government, when administered by agents possessing the confidence of the great body of the people? Sir, there is no avoiding the conclusion, that, if bank agency is necessary, we must have a federal bank, which we can control ourselves, or, at least, have a legal right to control. But no such agency is necessary. The proposed system is not only practicable, but natural, simple; and, Mr. N. did not hesitate to say, would be found, on trial, to be as convenient as the State bank machinery.

If authority is of any avail, Mr. N. said he would refer to that of Mr. Gallatin, whose great experience and learning, as a financier, no one would dispute. He says, "it must be acknowledged, that inasmuch as the revenue may be collected, and the public money may be kept in the public chests, and transferred to distant places without the assistance of banks; as all this has once been done in the United States, and continues to be done in several countries without any public bank; it cannot be asserted that those institutions are absolutely necessary for those purposes, if we take the word necessary in that strict sense which has been alluded to." He thinks, however, it would be more inconvenient and expensive.

What, then, are the objections to it? Several have been urged, which he would briefly notice. It is said that it will increase the expense, and that the public funds will be unsafe. The question of expense was too unimportant, in his estimation, to be deserving of any serious consideration; if the expense should be double, triple, or quadruple what it has been estimated at, it would be a matter of no moment with him: As to the security of the public funds, he thought they would at least be as safe as in the banks. Can we not put as much confidence

in our own officers, appointed by, and accountable to, this Government, subject to the regulations, and pains, and penalties, which may by law be prescribed, as we can in the officers of mere corporations, over whom we have no control, and who are no way accountable to us for their conduct. We have no remedy, either civil or criminal, against any officer of a State bank for embezzling our funds; our only remedy is against the corporation, and that by suit, like any other creditor. But the power of supervision and removal, which will be applicable to officers of our own, and a frequent examination of the state of their funds and accounts, as provided for in this bill, is a source of great security. But it is said if we entrust our funds in banks, we have the capital of the institution as a reliance to make good any defalcation. But if our moneys were embezzled or wasted by the officers of a bank, the same fraudulent conduct would waste the capital also. How many banks in the Union have experienced such a catastrophe? There is one circumstance greatly in favor of the proposed scheme, as regards security. The federal officers are to be the mere *keepers* of the public money; they are not to use it; whereas, the banks are expressly authorized to use your funds, and do use them, as a part of their capital; and, of course, they are subjected to all the hazards and contingencies attending the banking business. There is another important point of difference: there are general causes which operate upon all banks at the same time, and which may prostrate the whole at once, to the most serious embarrassment of the Government. This is precisely our present condition. But there are no such causes which can operate on federal officers; an individual may prove faithless or fraudulent, but that cannot seriously affect the public interest.

It is further objected, that the proposed plan will withdraw the public funds from use; this is true. But who have a right to use the public moneys for their own benefit? Their use, heretofore, has been almost exclusively confined to one class, the merchants, who have had a monopoly of the privilege, if it is one; the privilege is also confined to the places where the revenue is collected. Is this just? The only sound principle is, that the public funds, which belong to the whole people, shall not be used by any one, but kept sacred until wanted to pay the public creditors, and the expenses of the Government.

Is it not the fact that the merchants have been doing business on the funds of the Government, that has occasioned most of the clamor and excitement which has existed in the commercial community in regard to almost every financial measure which the condition of the country or its revenue have required? Is it not time this cause of disturbances was removed? But, sir, we are gravely told by the honorable Senator from Virginia, that the bill, with the amendment, which provides prospectively for collecting and disbursing the revenue in specie, will introduce two kinds of currencies—one for the Government, its officers, contractors, and so forth, and one for the people. He was sorry to see such an objection, which he would not say was taken from the newspapers of the day, put forth from such a quarter. Why, the Senator himself, seems to be sensible that it will be regarded as an *ad captandum* argument; yet, in the same breath, he informs us that he discovers in it the germs of an aristocracy. The officers of the Government were to have a "better currency," but rags were good enough for the people. But this currency of the privileged order, is no "better" than the public officers are entitled to by law; it is no "better" than we have agreed to pay them; no "better" than *justice* entitles them to. To pay the public creditors in any thing but the lawful currency, or what is equivalent thereto, is to defraud them; and this was the first time he had heard it urged, that democracy consisted in *cheating the public creditors*. This argument was hardly deserving of a serious refutation; it was better adapted to the newspapers of the day than to the Senate. The simple fact is, there never has been, and never can be, but one currency, so far as this Government is concerned, which is the lawful currency of the United States, or what, for the time, is deemed equivalent thereto. How would the Senator remedy the supposed evil? Would he require the revenues to be collected and paid in the paper issues of broken banks? And of which banks? How will he distinguish between those which have only suspended payment, and those which are really insolvent? But bank notes

are not the only paper currency which the people use; there are small notes, bills, and *shinplasters*, issued by all sorts of corporations, and even by boot-blacks and chimney-sweepers. Would the gentleman have the Government receive and pay out these shinplasters, so as to bring about the equality between the people and the Government? This Government has no control over these spurious paper issues, whether from corporations or individuals; it did not authorize them, and it cannot suppress them. If the people suffer themselves to be defrauded, is that a reason why the Government should be defrauded also? Or is it a reason why the Government should encourage these frauds upon others, and upon the whole community?

But the Senator further informs us that the proposed plan, which he insists should be called a sub-treasury scheme, will open the flood-gates to Executive influence; and this seems to be his strong position. If this was true in point of fact, it would be an objection possessing great force. But to sustain it, the gentleman draws largely upon his imagination. He looks beyond the present bill, which, he says, is only the germ of the system, which, when fully developed, will produce fifty thousand officers, like the establishment of the *Receivers General in France*. As this objection rested mainly on extraordinary flights of imagination, and as he (Mr. N.) had no capacity for such flights, he could not, perhaps, perceive its truth. He was willing to admit that it might hereafter be found necessary to enlarge somewhat on the plan as now proposed, and, at three or four points, to add some few additional officers, to be specially charged with the keeping and disbursement of the public moneys. New York, Philadelphia, Boston, and New Orleans, he thought were the only places where any such additional officers could be required; but as the mint and branch mints are to be places of deposit, it was quite uncertain whether any receivers or new treasury officers would be required. But as to the army of fifty thousand, they will never have any existence, except in the warm and fertile imagination of the Senator, who has so strong faith in his own foreboding, that, even now, he can see in a grain of mustard seed (the smallest of all seeds) springing into life, a large plant, spreading broad its branches, whilst the birds of prey are seen lighting upon them, ready to devour the substance of the people. But when we descend from these airy flights, and look at this subject as it is, we shall find that this army of fifty thousand officers dwindles down to a few clerks; for, as the bill now stands, it does not provide for the appointment of any other officers. And should it be found necessary to enlarge the system, as he had supposed it possibly might hereafter, the increase of patronage to the Executive can amount to no more than the appointment of some fifteen or twenty additional officers. These officers can have no extraordinary influence from having the keeping of the public funds, as they will not be permitted to use them in any way or manner whatever. He was aware that it was elsewhere, if not here, charged upon this system, that it placed the whole public treasure in the hands, and under the control, of the Executive. But every one knows that this is entirely incorrect; that the President, or the Secretary of the Treasury, can have no more actual control over the funds, on the proposed plan, than they now have. The President can have no direct control in either case, and the Secretary cannot draw a dollar from the Treasury, except in pursuance of appropriations made by law.

But, sir, I wish to call attention to the great point of distinction between the proposed plan and the deposit bank scheme. It is this—that the former is entirely free from any *moneyed influence*. That is the only influence which we have to fear; that is the subtle poison which is to corrupt the very fountains of our liberties; that is the secret enemy, which, like the worm that never dies, is gnawing upon the very vitals of our free institutions. In the one plan, the public funds are not to be loaned or used; they, therefore, can neither benefit any one, nor corrupt any one; but, in the other case, the public funds are to be loaned through the agency of banks. But this is not all, nor the worst. The deposit bank system, as established by the act of 1836, is subject to the most weighty and alarming objections. Those provisions of the bill were not sufficiently considered; they passed without discussion; the attention of all being engrossed by the sections of the bill relating to a deposit of the sum, plus with the States,

That act provides that all the public revenues shall be deposited in State banks, to be selected by the Secretary of the Treasury, and that, when the amount exceeds a certain sum the banks are to pay interest at a certain rate. The banks are also required, as part compensation for the use of the public depositories, to perform the duties of pension agents. What are these principles but a proposition for a compact with the State banks? and when acceded to by any bank, it becomes a compact between the Government and such bank. And what is the nature of this compact? Why, that the United States is to become a sort of "partner in trade" with the deposite banks. It is, in fact, sir, a *system of banking on the part of the United States*, carried on through the agency of State banks, that agency resting on contract. If an individual was to contract with a bank for the use, for an indefinite time, of a large sum of money, to be employed for banking purposes, for which he was to receive either a stipulated interest or a certain share of the general earnings of the bank, would not such individual be engaged in the banking business? Sir, under this deposite bank system, the United States, during the year 1836, was carrying on a more extensive banking business than any institution in this country, as it had between forty and fifty millions, all employed in banking operations. But not only are the funds of the Government to be used for loans and discounts, but they are blended with those of the deposite banks; and, by this sort of political copartnership in banking, the Secretary of the Treasury may acquire, to some extent, an influence over the general business of the bank, and over its own capital, as well as that furnished by the Government.

The act contemplates that, by this compact, the bank is to submit to his supervision; it is periodically to report to him the state of its affairs, and to submit to such restrictions and regulations as he may prescribe, so far as he is authorized to do this by the act. The act also imposes restrictions as to the issuing of small bills on the deposite banks, which is virtually modifying their charters.

Now, sir, compare the two systems in respect to their bearing on Executive influence: the one makes a small addition to the patronage of the President, the other not only adds to Executive patronage, (for the designation of deposite banks is an item of patronage,) but it brings the Government into direct connexion with the moneyed institutions of the country. In some instances, a single bank has had several millions of the public funds, using them as a capital for discounts. How many persons would be interested in the maintenance of that fund in the bank? All the stockholders, to the amount of several thousands, whose dividends would be greatly increased; in some instances, no doubt, more than one hundred per cent. He had known something of one deposite bank, whose dividends were increased nearly at that rate. The customers of the bank, and all dependent upon it, have also an interest.

The Secretary of the Treasury has not abused the power improperly conferred upon him; but the influence of this system was great and dangerous. It was a moneyed influence, which ought to be, so far as possible, kept out of the Government. The use of the public funds was entirely wrong, and to receive interest was increasing the evil. Instead of swelling the flood-tide of Executive power, the proposed plan would destroy that dangerous moneyed influence which belongs to the present system, the most to be deprecated of all Executive power.

But it is said that, if this bill was to pass, the result would be the establishment of a Treasury bank. Surely there is nothing in this bill which has any connexion with a Treasury bank, nor could he see any tendency it had to such a result. If a Treasury bank should be established, it must be by the subsequent action of Congress, wholly independent of the proposed financial measure. He hardly knew what the Senator from Virginia meant by a Treasury bank; but if it means only the issuing of a limited amount of Treasury notes or drafts, based on the funds of the Government and the faith of the United States, and receivable for the public dues, he should not be much alarmed at such a bank, provided he could be satisfied as to our constitutional power to establish it. He agreed with the Senator from South Carolina (Mr. Calhoun) in the opinion, that a limited amount of paper of that description would be found extremely convenient,

not only for the financial concerns of the Government, but for exchange, and other commercial purposes. It would be truly a national currency, possessing equal value in all parts of the Union, and, of course, have advantages over any bank issues, whilst it would be free from those ruinous contractions and expansions which invariably attend a bank note currency.

Mr. N. said that the proposed financial system, like all others, had three distinct aspects in which it must be viewed: its efficiency in the conducting of the finances, its political tendency and bearing, and its indirect influence on the currency. He had disposed of the first two divisions of this subject, and it now only remained for him to make a few observations on the last. The powers and duties of this Government, in relation to the currency are a subject about which very different opinions prevail, both here and elsewhere.

The honorable Senator from Massachusetts (Mr. Webster) maintains, with great strength of argument, that this Government possesses an independent, substantive power over the entire subject of currency, embracing the bills of State banks, and whatever else may circulate as money. He also said that he did not mean to be understood, as expressing the opinion that there was but *one way* in which Congress could exercise this power of supervising and regulating the currency. By the one way he (Mr. N.) supposed was meant the establishment of a national bank; in what *other way* the gentleman proposes to regulate the currency he has not informed us. He, for one, felt anxious to see the gentleman's other measures.

The Senator from Virginia does not admit that Congress has any distinct, independent power, but considers that its power over the currency is only incidental to the revenue power. This opinion is not consistent with the views of many in regard to the tariff, yet he (Mr. N.) considered it the true doctrine.

In the adoption of measures for the collection, safe-keeping, and disbursement of the revenue, Congress can take into consideration the effect which such measures may have on the general currency of the country. This is all we can do; we cannot directly interfere with the issues of the State banks. This incidental effect which may be produced by our financial measures, would naturally seem to be of secondary, but now appears to be regarded as of primary, importance. Indeed, it is the real or supposed bearing of the financial measures of this Government, on the general currency of the country, that attaches to them so deep and extensive an interest.

It becomes therefore important to consider how the proposed measure will affect the currency or the paper issues of the State banks. He thought that its influence would be very salutary, and that, in this respect, it would have a decided preference over either a national bank, or the State deposite banks. It may, it is true, in some degree diminish the profits of banking; but the present system of paper money cannot be improved in any degree, however small, without the reduction of the profits of banking enters into the measure of reform.

What is the great evil of our paper system of currency? It is its instability, its irregular action, its constant tendency to the most ruinous expansions and contractions. This is a point about which there is no controversy; all agree in it. Will the proposed measure, then, tend to render the currency more stable and less fluctuating? If so, its influence must be highly salutary. One of its immediate consequences will be to create and keep up a demand for specie to the extent of the revenue and disbursements of the Government. This constant demand for specie will operate as a continued check and restraint upon the banks in the commercial cities; it will compel them to be more cautious in their issues, and to keep themselves more strongly reinforced with specie. The more cautious action of the city banks will tend to restrain the country banks. How considerable this restraining influence upon the banks may be, it was impossible to say, but, so far as it exists, it would be salutary.

It seemed, however, to be feared that the proposed measure would impose too great a restriction upon the banks; that it would diminish their ability and limit their operations too much. But this was not to be feared; the only danger was the over action and the irregular action of the banks; this is their natural tendency; it results from the principles of the system, and is an evil which cannot be removed without a change of its principles. A bank of the

United States, as he had already said, is now asked for, solely on the ground of checking and controlling the State banks; but when it is proposed to do this in any *other way*, that is regarded as an insuperable objection to the measure. How is this? Can State banks only be regulated by federal banks, or is it a mere pretext that a national bank is wanted as a regulator of the State institutions?

But this constant demand for specie in the transactions of the Government will promote the general circulation of coin, and improve the whole currency; it will render our currency, in some reasonable degree, a mixed currency, instead of an *exclusive* paper one, as it now is.

But there will be other consequences affecting the currency, equal, and perhaps more important, than those named. The proposed system, should it be adopted, will occasion a *complete and entire separation of the Government from all banks*. This is its distinguishing feature, and highest recommendation. This separation is not only important in a political point of view, but, if possible, equally so in its effect on the currency and the interest of the country. What have been the fruits of this connexion? Sir, there is high authority on this point, which goes to show that it has been injurious both to the Government and the banks. Mr. Biddle, the President of the late Bank of the United States, who, in the opinion of some, is the greatest financier that now exists, or ever did, or ever will exist, has expressed this opinion. At the organization of the Pennsylvania Bank of the United States, in 1836, he congratulated the stockholders on the prosperous condition of their interests, the accumulation of a large surplus fund, and the purchase of a new charter, and boasted that the bank being "safer, stronger, and more prosperous than it ever was." He also adds, that "*it was an original misfortune in the structure of the bank that it was in any way connected with persons in office*." The instincts of all political power make that association dangerous—*useful to neither party—injurious to both.*"

Sir, I repeat the question, What have been the fruits of this connexion of bank and State? Let the experience of the country answer! He need not go back to the last war, when, in the negotiation of loans with banks to the amount of about fifty millions, at least fifteen millions of dollars was sacrificed by the Government. These loans consisted of exchanging the credit of the United States, which was vastly better than that of any bank, for the credit of the banks, at the rate of eighty and eighty-five dollars for a hundred. This occasioned the rapid enlargement of bank issues during the war, and led to the suspension of the banks in 1814, and to a long train of calamitous consequences, under which the country languished for five or six years. He had already alluded to these circumstances.

This connexion has greatly increased the irregular action of the banks, and stimulated their contractions and expansions. The first great and sudden expansion of the Bank of the United States, in 1817, was, in part, occasioned by the Government redeeming thirteen millions of its stock, then held by the bank, as part of its capital, which obliged it to loan it suddenly to individuals. The public depositories, as is well known, have always been used by the banks as the basis of discounts; and, as they increase and diminish suddenly, this produces a corresponding enlargement and curtailment of their loans.

In consequence of this unfortunate connexion, as Mr. Biddle calls it, every measure of the Government, of a mere financial character, having no direct bearing on any commercial interest, has for years occasioned a disturbance in the monetary concerns of the country, which, under our credit system, are otherwise sufficiently unstable. Almost from the foundation of the Government, this has been one continued source of clamor and complaint—of agitation, of fierce denunciations, and of curses loud and deep against the Government, from the commercial portions of the community. Cause or no cause for these complaints, for his present purpose, was of little consequence. He believed that, in general, such complaints had been without any just foundation; but he wished to remove the pretext for them, and effectually to remove all grounds of charging, upon the mere financial measures of the Government, the disturbance of the currency; and the derangement of the business concerns of the country.

Was it necessary to refer to particular cases?

there were some too recent not to be fresh in the minds of all. No one, he believed, had forgotten the removal of the deposits, in 1833, or the crisis and panic which followed; the deep agitation of the public mind; the violent party excitement; the failures and bankruptcies; and the general cry of ruin, which resounded from one end of the Union to the other. And what was that measure which produced such frightful and alarming consequences? He did not speak of it in a political point of view. Sir, that measure, which brought on one of the greatest crises that this country has ever experienced; which, in the opinion of some, threatened a revolution, and almost shook the Union to its centre, was nothing more than changing the deposite of some three or four millions of the public funds from one set of banks to another set of banks, in the same places. The deposite act, or the manner of its execution, is considered as one of the prominent causes of existing embarrassments. And the Treasury circular has been, and is now, here and elsewhere, regarded as among the causes which have deranged the currency and prostrated the business of the country. The large amount of revenue which had accumulated in the deposite banks, all admitted, was one of the causes of existing difficulties. He was tired of these complaints, and he believed the people were tired of them. If our monetary affairs are of so ticklish a nature, and there was so much susceptibility in the commercial community, it was time that the financial affairs of the Government were placed on a different footing, so that they could not be charged with disturbing these interests.

But there was one more consideration, of great weight in his mind, in favor of this great measure of a separation of the Government from all banking institutions. The banks have become an element of political power, and the basis of a moneyed aristocracy. The whole system is one resting on monopoly and exclusive privileges, in derogation of the equal and common right of the people. Experience has also proved that the system is founded on unsound principles, and its rapid and dangerous extension, the last few years, and the serious evils attending it, have produced a very general conviction, embracing, probably, a large majority of the people, that the system cannot long be endured, *as it is*; that it must either be reformed or abandoned. From dear bought experience, this had become the general sentiment. But this reform cannot be effected here; we have no jurisdiction over the subject; Congress did not create the State banks, and it cannot unmake them, or reform the system. This belongs to the people and the States; let us leave it there; they have the power, and are competent to the task. The accomplishment of this important measure—one which at this time excites a deeper and more universal interest than has ever before existed in relation to any reform in our civil institutions—will no doubt be resisted, violently, desperately, by the whole combined moneyed influence of the country. The issue is already made up; it is a great issue; one which will be likely to agitate the public mind for twenty years to come. On the one side is the popular will, the great mass of the people; on the other are the banks and the moneyed power. On the one side (if he might use the language of the London banker's circular) is the aristocracy of wealth; on the other, the democracy of numbers. The struggle will be arduous, and, probably, long; but the result cannot be doubtful. At a time like this, and under such circumstances, is it proper for this Government to become a party to this contest? As we cannot do it directly, is it proper, is it right, for us to interfere indirectly? As we cannot assist in carrying out this great reform, all that he asked was, that this Government should stand aside. It cannot rightfully become a party to this contest; it cannot promote the reform, but it may retard it. Shall Congress interpose itself between the people and this great measure? Shall it take sides with the banks against the people? Shall this Government become the endorser and the backer of the State banks? Shall we, by our improper connexion with them, encourage them to look to us to sustain themselves against the popular voice? Shall we unite and league them together, and thus add to their power by combination? Sir, let this Government stand aloof from this contest, and leave the banks in the hands of the States and people from whom they derived their existence, and to whom they are amenable for their acts, and by whose will they must stand or fall.

Mr. N. said he had gone through with the sub-

ject, so far as regards the matters more particularly connected with the bill under consideration; but would briefly notice another topic, which had been drawn into this debate.

It is said, by gentlemen, that no measures are proposed for the relief of the country; that we seem only anxious to take care of the Government, and to do nothing for the people. This is the broad and general objection to the measures reported by the Committee of Finance. Is this charge well founded? He thought it was not. What is meant by taking care of the Government, and doing nothing for the people? Have the people no interest in the Government? Is it not their Government? And is not what is done for the Government, done for the people?

But he supposed gentlemen meant that no measures were proposed to relieve the present embarrassments of the country. But is this correct? Will not most of the bills which have been reported by the committee have a tendency to afford relief? The bill extending the time of payment of the merchants' bonds is certainly a direct and important measure of relief; the bill giving indulgence to the deposite banks which are indebted to the Treasury is another essential measure of relief; and the bill authorizing the issue of Treasury notes, although intended to aid the Treasury, will operate most beneficially as a measure of relief to the whole country. Its immediate effect will be equivalent to the infusion of a sum into the metallic currency of the country equal to the notes to be issued.

So far as the revenues of the Government are concerned, our measures all tend to afford relief. Ought we to go further? Can we go further? What do Senators desire or expect? Do they wish the Government to provide for liquidating the foreign debt of our merchants? or would they have us assist the banks? Why, the Senator from Virginia (Mr. Rives) says that all that is wanting is *confidence*! Confidence from whom, and in whom? He seems to suppose that the want of confidence in the State banks is the principal source of difficulty; and that the measures proposed were calculated to destroy, rather than to restore, that confidence. But Mr. N. apprehended that the want of confidence in the banks was not the cause of our difficulties; they had rather proceeded from an excess of confidence in the bank and he did not now think there was any want of confidence in the solvency of the banks; he was rather astonished that there was so much confidence.

What were the present causes of the prostration of business? He did not mean the causes which may have brought the country into this situation. Is the want of confidence the main cause? He thought not. The causes lie much deeper and broader. You might as well suppose that a patient, brought by a violent fever to a low state, could suddenly recover by confidence. Sir, something more than confidence is required. The causes now operating are *debt* and the *derangement of the currency*, and mainly the former. The disordered state of the currency is extremely vexatious, and it embarrasses the domestic exchanges. This is about the extent of its influence; for as long as the bills of the banks circulate freely, they answer the general purposes of currency. But debt is the great cause; all overtrading produces exhaustion; the debts abroad and at home must be paid off, or greatly reduced, before business can revive. This requires time, and the avails of the crops of the country. It is the true policy of this Government to connect its legislation as little as possible with the *great interests* of the country and the business concerns of the people. Protection, freedom, and security in their pursuits, are all the Government can afford, and all a wise people will desire.

But it is claimed that it is the duty of Congress to adopt measures to bring about a resumption of specie payments by the banks. How can Congress do this? What power have we over the State banks? Can we, by coercion, compel them to resume payments? This is not claimed; but it is supposed we can effect the object by means of our revenue. But (Mr. N. said) he had no faith in such remedies; we have been trying them for years, and what have they amounted to? We have tried the experiment of a national bank, and that of deposite banks, for regulating the paper currency of the State banks, and he held that *both* experiments had failed. It had not been regulated or improved, but had gone on from bad to worse during the whole of this period.

He thought it unwise and mischievous for Congress to deceive itself and delude the country any longer. Sir, it is high time this delusion was expelled, and the public opinion disabused in relation to the ability of this Government to regulate and control the paper medium supplied by the State banks. Congress never has done this, and never can do; we have not the power; it resides in the States, and they alone can apply a remedy. If there are petitioners here, it is our duty to refer them to the States. The evils of our paper system are too deeply rooted, and its ramifications too extensive, to be reached by any indirect measures of Congress. It is idle, therefore, to keep up this delusion, and now, sir, is the time to dispel it. One branch of the Government, the Executive, has done its duty; at this great crisis in our monetary affairs, he has spoken with the fearlessness and honesty which became the chief magistrate of an enlightened people. The President has done his duty, let Congress do its duty. Let us boldly and honestly tell those who apply here for the correction of the evils of the paper currency, that we have no power to apply a remedy; that they have mistaken the tribunal, and appealed to the wrong forum. Let us refer them to the States; let us tell them that the remedy is in their own hands, and that it depends on themselves whether they will continue to suffer all the evils of a depreciated and vicious paper currency, unsettling the value of property, deranging all the pursuits of business, and corrupting the morals of the community, or apply an adequate remedy. Mr. N. said he had no doubt what would be their final decision on this great question; he concurred fully with the distinguished author of the letter to Sherrod Williams, that an intelligent "people, like those composing the States of this confederacy, will not long stand by and see the currency of their respective States corrupted, the value of their property unsettled, and all their interests deranged, by the imprudence or cupidity of the banking corporations, without finding and enforcing an effectual, and, at the same time, a constitutional remedy." Such remedy they cannot find here.

What, then, do gentlemen expect, can be further done for the relief of the country? Those who so earnestly call for measures of relief, he thought were bound to suggest their plans. He should like to see their relief measures. The *favorite* measure of relief we all understand; but, as they cannot obtain that, what are their other measures? Would they have Congress attempt to regulate the commerce of the people, as well as the currency of the States? Would they have the Government interfere in the private pursuits of the citizens to help them out of their difficulties? If we had the power, such interference would most assuredly only make matters worse, and, he feared, be soon denounced as another "experiment."

To the solemn appeals to the majority for some healing measure to relieve the merchants and others from existing embarrassments, and to help them in their private affairs, he would apply the opinions of two great men and profound thinkers: "Projectors," says Adam Smith, "disturb nature in the course of her operations in human affairs; and it requires no more than to let her alone, and give her fair play in the pursuit of her ends, that she may establish her designs. Little else is requisite to carry a State to the highest degree of opulence, from the lowest barbarism, but peace, easy taxes, and a tolerable administration of justice; all the rest being brought about by the natural course of things." This brief sentence contains the principles which lie at the foundation of the immortal work of that great man.

The other opinion is from Thomas Jefferson, scarcely inferior as a philosopher, and more experienced as a practical statesman. In his first inaugural address, where we find more profound and just political maxims than in any other publication of the same extent in this or any other age or country, he asks the question, "what farther is wanted to complete the general prosperity?" and answers it as follows: "One thing more, a wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned." Here, in a few words, we have the three great requisites of a wise and good government, protection and security, entire freedom in private pursuits, and light taxes, or an economical administration.

# SPEECH OF MR. HAMER, OF OHIO.

*In the House of Representatives, September 25, 1837—*  
On the bill to postpone the deposit of the fourth instalment of the public money with the States, under the act of June 23, 1836

MR. SPEAKER: I have anxiously desired to avoid speaking upon this subject. The extraordinary circumstances under which we have been assembled, seem, to my mind, to require action, rather than debate. Whatever we do, to be effectual, should be done promptly, without unnecessary delay. I have been disinclined, therefore, to protract this discussion. Besides, for some days past, my health has been such as to disqualify me, in a good degree, from engaging in the contest that has been progressing in the House. But the course which the debate has taken, as well as my own position, being a member of the Committee of Ways and Means, seems to require that I should express my opinions upon the important topics introduced by gentlemen, and upon the principal measures which have been presented by our committee to the consideration of the House.

It is true, as has been remarked by several gentlemen, that the contrast which the present condition of the country exhibits to that which we occupied but a few months since, is of an extraordinary character. It is but a short time since our Treasury was full and overflowing. Complaints were heard from all quarters of the country, that we had so much money in the Treasury of the Union, that no one knew what to do with it. The baneful influence of such vast sums of money upon our legislation, leading to profusion and extravagance in the public expenditures, was deprecated by all. Schemes without number were devised to get rid of it, in some manner that would benefit the country. Now, sir, on being assembled here by proclamation of the Chief Magistrate, we are told that not only are the people of the country in a state of great pecuniary embarrassment, but that the Treasury of the United States is in a state of bankruptcy!

Instead of proceeding, at once, to provide remedies for this remarkable state of things, if remedies can be found, within the range of the constitutional powers conferred upon Congress, it would seem, from the remarks that have fallen from gentlemen, that our great object is to ascertain *who* created all this distress and embarrassment. The remedy is forgotten; whilst we occupy ourselves, in ascertaining who is the culprit; to what origin these difficulties are to be traced; or, in other words, which party is to be held responsible for this catastrophe? Instead of attempting to relieve the Government and the people, we stop to talk about "lions" and "tigers;" about "foxes" and "hares;" of "Executive patronage" and "Legislative servility;" about a "Star in the East;" the "dark clouds" that overshadow the fortunes of the administration; and the "sunshine" that is breaking in upon the prospects of the opposition. We stop to talk of Presidential elections that have been, and that are to be; and of candidates that are now, or may hereafter make their appearance in the field. Is this a course dictated by wisdom? Is it required by patriotism? It may seem so to some gentlemen; but, in my judgment, it is wholly incompatible with the duties which devolve upon a patriotic and enlightened statesman.

In private life, we have many rules and maxims that are applicable to public affairs. When I see my friend in distress, it is not the part of friendship to stop and inquire minutely into all the circumstances, to see whether his difficulties may not have been occasioned, in some degree, by his own imprudence or want of foresight. The first thing a true friend does is to reach out his hand. He first relieves the other from his embarrassments and dangers, and inquires into the causes afterwards. The same rule should be applied to our country. If she is really distressed, every true-hearted man will come to her relief. The particular causes which have contributed to produce her troubles are wholly immaterial. When she raises her voice and demands assistance, that son who disobeys the call is unworthy of his country.

But before we advance a single step towards amelioration, the opposition in this House seem determined to convince the country that the policy of the last and present administrations has produced the existing evils of which we have now to complain. This is to be done by furious declamation. Sir, it is very easy to declaim. The cant phrases of "Goths," "Vandals," "Cormorants," "Destructives," "Loco-focos," "third-rate men in power," "slaves to Executive dictation," can be pronounced without either intellect or patriotism. A parrot could be taught to repeat them as well as a demagogue. Crimination and recrimination prove nothing; but they usually indicate either a bad cause, or weakness and malice in those who are its advocates. And it may do very well for those who have not the capacity to discover the real causes of our present difficulties, or the honesty to avow them, to attribute every misfortune which has befallen the country to the policy of the democratic party.

We have been repeatedly told during this debate, that all our embarrassments might be traced to the veto upon the bill rechartering the United States Bank; to the removal of the public deposits from its vaults, and to the Specie circular. It is a sound rule in philosophy, that in attempting to account for a known effect, we must always select a cause that is adequate to produce it. Now, if the opposition newspapers can be believed; and I admit that they are generally very bad authority, but in this instance they are corroborated by the papers on our side—if they speak the truth, then these embarrassments in the commercial community are not confined to the United States. They have overrun England, France, Germany, Switzerland, Turkey, the East Indies, and the empire of China. The whole civilized world has been more or less affected by them. Can any man in his senses believe that the removal of the deposits from the United States Bank has convulsed three quarters of the globe? Is it possible that the mere transfer of a few millions of public money from one bank to another, or to several others, could have produced an entire revolution in the monetary affairs of the world? As well might it be pretended that a pebble thrown into the Potomac had produced a mighty tempest in the Atlantic; which had overwhelmed whole fleets in its progress, and sent thousands of human beings to a watery grave? Is it not strange, that gentlemen belonging to a party who claim to possess almost all the wisdom in the community, should have selected so trifling an event, and held it up to the people as the cause of all the confusion, embarrassment, and distress of the present time?

Sir, the real causes are far different from those to which I have referred. They are to be found in the over-trading, speculations, and extravagance of the times. The causes have not been limited to our country alone. They have pervaded the whole commercial world. It is one of those extraordinary conjunctures in human affairs, produced by a combination of circumstances, and traceable, remotely, to principles inherent in the constitution of man. At particular periods a mania seems to prevail upon some one or upon similar subjects, that sweeps over the whole face of the earth. Human affairs ebb and flow like the tides of the ocean. Hence history is divided into ages and epochs, and we have the ages of conquest and of inventions; the ages of discovery and adventure, and of the revival of letters. We have periods of almost universal war and of almost universal peace. The remote cause may be entirely beyond our reach, but the fact is indisputable.

The present ebb in commercial affairs has been preceded by a remarkable flow of prosperity. An increase of riches only stimulated to greater risks, and whetted the appetite for more exorbitant profits. A restless anxiety and burning desire to amass large fortunes, in a short time and by a few operations, plunged every one into wild and extravagant speculations; and the wave rolled on, accumulating and increasing as it progressed, until in a moment of fancied security, it was suddenly broken upon a rock, and its scattered particles fell back into the bosom of the great deep from whence it had risen. The same scenes are witnessed at least once in every generation; sometimes oftener. But

in such matters, the succeeding generation learns no wisdom from the experience of the past. They always fancy they see a distinction between the cases; they go on, engage in the same schemes of speculation, and in a short time find themselves plunged in the same difficulties and misfortunes.

So far as this country is concerned, we know there were some local causes which have contributed to bring upon us our present disasters. When the bank charter had been vetoed, and the deposits removed; when all saw that the bank must die, there was a general impression abroad in the community, that other bank capital and circulation ought to be provided by the State Governments, to supply the vacuum which would be occasioned by the withdrawal of the United States Bank from business. Accordingly, many of the existing banks had their capital increased; and a great number of new banks were chartered by the State Legislatures. In the years 1834 and 1835 the bank capital was increased from about two hundred millions to two hundred and fifty-one millions of dollars; the amount of bank paper in circulation was increased from ninety-five millions to one hundred and forty millions of dollars; and the loans and discounts during the same period were increased from three hundred and twenty-four millions to four hundred and fifty-seven millions of dollars. This extraordinary increase of capital, circulation, and loans, within so short a period, changed the face of the whole country. The credit system was expanded to such a degree as to affect every man's business and estate. The value of labor and property was raised in proportion to the increase of the circulating medium; and to the facility with which money was obtained. The country wore an appearance of prosperity, such as the nation had seldom, if ever, witnessed at any former period. Most of this prosperity was real, but there was much of it delusive. If men could have been satisfied with a reasonable distension of the credit system, they would have done very well. An impulse was given to business and enterprise, that exerted a most salutary influence upon the country; but they continued to blow, until, at last, the bubble burst, and we have seen the consequences.

Now, sir, who produced this state of things? Who put this ball in motion? Not the President of the United States. He had no control over it whatever. Not the then Vice President, the present Chief Magistrate of the Union. He had no connection with the operations which brought into existence this prodigious amount of bank capital and circulation. Not their friends in either branch of Congress. They had neither lot nor part in the matter. None but the State Governments are responsible for it. They legislated these banks into existence and gave them their powers. They authorized these extravagant issues and loans, by granting charters to so many corporations, whose interest it is to fill the community with their promissory notes, and cause them to circulate as money. The Legislatures and people of the several States are alone responsible for this redundant circulation, this bloated state of the currency; and whenever they are satisfied they have erred, we shall see them retracing their steps; but we have neither the power to control, nor the right to censure or rebuke, them for what they have done.

But which party is responsible in the State Governments for these acts of incorporation? Look at any or all of the States where this increase of capital and circulation has taken place. Does it exist only in those where the democratic party had the majority? Who increased the bank capital in Kentucky, Massachusetts, Tennessee, New York, South Carolina, and Ohio? In the latter State, owing to the controversies upon this question of party responsibility, the journals of the Legislature have been examined; and, from some recent publications, it appears that a majority of the opposition, aided by a small minority of the democratic members, carried almost all the bank bills that have been passed there during the last three or four years. It is natural that it should be so. The opposition in this country make the banks, and control them after they are made. A large majority of the banks belong to them. They are the stockholders, presidents, and directors; and whatever

influence they wield, either political or pecuniary, is against the administration. At the very moment when President Jackson was charged with wielding the sword and the purse of the nation, (although he could not use a dollar of public money, for any purpose, till authorized to do so by a law of Congress,) the banks holding the public funds were, with a few exceptions, entirely under the influence of his political opponents.

The object of all banks is to make money. They loaned to every man who could get an endorser. The merchants and speculators extended their business, and thousands turned merchants and speculators who had formerly been engaged in other pursuits. Immense fortunes were realized by many. The Government lands were purchased at one dollar and twenty-five cents an acre, and were transferred from hand to hand at five, ten, fifty, a hundred, and sometimes a thousand dollars an acre. The country was filled with foreign merchandise. Every city, town, village, and hamlet was crowded with stores, and we could not pass a point where two roads crossed without seeing the productions of European workshops and manufactures displayed in a "new store." Our large importing merchants accumulated wealth with a rapidity almost unknown in commercial history, and if they did not become princes, they at least dwelt in palaces, and rolled in luxury.

In the meantime, the public money in the vaults of the banks was loaned to individuals, to aid in these large operations. It was returned and loaned again; each successive payment for public lands, or duties on goods, being entered to the credit of the Government. The amounts paid in far exceeded the wants of the Treasury, and thus a surplus accumulated, which was really large, but apparently much larger than it actually was. True, the amount purported to be in the banks to the credit of the department; but it was not there. And we then heard a universal cry from the opposition throughout the country, that this Government had thirty or forty millions of the public money locked up in the banks, and would not allow it to circulate; and that was then said to be the cause why money was scarce, and the times hard! There was not one word of truth in this complaint. Almost every dollar of the public money was then in circulation. The banks were using it for their own profit, and for the accommodation of the public, holding themselves bound to pay it whenever called on by the United States.

Under these circumstances the deposite law of June, 1836, was passed. The objects of that law were, to remove the surplus from the banks, and place it in deposite with the States, where it would be safer than in the banks, and where the States could have an opportunity of using it, until the Federal Government should stand in need of it for federal purposes. Safety for the fund itself, and a transfer of profits from the banks to the States, were the only avowed objects, at that time, in the passage of the law. I dare say it was anticipated by some, that the money would never be called for—that it would, in effect, be a distribution; but every man who was then here, knows that if it had been put upon that ground, the law never could have been passed. A large majority of this House would have voted it down. It was then treated as a deposite law exclusively; and we were told that the States were highminded and patriotic; that whenever the necessities of the General Government required this money, it would be promptly and cheerfully refunded. Now, sir, we hear a different doctrine proclaimed. Now gentlemen talk of a contract, of a vested right to this money on the part of the States; of the pledge given by this Government, which must be redeemed; and a willingness is openly avowed by some to borrow money to deposite with the States! In what part of the Federal Constitution is this power to be found? No where. But if we had the power, ought we to exercise it? Shall we borrow money, create a national debt, to be discharged by taxes, levied directly or indirectly upon the people, to enable the States to carry on works of internal improvement, to maintain schools; or to open loan offices, and lend out public funds to their citizens? Sir, we understand all this. It is the

doctrine against which we have been warring for years. The old banner of "national republicanism" is again unfurled. It is the flag of the American system. We have the doctrine of a high protecting tariff, and internal improvements, again presented in a new form. What cannot be done directly is to be done indirectly. The object of the celebrated "land bill" is to be accomplished in this way. The money is to be divided among the States, and appropriated to schools, internal improvements, &c.; and, instead of being repaid by the States, is to be replaced by new taxes upon the people! The position assumed can not be misunderstood; and that being the issue, I trust every man will know where to place himself. Each man will rally to his appropriate standard. Let the planting and agricultural States look to it. For one, sir, I know my course, and shall not hesitate to take it. I go for a cheap and simple Government; one that will protect men in the enjoyment of their rights; leaving each individual free to pursue his own occupation in his own way; and shall oppose all high tariffs, systems of distribution, unjust and unequal burdens, and schemes of national aggrandizement, which are to jeopardise the public happiness and public liberty.

Under the provisions of this law, the Secretary of the Treasury was compelled to remove a portion of the public money to other banks. Some ten or fifteen millions were thus transferred in a few months. This necessarily produced embarrassment. The money was loaned out. It had to be collected, and paid over to the new depositories; and this first movement under the law involved the debtors to the banks, and their debtors, in difficulties, and produced a limited pressure at the points where the collections were made. But it could not be avoided. The law required the Secretary, whenever a bank had more than a given amount of public money in its vaults, (three-fourths of the amount of its capital actually paid in,) to remove the overplus to some other bank. He was obliged to obey the law.

Again: the next step under this law was to collect from the banks nearly forty millions of dollars in the short period of nine months, (from January to October, 1837,) and transfer the amount to the several States. Much of this large sum had to be taken from the great Atlantic cities, and carried to the interior. Six or eight millions were removed from New York last spring, in the course of a few weeks. So large a sum drawn from the active circulating capital of a large city, and removed from the channels of trade, to points remote from commercial transactions, to be expended by the States, or distributed in loans among their people, must necessarily cause a heavy pressure among merchants and men of business, who had invested their funds in commerce. It has been intimated here, that the importation of thirty or forty millions of specie from Europe into this country, within the last two or three years, is the probable cause of all the embarrassments now pervading the world. If thirty millions, in two years withdrawn from the commerce of all Europe, could produce such results, what might we not expect to follow the withdrawal of six or seven millions from a single city, in a few weeks?

This, alone, should have produced serious losses, sacrifices, and distress; but who is to blame for it? Not the administration; not the Secretary; but those who made the law. Without pretending to more sagacity than others, I thought, at the time of its passage, that I foresaw many evils to result from it, and this one among the rest. I voted against it. My skirts are therefore clear. But it received almost the unanimous vote of the opposition in both branches of Congress. It was hailed by them and their presses as a great whig triumph over the Executive, who was belived to be opposed to it. It was characterised as a measure that had been too strong for even General Jackson to resist. Now, sir, those who were its friends ought to be the last men to complain of its practical effects upon the commerce and business of the country.

But, to complete the disasters of the merchants, just at the moment when these large demands were made upon them by the banks, their notes in Europe became due. They had made immense immense importations from abroad, on credit; the

country was overstocked with goods. They had sold much on credit; and the balance remained unsold, in the store-houses. It was impossible to raise the money on the goods, to pay their original cost. The banks could not relieve them, but were actually demanding money to enable them to comply with the requisitions of the Government; and between these two fires the merchants fell. What was true at New York, was true, to some extent, at every other point along the seaboard. At New Orleans, where commercial houses failed for ten and fifteen millions of dollars, they did so because they had accepted the drafts of planters upon their cotton crops, for two or three years in advance. These acceptances were used by those who held them to purchase land and other property, and were really the debts of the drawers; but they helped to swell the amount for which the houses failed, who had made themselves responsible for the payment.

Such a condition of things could not last. It must either become better or worse. The pressure continued, the panic commenced, and the banks suspended specie payment—beginning at New York! The others followed the example, as fast as the mail conveyed intelligence of this movement at the great emporium.

I can not pass this point without some observations upon the circumstances attending this extraordinary suspension. What were the reasons assigned for it? The banks in the East complained that, under the Specie circular, the hard money had all gone to the West; in other words, they suspended because they had not specie to redeem their notes. On the other hand, the banks suspended in the West because they feared their paper would be bought up, brought in upon them, their vaults drained, and the specie taken to the seaboard for exportation to Europe. In plain English, the eastern banks suspended because they had not specie, and the western banks because they had!

As it regards the latter, there was some force in the reason assigned by them; they regarded it as a defensive measure. It was perhaps better for them and for the country, that they should suspend with money in their vaults, than without it. If they had allowed the specie to be taken from them, and had then suspended, their paper would have sunk to twenty-five and fifty per cent. below par; whereas it now answers, as a currency, for all the ordinary purposes of life. The same remark to a considerable extent is true in regard to the eastern banks, so far as the value and circulation of their paper is concerned. But how did the specie circular depress the eastern banks? How has it embarrassed any bank? It either had an effect, or it had not. It was intended to curtail their operations and limit the loans for investment in public lands; to prevent the exchange of the public domain for bank paper. By some it is insisted that it failed to produce this effect; that purchasers procured the paper; drew out the specie from a western bank; purchased the land; and the receiver returned the specie to the bank again in a few days. That in this way, one small bag of gold or silver could be made to purchase all the lands in the West. If this were the operation, then it did not produce a drain of specie from the East, and had no effect whatever upon the banks. But others say that there was a stream flowing westward continually; that the paper of the eastern banks was collected and brought in upon them from day to day, and specie obtained to purchase public lands; and that, in this way, the business of the banks was curtailed. Suppose it to be so. Then the effect of the "order" was to restrain the issues of the banks. Very well: the banks have now so much paper in circulation that they can not redeem it, and are obliged to suspend payment. How much worse would have been their condition, if this "order" had not been issued? Would they not have had a much larger amount in circulation? The answer is obvious. Whilst paper was taken for land, the banks could lend any quantity of that; because they multiplied and manufactured it at pleasure; but when cash was required, they curtailed their discounts. If this was the operation of the "order," it is a subject of regret that it was not issued a year sooner than it was. The truth is, the

administration is in no way, directly or indirectly, censurable for the suspension of specie payments. They have had no agency in it whatever. Their money was left in the banks on deposit, just as individuals deposit theirs, and in the same banks where opposition men were making deposits daily throughout the year. The money was believed to be safe, and will be ultimately paid, every dollar of it. Fifteen millions have already been paid since the suspension. The Government will lose nothing; but if it should, what right has any one in the opposition to complain of the imprudence of the Secretary, when the opposition bankers and merchants kept their money in the same institutions? All that has been done in removing these deposits from place to place, has been done, as I before said, in obedience to a law which was voted for by the opposition almost to a man. The administration has, therefore, no connection with the suspension, and those who would throw this responsibility upon it are doing it a gross and manifest injustice.

The distress, of which we hear so much, is greatly exaggerated. It exists only among particular classes of the community. It has not reached the great mass of the people at all. Among all the strange things published during the summer, I was amused with some of the accounts of distress. God forbid that I should ever smile at the actual distress of any human being. I remember, among other evidences of pressure, it was stated in an eastern paper that two hundred immigrants, who came to this country from England, were obliged to return, because they could not find employment in the United States! Now, at that very moment, in the district which I have the honor to represent, as well as in other parts of the western country, we were paying laborers a dollar and a dollar and a quarter a day in cash, to aid us in taking care of our grain and hay; and the crops were suffering for want of hands to secure them! If any such persons did return to Europe, they must have done so in consequence of the information they received from some panic-maker whom they met upon the wharf where they landed. Why did they not go into the interior, and they would have found a welcome reception from the laborious and thriving population, who live by the proceeds of their own honest industry, without relying upon either banks or speculations for assistance.

Who suffers by the failure of the banks to pay specie? Not the banks. They are collecting their debts, getting in their paper, and strengthening themselves without paying out any money. They would be very willing to make the suspension perpetual, if the people would circulate their promises, and recognise them as money. Banking would then be a profitable business; it could be carried on without any capital at all!

The merchants are not injured by it; at least not seriously. As a body, they owe the banks large sums; and in selling goods and collecting their debts, the paper answers their purposes as well as specie, because it pays their debts to the banks, or to each other, and then to the bank. Besides, the merchants and the bankers are the same persons, to a very great extent. Almost all the banks are in the hands of merchants, who are officers, directors, and stockholders.

The manufacturers are embarrassed in some places, it is true. They have been forced to discharge a portion of their "operatives." But these people, who are now out of employment, are but suffering a calamity which is incident to the business in which they have been engaged. It must always be so in manufacturing districts. How often do these things occur in England? They are still more liable to happen where we attempt to give manufactories an artificial impulse by law, and push them in advance of the wants of the country, and the interests of the agricultural and commercial classes. Let these people come to the West; and, in the fertile valley of the Mississippi, we will furnish them all with employment, and pay them higher wages than they received under their late engagements.

Yet, although a large majority of the people have not suffered any great losses from the suspension of specie payments, it is very certain that the General Government has been impeded in its

operations by this event. It is without money to defray its current expenditures and to discharge its debts. One can not but admire the liberality which has been shown by the opposition towards the administration in this critical posture of its affairs. The Government is daily abused for not paying its debts in specie, and is denounced as a bankrupt!

What are the facts? There are some twelve millions of public money in the State banks, deposited for safe keeping, which those banks are bound by contract to pay over to the Government on demand. In addition to this, there are due from the importing merchants about four or five millions for duties on imported goods, which ought to have been paid into the Treasury by the 1st day of October. The banks, in the first place, shut their doors, and refused to pay a dollar in specie when demanded for the use of the Government, and to enable it to pay its debts. In the second place, the merchants petition for a longer time to pay what they owe, alleging that they cannot procure money even to pay their postage, much less the debts they owe Government; though it seems they, some how or other, pick up a good deal for exportation! In this state of things, the resources of the Government thus cut off, the professed friends of the banks and the merchants turn round and abuse the same Government because it does not pay its debts, and pay them in specie! What would be thought of such a transaction between two individuals? One deposits ten thousand dollars with another for safe keeping. In a short time, he calls for a thousand dollars, to pay off the last and only debt he owes in the world. The depository locks his drawer, and refuses to let him have a cent; and, to add insult to injury, he sneeringly calls him a bankrupt, and insists upon his paying up his debts! A scoundrel who would conduct himself in this manner would be driven from society by the common sentiment of all honest men.

These are the circumstances under which we have been called together; and the question is, *what are we to do?* Have we the constitutional power to do any thing for the country? If so, what is it? and shall we do it?

Here I can not but advert to the extraordinary course pursued by the leading opposition newspapers of the country. After "making the welkin ring" with their cries of public distress for some months past; after demanding, in the most peremptory manner, that the Executive should convene Congress, to give relief to a suffering country, now, when we are convened, they advise their political friends in the two Houses to propose nothing; to offer nothing; to suggest no plan for relief; but to leave the matter entirely with the administration and its friends! Their language is, "let the fourth-rate men, who have involved us in these troubles devise the mode of extricating us!" The country, according to them, is in deep and unparalleled distress; it is groaning under affliction, and upon the verge of despair; yet in this condition, they refuse to lift a finger to save it! This comes too from the "Simon Pures," the "no party" men! This proposition is made by those, who are always for their country, and never for party. These are the men who are constantly whining about corrupt presses, and corrupt politicians. They not only refuse to offer any plan for relief; but have, so far, shown a disposition to oppose every thing offered by the administration and its friends. This, sir, I suppose is modern patriotism!

The same sentiments, in part, have been repeated in this House. We have been distinctly told that the opposition had no plan to offer. Gentlemen seem to have taken their cue from the organs of their party. Thus far, the principle has been acted upon. All our measures are opposed with violence, and nothing is proposed as a substitute. We shall see whether this game will be played out to the end. If so, it makes but little difference what are men's professions. The people will judge them by their acts. If they continue to act upon this principle throughout what they denigrate the present great and perilous crisis of the country, they will furnish the most indubitable evidence that their great object is political power, regardless of the means

by which it is to be attained. They will prove to all impartial observers that, with loud professions of disinterestedness upon their lips, they are in reality fighting for the "spoils," and that all their measures are so shaped and directed as to turn the dominant party out of power, and clove themselves to the vacancies thus created. Sir, such a party as this deserves no support from the honest and intelligent people of the United States. Men who, when their country calls for relief, turn a deaf ear to her complaints, and practically "mock at her calamity," are destitute of that patriotism which should distinguish every true-hearted American. And if I were disposed to recriminate, to indulge in the use of such epithets as are daily thrown out against the democratic party, I would pronounce such a party to be a mere corps of political mercenaries and miserable demagogues, seeking their own advancement, without reference to the public welfare; in a word, to be the most unprincipled, corrupt, and rotten-hearted faction that has ever appeared in this country. But I will not indulge in such language. It belongs to the opposition vocabulary, and I leave it with them.

What do we propose as measures suited to the present crisis? To understand the policy of the friends of the administration, we must view the individual measures as composing a whole; as separate parts of one scheme.

First: We have a bill on our table, proposing to allow time to the deposit banks to pay up the balance they owe the Government by instalments; so as to relieve them from the necessity of distressing their debtors by rapid collections, involving the sacrifice of individual property.

Secondly: We have a bill to allow longer time to the importing merchants to pay the duties they owe the Government, upon their giving new bonds, with satisfactory security, and paying interest on the amount they owe. This saves them from a heavy pressure; enables them to give time to the merchants of the interior, who owe them, and allow the merchants of the interior to indulge the people who have purchased their goods on credit.

Thirdly: A bill to authorize the Secretary of the Treasury to issue Treasury notes, to an amount not exceeding ten millions, to aid the Government in carrying on its operations until those who owe us are able to pay. These notes will be receivable in payment for lands and all public dues; will circulate through the community as a substitute for money; and will relieve the necessities of the country, by adding that much to the description of circulating medium which is needed by the merchants and banks to pay the Government what they owe. They complain that specie is not to be had; these notes will answer the same purpose in their dealings with the Government.

Fourthly: As the banks have cut loose from the Government by their own act, we propose to leave them in that condition, and hereafter to take care of our money ourselves without their assistance; and we have a bill for that purpose, familiarly called the Sub-Treasury bill.

These are our prominent, leading measures. We say they will afford relief to both Government and people, and that they afford all the relief which our constitutional authority, or the exigencies of the crisis, requires at our hands. We relieve the banks and merchants directly, immediately; and indirectly we relieve other classes of the community. The influence of this scheme will reach nearly every man in the country, in one way or another. It will especially benefit the planters and farmers, by enabling the banks to furnish facilities to aid in taking the fall crops to market. By aiding the traders, we keep up the prices of the great staples where they are raised; and by giving time to the banks, we enable them to furnish purchasers in the market with means to buy the productions of our soil.

So far as regards the banks and the merchants, I have nothing to say in their justification. They have not done well; but at the same time it is to be remembered, that their misfortunes have been in some degree brought upon them by circumstances over which they had no control. We must deal gently with them; especially when their inte-

rest is so interwoven with the business and interests of other portions of the people.

In relation to the merchants, I will say, that I make no war upon them. There are many of them who are highly valuable citizens, and men whom I esteem. I listened this morning to a splendid eulogy pronounced upon them by a distinguished gentleman from Pennsylvania, (Mr. Sergeant.) There was much truth in what he said; but I am far from agreeing with him in all the sentiments which he advanced. I know their influence in society, from the great importer, through the wholesale dealer, down to the little country retailer, who talks about banks, currency, and exchange, to his neighbors, and exerts his *ledger influence* over those who buy of him, at all our important elections. I am aware that they, in effect, regulate our currency now, and have done so in all time past. When a bank note is presented to an individual, the first question he asks, if he does not know it to be good, is, "do they take this in the stores?" If it is taken by the merchants in the little town near him, he receives it; if not, he rejects it.

It may be conceded that punctuality and fidelity are traits in the character of the merchant of all countries. These are the life of trade, without which it could not exist. It is their *interest* to be faithful and punctual in their engagements. And I have read and seen enough to satisfy me, that, as a class, *interest* is the ruling principle with them. Many honorable exceptions there undoubtedly are; but such has been their general character, from the days when they bought Joseph and sold him into Egypt, down to the period when they furnished the enemy with provisions, and smuggled goods into the country during the last war.

Look at history. What were the Republics of Carthage, of Venice, of Genoa? Governments of merchants. When did they ever observe any rule of conduct but their own interest? What is England but a nation of merchants; and the whole island but a great banking establishment? Where has she ever faltered in the pursuit of an object, if her interest required the pursuit? Nay, sir, in our own country, young as it is, experience has taught us that the merchants could drive us into a war in defence of commerce, of "free trade and sailors' rights," and then throw every impediment in the way of our Government in the successful prosecution of that war; evincing that they were the most mercenary, if not the least patriotic, of our citizens. I know it is an easy matter to deny all this; and so it is to deny the truth of any fact recorded in history, if a gentleman choose to take that responsibility.

However much, therefore, I may respect individuals belonging to this profession, as a class, those who have deluged the country with foreign merchandise; involved us in a foreign debt of more than thirty millions, and produced a necessity for shipping one-half our specie from the country to pay this debt, deserve no peculiar favor from the Government.

Still we must do right, whether they do or not. We propose to relieve them in the present crisis, by the measure to which I have referred. Are gentlemen not satisfied with this? Do the merchants ask any thing else? What would they have? Shall we pay their debts? Does any man advocate this doctrine? We have no power by the Constitution to do so. Besides, it would be gross injustice, if we had the power. Where would we get the money? Out of the Treasury, of course. Shall we take the money raised from one set of our citizens to pay the debts of another set? Who will advocate such a proposition? No one will have the hardihood to do so. And if we do not resort to such a measure, then there is no other relief to be given but that which we now offer.

I know that some gentlemen, during the discussion, talked of the relief given by the Government of France, in the time of the great Mississippi scheme, which embarrassed the whole nation; and others have told us of the measures adopted by the Parliament of England, at the time of the South Sea bubble, which deranged the monetary affairs of an entire kingdom. Are these examples for our imitation? Shall we assume powers, never delegated to us by the Constitution, that we may imi-

tate a despotic Government, such as France had at that day; or to follow the footsteps of the British Parliament, a body, who, in the language of English law writers, is claimed to be "omnipotent?" This would be indeed an act of usurpation, for which not only the American people, but "the very stones might cry out against us!"

But some gentlemen have been candid enough to admit, that a NATIONAL BANK is what they want. I commend them for their frankness. That is what the great body of the opposition *really* want, if they would come out manfully and avow their sentiments. It seems we ought to have a great "REGULATOR OF THE CURRENCY." I had intended to make some observations upon this subject, particularly in reference to the Pennsylvania Bank of the United States, but the honorable gentleman from Pennsylvania, (Mr. Potter,) in a speech to-day, which for ability and force of argument has been seldom equalled, and never surpassed, in this House, portrayed this subject so fully, that I will not dwell upon it. He has placed the whole matter in a much clearer light than I could hope to do.

It is important to remark, however, that the old Bank of the United States never did regulate the currency; it could not prevent over issues on the part of other banks; and it constantly indulged in expansions and contractions of its own, which left the prices of property, in all parts of the country, uncertain and unstable. However currently its own paper might pass, it was not always convertible into gold and silver; without trouble and expense to the holder, because its bills were not always redeemable at the offices where they were issued, and in the neighborhoods where they circulated. And the value of its paper, its universal credit of which we hear so much, was owing chiefly to the endorsement of the Government, which received it in payment of all public dues. The purchasers of land sought after it to buy the public domain. The importing merchants collected it to pay their duties; and, of course, the wholesale and retail merchants took it, because the importers preferred it. Thus the impress of the Government caused it to pass in all parts of the Union; but that same impress would have caused the paper of any other bank to pass in the same manner.

If the old bank did produce a uniform currency; did act as a regulator restraining the other banks within due bounds, why has not the present Bank of Pennsylvania done the same thing? When the charter had been obtained from the State, and Mr. Biddle had called the stockholders together, to decide whether they would accept the new charter, he informed them that the new one was better for them, and for the public, than the old one; that the connection between the bank and the Government had never been of any advantage to the bank; and that, for all the purposes of currency, commerce, &c. the present bank would be better and stronger than the former. Now, was this true? If so, then, according to the arguments of gentlemen, the bank could have prevented all the present difficulties. If it could have prevented them and would not, it is unpatriotic, and ought not to be trusted. If it could not prevent them, then it does not possess the power ascribed to it; and if this bank can not regulate the others, then the old one could not; for Mr. Biddle declared that this one was more powerful for all good purposes than the former. Who knows better than he the respective powers of the two corporations? And yet we see that this boasted giant was one of the first banks in the country to lay down its arms, to close its doors, and thereby to admit its inability to redeem its paper. For, I care not who says to the contrary, no man will convince me that the bank was able to go on. No, sir: it stopped from sheer necessity. If it had possessed the ability to redeem its paper, who does not see that it would have gone on paying specie after the other banks had stopped, and thus compelled the Secretary of the Treasury, under the deposit law of 1836, to place the public money in its vaults—thus achieving a complete victory over the Government and a large majority of the American people, who have rejected it as a fiscal agent. If Mr. Biddle had the means to go on at the time he stopped payment, he committed the greatest *financial and political* blunder that has occurred

during the last twenty years; and his reputation as a financier ought to fall at least fifty per cent. in the estimation of all his political friends.

One word in regard to exchanges, which gentlemen think the Government ought to regulate. What are exchanges? I do not profess to be a financier, but I endeavor to understand these subjects for myself, and to take what I consider a plain, common sense view of them. Exchanges, then, are the means whereby capital or money is transported from one part of the country to another. I have a thousand or ten thousand dollars at Cincinnati, and I want to use it at Philadelphia or New York. By means of a bill of exchange, or bank notes, I am enabled to transport it free of cost. I take my specie to the bank and deposit it there, and, in lieu of it, they give me a bill of exchange on some bank or individual in Philadelphia, who pays me the money when I get there; or they furnish me United States Bank notes, which I can put in my pocket-book and carry without trouble or expense. This is a convenient operation for me, but the question is this: *is the Government bound to furnish this accommodation to individuals?*

What is money? Is it any thing but property? It is considered a medium of trade and commerce: so it is; but still *it is one of the forms of property*. What is the difference between a thousand dollars in money, and a thousand dollars in pork or flour, except that one is more easy of transportation than the other, and that the owner of the pork or flour is obliged to make sale of his property to turn it into cash. So, if the owner of the money wants pork, he is obliged to sell his money for the purpose of obtaining it. It is property, then. Now, if the Government is bound to furnish those who have money with the means of transporting it, free of expense, from one part of the Union to another, are they not equally bound to furnish the means of transporting every other species of property in like manner? Is equality one of the fundamental principles of the Government? Shall any one set of men have laws made for their peculiar benefit, which are to reach no other class? Is this just? If it is not, then the Government should furnish the means of taking our flour, pork, cotton, tobacco, horses, mules, and cattle to market. One man has ten thousand dollars in cash at Cincinnati; another has ten thousand dollars worth of flour; and a third ten thousand dollars worth of mules, at the same place. If the Government is bound to make a national bank, to transport the money to Philadelphia, it is equally bound to furnish a national steamboat to take the flour to New Orleans, and national mule drivers to take the mules to South Carolina. If any gentleman can point out the difference, and show why a distinction is to be made among the cases, and especially, why the *peculiar privilege* should be given to the individual who has the money—a class who are generally better able to take care of themselves than any other—I should really be pleased to hear the argument.

But we have one consolation in all this controversy. If a national bank is a sovereign remedy for all the evils—pecuniary, political, and physical, with which we can be afflicted; if it is a panacea for derangements of the currency; for party conflicts, endangering the stability of the Union; for cholera, and for short crops of wheat, corn, and cotton—one thing is quite certain: we can adopt this remedy whenever we think proper. This is a great privilege we enjoy. I admit, however, that that there is no prospect of getting a bank during Mr. Van Buren's administration, and so far as I am concerned, individually, I am willing to try a few more "experiments," as they are called, before I resort to it. When we have gone the "rounds," and find that nothing else will save us from ruin, it will be time enough then to begin to think of making a national bank.

But I return to the measures now before us. By issuing Treasury notes we use our credit to enable us to carry on the operations of the Government. We cannot pay our debts. Why? Because those who owe us can not pay. We must either prosecute them and compel them to sue their debtors, or we must give time, and enable them to indulge those who owe them. We prefer the latter

course; and when an individual who has a claim on the Government for provisions furnished to the army, or for any other service, calls for his money, we tell him we cannot pay for want of funds, but we give him our note, payable at the end of a year. He is not obliged to take this. He has a right to demand gold or silver; but he will take the note in ninety-nine cases out of a hundred; for by calling upon any bank or merchant that owes the Government, he can get money or currency for his note that will answer his purpose where he resides. For example: the deposit banks in Cincinnati would buy his note and give him their paper, which, in common business, would answer him as well as specie. The bank would send in the note to the Treasury, and get credit for that amount in their dealings with the Government. We do in this case what an honest man does in his own affairs. We settle; and not having the money, we give our note for the amount due; and our creditor either holds the note till it becomes due, or he trades it off for property or cash, as may best suit his own convenience or interest.

By the time our notes are due, we shall be able to lift them, with the money paid in by the banks and the merchants, and from the current receipts into the Treasury from duties and public lands; we will have relieved both Government and people by thus using our credit; the debts due to us will be paid without distressing any one; and our paper will be redeemed. The measure is, therefore, a salutary one. It has been tried before; especially during the last war. It should not be resorted to upon light or trivial occasions; but when the public interests require it, no one should hesitate to lend his support to a course of policy which is both safe and beneficial.

The Sub-Treasury system, as it is called, seems to have excited more alarm in certain quarters, than any other proposition before us. It is said we are about to cut loose from the banks; to turn them adrift to take care of themselves, and to be driven about by wind and tide till they are wrecked upon some dangerous coast, or lost amidst the conflict of elements which they will be forced to encounter. Is this true? Are we about to cut loose from banks? Why, sir, they have cut loose from us. They have divorced themselves; or rather they have eloped from our bed and board, without just cause or provocation; and have carried off all the money and jewellery they could find about the house, at the time of their elopement. All that we say is, that, if they attempt to return, we shall shut the doors upon them; and, in the meantime, give notice that we will pay no debts of their contracting after this date! If any man trusts them, it will be his affair, and not ours. This is our position, and it is nothing more nor less. They have left us, and not we them; and we have no disposition to renew the connection. Hereafter, we intend to take care of our money ourselves. We claim the same right that every man in the country exercises—the right to manage our own funds, without employing banks to do it for us. No one can complain of this. The banks have no more right to the money of the Government than they have to that of individuals. The law declared that, if they suspended specie payments, they should no longer be public depositories. They did suspend, and the Secretary obeyed the law. That is the whole story.

The administration has been accused of hostility towards the State banks. How has it been shown? Where is it manifested? In the Message? In the report of the Secretary? I defy any man to find a word in either of those documents evincing hostility to the State institutions. On the contrary, both these documents treat the banks with great mildness. Is it in the measures emanating from our committee? We furnish proof to the contrary. Our bill allows time for settlement with all the deposit banks; and if the time named is not long enough, let the House give further indulgence; for one, I will cheerfully vote for it. This charge is utterly without foundation. The administration leaves State institutions where they have always been—under the care of the people and Governments of the several States in which they are situated. It

has no control over them, and desires none. It takes no stand for them or against them, simply because it is a subject with which the General Government has nothing to do. There are objects enough within the pale of its constitutional powers to employ all its energies, without going beyond them to embroil itself in controversies with the State authorities.

We have heard much recently about "*two currencies—one for the Government, and the other for the people.*" So far as such language has been used here, I will not call it *miserable newspaper slang*; though in another sense it is so; for we see it daily in the party newspapers of the country. I consider it a most pitiful party subterfuge, to alarm the public mind, and create prejudices among the people, in regard to the system of collecting and keeping the public money now proposed, before time has been given to examine its principles and details. Two currencies! Why, the Administration does not propose to create *one* currency, much less *two*. It makes no currency; the Constitution has done that. We propose to adhere to the Constitution. Does any one object to that? The revenues are to be collected in money; or, for a time, partly in money, and partly in paper equivalent to it; and, ultimately, if you please, in *hard money*. If any man is opposed to this, let him quarrel with the Constitution. Does the Government claim more than private citizens? Has not every man a right to specie in payment of his debts? Is any one bound to take paper? If a citizen has land to sell, is he bound to take any thing but specie for it, if he choose to ask that and to refuse paper? Have not the whole people the right to do what each one can do? What do we mean by the Government? You mean the persons who happen to be in office at this time—those who now administer the Government. They are but the temporary agents of the people; and they will collect revenue in whatever the people direct. It is no affair of the individual agents. It is the people's business, and is for the benefit of the whole country. Gentlemen talk about the Government as they would in England, where the Government of King and nobles may have a distinct and separate interest from that of the people. Here the interests are the same. The people decide, through Congress, in what their federal revenue shall be received; they decide, through the State Legislatures, in what their State revenue shall be taken; and they then decide, each man for himself, in what his own revenue shall be collected; and what kind of money, or bank paper, he will receive from those who owe him. Away with all such trash then, about "*one currency for the Government, and another for the people.*" It is unworthy to be either propagated, or listened to, by any man of enlightened understanding.

Those who assume to be the especial friends of the State banks complain that the General Government has lost confidence in them, and has changed its ground in regard to the system of depositories. The case is a plain one. The banks have failed to perform their engagements; they have violated their contracts with the Government; they have got our money, and cannot pay it out to meet the wants of the public. The system has, *practically*, failed to answer the purposes for which it was adopted. Now, although the banks may have been honest, and may have been driven to this condition of things without any agency of their own; although they may make it appear that the system has not had a fair trial, and that, under a new organization, they could do better than heretofore, still the administration is under no obligation to try them again. It does not choose to do so, and neither they nor their friends have any right to complain. What can we do for them? Surely no one will propose to make them our depositories now, whilst they refuse to pay their notes in specie; nor would any man ask us to take their notes in payment of public dues. That would be too monstrous to find advocates any where. What then is proposed? Shall we say that the banks which resume in ninety days shall receive the deposits; and their paper shall be taken in payment of public dues? Such an act would be a direct transfer of the public money to Nicholas Biddle's bank. Why, sir, no banks can resume specie payments, who have any

paper in circulation, until the drain of specie to Europe is stopped. When is that to be? Specie is now worth in England only three per cent interest. On British securities, plenty of it can be had at that rate. No one will deny this. Through the agency of his British stockholders, Mr. Biddle can get what money he wants. Suppose he were to negotiate a loan of ten or twenty millions in London; enabling him to draw bills to that amount; bring down the exchange to *par*, and thereby stop the exportation of specie at once. Every body knows that he can do this if he will. He could then resume specie payment at once; and, holding the exchange of the country in his own hands, he could control the other banks who would, or would not, resume at the same time, as he might direct. Without his approbation, they would have to wait till the foreign debt was arranged *through his means*. Then the drain would be stopped, and they could resume in spite of him. But, in the interval, under our law, he would resume specie payments, and demand the public deposits. Who could prevent his getting them? He would inevitably obtain them under such a provision; and those who may advocate this policy, whatever may be their purposes, are, in reality, playing into the hands of the United States Bank. Let them beware of this, lest the seed they now sow should hereafter produce a harvest of public calamity and individual mortification.

I shall not pause to discuss the merits of the Sub-Treasury system. It will be time enough to do that when the bill comes before the House for its action. But I must say, in passing, that it is amusing to see the subterfuges to which the opposition are driven, to keep up a clamor. For years past they have been abusing the Executive branch of the Government for having seized the sword and the purse; for having usurped all power, and trampled upon the Constitution; and especially, for having added an enormous amount of power and influence to what it formerly possessed, by its control over nearly one hundred deposit banks. All the presidents, cashiers, stockholders, and borrowers were supposed to be under Executive control, forming a large army, to enter the fields with millions of money, at every election! Now, what do we hear? The banks have separated from the Government. Whatever influence the Executive ever possessed over them is gone. It is proposed by the President not to employ any such agencies in future; but to let the money remain in the hands of the collecting officers, who are to pay it out as it is wanted. It is not proposed, by the bill before us, to increase the number of officers at all. There may be a few more clerks wanted; but the increase is too trifling to be named. Here is the Executive, endeavoring to keep clear of his old "*army of dependants,*" and to our utter astonishment, *the opposition are trying to force them upon him!* They are abusing him for trying to get rid of this very patronage which they have so much deprecated in past time. What consistency there is in the public course of these gentlemen! Let the President do what he will, they oppose him. If he has patronage, they abuse him for it; if he proposes to abandon it, they abuse him for that. If he remains silent, they quarrel with him because he does not speak out and let the country know what he thinks. If he gives his views upon a question, and suggests a course without expressly advising it, then they cry out "*non-committal!*" and if he comes out boldly, and recommends a measure as, in his opinion, fraught with public good, they denounce him as a tyrant, attempting to dictate to the "*House of Commons,*" the representatives of a free people, what they shall do in a great public emergency! This, I suppose, is what is called, now-a-days, being "*for our country, and against a party.*"

We have a most extraordinary scene before us in regard to this bill. It is the tendency of all Executive departments to accumulate power and patronage. Here is the Executive of our Government, voluntarily proposing to relinquish patronage, and those who are in opposition striving to retain it in his possession, to force it upon him. It is perhaps the first instance in the history of free Governments where such a proposition has been made, and has met with opposition in such a quarter.

What we shall see next, no man can even conjecture.

By this scheme we shall be able, at all times, in peace and in war, to command our own funds. No revulsion in trade; no expansion or contraction of paper currency; no movements of speculators; will ever embarrass the operations of the Government. The expense is but trifling, probably not fifty thousand dollars a year. The losses from misconduct of public officers will be no greater than at present, for the money now all passes through the hands of these same men. Are not our officers as honest as the officers of banks? Cannot the Government provide vaults that will be as strong and secure as the vaults of banks? In a word, we have the alternatives presented to us, either to adopt this system, or resort to a national bank; for to that point we must come, if we cannot devise a mode of collecting, keeping, and transferring public money without bank agency.

By receiving our revenues in specie, and paying it out among the people, we keep it in circulation. We thus create a demand for it in the country, and prevent its going abroad. We shall infuse a larger specie basis into the circulating medium, and render the State banks more solid and permanent than they are at present. This policy will prevent sudden and great fluctuations, and will, in fact, aid the banks, by increasing the public confidence in their ability to meet their engagements.

Pass these bills, and all the banks which have been prudently managed can resume specie payments in a short time. There are but two obstacles now which prevent them from doing so. The first is, the debt due to the Government; and the other, the debt due abroad. Our bill for settling with the banks, and allowing them time, removes the first difficulty. They can then open their doors without the fear of having a Government draft presented, which would drain all the specie from their vaults, and compel them to suspend a second time. As to the other obstacle, much of the foreign debt has been already paid; and by giving time to the merchants to pay the debt which they owe us, we enable them to discharge and arrange the remainder. The crops of this year—the cotton and tobacco—will pay a large portion of the foreign debt. Time will be obtained for some part of it, and insolvencies will discharge the remainder. The drain of hard money will, in a short time, be suspended; the banks can resume; business will revive; and the industry, frugality, and enterprise of the American character will soon restore the country to that flourishing condition in which we saw it one year ago.

The bill, now before us, to postpone the fourth instalment of the public deposits with the States, involves three questions. Do we want the money? Have we a right to retain it? Is it expedient to do so? Settle these interrogatories, and we shall know how to vote upon the proposition to withhold the money.

As to the first, I do not see how there can be a doubt. The President declares in his message that there is a deficit in the Treasury, and that this money is needed for defraying the public expenditures. The Secretary of the Treasury has told us the same thing in his report, and informed us that he has not the means of paying over the money to the States, because there are no funds available for that purpose. Here are the high functionaries of the Executive Department officially stating to Congress, to the American people, and to the world, in distinct and positive terms, that we want this money for the immediate use of the General Government; that there is a deficit in the Treasury; and yet gentlemen here pretend to doubt about it. In opposition to these official statements, we have the guesses and conjectures of members upon this floor, who ask us to vote against the bill, because they say they cannot understand the Secretary's report. Sir, I will not say that there are none so blind as those who will not see; but I will say, that without pretending to any more sagacity or financial skill than other gentlemen, I have not found the slightest difficulty in understanding the report. One would suppose, from remarks here, that Mr. Woodbury deserves to have been consigned to a "dunce block" from his childhood to the present hour; that he is not

qualified to play clerk in a counting-house, much less to take charge of the finances of a great nation. Let us look at his report for a moment, and see whether there is really any thing so unintelligible about it.

The question of a deficit has nothing to do with the thirty-seven millions intended to have been deposited with the States. Let us leave that out of the calculation entirely. Its introduction only serves to confuse the mind.

There was in the Treasury on the first of January, 1837	-	-	\$6,670,137
The money received during the first six months of the year is	-	-	13,187,182
The revenue for the last half of the year will be	-	-	7,000,000

Making, in all	-	-	\$26,857,319
----------------	---	---	--------------

These are our means for defraying the expenditures of the year:

The expenditures for the first half of the year 1837, are	-	-	\$16,733,844
For the last half of the year will be	-	-	16,000,000

Total expenditures for 1837	-	-	32,733,884
Deduct the amount of our funds	-	-	26,857,319

Balance against the Treasury	-	-	\$5,876,565
------------------------------	---	---	-------------

Here is a clear balance of nearly six millions, which must be provided for in some way. There is no mistake about it. There can be none. He that runs may read; and with all the mystification of gentlemen, the figures will tell the truth, and must invariably produce the same result.

The law regulating the Mint authorizes the Secretary of the Treasury to employ a million of dollars in that establishment, to purchase bullion, and keep the whole in active operation. And the deposit law contemplated that there should always be a surplus in the Treasury of some five millions, to meet contingencies, which are unforeseen, and not specially provided for.

Take the above deficit	-	-	\$5,786,565
Add for the Mint	-	-	1,000,000
Say for contingent fund only	-	-	3,000,000

\$9,876,565

And we have a total sum of nearly ten millions, to be provided for this year.

This calculation is so plain and simple, that a child can comprehend it; and yet grave and intelligent statesmen are daily complaining that the report of the Secretary on the state of the finances is so involved and obscure that they cannot understand any thing about our pecuniary condition!

How is it proposed to get rid of this deficiency? The gentleman from Georgia (Mr. Dawson) proposed the other day to supply it, by applying the unexpended balances of appropriations to that object! Was ever such an idea heard of before? The unexpended balances are sums ordered by law to be paid out of the Treasury for various purposes, but which have not yet been paid. They are debts which the Government owes, but which are not yet due. They amount at present to twenty-four millions of dollars. The gentleman made the strange mistake of supposing that these balances were money in the Treasury, when they are claims upon the Treasury. His proposition amounts to this: A owes thirty-two dollars, and has but twenty-six dollars to pay it with. Besides this, his note is out for twenty-four dollars, but it will not be due till next year. He complains to B that there is a deficiency in his treasury of six dollars, having but twenty-six dollars to pay thirty-two with. His friend gravely advises him to take a part of that twenty-four dollars, which is not due till next year, and pay off the six dollars that are now due! In other words, the gentleman supposes that the amount which a man owes indicates the amount of money he has in possession, especially if the debt is not due till next year!

What is the next financial scheme for supplying this deficit? The gentleman from Tennessee, (Mr. Bell,) after a number of calculations for the relief of the Treasury, informed us that there were five millions of money in the hands of disbursing officers which had been kept out of view by the Secre-

tary, and seemed to have been lost sight of by the House. He felicitated himself upon the discovery, and defied any one to overthrow his position. Let us see how this matter is.

The expenditures of the year are thirty-two millions, and the means twenty-six. I speak in round numbers, without noticing fractions. This leaves a deficit of six millions. But where are these twenty-six millions? Part of that sum has been collected, and part has not; it is yet to come into the Treasury during the year. Of that which has been collected, part of it is paid out; part of it has been given to disbursing officers, who are ordered to pay it over to the persons who are entitled to it; and the balance remains in the banks, the mint, and in the hands of receivers of land offices and collectors of customs. When the Secretary comes to inform Congress where the money is, he states that part of it is in the hands of these officers. But does that give him any more money than the twenty-six millions? It is preposterous to talk about it. Let me illustrate the case. A owes two hundred dollars, due in small sums, to various individuals; he has but one hundred dollars in the world, and applies to his friend B to loan him another hundred to discharge the claims against him. B inquires of him where his one hundred dollars are. He answers: fifty dollars in bank, forty dollars in his drawer, and ten dollars in the hand of a friend, who has agreed to call, the first time he goes to town, and pay a balance of that amount which he owes in a store; and he is not certain whether his friend has yet been to town and paid it or not. Now what should we think of B, if he were to direct A to go to his friend, and get that ten dollars from him, and tell him he would then only want to borrow ninety dollars, instead of a hundred!!! Could A believe him to be serious? And yet that is the exact proposition of the gentleman from Tennessee, word for word, and letter for letter. Was ever such a plan invented before by a financier to relieve an embarrassed Treasury? Why, A might as well go and get the forty dollars in his drawer also, and then he would have but fifty dollars to borrow; and if he would then call at the bank, and get his fifty dollars in deposit, he would not want to borrow any thing, and his one hundred dollars would thus be made to discharge debts, to the amount of two hundred. Sir, this system is not quite equal to the "philosopher's stone" which transmutes every thing it touches into gold; but except that, it is superior to any thing within my knowledge for multiplying individual and national wealth.

Several gentlemen have advised us to repeal the appropriations of last year, and thus get clear of our embarrassments. Why do they not bring forward a bill for that purpose? What appropriations will they repeal? What public works are to be suspended? What roads, harbors, rivers, custom-houses, light-houses, are to be curtailed of the sums set apart for their benefit? Give us the items, and let us see who will vote for them. Are the sums allowed for the support of civil officers of the Government, for the army, the navy, the Florida war, or the removal of Indians, to be curtailed? Shall we delay the payments under Indian treaties, and involve ourselves in more wars with them? Are the public works to be suspended, where contracts are already made and hands employed upon them? Shall we violate our contracts, and turn a large number of individuals out of employment? Would this be relieving the people? Are the public works to be damaged, by remaining in an unfinished state, and large expenses incurred in collecting hands together at some future period—an expense which we intended to avoid, by making large appropriations, so that the hands need not be scattered, but could be kept together, and go on till the works were finished? Finally, as fifteen millions of the appropriations have been postponed until next year,—so we are informed by the Secretary,—are these the same appropriations which gentlemen propose to postpone again, or are they other and different ones? Let us have light on this subject. Conjectures and generalities will not justify us in leaving the Treasury empty, and the public service unprovided for, in direct opposition to the statements of the Head of the Department.

Have we a right to withhold this money? Upon this point it does seem to me that gentlemen have run wild. With all due respect for them, I must say that their arguments remind me of scenes I have witnessed, when a very young man, before a magistrate in the country, where two young lawyers were engaged in *pettifogging* a case about five dollars. They read Blackstone and other elementary works, and gravely informs us that "a contract is an agreement to do or not to do a particular thing, upon sufficient consideration." We are then told that the General and State Governments made a solemn contract about these deposits, which compels us to pay them over, whether we have the money or not! Gentlemen talk of this Government as though it were something foreign from, and hostile to, the people and to the State Governments. What delusion! Who made this Government? The people of the several States, acting as separate communities, through their constituted agents. Whose Government is it? The people's. Have they any interest, other than the interest of the Government? Certainly not. Whose money is this? You say, the people's. Very well. If the General Government and the State Governments both belong to the people, and this money also belongs to them, it is merely a question to which of the Governments shall it be given? The State Governments say they want it: *so do we*. We have collected it under our laws, and intended to place it with the States for safe keeping until we needed it; but it turns out that we want it before it has been passed over to them. Is the General Government to stop, in order that money may be placed with the States for safe keeping? The proposition is an absurdity upon its face. Are we to pay over this money for the pleasure of immediately calling it back? What statesman would advocate such a doctrine?

When the law of June, 1836, passed, this money was treated as a deposit. Every one knows that, as a *distribution law*, it could never have passed through either House of Congress; and if it had, it would have been vetoed by the President. It is treated as a deposit upon the face of the law. The Secretary is directed, by *consent of the States*, to place the money with them. The word *consent* is used as to the banks also, and for the obvious reason, that we could not compel either the States or the State banks to take our money; they must *consent* to it. Neither the terms employed, nor the proceedings enjoined, imply a contract, except that the States and banks shall pay the money to this Government when required to do so. Suppose Congress had repealed that law before January, 1837, would the States have been entitled to any thing under it? Have they a *vested right* to the money? Suppose a war had broken out in the interval, between June, 1836, and January, 1837, rendering all the funds we had necessary for the purposes of this Government—would any one contend that we were still bound to go on, and deposit the money? Congress did virtually repeal the law in part, by appropriating some six or seven millions last session over and above all the *other money* which they had in the Treasury, and of course thus far encroaching upon this fund. When the law of June, 1836, passed, we were told that the States were patriotic and high minded, and would pay this money promptly, whenever it should be needed; and that, until that period, they could use it, which was much better than to allow the banks to use it for their private advantage. It was supposed it would be much safer too in the State Treasuries than in the banks. What do we see and hear now? Now it is a *contract*; and although three instalments have been paid, and the Treasury is empty, gentlemen here are willing to see the wheels of Government stop, that they may secure the balance which their States *expected* to receive! Who would have anticipated this? We have given them our all, and they now want us to violate the Constitution, and *borrow money* to place on deposit with the States! If we can do so for that purpose, we can borrow to loan to banks and individuals, or for any other purpose under heaven. We placed this money with the States, supposing it would be safer than in the banks. The banks can not now pay us what

they have got, though they will finally discharge every dollar; but the amount with the States will indeed be safer than in banks; for, from the spirit displayed in Congress, I do not believe we shall ever get the consent of their representatives to pay back one dollar of what they have received. Gentlemen talk of *contracts*, and of "public faith!" That will be keeping public faith, and fulfilling contracts, with a vengeance!

Is it expedient to withhold this money? I think so. We are about to issue ten or twelve millions of Treasury notes. They will be payable one year after date. We should have a fund provided for their redemption as they fall due. This money in the banks is that fund. In connection with what will be paid in on the merchants' bonds, we shall have a sum equal to the notes issued. The value of such paper as Treasury notes depends somewhat upon the ability to make prompt payment, as well as upon the ultimate responsibility of the Government. The receivability of the notes in payment of public dues will create a demand for them; and the provision for their prompt payment will add to their value in the money market.

Again: we must either retain these funds, or borrow money to carry on the Government. We must issue stock, and create a national debt, or resort to these funds. Gentlemen say we are borrowing money when we issue notes. Well, be it so. Then, when I settle with my neighbor, and give him my due bill for the balance I owe him, because I have not the money, *I have borrowed that sum of money from him!* Is this the common, usual acceptance of the term? If it is not, why become so very metaphysical and astute all at once, to fix upon us what is supposed to be the odium of borrowing money? We cannot pay, because we cannot collect; and, like honest men, we give notes to those we owe, promising to pay as soon as we can get our money. That is the whole matter, disguise it as you will.

We have not the means to pay this instalment to the States. The Secretary has told us so. He cannot raise the money. Gentlemen affirm that the States will take the paper of the deposit banks. Why, we all know that this is not so. The States might take the paper of banks within their own limits, or in their immediate neighborhood; but the banks in the south and west have nearly all the money due the Government. There is no money in the north. Will Massachusetts take the paper of the Alabama and Mississippi banks—from ten to twenty per cent. below par in Boston—and bind herself to return specie, when called upon for payment? Will Maine, New York, or any other middle or northern State, do so? We know they will not. It is idle, therefore, to talk of turning the banks over to the States. The States would present their drafts upon the banks, get them protested, and then return them upon the Treasury—producing still further embarrassment than already exists.

If we create a debt by borrowing money, how is it to be paid? By new taxes levied upon the people. Not direct taxes, but *but by a high tariff*. Let the planting and agricultural States look to this. Without a debt, there can be no pretext for keeping up the tariff. With such an incumbrance, there will be a reason for its continuance; and when was such an opportunity ever known to slip through the fingers of the manufacturing interest, *without being improved?* It is time for the planter and the farmer to begin to take care of themselves. Those who produce all, and "pay for all," are usually forgotten amidst the contests and combinations that take place in legislating for other portions of the community. They share the too common fate of modest, unobtrusive merit. They are overlooked, whilst the clamorous, impudent and obstreperous, often obtain advantages to which they have no just or well founded pretensions.

As to the amendment offered to this bill by the gentleman from South Carolina, (Mr. Pickens,) I have nothing to say. I see no particular objection to it, and shall vote for the bill whether the amendment prevail or not. In either case, my object will have been effected. That object is the postponement of the deposit, to enable the Govern-

ment to use its own funds, to pay its debts, and fulfil its obligations.

These are our measures; this is our system. If the opposition have any thing better, let them present it, and I, for one, will cheerfully vote for it. The question presented to every gentleman now is, RELIEF or NO RELIEF. Show us your hands, gentlemen! What do you intend to do? Have you any plan to relieve the country? Can you do any thing for the people? Are you willing the wheels of the people's Government shall move on, or do you mean to let them stop? These are grave questions; and every man must answer them to himself and to his constituents in the best manner he can. But, sir, the people will not judge gentlemen by their professions; the practice must conform to them. And without pretending to the gift of prophecy, I will predict, that he who offers nothing for the public benefit, at this perilous and interesting crisis, and at the same time opposes all measures presented by others—no matter how much concern he may avow for the sufferings of his country—on his return to the bosom of his district, will find himself subjected to a fiery ordeal before his insulted constituents. The good sense of the country will set this matter right, and by that decision, willing or unwilling, we must all abide.

For my own part, I shall sustain the bills before the House, believing them to be fraught with permanent good for that common country, which should be so dear to us all. And whether they succeed or fail, I shall at least have the consolation of knowing that, as an humble individual, I have contributed every thing in my power to deliver both the Government and the people from the misfortunes and difficulties which at present surround them. I must close, sir, by thanking the House for their kind and patient attention.

## REMARKS OF MR. TAYLOR

OF NEW YORK,

In the House of Representatives, September 26, 1837.—

In Committee of the Whole, on the bill to postpone the fourth instalment of deposit with the States.

MR. TAYLOR addressed the committee as follows:

MR. CHAIRMAN: The subject under consideration has already been so fully and so ably discussed, that it will be difficult for me to offer any extended remarks, without occupying ground already occupied by those who have preceded me. I shall therefore, sir, both from necessity and inclination, endeavor to be brief.

Most of the gentlemen who have addressed the committee in opposition to this bill, have commenced their remarks with a criticism, or rather denunciation of the report of the Secretary of the Treasury. Gentlemen say they cannot understand it; that it is difficult to comprehend; that it is a labyrinth of perplexities and difficulties; and the gentleman from Ohio (Mr. Loomis) fears to embark in the attempt to fathom it, lest, peradventure, he might become entangled in the meshes of financial intricacy. The gentleman from Virginia (Mr. Mercer) has gone into an investigation of the report, but, I must confess, I was unable to understand the errors which he endeavored to point out. He stated, to be sure, that there was something over \$700,000 of the Navy Pension Fund, which ought not to be deducted from the first instalment due from the United States Bank, as proposed by the Secretary. He also alluded to the condition of the mint, and came to the conclusion that, instead of requiring one million of dollars for its operation, a much less sum would be amply sufficient for that purpose. These seemed to be two material points which the gentleman dwelt upon in his exposure of the errors of that report. But, even supposing the gentleman correct in his views upon these points, what does it amount to? Why, you do not save enough to cover the estimate of additional appropriation for the Seminole war, which is to be provided for by a bill now on your table; so that, by adding to your available means all the gentleman proposes by these two items, the aggregate of deficit will not be diminished. Now, sir, I ask

gentlemen who can not, or who will not, investigate the report of the Secretary of the Treasury, so as to expose its errors, if any there be, if they are not bound to take the statements of a responsible officer of this Government, especially upon those points which are so clear that they cannot be misapprehended? It appears to me they are. Several gentlemen, on both sides of the question, have presented their estimates, and I believe every one of them has come to the same result—that there will be a large deficit in the Treasury, of available means to meet the current expenses of the year. And so says the report of the Secretary. Gentlemen have come to this conclusion by different processes, but they all come to the same result.

Then, sir, if this be so, what is the remedy? How shall this deficiency be supplied, and the Treasury relieved from its temporary embarrassment? The bill under consideration is deemed one among the most prominent measures of accomplishing this object. This measure has received the consideration and recommendation of the President, and the Secretary of the Treasury; the grave deliberation of one branch of Congress, who promptly acted upon it and sent it to this House; and the Committee of Ways and Means has reported it for our deliberation. Now, sir, what are the objections urged against the passage of this bill?

The first objection which has been urged, and which has been reiterated by almost every gentleman who has opposed the bill, is, that it impairs the validity of a contract—a contract binding upon the General Government, for the performance of which it has pledged its faith, and from which we can not recede. Mr. Chairman, I am no lawyer, and with regard to those nice legal distinctions and technicalities of law which have been introduced to sustain this position, I have nothing to say. I shall leave gentlemen of the law to measure swords upon those points, for I believe this House is abundantly supplied with legal talent. I shall content myself with taking a plain common sense view of the subject. Well, sir, what are the facts? The law of 1836 directed the Secretary of the Treasury to deposit with the several States the money which shall be in the Treasury of the United States on the 1st day of January, 1837, reserving the sum of five millions of dollars, and to receive therefor certificates of deposit, pledging the faith of the States for the safe-keeping and the repayment thereof, according to the condition of the act, "for the purpose of defraying any wants of the public Treasury." This act, so far, is only binding upon an Executive officer of the Government, directing him in what manner to dispose of the public funds for safe-keeping; and he was bound to execute it, so far as was practicable. Now, sir, what is the next step in this process, to make out what gentlemen call a contract binding upon this Government? I shall follow the example of my colleague, (Mr. Parker,) who referred to the State of New York to illustrate his views, and who presented to the House a correct statement of the effect this bill will have upon the people of that State. I have not before me the law of that State making provision for the disposal of its quota of the surplus, neither am I able at present to obtain it; but I state from recollection, that the enactment commences by saying that "the money which has been, or which shall be, deposited with this State for safe-keeping," etc. and this is the point to which I wish to call the attention of the House. There is nothing definite either in the law of Congress or the State as to the amount of money to be deposited. The State agrees to receive for safe-keeping such an amount as the Secretary of the Treasury shall deposit with it, and to return it in limited amounts when called for by "the wants of the public Treasury." Thus far it will not be pretended there is any contract entered into between the parties, by which the faith of this Government is pledged to deposit with the State any amount of money, or by which the State has a right to claim any amount. Either party has a right to recede, to repeat its law. When, then, is this contract made? When is it consummated, if there be a contract? Certainly not until there is money de-

posited with the State, and a certificate of deposit given therefor. Then the faith of the State is pledged for the safe-keeping of so much as is deposited, and for its return, when called for, agreeably to the terms of the law. But does it go beyond this? Is there any contract for a dollar more than is covered by the certificate of deposit? It appears to me not. And I ask gentlemen—I ask my colleague, (Mr. Sibley,) who so ably and eloquently argued this point—if there is any contract for a single cent beyond this? Is it any thing more than a mere certificate of deposit, given by the State for the amount received? If the law of 1836 is what it professes to be—what it was then declared to be—an act of deposit, for the safe-keeping of the public treasure until it should be wanted for any purposes of the Government, I hold it is competent for Congress, at any time, to direct the Secretary of the Treasury to discontinue to make further deposits with the States, and to appropriate it to such objects as the public service may require. These, sir, are my views of the much talked of contract.

Mr. Chairman, I am not one of those who voted for the deposit law. But I do not take ground in favor of the passage of this bill, because I was opposed to the act of 1836. The law having passed, I have never felt any disposition on this account to throw any obstacles in the way of its complete fulfilment, were it in my power to do so. And none would be more gratified than myself to believe, that no necessity now existed for arresting its progress; and none will more sincerely regret any inconvenience which the States, or the people of any of the States, may experience from the passage of this bill. But, sir, I take other and higher ground. We have not the means of making this deposit. The Treasury does not possess them. If you take all the means in the deposit banks, subject to draft, you have not enough to meet this call. It is not to be inferred that, by withholding this fourth instalment, you replenish the Treasury to that amount, as seems to be intimated by statements which have been presented; for much of that on deposit in the banks is not at present available, and besides, we have on our tables a bill authorizing the Secretary of the Treasury gradually to withdraw the public money in their hands, in such manner as may be convenient for them, without oppressing them; and if the Treasury drafts shall not, or cannot be met by them when presented, the Secretary is authorized to give them suitable time, by receiving interest, and additional security. So then it is manifest, that the amount of money you detain from the States by the passage of this bill, is not now available to any large extent, for the means or the wants of the Government. But it relieves the Treasury from much of its present embarrassment. It saves the Secretary from the necessity of further efforts to transfer to the States every dollar that can be obtained, to the detriment of the public service. It disembarrasses the Treasury, as far as it goes, and that alone, is a very important consideration at this time.

Mr. Chairman, I have heard much about the passage of this bill oppressing the people; and one gentleman even went so far as to say, he would entitle it "an act to oppress the people." How oppress them, sir? in what manner? You but detain in the Treasury that which its immediate wants require; you relieve it from the embarrassment of attempting, at this time, to distribute nine or ten millions of dollars among the States for deposit. Sir, do the people of these United States feel themselves oppressed, because you do not distribute among them every dollar you have in the Treasury? Ay, more, borrow millions for the purpose of distribution? Is this the estimate gentlemen make of the intelligence and patriotism of the people? If so, they greatly underrate them. They possess different views of the objects for which this Government was organized. They will never consider themselves oppressed by your taking proper care of the fiscal affairs of that Government which they have instituted, and to the maintenance of which they are devoted.

It has been said that this bill will oppress the banks—will cripple them in their ability to accommodate the public. But, sir, how will it oppress or

injure them? Gentlemen proceed on the supposition that if the instalment is paid, the States would accept drafts on the deposit banks, which would be more convenient for the banks; but otherwise, the banks are to be called upon for payment in specie, which they cannot meet; and with this demand upon them, they could not afford accommodation to the public. It may be true that those States, where there is sufficient money deposited, might accept drafts on deposit banks, which would be more convenient for the banks to meet. But would the States not so situated accept drafts on distant banks, take their depreciated paper, and obligate themselves for the repayment of the full amount? I think not. But, although the banks are under obligation to pay all their deposits in specie, if demanded, and much of which has been received in specie, the course hitherto pursued by the Secretary, and the bill to which I before alluded,—should it become a law, show conclusively that the banks will have extended to them every accommodation, consistent with the public interest, in making payment of the deposits to the Government. Since the suspension of specie payments by the banks, millions have been drawn from them by the acceptance of drafts, given to the public creditors, in a manner satisfactory to the holders, without having paid a dollar in specie. And such, doubtless, will continue to be the case, to a considerable extent at least. So, then, I am at a loss to perceive how the passage of this bill can cripple the banks, and thereby lessen their ability to accommodate their customers.

Now, sir, if this bill shall not pass, I ask gentlemen opposed to it, how is the deposit of the fourth instalment to be made to the States? It will not be contended that you have the means in the Treasury at command. Then how will you do it? Will you borrow the money—will you use the credit of the Government for this purpose? Will you raise money in any manner, either by taxation or on the credit of the Government, for the purpose of deposit with the States, to be immediately called back, or for distribution? Will you issue Treasury notes for this express purpose? That is the way I understand many gentlemen propose to accomplish this object. I ask then, sir, by what authority, upon what sound principles of constitutional legislation, will you raise money on the credit of this Government, for the purpose of distribution? I call it distribution, though the law calls it deposit, for such is the expressed language of gentlemen of the opposition; and the gentleman from Virginia (Mr. Mercer) said, when he voted for the law, he designed it as an act of distribution; he meant it as such, and the States had a right to the money. I take them, then, at their own expressed understanding of the law, and again ask, whence do you derive your authority to raise money for the express purpose of distribution? Will you find it in the Constitution? Sir, in my opinion, it would be a palpable violation both of the letter and spirit of that sacred instrument. It would be a perversion of the objects for which this Government was formed. Gentlemen may cover the design, by saying they raise money to enable the Government to carry on its fiscal operations, in which this will be included. This would be a roundabout way, an indirect mode, of arriving at the same object. With the understanding of the intent and meaning of the 13th section of the deposit act, as has been frankly avowed upon this floor, it would be indirectly doing what I am well assured you could never get a vote of this House to do directly; and if it had been supposed, at the time the deposit law was passed, that it was to be a distribution act, it never could have received the vote of a majority of this House, or the sanction of the then Chief Magistrate. Is it true, sir, that the power in question is to be derived from "the general welfare" clause of the Constitution, as seemed to be the opinion of the gentleman from New Jersey, (Mr. Halstead?) Why, sir, take that clause in that sense, and you may make it cover any and every thing that one can possibly imagine may be for the general welfare; and with the selfish feelings of men, their notions of "general welfare" are too apt to centre very near home. Every project, no matter how vision-

ary, whether among the enumerated powers of Congress or not, would be embraced under it, and the barriers of the Constitution trampled under foot. If such are the views of the gentleman, the question which he raised with reference to himself may, I imagine, be easily settled; for no democrat will assent to such a latitudinarian construction of the Constitution.

Mr. Chairman, it has been asserted by gentlemen that some portion of this money may become available by retrenchment—by withholding expenditures under the appropriations of the last Congress. Sir, the Secretary of the Treasury has told us, that when the revulsion in the mercantile affairs of the country commenced, or became seriously felt, in May last, a minute and critical examination was instituted of the various items of appropriation, to ascertain what could be deferred, in order to relieve the Treasury from anticipated embarrassment; and “the result was, that enough could and would be postponed till next year, to amount to about \$15,000,000.” And upon this basis, his estimate of the condition of the Treasury for the last quarter was made. This, it appears, in his judgment, is all that could be postponed. Those who propose to relieve the Treasury in this way, have not selected the items which they would postpone, and I apprehend it would be difficult for them to do so; and should a proposition be brought forward for this purpose, it would take three months to select and agree upon the items, considering the various interests involved, and the discussion that would grow out of it; while immediate action is needed, to provide for the indispensable wants of the Government.

I have heard much in the course of this debate about “measures proposed for relief of Government, but none for the suffering people.” Here is a theme on which gentlemen seem to dwell with great pathos and zeal. Sir, I would ask gentlemen what they mean by “affording relief to the Government, and none for the people?” What is your Government, but the Government of the people, instituted by their choice, and for their own exclusive benefit? Your army is the army of the people, for their protection, for the protection of your coast and your frontiers, your homes, your firesides, and your altars, when threatened by danger from without. And this army must be provided for. Your navy, designed for the protection of your wide-spread commerce, extended over every sea, is the navy of the people. Your appropriations for harbors, light-houses, and the improvement of your navigable waters, are for the people, for the benefit of their commerce. Your relations with foreign Governments, maintained at considerable expense, is for the preservation of the rights, the honor, and the dignity of that Government, which the people have established. Talk about separating the Government from the people, as though they possessed separate and distinct interests! Why, sir, what did the people send us here to do? Do they ask you to pay their debts, or to make appropriations to relieve men who have become involved in ruinous speculations? No, sir. We are but the servants of the people, sent here to make the necessary provision for the expenses of their Government, and to adopt such measures as shall best promote the public welfare, within the constitutional limits assigned us. And this they expect us to do. But they have not become such sordid worshippers of Mammon, as to sacrifice all these high public considerations, and to expect or wish us to legislate for the relief of private embarrassment, or to scrape out every dollar from the public Treasury, and distribute it among them. When gentlemen complain that no measures of relief to the people are proposed, I would like to know what measures of relief they have in view—what do they propose? After the President’s Message had been read in this House, it was then stated, that it contained no plan for the relief of the people. The Chairman of the Committee of Ways and Means, in his place, said, he hoped gentlemen would be as bold and frank as the President had been, in bringing forward their measures of relief. The reply was, “we shall offer no remedy—we have no measures to propose.” Sir, I had heard that this was to be the course

of policy of the opposition; before I started for this place, I had seen it in the newspapers; it has been announced here. And, while it has been said they would propose no measure of relief, it has been believed they would oppose every proposition the Administration or its friends should present. But this, I hope and trust, will not be so. I hope gentlemen will not be controlled by considerations so narrow, as to oppose every thing and propose nothing; thus keeping the country in continual agitation and suspense; that they may ultimately arrive at that object which they have so much at heart—a charter for a United States Bank. This, sir, is the only remedy, the only relief measure, which I have heard suggested by that party, either here or elsewhere. It is, with them, the grand panacea that is to remove all political and pecuniary embarrassments. But, sir, I apprehend the period is too far distant for relief to come through this channel. The resources, the energy, and the enterprise of the country, are too great, for the people to remain embarrassed and distressed long enough for this event to happen; they will not soon be induced, from panic and pressure, real or fictitious, to throw themselves, for relief, into the arms of an institution which so recently they have found a most formidable political enemy, boldly entering the political arena, and doing battle with the powerful weapons of wealth and influence against the administration of the country. And the sooner the friends of a national bank settle it in their minds that the people of these United States will not yield to their wishes in this respect, and act accordingly, they will, in my humble judgment, remove one of the obstacles in the way of a speedy return to a sound, healthy, and prosperous condition of the business of this country.

But, sir, are there no measures of relief proposed by the administration and its friends? The greatest suffering, since the commencement of the revulsion and pressure in the business of the country, has been, I believe, with the mercantile community. The great agricultural interest of the country has suffered comparatively little; it is, in the main, in a prosperous condition. It is, then, from the former class whence the cry of relief most loudly comes, and it is more directly for their benefit that measures are proposed; and, for one, I am willing to do any thing for their relief, or any other portion of my fellow-citizens, consistent with my notions of public duty, and the trust reposed in me, as a representative upon this floor. But there is a constitutional barrier which I should not, and which I can not pass. I find, sir, upon my table, a bill from the Senate to postpone the payment of duties on the merchants, bonds, a most important measure for their benefit. Another, to remit the duties on goods destroyed by the fire in the city of New York. Another, for the issue of Treasury notes to the amount of ten millions of dollars, or so much thereof as shall be required by the wants of the Treasury, which can not fail, not only to aid the merchants, but to be, at this time, of great public accommodation; and another bill, regulating the settlement with the deposit banks, to which I have before alluded. And yet, gentlemen say, no measures of relief are proposed! But, sir, I will pursue this subject no further; for it was not my intention to notice all those sweeping charges which have been brought against the administration and its policy; but to endeavor to confine myself to the subject under consideration. One word, sir, as to the amendment of the gentleman from South Carolina, (Mr. Pickens.)

I suppose all those who will vote for the amendment, but are opposed to the bill without it, abandon the ground of a contract binding the action of this Government; for if you can by enactment postpone one year, you can five, ten, or indefinitely. It becomes, then, merely a question of expediency as to time: whether it shall be fixed for some future day certain that you will deposit with the States over nine millions of dollars; or whether, by an indefinite postponement, you will leave it for Congress hereafter to be governed by the condition of the Treasury. For the present purposes of the Treasury, the amendment will accomplish all that would be accomplished by the

original bill. It will afford the temporary relief desired; but as to the future deposit with the States, I prefer leaving that for Congress to determine hereafter. I am unwilling to hold out to the States the expectation that this deposit will be made on the first of January, 1839, when, perhaps, at that time, you will have in the Treasury no money to deposit; and especially am I opposed to pledging the faith of this Government that it shall be made at that time, whether we have the means or not, as proposed by the honorable gentleman from Massachusetts (Mr. Adams.) I can not consent, by my vote, to pledge the faith of this Government to any such measure. My colleague (Mr. Foster) inquired if it was not the intention to carry out the provisions of the law, in making the last instalment, sooner or later? So far as my vote is concerned, I do not intend it shall be given to deposit money with the States for safe-keeping when you have none in the Treasury to deposit, and may have to resort to a loan, or other means, to raise it for that purpose. I hold the law to be, what it was professed to be, a deposit law, for the purpose of withdrawing from the banks a large amount of surplus money, which had accumulated in their hands, and depositing it with the States, where it would be more safe, as well as more advantageous to the public interest; and I choose not to regard it in any other light, whatever others may choose to call it—either a gift, distribution, or loan, by which the States have a right to claim it, or to be quoted hereafter as a precedent, which would be of dangerous tendency. I prefer, therefore, the bill in its original shape, leaving the question of time to the future action of Congress, when there shall be a surplus on hand to deposit. But if the amendment prevails, I shall vote for the bill as amended; not regarding it, however, as pledging the faith of the Government that the money shall, under all and any circumstances which may exist, be paid to the States at that time. Having detained the committee longer than I intended, I will only add my hope, that we may come to a speedy action upon this subject, and that the bill will receive the approbation of a majority of this committee.

## REMARKS MR. PICKENS, OF SOUTH CAROLINA,

*In the House of Representatives, September, 19, 1837.—*

The bill to postpone the fourth instalment of the payment to the States being under consideration; and Mr. BELL having concluded his speech upon it—

Mr. PICKENS of South Carolina, said he had not risen to make a speech; he was not prepared for that; but that he merely rose to touch upon the general grounds that would govern him in the course he would pursue in relation to the bill under consideration. He would here take the liberty of saying that we had a commentator upon the report of the Secretary of the Treasury in the chairman from the Committee of Ways and Means, and now we had another explanation of it by the gentleman from Maryland, (Mr. McKim,) and, notwithstanding all this, it was still as bungling and confused a document as he had ever been called upon to analyze. One of these gentlemen had made the sum that would be in the Treasury on the 1st October, something under \$2,000,000, and the other had made it \$2,000,000. Mr. P. would recommend to the gentleman from Tennessee (Mr. Bell) that, while engaged in the subject of reform, he should propose a reasonable appropriation, under the direction of some fit and suitable person, so that, during the recess between this and the regular session, the Secretary might be taught both arithmetic and grammar. This might be sound economy, for it might save the time and trouble of this House in the discussion of points which we now witness for want of clearness and distinctness. With all the conflicts upon these points, Mr. P. was strongly impressed with a conviction that the Treasury would be embarrassed, whether from mismanagement and extravagance, or the pressure of the times, or from all, he would not now say. H (Mr. P.) had no idea of now distributing \$9,367,21

amongst the States, only that the tax-paying people of this country should be called on to pay back again that amount to supply the demands of the Government. He was not for incurring a debt merely to distribute money amongst those who would receive two-thirds of the amount, and not pay one-third in raising it. He would not go before his constituents, and tell them that he had involved them in a debt merely that other and more powerful sections might lay the taxes by which it was to be redeemed. Besides, Mr. P. contended that we must look at all the different measures proposed under the present embarrassed state of our affairs as one system, and not separately. He felt disposed to relieve, as far as this Government could legally do, that enterprising and meritorious class of citizens engaged in the foreign importations of the country. They deserved our sympathy, our aid, and fostering care. We had a bill before us proposing indulgence and extension of credits on their bonds. The Senate had passed one extending the time for nine months, and also for the same credits on all bonds for a year after the 1st of October next. Mr. P. was in favor of the very longest time possible, and, with that view, he wished the Treasury relieved from the immediate demands that would be had against it by the payment of this fourth instalment. If it were disencumbered from this demand for the present, it would enable us, with difficulty, to extend the custom-house bonds. Let not those who desire relief to importing merchants embarrass the Treasury by too many demands upon it.

Mr. P. also expressed himself in favor of a small amount of Treasury notes, unless, under very restricted limitations, their only qualities being their receivability in public dues. The gentleman from Tennessee (Mr. Bell) had enumerated a number of appropriations which were extravagant and useless, and which ought to be dispensed with. Mr. P. agreed with him entirely on that point, and would here say, that if the gentleman would bring in a bill, enumerating the useless and extravagant objects, and calling for a reduction and withholding of those appropriations, he would go with him heart and hand, and would move that the present bill be laid aside until the gentleman would have a fair opportunity to pass his retrenchment bill. He never had voted for these objects, and never would. But the gentleman well knew that no such bill would ever receive the sanction of this committee. A majority here were for extravagant appropriations, and would at any time expend money for any thing that the wit of man might propose, even if they incurred a debt, and then distribute the \$9,367,000 besides, and wring the last cent from the productive industry of this country, for no other object than to divide the proceeds amongst their constituents. Many came here good opposition reform men, and continued to be so in words, for the first of the session, but in the last ten days, when it comes to voting appropriations, the gentleman would find them true to their interests, and voting millions upon millions, with *reform* upon their lips and extravagance in their hearts.

[Here Mr. BELL inquired if Mr. P. meant to include him. Mr. P. said, not at all; he meant the National Republican party from the middle and northern sections of this Confederacy.]

Mr. P. was afraid the majority here would not only take the \$9,367,214, but pass the extravagant appropriations again and again, and incur a debt too of \$20,000,000 without the slightest regret; and to effect their purposes, when objects of expenditure were exhausted, they would do as they had done before, propose to tack on to a bill containing large appropriations, a bill locating "marine hospitals" on the rivers and creeks of the far West, even beyond the settled country, where it would be difficult to fill them with inmates, unless they were to collect the bears and wolves of the forest for that purpose. This is what the majority have done and will do here. The Secretary of the Treasury last year estimated the wants of the year at \$27,000,000, which was about \$10,000,000 more than he ought to have asked, and yet what was the remarkable spectacle that this House exhibited? We not only voted the \$27,000,000, but \$33,000,000; about \$6,000,000 more than even an extravagant adminis-

tration asked for. This is your economy and reform. Mr. P. desired to hold back the fourth instalment, so as to induce gentlemen to retrench in expenditures, under the hopes that they will get the fourth instalment divided hereafter, if they will reduce the demands upon the Treasury.

The gentleman from Tennessee, (Mr. Bell,) Mr. P. continued, has maintained that the deposit act was a *contract* binding upon this Government; and, by consequence, that we were bound to make the distribution, whether we wanted it or not. Mr. P. said he could not thus view that act. He looked upon it as a deposit act, and not a distribution act—creating the States of this Union, for the time and for a particular purpose, branches of the Treasury of the General Government. This was the legitimate and only constitutional object of that act. We have no right, under the specific objects for which we can appropriate money under the Constitution, to give it to the States. Mr. P. then read the clause in the act regulating the deposits and the conditions as follows:

Sec. 13. *And be it further enacted*, That the money which shall be in the Treasury of the United States on the first day of January, eighteen hundred and thirty-seven, reserving the sum of five millions of dollars, shall be deposited with the several States, in proportion to their respective representation in the Senate and House of Representatives of the United States, as shall by law authorize their Treasurers or other competent authorities to receive the same on the terms hereinafter specified. And the Secretary of the Treasury shall deliver the same to such Treasurer, or other competent authorities, on receiving certificates of deposit therefor, signed by such competent authorities, in such form as may be prescribed by the Secretary aforesaid, which certificate shall express the usual and legal obligations, and pledge the faith of the State for the safe keeping and repayment thereof, and shall pledge the faith of the States receiving the same to pay the said moneys, and every part thereof, from time to time, whenever the same shall be required by the Secretary of the Treasury, for the purpose of defraying any wants of the public Treasury beyond the amount of the five millions aforesaid: *Provided*, That if any State declines to receive its proportion of the surplus aforesaid, on the terms before named, the same shall be deposited with the other States agreeing to accept the same on deposit, in the proportion aforesaid: *And provided further*, That when said money, or any part thereof, shall be wanted by the said Secretary to meet appropriations by law, the same shall be called for in ratable proportions within one year, as nearly and conveniently as may be, from the different States with which the same is deposited, and shall not be called for in sums exceeding ten thousand dollars from any one State, in any one month, without previous notice of thirty days for every additional sum of twenty thousand dollars which may at any time be required.

He then argued at length to show that it did not partake of the nature of a contract, but a mere regulation of the surplus that might be in the Treasury, so intended, and bearing that intent upon its face. The title of the act was; "A bill to regulate the deposits of the public money."

He was at a loss to conceive how this could be called a contract, which was intended as a direction to the Secretary of the Treasury. There was no specific sum named to be delivered, and, if a contract, from its face, no specific sum could be recovered. The gentleman had said that it was a contract stipulating the sum for the use and benefit of the States. There was no stipulation of the kind even named in the act. The words use and benefit did not occur. It was a branch of the Treasury which the States might control and dispose of at their own risk and responsibility. The only security required was their faith. The limitations in the act were limitations upon the Secretary of the Treasury, not to draw back any sums, except in a certain way, and under certain restrictions, but there was no limitation imposed by that act over Congress. Congress might call immediately for the whole amount by any appropriations they might make, but the Secretary could not; it limited him, but not Congress. Suppose we had been visited

with foreign invasion, do you suppose that we could not then withhold the fourth instalment, because we were bound by contract to pay it over? As well might it be said that the law regulating the Treasurer, and giving him funds under certain conditions, was a contract, and we were bound to give him the funds, whether in the Treasury or not. We had something of a contract with the United States Bank, created in 1816, by which we were bound to deposit the surplus with that institution, under certain conditions. Those deposits were seized and removed in defiance of a plain contract, and yet the gentleman, with his friends, I believe, sustained that withdrawal of the funds. And we are now to be told that we must pay over the fourth instalment, under a *contract*, even though there be no surplus funds. How absurd must our position be, to say that we must now, under contract, make this deposit, when by that contract, if contract it be, it can be immediately recalled for appropriations, and which even the Secretary of the Treasury is authorized to recall in different sums if needed for any appropriations made by law. This seems to be any thing but financial wisdom. If this had been a contract he, Mr. P. never would have voted for it. He was not for an entire postponement, but for disembarassing the Treasury at present, and enforcing future economy, so as to make the deposit or division hereafter. It was not the time for the South to run the risk of incurring a debt merely to distribute a few thousand dollars, while others would get millions. If it be a contract, show the bond, and he would comply, although it might take not only the "pound of flesh," but blood too.

#### REMARKS OF MR CUSHMAN, OF NEW HAMPSHIRE.

*In the House of Representatives, September 22, 1837.—*

Made in Committee of the Whole House on the state of the Union, upon the bill to suspend the 4th instalment of the deposit act of June, 1836.

MR. CHAIRMAN, considering the position which I occupied in the last Congress, relative to the subject now under consideration, I hope the committee will indulge me while I make a few remarks. The gentlemen who oppose the passage of this bill, do it upon the ground that the law of June, 1836, was a contract made by the United States with the several States, by which the General Government is bound to deliver to the several States, in four equal instalments, their due proportion of all the surplus revenue which should be found in the Treasury of the United States on the first day of January, 1837, save five millions. On the passage of the bill regulating the public deposits, I recorded my vote in the negative, therefore I shall be excused, if I shall contend that, both in letter and spirit, that law is merely to regulate the deposit of the surplus revenue of the United States, and not a contract by which the United States would be legally and morally bound to pay money to the several States, whether that money is in the public Treasury or not. If it be true that the United States are legally, as well as morally bound to deliver over the fourth instalment therein mentioned to the several States, according to the declarations which have been made, over and over again by gentlemen upon this floor, then I acknowledge that I have been wholly mistaken as to the provisions of that law. Gentlemen say that it is a contract which could be legally enforced in a court of justice, if the United States were amenable to civil process. If so, this bill to withhold the fourth instalment ought not to pass. Nay, more, sir; if there be any moral obligation resting upon the General Government to deliver over or deposit, this money to the several States, then it ought not to be withheld; for when we legislate, we should do it upon principles as far above all legal liabilities as the heavens are above the earth.

I contend, however, that the deposit act is not such a contract as has been pretended. It is mere a gratuity, which cannot form the basis of a legal contract. Neither does it lay the United States under any moral obligation to deposit money with the several States, which she does not now possess.

Suppose, sir, that one individual should say to another that he would make him a present of a certain article, at a certain time and place, and suppose, further, that before the time should arrive for the delivery thereof, that article should be accidentally destroyed; would that individual be under any legal or even moral obligation to perfect that benevolent design? No, sir, there is not a gentleman on this floor who will contend for the fulfillment of such a promise, upon the ground that it lays the foundation of a legal contract, which can be enforced by suit at law.

Again, sir; suppose one individual should say to another that he had in the hands of his agent the sum of fifty thousand dollars, for which he had no present use. This sum you may have, with all the benefits you can derive from it, until he should be under the necessity of calling for it; when he should return it to the owner. And it is further agreed, that the same shall be delivered over in four equal instalments, in one, two, three and four months. Now suppose, sir, three of the above instalments to have been delivered over agreeably to the above mentioned promise, but before the time arrives for delivering the fourth instalment, the gentleman who made the proposition is visited by some unexpected calamity; his property engulfed in the ocean, or fire may have consumed to ashes his dwellings, by which calamity he is wholly unable to complete his original design.

Is here such a contract as could be legally enforced in a court of justice? Would there be even the slightest moral obligation resting upon that individual, after having been providentially deprived of the means of fulfilling his design, to hand over the fourth instalment as above mentioned? No, sir, every gentleman must be compelled, if he intends to abide the truth, to answer this question in the negative. The person to whom such an overture was made, would not have the hardihood to assert any such claim. He could not look his friend in the face, and tell him that he was guilty of a breach of faith. No, he would blush to make a charge of that sort.

Mr. Chairman, in the case, as above supposed, I have given you, as I think, a very fair exposition of the deposite law of June, 1836. That law was to regulate the depositories of the surplus revenue of the General Government. Three instalments of that surplus have been delivered over to the several States, agreeably to the requisitions of that act; but before the time had arrived for transmitting to the States the fourth instalment, she finds her financial affairs in such a situation as to leave her without any surplus to deposite. How can there be any legal or moral obligation on the part of the United States to deposite a surplus revenue which she does not possess? It is folly as well as madness to make any such pretensions.

I will now bring to the consideration of the House what I consider to be a test question upon this subject. Let it be admitted that on the first day of January last, the Secretary of the Treasury, in pursuance to the requisitions of the deposite act, ascertained that there was then a surplus revenue of thirty millions to be deposited with the States. Now, suppose that on the day following, the whole of that sum had been annihilated? What then? Why, forsooth, according to the arguments of learned gentlemen upon this floor, the United States are not only legally, but morally, bound to incur a debt to that amount, for the purpose of fulfilling her contract with the several States; that is, the United States must create a debt, in order to create a surplus to deposite with the States. This would be an absurdity, for the creation of a debt shows the want of a surplus.

I entreat gentlemen not to compel the United States to borrow money to deposite. I implore them not to tax the people for any such unholy purpose. Is there an individual in the community who would be guilty of such gross folly as to borrow money of one bank for the sake of depositing it in another? No, sir, no one save a madman can be found. The same course by which a prudent individual would be governed in managing his financial concerns, should govern Congress in the present question. I again repeat, therefore, for the United States to borrow money

to meet the fourth instalment under the deposite act of June, 1836, would not only be an act of gross injustice to the people, but an act of the grossest folly.

### SPEECH OF MR. WALKER, OF MISSISSIPPI,

*In Senate, September 27, 1837—On the bill for the collection, safe keeping, and disbursement of the public moneys.*

Mr. WALKER said: the Senator from Kentucky (Mr. Clay) has just explained to the Senate the causes which, in his judgment, had produced the existing embarrassments. Among these causes, he enumerated the effort made last year in this body to reduce the tariff. This position appears to me most extraordinary. The manufacturing, as well as every other interest in the United States, had been greatly stimulated by the wonderful expansion of the bank paper system; and if it had been checked, as the Senator from Kentucky supposed, by that effort to reduce the tariff, the overaction of the manufacturing interest had been so far diminished, and the revulsion which followed must have proved less disastrous in its results. If, indeed, the artificial stimulus of an augmented tariff had been superadded to the expanding influence of the banking system, the manufacturing interest would only have been lifted for the time to a greater height of seeming prosperity, to have received, from the revulsive shock which followed, a fall more fatal in all its consequences. If, then, the manufacturing interest, as is clearly shown, received no injury from the effort in this body in February last to reduce the tariff, still less could that failure have affected injuriously any other great interest. It was sufficient, in answer to this argument of the Senator from Kentucky, to say, that this effort to reduce the tariff was unsuccessful. But if it had succeeded, I can not perceive how a reduction of the taxes of the people could have increased or brought on the present disasters. On the contrary, I shall endeavor to prove hereafter, in the course of this address, that the reduction of the revenue to the wants of the Government would have greatly alleviated, if not altogether prevented, the existing embarrassments. The money would have remained in the pockets of the people, and would not have gone into the deposite banks, to have augmented their funds, and increased that inundation of paper money, in the reflux of which we now find wrecked and stranded all the great interests of the country.

But the Senator from Kentucky, as the great and distinguished champion of the tariff policy, might well oppose the measure now under consideration. That measure was to continue, now and for ever, the existing separation between the banks and the General Government. This fatal union of bank and State, it seemed to have been overlooked, was clearly calculated to produce a powerful alliance between the banking and tariff policy. So long as the banks are continued as depositories of the revenues of this Government, it is their interest to increase those revenues, and thus augment their deposits and dividends. By increasing the tariff, the banks then increase our revenues, and augment their deposits and profits. Hence it is, that, with so few exceptions in this body, the friends of the tariff are found united in the effort to restore the former connection between the Government and the banks as the depositories of the public revenue. The re-alliance between the tariff and banking policy would be most formidable indeed, and should be resisted at every step of its progress by the great agricultural interest of the country. There was too much reason to fear that the great battle between the friends and opponents of free trade must be fought over again in 1842, when the tariff reached the lowest point in the scale of descending graduation. I look forward to that period as the most critical in the future history of the country. It would then, perhaps, be finally decided, whether the tariff should be permitted to remain at the revenue standard, or whether it should be augmented and enlarged, to advance one favored interest by spoliations com-

mitted upon another—by the collection of taxes beyond the wants of the Government. In looking forward to this period, and the final adjustment of this great question at that time, I can vote for no measure which would make it the interest of the banks to augment our tariff and revenues, with a view to the increase of their deposits and dividends. The banking interest of the country was already great and powerful. It consisted now of eight hundred and twenty-three banks, and what might be the number in 1842, if again stimulated by heavy deposits, no human foresight could predict or determine; but if, in the next five years, it augmented in the same geometrical ratio as the last, we should have in 1842 nearly sixteen hundred banks, with a capital approaching one thousand millions of dollars. Especially—judging of the future by the past—would this increase in the number of banks be greatly promoted by reuniting them with the Government as depositories of the revenue. And shall I, a Senator from a State raising now nearly one-fourth of the great staple of the South, and destined soon to stand at the head of the great exporting States in the Union—shall I aid, by my vote, in bringing either now, or in 1842, this great banking interest of the country in aid of, and alliance with, the tariff policy?

But if the re-alliance between the banks and the Government would consummate the union between the banking and tariff interests, the discontinuance of the banks as depositories of the revenue, under the provisions of this bill and its amendments, will make it the interest of the banks to oppose the augmentation of the revenue. By this bill, the banks are at once and for ever discontinued as depositories of the revenue; and by gradual and successive steps, commencing now, and going fully into operation in 1842, no bank paper after that period will be received in payment of the public dues; and consequently, after that date, these payments must be made chiefly in gold and silver. Now, the great argument of the friends of the bank deposite system is, that this bill will diminish the specie in the vaults of the banks, by substituting that specie for bank notes in revenue payments. So far as this effect may ultimately be produced partially by this bill, it will make it the interest of the banks to diminish the tariff and the revenue, so as to diminish the calls upon them for the redemption of their notes in specie, to be used in revenue payments. The smaller the amount of the revenue, the less will be the influence of this bill in diminishing the circulation and profits of the banks. Thus, if under this system the Government collected little or no revenue, the bill under consideration would have little or no effect upon the circulation of the banks; whereas, under such a tariff as that of 1833, the revenue from duties would amount now to nearly fifty millions of dollars, and produce a wonderful curtailment of the circulation and profits of the banks. The banks then, now, as well as in 1842, under the system we propose, would be directly interested in diminishing the revenue and keeping down the tariff.

Nor is it less obvious that, upon the same principles, the adoption of this measure would make it the interest of the banks to diminish the revenue from public lands, by a reduction of their price, and by confining the sales to actual settlers; for otherwise, the prodigious sales of the public lands for speculation, at existing prices, which amounted, during the last two years, to near forty millions of dollars, would produce such a presentation of the notes of the banks for specie to pay for the lands, as greatly to curtail the circulation and profits of these institutions. But if we continue the late system of bank depositories, and of receiving bank paper for the public revenue, it becomes the interest of these institutions, as was clearly proved in 1835 and 1836, to augment their deposits by increasing, through loans, the sales of the public lands. Indeed, under this system, nearly the whole of the public lands worth purchasing, would have passed, in a very few years, into the hands of speculators—whole townships and counties being covered at an entry, by quires of bank paper, to be redeposited in a few days in the banks which had loaned the money. As, then, this bill is calculated

to keep and bring down the tariff and the price of the public lands, and limit the sales to actual settlers, upon what principle can I refuse to sustain it? From the first moment of entering this body, I have invariably opposed the surplus distribution policy, in all its forms and under every aspect; and as invariably advocated the reduction of the revenue to the wants of the Government, by reducing the tariff, reducing the price of the public lands, and confining the sales to actual settlers or cultivators; and shall I now oppose a bill which must prove so powerful an auxiliary of these great measures?

Nor is it less obvious that the re-establishment of a great Bank of the United States as the fiscal agent of the Government, would be a still more powerful ally of the tariff policy. It would be equally its interest to increase the tariff, and thus augment its deposits and dividends. And if, as we are informed by its friends, it could become the regulator of the State institutions, existing, as Mr. Biddle has told us, by its forbearance, it could, at its pleasure, wheel into column this army of dependent corporations, as auxiliaries of the great bank power in augmenting the tariff.

But the Senator from Kentucky, among other causes, which he enumerated as producing the present disasters, was the veto of his land bill in 1832, by ex-President Jackson. Now, by the provisions of that bill, the nett proceeds of the sales of the public lands for the years 1833, 1834, 1835, 1836, and 1837, were to be distributed among the States. By a reference to the public documents, it appears that these sales amounted to about sixty millions of dollars. This sum was to be irrevocably distributed among the States, and was to be lost for ever by the General Government. Now we have already distributed twenty-seven millions of dollars among the States, and are compelled to make a temporary loan of ten millions of dollars, as authorized by the bill which has already passed this body, rendered necessary by a deficit in the public revenue. Now this bill of the Senator from Kentucky would have increased this deficit to forty-three millions of dollars, as proved incontestibly by the facts and documents now before us. This bill, then, would have reduced us to a most disgraceful bankruptcy. It would have involved us in a new national debt, and rendered an increase of the tariff inevitable. By this operation, the State of Mississippi, where it received one dollar, would have been compelled to pay back three, by the operation of the tariff, reducing the price of her staple, and depressing the great agricultural interest of the whole country. Such would have been the glorious effects of this measure—such the relief it would have extended to the community. Its relief would have been an immense national debt and oppressive taxes. In the session of 1835-1836, the Senator from Kentucky again advocated the passage of this bill, when I thought it my duty to oppose the measure, and point out the evil consequences which the result has shown would have flowed from its adoption. At the last session, the Senator from Kentucky again introduced a similar measure, grasping for distribution these sales of the public lands, for the past as well as for the future, and terminating only on the last of December, 1841. This measure would have reduced the Government to still more irretrievable bankruptcy. But the worst of its effects are yet to be told. This bankruptcy, and its associated national debt, would have occurred or accumulated at the commencement of the year 1842—the very year for the final adjustment of the tariff under what is called the compromise act, when this accumulated debt would have rendered it impossible to prevent an augmentation of the tariff.

Such would have been the effects of the various land bills of the Senator from Kentucky. But, if that Senator could have united with me in the support of the land bill introduced by me the session before the last, reducing the price of the public lands in favor of settlers and cultivators, confining the sales to them, the present disasters, in all probability, would not have overwhelmed us. We should have had little or no surplus. The enormous sales of public lands to speculators, amounting, in two years, to about forty millions of dollars, produced this surplus. These sales would have

been prevented by the passage of that bill. This surplus, as I took occasion then to predict, has been the potent cause of the present disasters; and the deposit—the fatal deposit distribution bill, with its no less fatal equalizing supplement, so strenuously opposed by me, precipitated the great catastrophe. This forty millions of surplus deposited with the banks has been regarded by them as capital, and upon it they have extended their issues to an extent unprecedented. This inflation of the currency caused overaction in all the departments of trade and business. The banks not only swelled their issues, but, as a necessary consequence, paper credit of every description increased to an alarming extent. Prices rose incredibly, and every thing found a purchaser, upon credit, at almost any price. Mercantile acceptances, founded not on money or produce, but on credit only, were augmented to an extent heretofore unknown. New York and New Orleans, being the greatest theatres of these operations, were the first to feel the shock—the first link in the chain of paper credit breaking at New Orleans, and the next in New York. These calamities, though no one could tell the precise moment when the catastrophe would come, were clearly designated in the report in favor of the land bill, presented by me two sessions ago. The means, also, of guarding against these calamities, were fully pointed out in that report. These means were, to pass the land bill at once, and prevent the accumulation of that surplus which afterwards rose to forty millions, and swept before it the banks, the Government, and the people. I will only trouble the Senate with one short extract from that report:

“It is, then, the interest of the whole Union that those monopolies of the public lands should be arrested, and that capital should continually flow in the various channels of productive industry. If, among other causes, the existing embarrassments are now greatly attributable to the speculating investment of millions, during the past year, in wild lands, what will be the result if the system is permitted to continue for a series of years unabated? Is it easy to foresee that the necessary consequence will be increasing distress and embarrassment, or at least a diminution of the national prosperity.”

At that session this land bill could scarcely obtain a hearing, and the predictions of the report, portraying the disasters that would occur from the refusal to prevent the accumulation of the surplus, were treated as wild and visionary. We were careering onward upon the tide of an unreal prosperity, and no one could be induced to look forward to that shore where the mighty vessel of the Government itself was destined so soon to be wrecked and stranded. But, at the next session, when, as the report had predicted, whole States had been covered by speculative entries of public lands, with bales of bank paper obtained by loans of this accumulated surplus, then, at last, when perhaps even then it was too late, this land bill obtained a hearing. It passed the Senate, but was, most unfortunately, defeated in the House, as also was the bill reducing the tariff; then, for the first time, we set seriously to work to reduce the revenue to the wants of the Government, and the new deposit distribution project of the last session was defeated, on my motion, by the casting vote of Vice President Van Buren. And shall we not all learn, from the catastrophe which followed the surplus, the fatal tendency of that policy, and that the only path of safety for us is to reduce the revenue to the wants of the Government.

The next great question presented in the address of the Senator from Kentucky, was the creation by Congress of a national bank, as the only measure, in his opinion, calculated to relieve the distresses of the country. Why then has he not favored us with his project of a charter, that it might be examined by Congress, and by the nation? This the Senator had not done, and his failure to present his plan, would be regarded in no other light than as an acknowledgment of the great and intrinsic difficulty involved in such a question. Surely that Senator could not ask the Senate to vote against the measures now under consideration, unless he proposed some substitute. None, he presumed, were so entirely confiding, as to take upon trust any and every

charter of a bank which that gentleman might think proper for the present contingency. Let us see the bill with all its specific provisions, that Congress and the country may compare it with the measures now under consideration, and decide between them with full light and knowledge upon the whole subject. However great the confidence which any portion of the American people might repose in Senators opposed to the administration, he hardly thought the nation would be carried away by any vague or indefinite proposition; any clamor, however loud, for a national bank—a national bank, when the charter was withheld from their consideration. I now call upon the Senators opposed to the administration for their specific plan of relief; for a view of their proposed bank charter; and if this were refused, it must either be conceded that they can present no practical project, or the charge of non-committalism, which had been so industriously circulated, but without the shadow of foundation, against the President of the United States, must recoil on those who made it.

But although the Senator from Kentucky had not favored the Senate or the country with the provisions of his proposed bank charter, yet he has designated the means by which at least a portion of the specie necessary to constitute a part of the capital of the bank, may, in his opinion, be obtained. He tells us that fifteen or twenty millions may be obtained from abroad, and that if we object to the supposed influence which the foreign stockholders would have in the institution, to prevent such stockholders voting in the election of directors. We have tried this heretofore, and it did not prevent this influence. The fact is, the ownership of so vast a portion of the stock of the bank by British lords and bankers, would necessarily give them a powerful influence over the institution, and enable them, by an alliance formed between the American and British banks to control the moneyed transactions of both countries, and to elevate or depress the price of property at their pleasure. The Senator from Massachusetts [Mr. Webster] had a few days since derived this power of creating a national bank from the authority given to Congress to regulate commerce; but were this position correct, which was not conceded, are we prepared to surrender this power of regulating commerce to any great irresponsible moneyed corporation—much less to such a corporation, composed in part of any portion of the British aristocracy—the hostility of so many of whom to our republican institutions was so well known, and clearly defined? To trust in whole or in part in their keeping the moneyed and commercial relations of this great republic never would be permitted by the people of the United States. Besides, were we willing thus to procure this amount of specie from England for these purposes—if the argument of the friends of a national bank in this body be true, that, what they have been pleased to call the forced importations of specie into this country, produced by the policy of the late administration, has caused a comparative scarcity in Europe of the precious metals, and partly occasioned their and our existing embarrassments, and the fall of cotton and of prices generally—what, we may ask, would, upon these principles, be the effect of this sudden and immediate demand upon England, at this period, for fifteen or twenty millions of specie? It is in vain to suppose that we could, at this period, put a national bank in operation, by borrowing in England fifteen or twenty millions in specie. No, we would have to look among ourselves for the stockholders, for the nation would permit no others; and the specie to put such a bank in operation must also be looked for among ourselves.

A national bank, capable, according to the theory of its friends, of regulating the existing State banks, including the regulation of their late alleged regulator the Bank of the United States, rechartered by Pennsylvania, must possess an actual capital, as I shall prove hereafter, of at least seventy millions of dollars, and so far as paid in, consisting of gold and silver. No one would propose a bank, whose capital was not paid up, for the bubble business of creating banks on the stock notes or credit of the stockholders, could have no advocates in this chamber. Such a bank must commence its ca-

reer on capital, not credit. Now, how is this capital to be obtained? Not as formerly by Government stock; for we have no debt to represent that stock, as we had in 1791 and 1816, when the first and second banks of the United States were created, and no one would presume to ask that the Government should be involved in a new national debt, (inviting a renewal of the tariff,) for the purpose of creating a national bank. In 1791, three-fourths of the capital of the national bank then created, consisted in the securities or funded debt of the United States, bearing a fixed interest, and redeemable from the public revenue at specified periods. A large portion of the capital of the second bank, consisted in five per cent. stock of the Government, representing a portion of the national debt, and redeemable at fixed periods. Of the thirty-five millions of capital of this bank, when all paid in, twenty-one millions consisted of this public debt. We have now no funded or other debt to assume the shape of public securities, and constitute any portion of the capital of a national bank. How then is the capital of a new bank to be paid in? It can only be paid in stock notes of the subscribers—or State bank notes—or gold and silver. No one would propose the first method, and, if proposed, it would give no real capital to the bank, but begin and end in bankruptcy. The second method of payments, none would propose, for the depreciated paper of broken banks would constitute no capital upon which the new bank could issue a paper convertible into gold and silver. The precious metals then, could alone constitute the sole capital of the bank. Now let us suppose the bank chartered, and with a capital of seventy millions. Where, at the present period, is this enormous amount of gold and silver, or any large portion of it to be obtained? Not from Europe, as we have seen; and if attempted now in this country, even to the extent of fifteen or twenty millions, it would prevent, by this new demand for the precious metals, the possibility of the resumption of specie payments by the banks, or cause them immediately to suspend again, if they should resume specie payment. The passage, then, of a national bank charter at this time, with an adequate capital, would greatly injure, if not entirely overthrow, the banks of the States, and render still more intense the existing distresses. But were all these difficulties removed, and were such a bank put in operation, by depriving the State banks of the means of obtaining the gold and silver necessary to resume specie payment, the emission of the notes of the new bank would still further depreciate the paper of the suspended institutions, and involve most of them, and large masses of the people, in one common bankruptcy. It is time, then, that those who look to the establishment at this period of a national bank, should awake to the reality, that such an event would, at this crisis, prevent the resumption of specie payment by the State banks, depreciate their paper, so as almost to drive it out of circulation, or at least render it not receivable in payment of debts, unless at a ruinous discount, and increase and prolong the existing embarrassments. Nor should it be forgotten, that even if the attempt were now made to procure from England the necessary specie to put a national bank in operation, at the very time when so many of the State banks are endeavoring to obtain it from the same source, both could not succeed; and the suspended banks, being the weaker power, would be broken down in the conflict.

But suppose the bank chartered and put in operation, with, for the sake of argument, the power claimed by the friends of the late Bank of the United States to regulate and control the State institutions. The capital of a new national bank, adequate at this period for these purposes, must consist, as heretofore stated, of at least seventy millions of dollars. The number of the State banks, when the late Bank of the United States was created, was usually estimated at two hundred, and their capital one hundred millions of dollars. The number of these institutions at this period is eight hundred and twenty-three, and their capital about three hundred millions of dollars. If, then, the augmentation of the controlling power is to bear any proportion to the increase of the number and capital of the institutions sought to be controlled, the capital of the new regulator must be at least

double that of the old one, which would make it seventy millions of dollars. But we must also consider that the new bank must not only have adequate powers to control the eight hundred and twenty-three State banks, but also to control the very power which is claimed to have regulated them, continued in existence by the State of Pennsylvania, under a charter which its very able president (Mr. Biddle) tells us renders that bank stronger and more powerful than it was under its former charter. The new bank, then, must be able to control the *regulator*, and the *regulated*; and as the former must have been more powerful than the latter, the capital of the new bank must be at least double that of the old one. Indeed it must be much greater, in the precise proportion in which the power of the old bank as a regulator exceeded that of the institutions over which it exercised a control. Seventy millions, then, is the least capital upon which the new bank can be asked to be created, with adequate powers to regulate the State banks, and control the currency. Under the old system, the late Bank of the United States was regarded by its friends as the sun of the moneyed system, and the State banks as stars revolving round the central power. This sun and those stars are still in existence, though all have been madly shooting from their spheres, and the new bank orb must have power enough to control and regulate the whole system, and to recall the greater and lesser lights from the eccentric orbits in which they are now revolving. And are we prepared to create a power of such great, such terrific magnitude—a power wholly irresponsible to us, or to the people, and greater than the Government itself? Is it not clearly seen, that an institution of such overshadowing power, with a capital of seventy millions, and regulating a State bank capital of three hundred millions, would not merely regulate the banks, and currency, and exchanges, but would also regulate and control agriculture, commerce, manufactures, and the price of all property and of all products throughout the whole Union. The prosperity of the whole country, and of the whole people, would be subject to its controlling power, and he who would be willing to create such a power, in the hope that it would be its interest and desire to promote the public welfare, must be prepared for a despotic Government, in hopes that the identity of interest between the monarch and his subjects would make him a kind and forbearing master. But, unfortunately, it is not always the interest of the mighty head of the banking system to promote the public welfare. On the contrary, when, from its anxiety to accumulate heavy dividends, it has expanded to the utmost point the bank circulation, and when the revulsion comes, as come it must, this mighty power must either fall itself, or in its efforts to sustain its credit by the recall of its issues, and the curtailment of its loans, spread ruin and dismay throughout the country. If any doubt the truth of this position, let them look back to the panic of 1834, when the late Bank of the United States curtailed its issues so many millions, within so short a period, and so nearly produced the catastrophe which now overwhelms us. Or, if any suppose that these curtailments were the necessary result of the conflict between the Government of the people and the government of the bank, let them look back to the period of 1818, 1819, when the relations of the bank and of the Government were of the most friendly character. Mr. Cheves, in 1819, president of the Bank of the United States, in his official expose, then published, tells us that the curtailments of the bank were "within the period of eight months, eight millions of dollars and upwards;" and yet it was brought to the brink of ruin. In the same official document, Mr. Cheves says: "On the twelfth of April, 1819, the bank had in its vaults but \$71,522 47, and owed to the city banks a balance of \$196,418 47; and its circulation was still "six millions." He concedes that the suspension of specie payment by the bank was considered nearly inevitable. Such was the condition of the great regulator in 1819, with one dollar in specie for every hundred of its circulation, and expecting every moment to be compelled to suspend specie payments. So far from being enabled to regulate the State banks, which almost universally

failed then, as now, this great regulator was brought to the brink of ruin. It was saved, and barely saved, by its successive curtailments; but the State banks were destroyed by the operation, and the country ruined. Speaking of that gloomy period, Mr. Niles in his Register of that date says: "From all parts of our country we hear of a severe pressure on men in business, a general stagnation of trade, a large reduction in the price of staple articles—real property is rapidly depreciating. Many highly respectable traders have become bankrupts; three per cent. per month is offered for the discount of promissory notes, which a little while ago were considered as good as old gold. There are 20,000 persons daily seeking work in Philadelphia; in New York 10,000 able bodied men are said to be wandering about the streets looking for it, and we add to them the women who desire something to do, the amount cannot be less than 20,000." Such is a picture of that gloomy period, as it will be found portrayed in all the public journals of that date. The whole country presented one boundless expanse of ruin and desolation. And how produced? By the enormous expansions, and as sudden contractions, of this great regulator, the Bank of the United States. The present Bank of the United States proclaimed by President Biddle to be stronger under its present than its former charter, has failed to regulate the currency even in the State of Pennsylvania; but this very bank, although conducted by one of the most remarkable financiers of this or of any other country, as well as the rest, has suspended specie payments. This same institution, under its late charter from Congress, failed to regulate the currency in 1819, when the local banks broke almost universally; and the old bank of the Union did not succeed as a regulator when, in 1808-9, during the existence and full operation of that bank, there was a general failure of the banks of New England, then being about one-third in number of all the banks of the Union. The attempt, then, to regulate the currency by a Bank of the United States, ever has been a splendid failure. The experiment failed in 1808-9, under the regulation of the old Bank of the United States. It failed under the dominion of the late Bank of the United States in 1818-19, and it failed again under the continued existence of the Pennsylvania Bank of the United States; substituting, as it did, agencies for branches in the various States, and stronger (as the distinguished banker at its head has told us) under the new than the old charter. At last, the mighty regulator has stopped itself; and, so far from aiding, opposes the efforts of the State banks of New York to fix an early day for the resumption of specie payments. But even in its prostrate condition, this mighty institution, under its new charter, is entering upon a new field of power and speculation. Heretofore it only professed to regulate the State banks, and exchanges, and currency; now it is regulating the price of cotton, and of all commodities affected by it. It has turned cotton broker, and recently purchased an amount of our great staple, usually estimated at three millions of dollars—purchased at a period of the greatest depression, produced, in part, by the panic appeals and gloomy pictures of its organs and advocates—and will soon sell out at an advance, only afterwards to depress the market again, and make new purchases and new speculations. Nor is this all: In addition to its agencies in the States, procured by the wholesale purchase of several of the State banks, and the employment of other dependent institutions, it has established one of its own officers as a permanent agent in England, with an immense salary, there to overshadow our Minister by the affiliated power of its British stockholders and British bankers, to control for ever the price of all our exports, and in fact our whole commerce. Thus may this formidable alliance, by periodical contractions of the paper system, and the panics which ensue, bring down the price of our great staple, and purchase the crop when it is low, only by succeeding expansions and a consequent increase of the price, to sell when it is high, and renew from time to time these ruinous expansions and contractions whenever it, or its British bank allies, now openly proclaimed and fully organized, think proper to renew the speculation. By this means, if this mighty bank power does not regulate

that slavery of the South, so much denounced by so many of its organs and advocates upon both sides of the Atlantic, it controls the value of slave labor and the price of all its products. Cotton rises or falls, as the bank desires to sell or to purchase, and so does every other commodity affected by the price of our great staple. And shall I, an advocate of free trade, an opponent of tariff or bank monopolies, be asked to place my constituents and their property beneath the control of this powerful institution, by giving it a new charter from this Government, or by making it a depository of the national revenue? And, if not, shall I be asked to create a still more powerful institution, to regulate more than eight hundred State banks—to regulate this very Bank of the United States—and control the price of all property and all products? Who does not see, that before a year, the president of the present Bank of the United States, with his great American and British allies and stockholders, would be at the head of the new institution, with increased and increasing power, and the old bank, and the dependent State institutions, all regulated by the new bank potentate, would be but the subjects, existing by the forbearance of the mighty paper monarch. And shall I aid in creating this enormous, this irresistible central power? Shall I give it this triumph over the people and over the States? subjecting the price of all their property, and all their products, to its expansions and contractions, and following, to some distant capital, the seat of the new moneyed power, with my constituents as captives, suppliant captives, in the triumphal procession of this more than Roman conqueror. No one acquainted with political economy can deny that the power which creates and regulates the issues of paper money, and augments or diminishes it at its pleasure, and thus makes money plenty or scarce, does control the price of all property and all products, and the wages of labor and industry. This is the very regulating power claimed for the bank and its advocates. The tariff controlled the pursuits and business of men—giving temporary and artificial success to one branch of industry, and one section of the country, by the entire overthrow of other branches of industry, and other sections of the Union. But this is worse than the tariff; for that at least was regulated by the representatives of the people and of the States, whilst this is a great irresponsible power, placed by its charter, for a series of years, above and beyond the people; its managers not chosen by the people, or subject to their instructions or recall, but electing its own officers, responsible only to the power of the bank itself, and deciding in secret conclave upon the destinies of the nation, and the price of all the products and all the property of every citizen.

And who will ask, not merely the re-establishment of a similar power and similar institution, but the creation of a new and infinitely greater power—a mighty institution, capable of controlling the former regulator, and all its dependent corporations? Who does not see that such a bank, with such regulating and controlling powers, would be stronger than the Government itself, and would control all its operations; either as its ally or conqueror? If it came as an ally—as it must be—of the Administration which created it, it would unite here the powers of the bank and the Government, and terminate in a sordid central despotism. Talk not of the President or Congress of the people, when such an institution shall have been created. Our real President would be the president of the bank—our real legislators the directors of that institution; and the States—the States, subdued by the same influence—would gradually sink as undiscoverable spots upon the orb of a resistless central power. An ambitious President, aided and sustained by such a terrific and corrupting influence, could indeed strip us in a few years of all but the forms of constitutional freedom; and the Government would be merged in the bank, or the bank be merged in the Government. This merger took place in France, in 1718, between the bank and the Government, and it has nearly taken place in Great Britain. Here the union would be inevitable, whenever the bank places a president in power, and succeeded, through him, in obtaining a charter.

Yes, the creation of this great bank power, to become the ally of the British bank and bankers, is indeed a question not only affecting the forms of our Government here, but a question whether these States shall be re-colonized—whether the English bank, and its American allies, shall regulate all our commerce, and the price of all our products. It is now boldly asked, that England should have a vast circulation of gold and silver, but that we should have very little silver, and no gold, and substitute bank paper, controlled by the power which retains the metals. That money should be debased in value here, to enable England to control our business and circulation—that England may sell her imports here at our paper prices, whilst she gives for our exports the diminished price arising from a metallic or chiefly metallic currency. No nation could long stand the operation of such a system; but the exporting States, the price of whose staple depends chiefly upon the English market, and not the amount of American paper money, would soon be reduced to absolute bankruptcy. With the expansion of the paper money here, every article the planter desires to purchase would be enhanced in price, whilst his cotton, regulated by the English market and currency, would remain nearly stationary; till soon the expense of raising cotton would be so greatly increased, whilst the price of the article remained nearly the same, that little or no profit would be derived from the culture. It is not the nominal paper prices of property here that gives real prosperity to the planter, but the net profit upon the staple he raises, in calculating which the expenses of raising the article, arising from the expansion of American paper money, is precisely so far a diminution of his profits. Upon the exporting States, then, is thrown nearly the whole burden of this system. They participate in all the evils of an explosion, and during the expanding process, whilst they give more for every article connected with conducting a plantation, their great staple experiences no correspondent rise, being governed by the less inflated European money market. To illustrate this position, suppose, from the absence of bank paper, the expense in Egypt, the East Indies, or Brazil, of raising cotton, including the interest on capital, was one cent per pound, whilst here, from the paper expansion, it was six cents per pound; how long could we withstand the competition—the cotton of all other countries bringing in Europe the same price as our own? Is it not evident, that a few years more of expansion of the American paper system would reduce the exporting States to absolute bankruptcy, and the whole country to the most abject dependence on the money power of England—selling high her imports here by the false standard of our paper money, and purchasing low all our exports at the price regulated by her less inflated currency? In this way, England would vastly retard our actual increase of national wealth, by selling her imports to us at our paper prices, for a vast amount, and giving us a less price for our exports, estimated by her nearer approach to a metallic currency. Is it not seen, in this exchange of imports for exports, we get, for the same money, fewer imports, and England more exports, by the precise ratio in which imports are raised in price here by our paper money, and exports depressed by being measured by a currency more nearly metallic, and thus the whole nation sustains a great loss?

It would be most curious and instructive to compare tables from 1800 to the present period, representing the prices current of cotton, of domestic produce consumed wholly in the United States, and the amount of paper circulation. These tables I have neither had the time or opportunity to prepare; but this much must be known to every Senator, that as the paper money, before an explosion, rose in amount, domestic produce rose also, whilst cotton at the same period repeatedly fell—being regulated by the European money market. One fact alone will be conclusive evidence of the principle, that whilst from 1815 to 1835 the prices of our cotton, including Sea Island, averaged eighteen cents per pound, from the latter period to 1835, inclusive, the average price was less than twelve cents per pound; whilst from 1815 to 1835, our paper circulation has nearly doubled. The price

of our cotton, then, instead of augmenting with the increase of our paper money, has *actually greatly fallen under the operation*. The expanded paper money system operates as a perpetual tax upon the planter; and nothing is more clearly demonstrable than that, if every expense attending the conducting of a cotton plantation, including the property itself, rose in the same proportion, for the next, as it had done for the last three years, whilst cotton remained stationary, we should be compelled to abandon the business as altogether unprofitable.

Nor will a national bank prevent these expansions in this or any other country. The Bank of France in 1718, so prosperous in the commencement of its career, was soon over-extended, and burst with a fearful explosion, leaving upon the hands of the people four hundred millions of worthless paper, spreading in every direction ruin and dismay, and convulsing the very foundations of the Government. Paper money was nearly abandoned in France for more than half a century; and when it rose again, out of the horrors of the French revolution, again it exploded, with consequences, if possible, more terrific than before; and now no bank note under one hundred dollars is issued in France; and more than three-fourths of her circulation is gold and silver. In this country, we see now the great Bank of the United States, proclaimed by its president more powerful under the new than the old charter, prostrate and suspended; we see the same institution in 1819 reduced to the verge of bankruptcy, with one dollar in specie for every hundred dollars of its notes in circulation; and at the same period, as well as in 1808 and 1809, we have seen the State banks failing under the regulations of the Bank of the United States. The defect is in the system; for it is alike the interest of a national as of State banks, to expand their issues, with the view of augmenting their profits. Expansion is the vice of the entire system; contraction must soon follow, and suspension terminates the scene; and when a national bank suspends, associated as it must be with the Government, and connected with all the pursuits and interests of the people, the catastrophe must be great and overwhelming. The Government which created such a bank, might be held responsible by the people for the dreadful calamity; and amid their agony and despair, they might seek relief in revolution. Let us be most thankful that we were saved, as it were, almost by a miracle, from the failure of the national bank in 1819; and let no friend of this Union ever desire to subject it to a similar hazard.

But we are told that the State banks, or nearly all, bear evidence to the regulating powers of the United States Bank, and desire its recharter. It is interest that prompts this action on the part of the banks, because, by the creation of a national bank, they are enabled to conduct their business with less specie, and, consequently, with more profit. Let us illustrate this by a few examples. Without a great overpowering national bank, substituting its paper for specie, the banks of New Orleans and Natchez must keep in their vaults a larger specie basis, to supply the demand of the up-country traders and producers, who, upon their return to their respective States, take home these balances in gold and silver. To meet this demand, these banks must, in the absence of a national bank, issue less paper, or keep on hand a larger supply of specie. If, then, we look to the period when the Bank of the United States was in successful operation in the southwest, their banks are found to possess very little specie, and much less specie, as shown by their returns, in proportion to their circulation, than at the present period. And why is this? The circulation of the paper of the Bank of the United States, in addition to the amount in the possession of the State banks, constitutes their basis of operations, and is substituted for the specie in their vaults. In the mean time, the paper of the national bank is substituted for specie in the general circulation. It expels the specie from the country, or prevents its importation, by preventing the use of and demand for it to settle balances due in the different States. Never, then, can we hope to have, under such circumstances, as all experience has proved, any great amount of

gold and silver in the country; for the national paper, which is the cheaper currency, expels the specie, which is the more valuable. In pursuance of this universal law of the monetary system, we have seen that, at the period of the veto of the United States Bank, there was but about twenty millions of dollars of specie in the country, and now there is eighty millions, which, in the absence of a national bank, must and will go on augmenting. But, it may be asked, why should the State banks desire the creation of a national bank, by the augmentation of its circulation to usurp the channels of circulation, that might otherwise be occupied by the State banks? Because the paper of the national banks, whilst it diminishes the specie that must be kept on hand by the State banks, enables them to make more money on a less actual specie capital. But this is not all: with the issues of paper by the national bank, added to the State bank issues, there is, till the explosion comes, a temporary rise of property; thus requiring more money in circulation to meet the augmented price of property. I have called it an augmentation of the nominal price of property, but it is in fact no increase of its real value, but a sinking, a debasement, of the value of money, arising from the augmented circulation requiring larger nominal amounts of bank paper to make purchases and conduct all transactions. No addition is made to the real wealth and real capital of the nation; the only addition is to the dangerous amount of bank paper circulation and the increase of bank dividends. Hence it is that the State banks desire a national bank, not as a regulator to contract their issues, but in order to issue more paper on a smaller specie basis, and thus enlarge their profits. Hence it is, also, that with the enlargement or contraction of the issues of the national bank, the State banks generally enlarge or contract also, the national bank paper being substituted in place of a specie basis. Hence it is, that, were a national bank created as our fiscal agent and depository, it would be the interest of all the State banks to augment its deposits by increasing the tariff, and thereby augment its own circulation, so as to diminish the demand upon them for specie to redeem their paper. It is interest, then, and not a desire to be controlled or regulated by a national bank, that urges the State banks to desire the establishment of a national institution. And had it been established, and continued to this day, we should have had in the country but twenty millions of specie only, and with a paper circulation greatly expanded, and based, not upon specie, but upon national bank paper circulation, and when the convulsion came—as come it must—the State banks could not have existed for a moment, having little or no specie.

With the general crash and universal extinction of confidence, the United States Bank must have fallen, (as its successor has lately done,) and the suffering would have been more intense, and of longer duration. If any doubt this latter statement, let them look to the period of 1818, 1819, when, on account chiefly of the enormous over-issues by the national bank first, and State banks afterwards, the crash came; the United States Bank, reduced to one dollar in specie, for every one hundred in circulation, was barely saved from suspension; but, in saving it, the State banks and people were ruined, and the most intense suffering and prostration of business prevailed during a period of three years. Now, even since the Message was published, confidence is already reviving, depreciated bank paper has risen—stocks have risen, and business is recommenced. Why this difference between the pressures of 1818, 1819, and of 1837? The eighty millions of specie, around which public confidence can rally, creates the difference, as constituting the great basis for the resumption of specie payments; whereas, had a great national bank been in existence, and substituted its paper, as it would, by expelling the precious metals, when the explosion came, the very existence of this national paper currency would, as it did in 1818 and 1819, but increase the catastrophe, by the effort, which the great national bank did then, and must ever make in such a convulsion, to save itself by calling in its issues, by curtailing and necessarily fortifying itself with specie drained

from the State banks, which fall immediately beneath the pressure. This whole pretence of regulation of the State banks by the United States Bank is founded on the following by-law:

ARTICLE 25. "The offices of discount and deposit shall at least once every week settle with the State banks for their notes received in payment of the revenue, or for the engagements of individuals to the bank, so as to prevent the balance due to the office from swelling to an inconvenient amount."

Now this regulating article could have none or at least a very trifling effect upon the distant banks, whose paper does not reach the office of discount of the Bank of the United States. And even as regards the banks affected by this article, are they by its terms or directions to settle these balances in specie? No, there is no such payment required, and in point of fact, it is rarely, if ever, made, and therefore does not compel the State banks to enlarge their specie, and check their operations; on the contrary, these balances are settled by drafts on other banks, and redrafts from them, often mere bank kites, founded on mere credit arrangements between them; or by exchange often composed of mere accommodation mercantile acceptances endorsed by the State banks; and thus, or by other credit accommodations, these balances are settled, but not a dollar of gold or silver is seen in the whole transaction. And why is it that these State banks (which Mr. Biddle tells us existed only by the forbearance of the Bank of the United States) are not pressed to pay these balances in gold and silver? The great regulator dare not do it. It would break some two or three State banks; confidence would vanish; runs would be made on many other State banks, which, having little or no specie, pay out till they break; the notes of the United States Bank are then poured in upon it for specie, and it must break all the banks, and ruin the country by pressure and curtailments, or suspend also. The whole system is founded, not on a specie basis—for it is not there, in any of the banks, State or national—but upon confidence that all these notes are convertible into specie upon demand; and whenever a convulsion comes, this confidence in all bank paper is shaken; it is presented for redemption in specie; it cannot be redeemed; the delusion vanishes, and ruin ensues. This state of things will be constantly recurring under the dominion of a national bank as well as without it. But if, when after the veto, and when this eighty millions of specie was coming into the country, the paternal recommendation of President Jackson, to abolish all bank note circulation under twenty dollars, had been heeded, and this policy adopted by the States, we should now be prosperous and happy, with at least forty millions more of gold and silver, and greatly less bank paper; and until this and other necessary reforms of banking abuses are established by the States, a resumption of specie payments will be but the signal for new and successive explosions, approaching nearer and nearer in time, and augmenting in extent and intensity of suffering. Silver will never circulate to any extent, where notes under five dollars are permitted; and gold will never circulate to any extent, where notes under twenty dollars are issued. This is taught us, not only by the soundest philosophy, amounting to absolute moral demonstration, but also by the experience of every nation of Europe and of the world. This, then, should be the commencement of the great reform, to be carried onwards and upwards, by the States, by every constitutional means, as rapidly as can be done by wise, cautious, gradual, and successive movements, uninfluenced by passion or prejudice, up to the point of absolute security. Great will be the resistance of the banks and banking power, but greater still should be the efforts of a disinterested people. The continuance of such a system renders all the toil, and labor, and products of industry perfectly useless, for, when the balance returns in our favor from abroad, even in gold and silver; it is only to find its way into the vaults of the banks, that these our paper masters may make these metals the foundation of new emissions—new over-issue and new explosions. If any can doubt this last result, let them reflect upon this, which is

a fixed law of the monetary system, that when great expansion of bank issues, whether in the paper of National or State banks, takes place here, prices of all products or articles consumed here rise also; exports remaining unaffected in price by this event. And what follows? Why the value of money being less here, and prices higher than in foreign countries, where no expansion of the currency has taken place, the course of exchange rises against us in nearly the ratio in which specie, the universal standard, will buy more in the foreign country than in our own; specie comes not here, for it is sunk here to the level of our yet convertible bank paper. But prices of almost every article being much higher here than abroad, vast importations, beyond the power of the country long to consume, necessarily ensue; our bank paper is forced upon the banks for redemption in specie, to be shipped abroad, where it is more valuable than here; and explosion soon follows. So certain and unerring is this rule, that instead of there being written on the face of all our bank notes a promise to pay in specie on demand, the promise should be, if truth were consulted, not to pay on demand in specie in the contingency above described, and shown to be inevitable.

A national bank, we have seen, can neither regulate nor control the system. It can only banish specie from this country, and make the banks weaker when the explosion comes, and in such a crisis will ever be found endeavoring to sustain itself, by crushing the State banks and the people.

It was with no ordinary pleasure, that I hailed the vote of yesterday in this body, rejecting, by more than two to one, the proposition to create any Bank of the United States. With equal pleasure I have seen the vote of the House, virtually rejecting, by a majority of thirty-three, the same proposition. I congratulate the country upon this great and glorious result. It is the triumph, we trust, the final triumph, of liberty over bank panics and bank power, and is worthy to be proclaimed from this chamber. It is the great, the real relief measure of this session; and now when the battle by the friends of a bank is fought and lost, if they, on their return to their constituents, will tell them, and tell them truly, that there is not, under any circumstances, the slightest hope of procuring the establishment of a national bank—that no panics or pressures can produce this result—that the continued agitation of this question can only prove injurious to all classes, and especially to that great interest by which chiefly this measure has been so strongly pressed upon us—they will give repose to the country, and the light of returning prosperity will soon dawn upon us.

There was one remark made yesterday by the Senator from Kentucky, which I heard with peculiar pain and mortification. He told us that the question that Bank or no Bank of the United States, was a question of union or disunion. And has it come to this, that the bank power, having failed by panics and pressures to extort a charter from an oppressed community, now openly threatens, in this chamber, the Union of the States? Are we to be told, that a bank is necessary to the existence of this Union; and that, unless a bank is chartered, the Union will be overthrown? And is it indeed a fact, that the conflict must come between the friends of a bank on one side, and the friends of the Union without a bank, on the other? Let that contest come when and where it may, I shall be found in the ranks against the bank, and in favor of the Union, supporting the flag of my country, and preferring rather to perish among its friends, than survive and conquer among its enemies. The bank power has now assumed a new and imposing attitude—the attitude of menace and defiance; proclaiming in this Senate chamber, through its able and distinguished champion, that a bank must be established, or the Union will be dissolved. No, sir, no. This Union fans the vital spark of liberty itself; it is the very breath in the nostrils of this Republic; and no bank power can shake or destroy this great confederacy; and, if it could, the argument against the creation of such a power, which could hold in its grasp the existence of the Union, would become more potent and irresistible. If the bank power be indeed equal to the

power of the Union, then to create such an institution, is confessedly to transfer to its keeping the existence of the Government itself. And here I cannot withhold the expression of my astonishment, that the Senator from Kentucky, who, whatever political errors in my humble judgment he may have committed, has always, and especially upon two critical occasions, signalized his patriotism and devotion to the Union, should now menace that Union with overthrow, if we do not take to our embrace the banking power.

[Mr. CLAY here arose and said, that the respectful manner in which his name had been introduced by the Senator from Mississippi, induced him to explain to that Senator that he had not proposed the re-establishment of the present Bank of the United States, much less had he uttered any menaces against the Union; that he had only expressed the opinion that the failure to establish a national bank, which alone could supply a sound and uniform currency, might endanger the Union.]

Mr. WALKER said: I did not state that the Senator from Kentucky had proposed the recharter of the Bank of the United States, for he had proposed generally the creation of a new national bank; nor did I intend to say, or wish to be understood as stating or believing, that the Senator from Kentucky desired a dissolution of the Union; far otherwise; but that Senator had declared that the question of establishing a national bank and a sound currency, was a question of union or disunion. This was his very language; for I was startled and astounded by the declaration, and could view it in no other light than as an open declaration by the great national banking power that it was necessary to the existence of the Union; and, consequently, could uphold or destroy it at its pleasure.

The Senator from Kentucky had informed the country, that during the period of the late administration, every thing but the mere forms of free government had been sacrificed to the Executive will. He told us that the Jackson party in Congress would not have governed the country so badly, had they not yielded their own views to Executive dictation. Among the evidences enumerated by him in proof of this position, he was pleased to allude to the case of Mr. Dallas. This gentleman, we were told, had in 1832, introduced and sustained here the bill rechartering the Bank of the United States, and after the veto went home to Philadelphia and addressed the people in favor of the veto and against the bank, and now held the appointment of Minister to Russia. I know Mr. Dallas, and every Senator knows that in his own native Pennsylvania his name is a passport for all that is honorable in principle, exalted in talent, estimable in benevolence and virtue, and elevated in moral purity of character; and I cannot but regard the assault now made upon him in his absence as the representative of our country at a far distant court, as most unjust and ungenerous. Mr. Dallas is the distinguished democratic son of an equally distinguished democratic sire, and neither of whom ever bent the knee to Executive or any other power than that of the God that made them. In his statement, the Senator from Kentucky omitted to mention, that when Mr. Dallas introduced here the bill rechartering the Bank of the United States, he stated his opposition to any movement upon the subject at that time, and referred to the instructions of the Legislature of his State in favor of the bank, as constituting the ground of his action. True it is that Mr. Dallas had been at one period favorable to the recharter of the bank, with what he deemed proper restrictions and limitations, and so was his State then, as indicated by unanimous instructions; but when the bank, after the veto, openly came into the field with a candidate, or as a candidate for the Presidency; when it entered the arena of politics as a champion, and sought, by its enormous powers, a conquest over the Government and people of the Union, Mr. Dallas abandoned it to its fate, and did address the people in opposition to its recharter; and if Mr. Dallas changed his views with regard to the bank, it was after the bank changed its position, and assumed a new and hostile attitude to the Government and to the people; and Mr. Dallas was followed in this change by the great mass of the people of Pennsylvania, and of the Union. Why,

had the Senator from Kentucky referred to Mr. Dallas's course on this subject, and his subsequent acceptance of the office he now holds from his personal and political friend, President Van Buren? Did not the Senate, at the time, hail this appointment with instantaneous and unanimous approbation? And in abandoning a most lucrative practice for this station, no sordid or sinister motives could have influenced his choice. The Senator from Kentucky should have seen, in all this, nothing which rendered Mr. Dallas's conduct a just subject for commentary or reproach upon this occasion; and permit me to say, that the Senator from Kentucky is the last man in this house, or in this country, who should allude to any change of opinion by Mr. Dallas in regard to the Bank of the United States; for had not the Senator from Kentucky changed his own views upon this subject, and once denounced the bank in his well known and eloquent address in this body as most inexpedient, most dangerous to liberty, and grossly unconstitutional. And let me further add, that, if the Senator from Kentucky thinks it a matter of reproach than any individual should have changed his views in regard to the bank, or a Bank of the United States, he will embrace in this censure nearly every eminent statesman in America, including the Senator from Kentucky himself, and nearly every member of this body. To have supported at one time the recharter, with adequate limitations, of the Bank of the United States, ere it had entered the arena of politics, and to have abandoned that support when the bank let fall the curtain which concealed its dangerous powers and alarming tendencies, is certainly not one of those extraordinary cases which could justify the Senator from Kentucky in bringing into this debate the name of Mr. Dallas. That gentleman has sustained at all times, from his youth upwards, the democratic party of his State and of the Union; and there is nothing at all remarkable in his going with that party in 1832, in support of the bank veto of ex-President Jackson.

But the Senator from Kentucky has also told us, that, after anxious consideration, he believes that the great measure of relief would be a change of rulers; and he seems especially opposed to the reelection to the Presidency of a certain incumbent, whom he describes as five feet eight. No doubt, if another gentleman of six feet one, a gentleman of captivating eloquence, and many excellent social qualities and fine genius, was substituted in place of our present Chief Magistrate, it would be a certain relief to the numerous friends of that gentleman, and a great consolation to himself.

The Senator from Kentucky strongly objects that the President has pledged the veto in certain cases. These cases are the vetoes upon abolition, and a Bank of the United States. These two promised vetoes are the great ramparts of the Constitution and of the Union. Yes, abolition and the bank are to share the same fate from the President's veto. He has so declared it, and those who heretofore most unjustly represented him to the public as concealing or withholding his opinions, now charge that he expresses his views in advance. Well, sir, the charge of non-committalism, so often and so unjustly urged against Mr. Van Buren, is thus openly abandoned—there is no non-committalism in the Message, but all is clear, bold, manly, and direct.

And now, having discussed the question of a national bank, its dangerous tendencies, and its inapplicability as a measure of relief for the present—that measure having, at all events, been voted down by a majority of more than two to one in this body—no bank charter being presented by its friends for our consideration, and no one asserting, not even the Senator from Kentucky, that we ought to degrade this Government, by placing it in the attitude of a suppliant for the aid and patronage of the Bank of the United States—the question recurs, what must be done? That something must be done as regards the receipts, safe keeping, and disbursement of the public moneys, all concede; for since the repeal of the deposit bank system by the failure of the banks to redeem their notes in specie, and pay the Government demands, a contingency upon which the express provisions of the law require that the system should cease, the whole public moneys are left to the unregulated control of the Secretary

of the Treasury. That this state of things can be permitted to continue, is denied by all. What, then, is the remedy, other than the system proposed in the bill and amendment now before us? But one other alternative is offered, and that is the currency bill, proposed as a substitute by the able, patriotic, and distinguished Senator from Virginia, (Mr. Rives.) But here permit me to remind that gentleman that his bill does not meet the case; it makes no provision for the present; it makes no provision for any definite period; it leaves a blank for some day in the year 1838, when the bill is to go into effect; and not certainly, but upon the doubtful contingency of the resumption of specie payments by the banks. Then his system is to apply to the banks resuming specie payments by some unknown day in the year 1838. To my mind the objection to the bill is decisive, that the event contemplated by the bill may never take place, and that, in the mean time, it leaves the Treasury Department and the public moneys unregulated by law, and necessarily in hopeless confusion. We must make present, substantive, certain regulations; and if it be ever proper to support the bill of the Senator from Virginia, it will be at some future period, when the banks shall have resumed and the measure can go into operation. But I have higher and still stronger objections. I am opposed to re-uniting the banks and the Government; and here I shall recur to the facts on this subject. The currency bill now introduced by the Senator from Virginia, (with the exception of one very material modification as to the banks to be included or excluded by the operation of his proviso,) is substantially the same bill which received the sanction of the great mass of the friends of the administration in this body at the last session. The bill was regarded by me, and so declared by me at the time, as supplemental in its operation to the fifth section of the deposit act of June, 1836. That section prescribed that no note of any bank issuing notes under five dollars should be received in revenue payments. The currency bill extended the exclusion to "all banks issuing bills or notes of a less denomination than twenty dollars." No one then proposed the abandonment of the banks as depositories; and I conceived that the currency bill, so long as the deposit bank system was adopted, would, if carried into operation, have the wholesome effect of excluding all bank paper of all banks issuing notes under twenty dollars from revenue payments, with the hope of enlarging greatly the specie, and diminishing the paper circulation. Indeed, I voted for an amendment to the fifth section of the deposit law of 1836, having a similar object in view, when that bill was passed, as appears by the Senate journal, as follows: "June 13, 1836.—The deposit bill being under consideration: On motion of Mr. Benton to amend the reported amendment, by inserting, at the end of the fifth section, the following: 'and, in selecting and continuing banks as depositories of public money, a preference shall be given to the banks of good credit which shall relinquish the circulation of all paper currency under twenty dollars, and which shall enter into arrangements to promote the circulation of gold.'" My vote is recorded upon the journal in favor of the amendment; but, unfortunately, it did not prevail. The currency bill I considered as aiming at the same object, and, in that view, it received my support.

The deposit banks were then proceeding in full and successful operation, were highly recommended in the President's Message, and no one proposed their abandonment at that time as depositories. But does the Senator from Virginia fail to observe that this union then existing between the deposit banks and the Government has been dissolved, and that they have all most lamentably failed, and reduced themselves and the Government to bankruptcy? It is the banks that have changed their course as fiscal agents of the Government, and not those who now oppose the re-union. And here let me ask the opponents of the administration, who so long and loudly denounced the deposit bank system, when it was successful, why have they now changed, and when the system has failed, now yield it their support and countenance? Let me also ask them another

question. The national bank project has been voted down in this body by more than two to one, and the question now is between the divorce bill, and the re-adoption of the deposit bank system without a national bank. Now these gentlemen have repeatedly told us that, without the regulation of a national bank, State banks must fail, and fail incessantly. I ask them, then, as patriots, are they prepared to surrender the destinies of their country, and all its resources, to the safe-keeping of banks which they themselves admit must and will fail, and of course reduce the Government again to bankruptcy? And is any Senator prepared to readopt this system? What assurances can he give, that before another year we may not again be called here by the same causes which have now assembled us, viz: the failure of the banks and bankruptcy of the Government? Sir, if we renew this system, instead of our issuing commissions of bankruptcy against the banks, the banks can issue a commission of bankruptcy against this Government at their pleasure, or even against their consent by a forced suspension. But what is infinitely worse, our national honor may be tarnished, and our Federal Government disgraced, whenever the Bank of England, by successive expansions of American credit to American houses, produces overtrading and overbanking here, and then, by a sudden withdrawal of that credit, causes first mercantile, and then bank failures, and thus arrests the operations of the Government.

The history of one bank panic proves this important fact. When the currency has been inflated by the banks here, and our credit pushed into England, and importations made to an extent heretofore unknown, the Bank of England interposes—it suddenly withdraws the accustomed facilities from the great American houses. The English private and joint stock banks, and the money lenders, follow in the wake, and American stocks can no longer be sold, as formerly, in the English market, or American bills discounted. The Bank of England goes on curtailing; there is a terrific fall in the price of cotton, and a pressure for money ensues in England. The letters of credit given by the English to American merchants are withdrawn, and the latter is thus deprived of the expected facilities of meeting his acceptances at maturity; one of his bills is at length protested, and the failure here of some great mercantile firm is announced to the world; another, and yet another follows; confidence vanishes; a panic ensues, credit is destroyed; the distrust becomes general; the most solvent merchants cannot negotiate even the best securities; more bills are protested; the panic goes on augmenting; there is a general fall of the prices of all property and all products; the mercantile failures become almost universal, the failure of a few firms bringing down many others, and all the endorsers for them. The banks which had discounted so many fictitious mercantile acceptances, can no longer procure payment. The suspicion extends to them; there is a run upon them for specie; it continues and increases; some one of the banks suspends specie payments; there is a run upon all, and finally all join in the general suspension. Specie rises in price, and bank notes depreciate; capital retires during the general panic; specie is hoarded, and no one will lend money to any one, except a few brokers and shavers at exorbitant and ruinous discount, and property and products can scarcely be sold at any price for cash. And now hundreds who so lately in their paper credit balloons, had been traversing both continents, the wonder and envy of the world, are seen thus suddenly to fall from the heavens, without even a parachute to bear to the earth these most unfortunate aeronauts. This is the history of a real bank panic, and it continues, till labor and its products come to the rescue, and gradually repair the injury which over-trading and over-banking had done. The banks now call in their issues, and by the ruin of thousands, are at length enabled to resume specie payment; the solvent banks and individuals are separated from the bankrupt; confidence is gradually restored; the banks begin to reissue their paper; prices rise slowly at first, but at length more rapidly; the banks, eager to increase their profits, overissue again; over-

trading ensues, till a reaction takes place as before, and the same disasters follow. Such is, and will be, the history of successive bank panics. And is the security of the people's Government to depend upon the fluctuations of such a system as this? Must the Treasury become bankrupt, and Congress be convened, whenever the banks think proper to suspend specie payments, and withhold the Government deposits? Is the credit of this Government to rise or fall with that of the banks, and the Treasury be reduced to bankruptcy, whenever the banks so determine, or rather, when the Bank of England so determines? For we have seen that this bank, by stimulating at one time the credit of the English houses and bankers connected with the American trade, and then suddenly withholding that credit, can produce extensive failures here, and the suspension of specie payments by the State institutions. And can any patriot be willing that this Government should owe its revenue, its very existence, to the Bank of England, or even to our own banks? Let commercial credit rise or fall as it may; let the banks lose or maintain their credit, this Federal Government, the only bond of our Union, should never be permitted to fail, whenever bank panics or pressures assail us. Nor should it be forgotten that the danger increases at every step of our progress—that every epileptic fit renders the banks weaker and weaker, and public confidence more tremulous, and must necessarily render these bank failures more and more frequent and extensive, until soon, under the continuance of the existing system, Government and bank failures will become as frequent as mercantile failures, and our credit will be no better than theirs. And if the danger is great in peace, how infinitely greater in war? Who can reflect with complacency, that but a year or two past we might have been engaged in a terrible conflict with one of the greatest powers of Europe, and at the same time the failure of deposit banks might have deprived this Government of the means of raising and equipping our forces, either by land or sea, till our coast was ravaged, and our cities and capital reduced to ashes. In peace we should always be prepared for war, and we can not thus be always ready, if our money is placed beyond our control, loaned out by banks that cannot refund when the Government most requires it.

But we are asked to try this experiment again, by endeavoring to confine the deposit banks, and all others whose notes shall be received in revenue payment, to the issue of no notes under twenty dollars. By striking out twenty, and inserting five dollar notes, this would be but trying again the same experiment which has already failed. The fifth section of the deposit bank law confined the issue of the notes to five dollars. It failed; and now, when we can not, by the mere incidental effect of our Treasury regulations, succeed in enforcing and maintaining the five dollar principle, how could we hope for such influence over the banks as to induce them to abandon the circulation of all notes under twenty dollars? To their masters and creators, the States, we must look for a reform of the system.

But the Senator from Kentucky tells us that the bill under consideration would increase Executive patronage. Now the bill creates no additional officers; it gives to the President no additional control over the existing officers; it merely imposes additional duties upon existing officers, requiring them not only to receive, but to keep safely, without use or loan, till the period of disbursement, the public moneys. I can see here no increase of Executive patronage. But this question must be examined by comparison with the proposed substitute, namely, a re-adoption of the deposit bank system. Now, no argument has heretofore been more strongly urged by the opponents of the administration, than the vast and increasing patronage the deposit bank system would confer upon the President of the United States. These banks were denominated pet banks, the President's banks, and again and again was it said that the late President desired to retain the surplus in these banks, (these miserable deposit banks, as they were then expressly called by the Senator from Kentucky) with a view to influence the approaching election. Nor was this argument con-

fined to this chamber; but, in the House of Representatives, at the last session, a committee was raised by the opposition to prove, among other things, the corrupt and corrupting influence of the deposit bank system, as connected with the agent of that system, and the Treasury Department. It would be really amusing to read some of the speeches of the opposition members at that period, denouncing the corrupting influences of the deposit bank system, and the vast patronage it conferred upon the Secretary of the Treasury. I have not time to read these speeches to the Senate, but, from the documents presented by this committee, I will refer to two letters by them published. The first is from the cashier of the deposit Bank of Burlington, Vermont, under date of January 25, 1836. The cashier says: "Being located in the same place where a branch of the United States Bank was established, and, as we are a deposit bank, when the branch here discontinued its operations, the public seemed to expect that we could at once afford the same facilities and accommodations that they enjoyed when the branch was doing business. There has been, on the part of our directors, a desire to meet this expectation; and the consequences has been that a very sensible change has taken place, politically, in favor of the Government; and, as it is our desire to strengthen that sentiment, we feel that it is important to afford our farmers and merchants, the coming spring, a pretty extensive accommodation, in anticipation of the wool clip."

Here the sensible political change in favor of the Government produced by this bank depository, is clearly stated, and the importance of augmenting it by enabling the bank to discount more freely on the Government deposits, is strongly urged by the cashier of the bank. I might detain the Senate for weeks by quotations from similar letters; but only make one other reference. It is to the letter of the president, directors, and cashier of the Seventh Ward Bank of New York to the Secretary of the Treasury, dated December 16, 1833, and is as follows:

"We the subscribers, officers, and directors in the Seventh Ward Bank, in the city of New York, friends of the administration, and of the revered chief at the head of the Government, do solicit a portion of the FISCAL PATRONAGE of the United States Treasury, for the Seventh Ward Bank; the terms as those most favorable to the Government."

Can any man peruse this letter without feelings of loathing and disgust; yet it is from fourteen of the most respectable bankers of our great commercial metropolis. Does it not demonstrate the dangerous tendencies and influences of this deposit bank system? an entire bank, through all its officers and directors, soliciting, "a portion of the fiscal patronage of the United States Treasury," on the grounds that they were "friends of the administration!" This report, published in March last, containing these documents, I never perused till after the close of the last session of Congress. The deposit bank system, it is well known, in Mississippi, was in its origin no favorite measure of mine; in fact, it was the first measure of our patriotic President to which I had ever expressed any dissent, and I only afterwards gave it my reluctant assent, as an alternative to what the developments of the spring of 1834 demonstrated to be a greater evil, and still more dangerous measure, the establishment of any Bank of the United States. But who can peruse these letters, and deny in the face of the American people, that this deposit bank system did enormously increase the power and fiscal patronage of the Government, and that in the hands of a corrupt Secretary, and aspiring President, it might be made a political engine of the most dangerous and alarming character? That it was not so used or attempted to be used by our venerable President, or incorruptible Secretary, is proved by the documents accompanying the reports to which I have referred; but that it was susceptible of such abuse is also as clearly demonstrated. And what is the extent of this "fiscal patronage?" Why, by the last return of the Secretary of the Treasury we see, under the last law, the number of deposit banks increased to 89, with upwards of eighty millions of capital, and discounts of notes

and bills of exchange, amounting to one hundred and thirty millions of dollars—and this immense moneyed power was subjected to the influence and control of the Secretary of the Treasury; for the whole bank correspondence will clearly demonstrate that many of these banks, from time to time, owed their very existence to the forbearance of the Secretary of the Treasury, and that often a Treasury draft or transfer warrant would have reduced them to a state of bankruptcy. True it is, that all of the deposit banks could not thus have been destroyed by the Secretary, yet the profits of all would be greatly influenced by the amount of revenue he deposited with, or withdrew from them. What, then, was this power? It was a power over eighty-nine of the strongest confederated banks in the Union, with this enormous amount of loans and capital, and with stockholders, debtors, and customers, at least one hundred thousand in number, all affected by the movements of the Secretary of the Treasury in the distribution or withdrawal of the deposits. In May last, the Secretary of the Treasury had necessarily distributed among these institutions more than thirty millions of public deposits. What a tremendous extent of power and patronage! Why, sir, it was almost the lever of Archimedes; and if this system had gone on progressing and augmenting, soon, very soon, the banks by their power must have controlled the Government, or the Government controlled the banks. And now when the President proposes to surrender all this money, and power, and patronage, to dissolve this dangerous connection between the banks and the Government, shall he be opposed in this measure by those who so lately denounced the whole deposit bank system as the very climax of political corruption? And what do we see now? Why, this career of illimitable discounts by banks on Government deposits is closed for the present, and the still more dangerous attitude is exhibited, in which it is but too probable that very many of the banks may soon be sued by the Government to recover the public moneys, or rather the States that own in whole or in part so many of these banks, and the debtors that owe them; for, as the banks can only collect their moneys by suits against their debtors, to sue the banks at present, is to sue the people. It was in view of this state of facts that I succeeded a few days since in prolonging the time given to the deposit banks to make payment to the Government, from two, five, and eight, to four, six, and nine months, being the longest extension I could obtain for them; and upon payment of the first instalment, the two last ought to be, and I hope will be, still further prolonged at the next session. But I could not but feel humiliated by the reflection that so many of my most worthy constituents—including two of our largest State institutions, and the State itself the principal proprietor of one of them—should be placed in a position in which a suit against any of them could in any event be resorted to—a position arising out of this most unholy connection between the banks and the Treasury—a connection of unmixed evils, disastrous to the banks, the States, the people, and the Government.

Well, then, may the Senator from South Carolina, (Mr. Calhoun,) who has on this floor so repeatedly opposed the augmentation of Executive power—well may he support the bill now under consideration; because it not only adds nothing to Executive patronage, but takes from it that alarming patronage and power that it could have acquired through the deposit bank system. Sir, the Senator from South Carolina is right, and I hail him back with pleasure, on this question, to the ranks of the democracy, of which he was so long the pride and ornament, when in March, 1824, I assisted in the great democratic convention of my native State in nominating him upon the Jackson ticket for the second office in the gift of the people. Sir, if he can go no further with us, let him at least aid us in breaking down this overshadowing Executive power, this dangerous and corrupting fiscal patronage, growing out of this unhallowed confederacy of bank and State, throwing aside all other considerations, and sacrificing his personal prejudices on the altar of his country's good. Sir, I have heard much about Executive patronage as lurking

in some of the features of this bill; but if it be so, it must be deeply concealed indeed, for no one has pointed out how it is accomplished. Vague and general denunciation we have indeed had, but how one iota of power or patronage will be conferred on the President by this bill, in addition to that which he already possesses, has not been designated; but were it so, the bank patronage, of which this bill deprives him, would be infinitely greater. The receivers, who are made depositories for safe-keeping only until disbursement, were already depositories until the transfer of the public moneys to the banks; and this bill only dispenses with one class of this double set of depositories, the banks. The machinery was thus made more complex and dangerous. The money collected by the Government from the people, was not loaned out to the people who paid it, but deposited with banks, to be loaned out by them to bank votaries, and to increase the dividends of a few corporated stockholders. The people were taxed for revenue, to be converted into bank capital, stimulating their over-issues, and rendering their condition more fluctuating and precarious. The fluctuation of banking business is bad enough under any circumstances. Why, then, should we augment their natural tendency to over-issue by Government deposits? Will not the banks issue enough of paper without this artificial stimulus? Why, then, should the Government inflate their issues, and drive them on more rapidly to explosion? Why not let them bank upon their own capital and their own credit, without depending upon the Government for both—for capital in Government deposits, and for credit in Government endorsement for all their notes, as receivable in revenue payments? Is it not seen that the most insolvent bank in the Union might thus be puffed by the Government into great and extensive temporary importance, and then, when the Government patronage was withdrawn, their depreciated paper fall dead and worthless in the hands of an unsuspecting community?

The President's Message is against the extension of Executive patronage. Its cardinal doctrine is this: "A limitation of the expenses of the Government to its actual wants, and of the revenue to those expenses." This, then, is the President's doctrine, openly avowed in his Message—reduce your expenses, reduce your revenues. This was the bag under which I have fought ever since entering this chamber; it is the flag under which I opposed your extravagant bills for local and sectional improvements; it is the principle I espoused at the first session of my service, contained in my resolution to reduce the revenue from the tariff and public lands to the wants of the Government. It is the great principle contained in the land bill proposed by me, reducing to settlers the price of the public lands, and confining the sales to them; it is the great principle upon which I relied for the reduction of the tariff, and especially the abolishing of the duty upon salt, that most odious duty upon light and heat, in forming salt from solar evaporation; and lastly, it is the great principle upon which, at the first as well as the last session, I opposed, in every form, the surplus distribution policy, that mother of tariffs, banks, and of the very catastrophe which now overwhelms us. Reduction of the expenses and of the revenue, economy in all public expenditures; and no "interference with the pursuits of the citizen." "No special favors to individuals or any classes of them, to create systems of agriculture, manufactures or trade." These are the doctrines of the Message, and do they enlarge Executive patronage? How is Executive patronage enlarged? It is chiefly by extending the powers of this Government, and augmenting its revenues; for every increase of the powers and revenue of the Government, is an augmentation of the power of the Executive functionary. This the message avoids; but what measures would the Senator from Kentucky give us to reduce Executive patronage? His policy would give us a quadruple alliance between the surplus, the bank, the tariff, and internal improvements, all certainly tending to, and terminating in a national debt, to create a new tariff. The tariff to regulate the whole industry of the whole people of the Union, and build up vast manufacturing

establishments by the extension and perversion of the taxing power of this Government. A great national bank, to grow rich upon the revenue deposited from the proceeds of the tariff, deriving its profits from Government moneys, and of course the ally of the administration which feeds and created it. The internal improvement policy, growing and extending with the increase of the tariff, and making roads and canals in some favored States, by taxes collected from the whole people; and lastly, to give universality to the principle, the surplus—the annual surplus for distribution, from sales, by townships and counties at an entry, to speculators in the public lands—a system calculated to debauch and corrupt the States, to break down every feeling of State independence, to feed them annually, from the public Treasury, mere stipendiaries upon our bounty; supporting even their State Governments and State officers from the revenues of this Government. And at the head of this mighty system, this consolidation of all powers in this Government, would stand the executive of those powers—the President of the United States, a MONARCH in every thing but in name. And, sir, this league of State banks, confederated by the Government, and fed by the tariff, increasing its deposits and profits, would be the next most potent ally of these systems. It would station some hundred bank fortresses throughout the States, armed and equipped by Government deposits, and extending Executive power and influence. All this President Van Buren would avoid. No, sir, no; it is not the principle or policy of this administration—Give us patronage and we will make ourselves popular.

But it has been said that this bill establishes, in fact, a Treasury bank. And why? Because, although these depositories can neither use or loan the public moneys, where disbursements are to be made at distant points, to avoid the expense and patronage arising from a new army of officers, constantly engaged in transporting the specie, drafts in payment of its dues may be drawn by the Government on these distant depositories—drafts drawn on actual deposits of gold and silver; and this is called a Treasury bank, and that too by the advocates of the deposit bank system, by which Treasury drafts, checks, and warrants upon and by the banks may be drawn upon and by the deposit banks in the transactions of the Government. It is true these drafts will constitute the best exchange in the world, and thus far operate incidentally for the great convenience and benefit of the people; but this is no objection to the system, for the Government neither loans nor discounts, but simply pays the public creditor in gold and silver, or an order upon a depository, on which he receives the specie.

But it is said this bill, separating the Government from the banks, will divorce the Government from the people. Are the banks the people? No, sir; this bill will elevate the people, and the Government of the people and of the States, above the banks, and prevent them from arresting the Government, as they now do, by withholding the public revenue. It will have a still greater tendency to elevate the people above the banks, by diminishing, by its incidental operation, the amount of bank paper, and increasing the circulation of gold and silver—for the payment of it into the Treasury will be as constantly flowing out, enriching and fertilizing the whole country.

But the Senator from Virginia (Mr. Rives) says this bill will furnish one currency for the Government, and another for the people. Is it contended that the Government should take and pay out the broken bank notes and local shin-plasters, because the people take them? No: the Senator from Virginia does not propose this, but only that we should receive the notes of banks that resume specie payments under the existing law. Now, what is that law? I find it embraced in the Senate journal under date of the 6th of April, 1836, as follows:

"The Senate resumed the consideration of the bill entitled 'An act making appropriations for the payment of the revolutionary and other pensioners of the United States, for the year 1836.'

The following amendment, proposed by Mr. BENTON, being under consideration:

SEC. —. And be it further enacted, That no bank

note of less denomination than twenty dollars shall hereafter be offered in payment in any case whatsoever in which money is to be paid by the United States or the Post Office Department; nor shall any bank note, of any denomination, be so offered, unless the same shall be payable, and paid, on demand, in gold and silver coin, at the place where issued, and which shall not be equivalent to specie at the place where offered, and convertible into gold or silver upon the spot, at the will of the holder, and without delay or loss to him."

This provision was adopted, and is the law: the vote in the Senate being ayes 22, noes 13, my own vote being recorded in its favor. Now this is the law, and the Senator from Virginia does not propose to change it. Now, are these bank notes that the Senator from Virginia would permit the Government to pay out and receive, actually "equivalent to specie, and convertible into gold or silver on the spot at the will of the holder, and without delay or loss to him?" Then the result of the law, as that Senator would have it remain, is the same in its operation in this respect as the bill now before us: gold and silver, or its full equivalent, being the effect of either system. But if this be not so, and these bank notes be in fact a baser currency than gold or silver, what right or power has this Government to force this baser currency upon the people by public disbursements, when this Government can make nothing but gold or silver a legal tender in the payment of debts? No, sir: the operation of this bill will be to improve the currency of the whole people by its incidental effects in diminishing bank paper issues, and enlarging, at least to that extent, the general circulation of gold and silver. But the deposit bank system will, indeed, force a doubtful and uncertain bank paper circulation upon the people, convertible into specie one day, and inconvertible and depreciated to-morrow.

We have been told that the terms divorce of Bank and State, as reminding the people of the divorce of Church and State, are popular catchwords. I have not used these terms, although I firmly believe that the union of Bank and State would soon prove as fatal to liberty as the union of Church and State; but, let me ask, are not the terms used upon the other side—one currency for the people, and another for the Government, and the terms separating the Government from the people, mere popular catchwords which, will not bear, as we have seen, the slightest examination. It is said this bill will destroy credit, by impairing confidence in banks. Have not we had too much confidence in banks, and have they not proved the greatest and universal destroyers of all credit and all confidence? Yes, these very banks, by their expansions, contractions, and failures, destroyed all confidence and all credit, not only in themselves, but also between man and man, and almost between nation and nation. It is the banks that render prices, confidence, and credit, fluctuating and uncertain; and, before their existence, the page of history tells that confidence and credit, between man and man, were infinitely more universal, and that protests of bills of exchange and mercantile tile failures were then almost wholly unknown. Specie was not hoarded, nor credit withheld from honest industry, but universally extended, unchecked by that overthrow of all confidence, and all credit, arising from expansions, contractions, and explosions of the bank paper system. We are told that confidence, confidence, is the magic word, and the Government has only to breathe into these banks the breath of confidence, and all will be well. Sir, if these banks, limited and restrained by the State Legislature, ought to be continued, I would rather, by the ultimate incidental operation of this bill, push a little more of their paper out of circulation, and much more specie into the vaults, than all the false and delusive confidence that could be excited by the Government's endorsement of eight hundred and twenty-three suspended State banks.

This Government's endorsement, with its mighty surplus deposited in State banks, has been the fruitful cause of nearly all our disasters, and I shall never attempt to renew them by re-adopting the system from which these evils flowed. The danger is not of our having too few banks, and too little paper, but precisely the reverse. To repress this evil tendency, should be the ultimate aim of every patriot statesman. It is too many banks, and too much paper, that has involved us in too much debt, and more banks and more bank paper would only aggravate the evils.

The State banks, so far as regards their mere discountance immediately as Government depositories, will be precisely

where they were before the removal of the deposits. And as to the exclusion of bank paper from revenue payments, it takes effect only in full on the 1st of January, 1842. The bill proceeds, as regards its operation on bank paper, by wise, salutary, cautious, and progressive steps, keeping in view the existing difficulties, and the necessity of abstaining from any measure calculated to injure or embarrass the people. The operation of this measure upon the banks, is much less than is generally supposed. It is much less than the regulating and checking power claimed for the U. States Bank; for that, if faithfully executed, would demand weekly balances in gold and silver, or its equivalent, from all the State banks, not only for "their notes received in revenue payments," but also for "their notes received for the engagements to the bank," creating thus a double check upon their issues.

I have shown that this article never was or would be faithfully executed; but the precise ultimate effect upon State banks of this measure will be this: Supposing the annual public revenues to be twenty millions of dollars, of which six millions would be the average amount in Treasury depositories received for public dues, the banks would be required to check their issues so as always to be ready to furnish six millions of specie annually for revenue payments. Now, the entire moneyed transactions of this country in a year are estimated at twelve thousand millions of dollars, so that if the demand of the Government upon the banks for six millions be the criterion, it will be equal only to less than one per cent. of the moneyed transactions of the whole country; or if twenty millions, to less than two per cent. of these transactions, leaving all this vast field of trade and business open for the action of the banks. They lose the Government deposits and Government credit, and are left to bank as they ought, on their own capital and their own credit. But what is most important in separating the banks and the Government, is the separation of money, business and politics, the fatal union of which must always be the fruitful source of panics and pressures.

Whilst, then, this measure, I sincerely believe, will have a most beneficial effect on the whole country, it is to me an inexpressible gratification, that to the sunny south it will prove a fountain of wealth and prosperity. The war of over-expanded credit upon labor and its products, aided by a great National Bank at some distant capital, or by the concentration at or near the same point of the great northern banking capital, sustained by the Government deposits and endorsements, must cease, and paper credit and the products of labor left a fair field, without artificial aid, will find labor and its products rising in the scale of importance and influence, and leading the great staple States a fair opportunity of carrying out their own exports, and introducing their own imports, and the balances in gold and silver, the real, solid, substantial business of their banks, being more safely augmented than all the ruinous aid they can ever receive from Government patronage. And now, sir, if the distinguished Senators opposed to the administration on this floor will go home to their constituents, and explain the full and precise effects of this measure, they can, in aiding the establishment of a sound credit on sound principles—aiding in inspiring a just confidence in the relief this great measure will ultimately extend to all the great interests of the country—they can have almost a moneyed millennium dawn upon the country at once. I appeal to them, then, as patriots, with hearts overflowing with sympathy for the distress of the country, as we have so repeatedly heard on this floor, to unite with us in producing this great, this glorious result; and the thanks of millions of grateful freemen will give them more real happiness, more genuine consolation, and more true and durable applause, than all the party triumphs that could adorn the proudest political conquerors. Let them imitate the noble example of the distinguished Senator and statesman from South Carolina, in laying down, in support of this bill, his personal and political prejudices, as a burnt offering upon the patriot's altar of his country's good, and for them, also, the swelling heart of a mighty nation will throb with love and gratitude. But should they esteem it their duty to determine otherwise—should their inspiring eloquence and great intellectual power be exerted in appeals to the people against this measure—should it be represented as a tropical tornado, about to sweep, in its destructive career, over all the great and cherished interests of our common country, panics and pressure may follow for a time; but soon, yes, very soon, the great principles involved in this bill must and will triumph, and it will then go forth with healing on its wings, hailed by the approving voice of the people. The measure itself will be justly viewed as a third declaration of American independence, and the day of its passage be celebrated in all time to come as a great and glorious national jubilee.

#### REMARKS OF MR. HAYNES, OF GEORGIA,

In the House of Representatives, October 3, 1837—  
On the Mississippi Election.

MR. HAYNES said that, until particular circumstances had called his attention to the subject of discussion yesterday, he had not intended to participate in it.

In proceeding to examine the claim of the sitting members from the State of Mississippi to seats in this House, two points were presented for consideration. The first and most important is, did such a vacancy exist in the representation as to authorize the Governor to issue his writ of election for filling it? and the second is, admitting such vacancy to have existed, how far is the validity of the election affected by its being limited to the present extra session of Congress by the proclamation of the Governor?

In considering the first question, the question of vacancy, and in the various definitions which honorable gentlemen had given of that term, he thought they had confined themselves to too nice and rigid a technicality. In the clause of the Consti-

tution which confers upon the Governor of a State the right, and which imposes on him the duty, to order an election to fill a vacancy in this House, no term of limitation is used restricting that right and that duty to any particular set of circumstances whatsoever. The words of the Constitution are: "When vacancies happen in the representation of a State, the Executive authority thereof shall issue writs of election to fill such vacancies." Could language be more broad than that employed by the federal convention in empowering the Governor of a State to fill vacancies in this House? It certainly could not. But in arriving at a conclusion upon the subject of vacancy or no vacancy, it appeared to him that gentlemen had carried to the consideration of the causes which might produce such vacancy, the same narrow and erroneous notions which had governed their interpretation of the term vacancy itself. They had confined those causes exclusively to the act of the individual incumbent, or the providence of God acting upon him, when it should have been equally applied to those whose duty it should be to see that no vacancy should be suffered to exist without having it immediately filled.

To enable us to arrive at a just conclusion of what was meant by the federal convention in conferring upon the Governor of a State the power of causing vacancies in this House to be filled, it is necessary to inquire into the motives of that body in organizing the Congress of the United States. And what was that motive? In announcing that motive, he would place himself upon ground which he was very sure no gentleman would contravert, that in creating the House of Representatives, as well as the Senate, it was the purpose of the convention, in each case, to create a perpetual office. That this was the office, is the necessary consequence of their high purpose to create a perpetual Government. They gave to the Senators the term of six, and to the Representatives the term of two years. But as a consequence, too obvious and inevitable to be contested, of creating a perpetual office to carry on a perpetual Government, the succession must also be perpetual. In proof of such intention, various considerations of a character too irresistible to be denied, may be presented to the consideration of the House. In setting the new system in motion, its operation commenced on the 4th of March, 1789; thus fixing the time from which the constitutional term of the members of the Senate and House of Representatives should be computed. All the elections to Congress were completed in anticipation of it; and on that day, if he was not greatly mistaken, was the first session of the First Congress commenced, thus fixing the starting point for calculating the commencement of every successive term of service in this House.

In ascertaining the intention of the parties to a contract, whether public or private, we might derive instruction from a reference to their practice under it. There were thirteen States concerned in forming the Federal Constitution, seven of which, together with two others since formed of portions of them, Maine, Massachusetts, Vermont, New York, New Jersey, Pennsylvania, Delaware, South Carolina, and Georgia, now keep up a perpetual succession in this House, sending here one hundred and eighteen out of the one hundred and seventy members who represent the old thirteen States. The intention to preserve the perpetual succession already adverted to, is as plainly indicated in the power conferred upon the Governor of a State to fill vacancies, and that reserved to Congress to legislate in default of State legislation, as it well could have been, so far from there being such repugnance between them as gentlemen have contended for.

The language of the Constitution is, "the times, places, and manner of holding elections of Senators and Representatives, shall be prescribed in each State, by the legislature thereof; but the Congress may at any time, by law, make or alter such regulations, except as to the places of choosing Senators." For what purpose could the power be reserved to Congress over time and manner of choosing Senators, and time, manner and place of choosing Representatives, and the power to fill vacancies conferred on the Governors of the States,

unless it was for the purpose of keeping those offices constantly filled? It would seem to be impossible to forego the conclusion that this was the purpose of the convention, and no other. In considering this point, gentlemen seemed to him to have erred in taking it for granted that Congress and the States had done every thing required of them by the Constitution, when there had, according to his view of the subject, been a glaring omission by both, in all cases in which the election of Representatives in Congress has been postponed beyond the day on which the constitutional term commences biennially, counting from the 4th day of March, 1789. He therefore came to the conclusion, which he did not believe a proper examination of the subject could resist, that a perpetual office having been created, perpetual succession must follow as an inevitable consequence; and whenever such perpetual succession is broken, either by the act of the incumbent, or the constituent body entitled to fill it, a vacancy existed in the contemplation of the Constitution, which it is the right, and not only the right, but the duty, of the Governor to cause to be filled, by issuing his writ of election.

But to show the mischievous consequences of the opposite doctrine, it would be sufficient to state, that there was an actual House of Representatives in existence, on the 4th of March last, by the previous election of more than one hundred and forty members, making a constitutional quorum for the transaction of business. Suppose some great national contingency had then made it the duty of the President to convene Congress at the earliest practicable period? There was a constitutional quorum for the transaction of business in existence; and no one can deny the constitutional power of the Executive, under the contingency supposed, to call them together. But although a quorum might have been so convened, and might constitutionally have proceeded to transact the public business, a majority of the States would have remained unrepresented for months, unless their respective Governors had issued writs of election, according to the plain intent and meaning of the clause of the Constitution requiring them to issue writs of election for filling vacancies in this body.

But there is another view of the subject which bears upon this question. It has been contended, that as the States are only required to elect representatives once in two years, the time of election is, with them, wholly a matter of discretion. But this is certainly an erroneous view of the subject, as that discretion was plainly intended to be limited by the necessity of the case; the necessity of keeping a perpetual succession unbroken and entire. By the Constitution, no day was fixed for commencing the operations of the new Government. That was settled by an ordinance of the Congress which ceased to exist the moment the Federal Constitution went into operation; and the 4th day of March, 1789, was the day appointed by them. As the Constitution fixed the representative term at two years, and as that term was to date its commencement at the 4th of March, the elections in the several States were intended to conform to it. If this principle should not govern, and a majority of the States postpone, as they now postpone, their elections beyond the day on which the term commences, their representatives are not elected for the term prescribed by the Constitution; and hence we arrive at the result, that in all such cases there is a vacancy, and such a vacancy as is contemplated by the Constitution in the clause empowering and requiring their Governors to fill vacancies. If, then, by the negligence of those States and of Congress, the perpetuity of the succession has been broken, how can that deprive a Governor of his constitutional right, or excuse him from his high constitutional obligation, to see that the vacancy shall be filled? There is certainly no conflict between the rights of the States or of Congress on the one hand, and the Governor on the other, under this view of the subject. It was made the duty of Legislatures of the States, and in default of them, of Congress, to keep up a perpetual succession in the representative body; and in the failure of either to do so, the right and the duty of the Governor of a State requires of him to supply the omission. Nor is this view derogatory to the rights of the people,

but in support and affirmance of them. In the case already supposed, or a convention of Congress at the commencement of the constitutional term, according to the doctrine advanced by those who oppose the regularity of the Mississippi election on the ground that there was no vacancy, a majority of the States, under their present election laws, might remain unrepresented for months, and their constituency unheard in this body. But, according to the view presented by him, every State in the Union would be represented with no more delay than might be necessary for their Governor to convene the electors by his proclamation. The conclusion of his argument was, that as the representative office is perpetual, and as that carries with it perpetual succession, if the State Legislature shall so leave it that on the fourth of March, corresponding with the biennial commencement of the representative term in this House, any State shall be unrepresented, a vacancy has happened, on which arises the power and the obligation of the Governor to cause it to be filled. He said he was aware that this might be considered a novel doctrine; but it was the legitimate consequence of his original proposition, the *perpetuity of the representative office*, and its necessary result of a *perpetual succession*; and he had already shown that the people were deeply interested in the establishment of the doctrine. If, then, his premises and conclusion were legitimate, there was a vacancy in the representation of the State of Mississippi, requiring of the Governor to issue his writ of election for filling it; that such writ had been issued; the people had assembled at the places, and held the election in the manner required, and as a consequence, the honorable gentlemen claiming seats in this House as representatives from that State, are as clearly entitled to them as any members belonging to it. In regard to the second point in the case, the limitation attempted to be imposed by the Governor upon the term for which members were to be elected, it seemed to him to be waste of words to discuss it. There was a vacancy, and a vacancy running to the close of the Congressional term. The Governor was not only authorized, but required to issue his writ of election to fill it. He did issue that writ, and because of the attempt to limit the term to the present session, will any one seriously urge that the whole proceeding is vitiated by it?

For whose benefit was that election ordered to take place? For the people of Mississippi. By whom was it conducted? By the people who were interested in it. And so far as we are informed, the whole canvass was conducted with a perfect understanding, that the election would cover the remainder of the term of the twenty-fifth Congress. And more, the canvass was animated, the election was full, and decided by a large majority. Who then will have the hardihood to say, because the Governor in performing his constitutional duty of ordering an election to fill a vacancy, attempted to limit and control the duration of that vacancy, that the full and free expression of the public will of the State of Mississippi shall pass unregarded in this House? For his own part, in every question involving the rights of the people, he should always be found in support of those rights to the best of his ability.

#### REMARKS OF MR. PARMENTER, OF MASSACHUSETTS,

*In the House of Representatives, Wednesday, Oct. 4, 1837—On the bill to authorize the issuing of Treasury notes.*

MR. SPEAKER: I have listened with great interest to the observations of my honorable colleague who has just taken his seat (Mr. Fletcher) as I always have elsewhere, when I have had an opportunity, from my great respect for his high moral worth and distinguished talents, but entertaining somewhat different views from those presented by him and other gentlemen on the same side of the question, I will with your leave state the grounds upon which I dissent.

My colleague assumes two conditions which he considers as indispensable prerequisites to the propriety of supporting the bill under consideration,

which are: first, that the Treasury is in need of the money; second, that the proposed mode is the best one for raising the money. On the importance of establishing these points, I agree with him, and shall endeavor to show why I consider the present bill necessary, and the best calculated for the convenience both of the Government and the people.

It has been remarked by several gentlemen during the debate, but not by my colleague, that they did not clearly comprehend the report of the Secretary of the Treasury, and they have avowed their inability to come to any definite conclusion, as to the real state of the Treasury. This opinion was expressed and urged, immediately upon the report being laid upon our table, by members usually ardent in their political predilections and prejudices, quite as soon as it could be expected that so voluminous a document, embracing views of finance and public policy, as well as various statistics, could be examined.

Having long entertained the most favorable impressions of the superior talents of the Secretary of the Treasury, whose ability and assiduity in the duties of his high stations, have been almost proverbial in the nation for many years, I read his report with great attention, and discovered, as I thought, a plain, lucid, and perspicuous view of the finances of the country. I put down, therefore, in my own mind, the attacks upon him as the effusion of political opposition, without any more meaning than the general dissatisfaction of those who disagree with the present administration. I am the more confirmed in this impression, because, since the first few days of this session, after an opportunity of full examination, all this hostility to the report of the Secretary has ceased, and it appears to me to be generally considered a correct, able, and interesting exposition of the finances and financial concerns of the country. I find by this report that there will be, in all probability, at the end of the year 1837, if there should be no deductions from the outstanding appropriations, a deficit of about twenty-two millions of dollars; but if, as the Secretary of the Treasury supposes, fifteen millions of dollars of unexpended appropriations may pass over to the year 1838, then there would be an absolute deficit of seven millions of dollars, to meet which, and for contingencies, and for the purpose of having a balance in the Treasury, on the first of January, 1838, this bill proposes an authority to the Treasury Department to issue ten millions of dollars of Treasury notes. This amount would have been nineteen or twenty millions of dollars, if the payment of the fourth instalment of the surplus revenue had not been postponed to January 1st, 1839; and it will be seen by the conditions of the postponement bill, that the Treasury is entirely cut off from getting back any of the twenty-seven millions distributed among the States, which by the original law the Secretary would have had a right to call for.

Now, sir, my respected colleague would appropriate the nine and a half millions in deposit banks, and four and a half millions standing to the credit of disbursing officers in said banks, or as much as may be necessary to meet the wants of the Treasury. If this could be done there would, of course, be no need of issuing Treasury notes. But have we not a bill now before us, giving the deposit banks from four to nine months for the payment to the Government of the balances due? Is it not agreed, on all hands, that the security of the debt, the welfare of the people of the States interested, require an accommodation? Has not one of the Representatives of a State in which two of the deposit banks, having a large balance, are located, said on this floor that it would be impossible for the banks to pay within the time proposed by the bill now before us, and that he should ask for more time? Is there the slightest doubt in this House that the bill from the other branch, now before us, must pass, or, if amended, by showing greater indulgence? This resource will then fail. As to the amount of four and a half millions in the hands of disbursing officers, there must always remain from three to five millions of dollars in their hands. All experience has shown such amount to be necessary. These sums are drawn to pay contracts actually fulfilled, and always be-

long to the creditors of the Government, and are, of course, entirely useless for a supply to the Treasury. Unless the operations of Government totally stop, it must be obvious that there always will be some few millions of dollars in the hands of the disbursing officers of army, navy, Indian department and other objects of expenditure, awaiting the call of creditors of the Government. He also thinks that it would be proper to sell the bonds of the United States Bank of Pennsylvania, which are held by the Treasury Department. It appears to me that there are to this proposition several objections. I am not certain that it would be exactly proper to put those bonds into market. It might, by possibility, have an injurious bearing upon the institution. If so, it ought not to be done, as an act of justice. It is not like an ordinary mercantile transaction. The directors of the bank undoubtedly had some object in view, in fixing annual payments; and I hope the Government will never give a cause of complaint to this institution, of the slightest character. Where will these bonds be sold? My own opinion is, that the bank would purchase its own bonds. It appears to me it would be unwilling to multiply and vary its obligations in the stock market. It has already post notes on the London Exchange; and it appears to me, it would be unwilling to have these bonds there. If, then, these bonds should now go into the market, and the bank should think proper to purchase them, the debtors of the bank must necessarily be called upon, and thus distress the commercial and trading community to that amount. If sold in Europe, London most probably, it would, to the amount of six millions of dollars, afford facilities for again over-trading, instead of being employed to relieve our own country. I do not believe that at this time there is a very large unpaid amount of good debts from American to English merchants. The fall in exchange and specie shows that it is very much diminished, and it appears to me, we ought to avoid any course which would tempt to excesses in our foreign importations in the slightest degree. But the objection of substituting the sale of these bonds for the Treasury notes is still greater in another view. It is an object to make this issue of Treasury notes incidentally beneficial to the community, by furnishing a means of remittance and one of a very valuable character. The Treasury notes would flow from the disbursing points to the communities who may want them for remittances. The West and South would receive them in payment of debts, or for the sale of their cotton and other great products, as well as for lands held by individuals and companies. They would find their way back to the Atlantic cities, forming a highly valuable circulating medium perhaps until the time arrives, which cannot be very far distant, of a resumption by the local banks of specie payments.

It has been argued, that it would be preferable to authorize a loan in the form of certificates of stock. This appears to be liable to exceedingly strong objections as any which would apply to the sale of the bonds of the United States Bank. So far as it relates to the incidental benefit to the commercial community, it would be a sluggish operation. The stock would be all taken in the large cities, and the proceeds pass directly to the Treasury, where it would remain until called for by the Government creditors, and perform none of the offices of a means of remittance. But my colleague and other gentlemen say, you do not need Treasury notes, because you can continue to make your Treasury drafts, and they will hereafter answer as they have heretofore. If these drafts were, in every particular, as beneficial as Treasury notes, they would be objectionable, inasmuch as they go to the world with the stamp of dishonor upon their face; they carry with them, as they pass from hand to hand, an indelible record of the discredit of the bank upon which they are made, and are therefore to be shunned and discarded as soon as possible, as offensive to the merchant who has a just sense of the importance of credit and punctuality. They are, moreover, inconvenient in amount, and unsuited to the habits and usages of the people.

My colleague objects to the bill, because no rate

of interest is specified; and he cannot give it his vote until he knows precisely what the obligations of the Government are to be. It appears to me, that this is one of the most valuable provisions of the bill, because the rate of interest can be so fixed all the way from a very low rate to the maximum of six per cent. and that the Secretary of the Treasury will put it at the most advantageous rate for the Government and for the community. And, it appears to me, the rule would be a very plain one, to place the rate so that they would not be hoarded by the capitalist, or fall below par in the market, however small the demand for Government dues. And although, as has been strongly urged, there is very small probability that, under almost any circumstances, they would be below par, yet it is better, in my judgment, to leave the whole matter to the discretion of the Secretary of the Treasury, who will understand best what the wants of the case may require.

It is objected, that the issue of Treasury notes is unconstitutional; that they are bills of credit, and prohibited by the Constitution of the United States; that they were never issued in but one instance, and that during the war with Great Britain, when it was difficult or almost impossible to obtain a loan. If it were unconstitutional to issue Treasury notes, the fact that we were at war, and it was difficult to obtain a loan in any other manner, would not have made it constitutional. I come to the conclusion myself, that Treasury notes were issued, at that time, for the same reason as now, because they are the most convenient to the Government and to the people.

I have not entertained the opinion, Mr. Speaker, that the present embarrassments of this nation have arisen from what may be properly called general distress. I believe, and think I shall be sustained in the opinion by the sentiments of many men of business in the commercial cities, that the stoppage of specie payments was owing to the alarm excited in the community, which caused a rush upon the banks for the precious metals, and thereby materially lessened their means, and by the imprudence and extended speculation into which the debtors of these institutions plunged. Had it not been for these circumstances, the suspension would not have taken place; and but for them, before this time, specie payments would have been resumed. It is true that the consternation was universal—the panic was overwhelming; but that the evil was not deep rooted, and that there was not in reality a scarcity of the precious metals in the commercial world, is shown by various facts. Contrary to the expectation of most persons in this country, the Bank of England continued, and still continues, specie payments, and money is abundant, and there is no want of coin and bullion for all purposes. The speculations and investments in lands, amounting to many millions of dollars; engagements in novel manufacturing concerns; building of railroads in all parts of the country; and establishments of every variety which ingenuity could invent—a few of them useful and profitable, but many, very many, most sorrowfully ruinous in their results—all tended to produce the mischief. The ordinary means of the banks were probably equal to their liabilities; but the inability of their debtors, in consequence of their imprudent and indiscreet course, crippled these institutions, and brought on the calamity of a suspension of specie payments—an evil which, while it continues, will blight every effort of enterprise and industry.

The amount of specie within the control of the banks of the country was equal to their wants, greater than it has been in many instances and at many times, but unsafe and improvident men obtained access to their resources; not that I mean to censure the managers of the moneyed institutions more than I would individuals, and copartnerships, and corporations, for every body was infected with the mania of speculation: the whole atmosphere of the business world was filled with it. It drove people to the pine forests of Maine, to the town sites on the Gulf of Mexico, to every stream and river through the whole Republic, to the new cities of the West, and to engagements in manufactures, mechanic arts, and discoveries of all kinds, in most instances lamentably unsuccessful.

My colleague objects that the bill is deceptive; that under the guise of authorizing an issue of Treasury notes, it effects a loan. It undoubtedly is an use of the credit of the country, to obtain means of extinguishing some of its liabilities, and in that sense is a loan. But there is no deception about it. Notes payable are never issued in money transactions, excepting for the purpose of substituting credit for money, or promising it, and therefore always directly or indirectly operate as a negotiation for a loan. What difference does it make as to the matter of borrowing, whether the money be obtained by one person of a third, and paid to a second one, or the note be given directly to the second person? In both cases, it is obtaining means on loan; in one instance directly, in the other indirectly. Banks borrow continually, by their bills or notes, money of the community. Now, sir, as Treasury notes can be issued for no other purpose than to procure money or means on the credit of the United States, the bill cannot be deceptive, because, as it can have no other object, every body understands it.

I am in favor of the bill as it now stands, without any of the proposed amendments, particularly those which propose the sale of the bonds of the United States Bank of Pennsylvania, and to the striking out the provision, authorizing the Secretary to pay interest, when, in his opinion, the good of the country may require it. It certainly appears to me, that there can be no possible objection to that provision. It will guard against the possibility, although I admit it is not a strong probability, that they will be at any considerable discount, under ordinary circumstances. But we all know the nice calculations of dealers in money; and I should be exceedingly sorry to hear the cry which has so frequently sounded in our ears of depreciated currency, applied to any of the issues of the Government.

I have confined myself strictly to the consideration of the bill now before the House, which appears to me to be so absolutely necessary, that it is almost a matter of surprise that so much time should have been employed in discussing it. It is called for by the Government, to enable them to comply with the requisitions of the public, and it is required by the people, as being the best mode by which their interests can be subverted.

The other bills before the house for deferring the payment of rebonds due from merchants and granting additional credit, as well as giving a credit on cash duties, it is universally conceded will pass, and I trust with few dissenting voices. For one, I feel strongly disposed to afford every facility and practice every forbearance, which the most liberal legislation will warrant; and it would seem that the administration, whose friends are so generally in favor of this forbearing course, and who are so willing to grant every indulgence to those who have the funds of the Government directly in their possession, or indirectly by want of punctuality in their own obligations and liabilities, should not be unnecessarily embarrassed in their measures, but should be met in a kind spirit by their opponents.

I have no fears in common with some gentlemen, that the issue of a limited amount of Treasury notes, for the present relief of the immediate wants of the Treasury, involves any objectionable principle. No apprehension was felt when the issue to a very great amount was made during the war with England, and it appears to me that the imagination must be exceedingly active which can discover danger in this simple process of anticipating the future means of the Treasury by a convenient and beneficial financial operation.

#### REMARKS OF MR. BOON, OF INDIANA,

In House of Representatives, September 6, 1837.—On Mr. Boon's resolution that in the election of Printer to the House, the vote of the members shall be given *via voce*.

MR. BOON said that he had no apology to make to the gentleman from Georgia, (Mr. Dawson,) or to the House, for having introduced a proposition.

25th Cong....1st Sess.

Postponement of fourth instalment—Mr. Holsey.

H. of Reps.

that in the election of public printer to the House of Representatives, the votes of the members shall be given *viva voce*. In this simple proposition, no charge, either directly or indirectly, was made touching the motives of any gentleman. Mr. B. said the proposition he had submitted to the House was not a novel one. It was in strict accordance with the true principles of republicanism; and he wished to know the gentleman, if such a one there should be in this House, who stood opposed to a full exposition of all his public acts being made known to his immediate constituents and the country at large. Mr. B. was not only in favor of the *viva voce* principle being applied in the election of public printer, but like the gentleman from Virginia (Mr. Patton) he was in favor of extending the same principle in the election of all the officers of the House. These were questions on which the votes of each member should be given in such a manner as to leave no doubt as to how, or for whom, he did vote.

The people are ever jealous of their rights, and, who, I would ask, will deny their right to know how their representatives vote on all questions, as well in the election of public printer, and all other officers of the House of Representatives, as on other questions connected with their public duties. Why should a part of the public acts of the people's representatives be conducted in a public manner, and part thereof be conducted in a secret manner? Such a practice Mr. B. considered anti-republican, and at variance with professions made by gentlemen on the floor of the House of Representatives, who are in the habit of declaiming in favor of the rights of their constituents. Mr. B. said that he had not risen to make a speech; his only object was briefly to express, in a very words, his preference in favor of the proposition which he had submitted to the House, and being desirous to know who, and how many gentlemen were opposed to the resolution by him submitted, he would conclude by asking that the question be taken by ayes and nays.

#### REMARKS OF MR. HOLSEY, OF GEORGIA,

*In the House of Representatives, Friday, September 22, 1837—On the bill to postpone the fourth instalment of deposit with the States—*

Mr. HOLSEY of Georgia said he was in favor of the bill under discussion, so far as it proposed to withhold the fourth instalment from the States. A crisis has arrived (said Mr. H.) when this Government has need of all its treasure. It has no longer the ability to dispense bounty to the States in the form of deposit of a surplus fund. It has no surplus. Nay, more, sir, if every dollar of the fourth instalment be withheld; if it were all available in the hands of the Secretary of the Treasury, it would not enable him to defray the necessary expenditures of the current year, and provide a proper fund for the use of the Mint and contingent calls upon the Treasury. But one year since, sir, the coffers of this Government groaned beneath their superabundance, and your councils were perplexed as to its disposition. The stream of your revenues, instead of being confined within the channels marked out by the hand of the Constitution, has overflowed its banks with a flood that could not be drained by the widest and most extravagant appropriation. It was diverted to the States, to be again returned, when demanded by the exigencies of the nation. But, before the last portion of the surplus has reached its destination, the fountains of your prosperity have been dried up; your accustomed supplies are cut off; the wheels of the Government revolve slowly on their axles, and unless that portion of the revenue originally designed for the States be now brought to bear upon them, will soon come to a pause—a pause, Mr. Chairman, which no man who loves his country can for a moment contemplate, and which must inevitably happen, but for the adoption of the measure now under consideration.

Sir, we have strong appeals to the faith of this Government to fulfil the expectations of the States, founded upon the deposit act of 1836. I deny the

obligation. I can safely appeal to the virtue and intelligence of the people, and ask whether they desire for State purposes the money collected by this Government, when it is necessary for Federal purposes? Is the fund necessary to meet the wants of the Government? This is the question. Let us refer to the report of the Secretary. This report has been condemned by the opponents of the bill as mysterious and incomprehensible. Be this as it may as to the details, the aggregate of means and liabilities is set down so plainly that "he who runs may read."

The amount of means in the Treasury for the current year, in round numbers, is twenty-six millions of dollars, exclusive of the nine millions due under the fourth instalment, and which is not a part of the income of the present year. The amount of expenditure, by virtue of appropriations, is thirty-two millions, leaving a balance of six millions against the Treasury, or a deficit to that amount. This debt of six millions cannot be paid except by a resort to the fourth instalment, or to those transfers which have already been made with the States. Shall we give them the fourth instalment in the left hand, and draw from them with the right, under the provisions of the deposit act? It is more easy to deposit money with the States than to collect it from them. Sir, the process of collection will be fraught with delays, dangers, collisions between the two Governments, which will leave the Treasury totally unable to pay the appropriations. It is already announced in this hall that the deposits with the States are a gift to them. Many of the States have made permanent investments of this fund. Some have deposited it with banks, to be loaned to the people. All will feel reluctant to return it. If we might judge from the tone of debate, some of the States would, as their representatives have done, attempt to "argue the seal from the bond," and prove the loan to be a gift. The difficulty is inherent in the nature of demands upon political bodies; the same which existed under the Confederation. Some will refuse to pay under colorable pretenses, and none will pay without all will pay. We must, therefore, discard the idea of drawing upon the States for the funds already on deposit with them. The only expedient left is to arrest the nine millions due under the last instalment. This amount in the deposit banks will not, in all probability, cancel the debt of six millions. Indeed, the general and signal failure of those institutions to comply with their engagements renders it doubtful whether any considerable portion of it can be collected. But as far as this fund can go to defray the expenses of the Government, it should go. It is not legitimate to divert it to any other object. But six millions of excess of expenditure is a minimum point; one to which all will, and, I believe, have agreed.

But the honor of our arms must be sustained in Florida, and its bleeding inhabitants protected against their savage enemies. One million and a half of dollars is estimated for this purpose during the present year. The present session of Congress will cost half a million. These two amounts are not put down in the report, and increase the excess to eight millions. If to this you add four millions at the end of the year, for the use of the Mint, and contingent calls upon the Treasury, you have an excess of expenditure and liabilities amounting to twelve millions of dollars. Can any gentleman equalize the income and expenditure of the present year? Will he strike a balance between the means and liabilities of the Treasury? The gentleman from Tennessee (Mr. Bell) has indeed discovered a new and singular method of replenishing an exhausted Treasury—by considering the money in the hands of disbursing officers (five millions) as an increase of the means of the Treasury beyond the items already enumerated in the Secretary's report. I am surprised that a gentleman of his experience in financial matters should fall into such an error. At the commencement of the year, the Secretary, being required to calculate the amount in the Treasury, found forty-two millions remaining after reducing the outstanding appropriations to sixteen millions. The money then in the hands of disbursing officers was then justly considered as money paid out of the Treasury, and reduced the outstanding appropriations precisely that amount,

which otherwise would have been twenty-one millions, supposing five millions to have been in their hands. Of the forty-two millions, there are nine millions remaining for deposit with the States, five millions reserved, one million six hundred and seventy thousand received from banks, and twenty millions from lands and customs.

The account will then stand thus:

Means—		
Remainder of the surplus	-	\$9,000,000
Reserved for use of Mint, and on 1st		
January last	-	5,000,000
Returned from banks	-	1,670,000
From lands and customs	-	20,000,000

Making an aggregate of	-	\$35,670,000
Liabilities—		
Fourth instalment to the States	-	9,000,000
Appropriations for 1837	-	32,733,000

Making an aggregate of - \$41,733,000

The excess in round numbers is six millions of dollars. Now, the argument of the gentleman from Tennessee would add the five millions in the hands of disbursing officers to the means of the Treasury already enumerated, and increase them to forty millions. But all the possible sources of revenue have already been placed in the account, and the money in the hands of disbursing officers, instead of swelling the amount, only shows where it is. As well might the gentleman add to the means of the Treasury the funds in the hands of collectors, receivers, and the officers of the Mint, and the whole amount to the credit of the Treasurer in the deposit banks. The truth is, that the aggregate means of the Treasury is one thing, and the manner in which they are kept or disbursed is another. The one gives you the whole amount of revenue; the other tells how it is disposed. But the gentleman from Tennessee complains of the extravagant expenditure of thirty-two millions for the present year. He has been requested by the gentleman from South Carolina (Mr. Pickens) to bring in his bill to repeal the objectionable items. The request is reasonable. Does the gentleman from Tennessee expect, by a general denunciation of those appropriations, to alter the data upon which the income and expenditure of the Government are founded, and thereby to lessen the acknowledged deficit of six millions? The Secretary of the Treasury, in obedience to a call from the House, has already stated that an exact and scrupulous investigation has been made in relation to such appropriations, the execution of which might, consistently with the public interests, be deferred until the ensuing year, and that the amount thus deferred is fifteen or sixteen millions of dollars, leaving the necessary and indispensable expenditures of the present year, as stated in his report, thirty-two millions, and the outstanding appropriations sixteen millions.

It has already been shown by the gentleman from North Carolina (Mr. McKay) that the increased amount of expenditure for the present year is owing mainly to extraordinary, but necessary, objects of appropriation: such as the Florida war, the increase of the pension list, and the execution of treaties with various tribes of Indians, among which is a treaty with the Cherokees which will probably demand, within the present year, one million of dollars. The gentleman from Pennsylvania (Mr. Eiddle) has taken occasion to strike this item from the list, upon the ground that it was appropriated for the last, not the present year. Why, sir, does not that gentleman perceive that it matters not when the appropriation was made, so far as the argument is concerned. It is not the time of appropriation, but of expenditure. The appropriations may have been made one, two, or four years back; but if their execution fall upon the present year, they are properly chargeable to it. The gentleman from Tennessee, who, on this occasion, stands forth the advocate of retrenchment, will not reduce even the basis of calculation, until he can lay his finger upon the items, and embody them in the form of a bill, for their repeal. Vague surmises of prodigality in an administration are at all times insufficient as a basis of legislative action: they are peculiarly so after "an exact and scrupulous investigation" into objects that may be dispensed with by the officer charged with the inquiry. Much, then,

25th Cong...1st Sess.

Issue of Treasury Notes—Mr. Bouldin.

H. of Reps.

as the gentleman from Tennessee has held out reinforcement as an argument to show the ability of the Government to meet its necessary expenditures, and, consequently, to defeat the passage of this bill, I am persuaded that the lines of a strong necessity are drawn around the thirty-two millions assigned for the present year, and that reform will be driven to the field of outstanding appropriations to fight her battles. In such a field, neither her alarms, her victorious shouts, nor her dying groans, will affect the exigencies of the present moment. They meet us every where, in a form that none can palliate or deny; and it is our duty to the Constitution and the country to meet them by a prompt application of the revenues yet in our hands. But, Mr. Chairman, it has again and again been reiterated in debate, by gentlemen who have opposed this bill, that the deposit act of June, 1836, was a compact with the States which this Government is bound to fulfil. Although I repudiate the doctrine of legislative contracts, except in cases where it is expressly so stipulated on the face of the act itself, or vests the rights of property by grant, yet I am willing, for the sake of the argument, to consider it a compact. I adopt the fundamental rule insisted upon by all who have argued this question—the intention of the contracting parties. But I insist that the act of June was founded upon the idea of a surplus beyond the wants of the Government. The Congress which passed the act, intended only to deposit a surplus revenue. The States intended to receive it only as a surplus. This feature is stamped on the act by its history—by the declaration of many of those who passed it, often repeated on this floor. Sir, believe me, the American people consider it in no other light; not as a specific amount, regardless of the wants of the Treasury, but simply as a transfer of the public treasure from the banks to the States, as being safer depositories of so large an amount of the public money. Contracts are made in reference to the *existing state of things*. That state of things, in this instance, is the existence of a surplus in the Treasury during the whole time of the execution of the act itself. But, sir, the surplus is gone, and the obligation to deposit must go with it. There is no proposition more fixed than that the revenue of this Government is first to be applied to its ordinary operations. It was collected for this purpose; and we are forbidden to make any other disposition of it whilst the Treasury is unable to meet the demands created upon it by law. Other gentlemen have varied the form of the argument. It is said the deposit act was a promise given and accepted. I grant it. But not unconditionally given or accepted. It has, at all times, been subject to be defeated by the contingency which has already happened—of a deficiency of the revenue to meet the wants of the Government. The gentleman from Ohio (Mr. Loomis) demands, for his State, payment of the fourth instalment, in order that she may carry out her system of policy in regard to education. He requires the money of the people, raised for the use of this Government, to be paid to his State for the purposes of education. He expects it under the promise. Suppose we give it to him. What shall we do to defray the current expenses of this Government? We are told by others to issue Treasury notes. These notes must be paid. And by whom, sir? The burden must fall most heavily upon that section which pays the most taxes. And that is precisely the section, Mr. Chairman, whose interests I am sent here to defend. It is no less than a proposition to tax the cotton fields and sugar plantations of the South, two-thirds of the amount of the portion of Ohio in the fourth instalment, to carry out her system of policy. Sir, the proposition is not only at war with the Constitution, which forbids you to tax the people to raise money to deposit or distribute among the States, but it is odious for its inequality. It is one to which I can not, and will not, accede.

But, sir, another doctrine more indefensible than all others, set up in relation to the surplus revenue, is, that the money already on deposit with the States is a gift to the States. This I understand to be the position assumed by the gentleman from Kentucky. (Mr. Underwood.)

[Here Mr. UNDERWOOD said that he had re-

marked that although the States did not, or could not, have an absolute title to the fourth instalment, yet they had an equitable title to it.]

The gentleman's statement corresponds with my recollection. The argument is still the same. Kentucky holds, in common with the other States, the bond of this Government, which is the act of 1836, to pay the fourth instalment. When it is redeemed by payment, the title of the States to the money paid is complete. Sir, this is in effect an avowal of the principle of distribution. I know the doctrine is openly avowed. Had this principle been asserted either in the act of deposit, or by those who brought it forward, the mark of the first murderer would have been stamped upon its forehead. Every man's hand would have been against it. The act purports upon its face to be a deposit act. It is the first rule of construction that "*you are not allowed to interpret that which has no need of interpretation.*" The gentleman from Kentucky, versed as he is in legal learning, can find no rule in the books by which he is authorized to construe a loan for a term of years, or at will, to a gift in fee simple. It would be directly in the teeth of the instrument, and unhinge the foundations of all human agreements. But if the act itself condemns such an interpretation, equally strong is the argument from the certificates of the States, *pledging their faith* upon the face of those instruments to pay the amounts received according to the terms prescribed in the deposit act. If any argument could be adduced stronger than another to justify this Government in withholding the fourth instalment, it would be difficult to conceive one more so than this assumption on the part of the States. They renounce the treaty so far as their obligations are concerned, and yet claim its execution as to ours. Even if the deposit act were in form a treaty between the Government of the United States of the one part, and the respective States on the other part, signed and sealed by their mutual plenipotentiaries, and ratified by their respective sovereigns, a renunciation by one party would justify a renunciation on the part of the other. *Renounce a treaty, and yet claim its fulfilment!* I ask for that part of the laws of nature and of nations which sanctions such a principle! Sir, I have thus far treated the act of June, 1836, as a compact, and attempted to show that, according to every rule of sound construction, this Government is not bound further to execute the agreement. I shall now consider it as a mere act of legislation which this Legislature is competent to repeal. The doctrine of *vested rights* under legislative enactments, or of *property in the laws*, has already assumed a portentous aspect, and threatens, unless speedily checked, to bind one section of the Union to the car of the other, to prostrate the dearest rights and interests of the people, under the tread of privileged monopolies, and to chain succeeding generations to the crimes and errors of the present. It is by virtue of this doctrine, sir, that the agricultural and consuming States of this Union are held to a ten years' term of service to the manufacturing. Every effort which has been made to change this state of things has been met by a charge of violation of the compromise of 1832. For five years longer we are called upon to keep the faith and fulfil the obligations of that act, by submitting to a system of taxation which draws from the pockets of the people more money than is demanded by the necessities of the Government, and that, too, in a manner marked by the most odious inequality and injustice. You can pass no law which may, in any degree, affect the interests or pursuits of any individual, or class of individuals, without a claim upon the Government of establishing, or a charge against it of infringing, *vested rights*. It is an inadmissible idea that *laws are contracts* with those who are benefitted by them. From the days of Cicero to Blackstone, and from that time to the present, it has been an axiom in politics that one Legislature is competent to repeal the acts of another. I will not deny that there are cases in which a Legislature may vest rights which a succeeding body cannot divest. Those cases depend upon the authority of the Legislature to enter into the bargain, and it must clearly appear upon the face of the law, that it was considered by both

parties as a contract, irrevocable but by the consent of both. Is the fourth instalment a case of this kind? Does it form an exception to the general law of legislative repeal? I think not. In the first place, Congress has no authority to borrow money, or tax the people to place on deposit with the States, when not demanded by the wants of the Government. In the second, there are no words implying a compact on the face or in the terms of the act. The ordinance of 1787, in relation to the Northwest Territory, is an instance of legislative compact; it is so expressed in the law. It is not so here; and if it were, it would be void as being without authority. For these reasons, Mr. Chairman, I am in favor of withholding the fourth instalment from the States.

## REMARKS OF MR. BOULDIN, OF VIRGINIA.

*In the House of Representatives, Thursday, September 26, 1837—On the bill authorizing an issue of Treasury notes.*

The question pending being the amendment of Mr. UNDERWOOD, to authorize the Secretary of the Treasury to dispose of the bonds of the Bank of the United States, to supply any deficiency there might be, if any, in the Treasury of the United States; and the amendment thereto by Mr. PATTON, directing the Secretary of the Treasury to draw drafts on the deposit banks for the balances due the Government in favor of public creditors, and directing the Secretary also to receive such drafts in payment of all dues to the Government.

Mr. BOULDIN rose, and addressed the House as follows:

MR. SPEAKER: I will not detain the house with apologies for doing that which is the duty of every member of this house, as well as his privilege,—I mean, to express his opinions to the house and to his constituents. I would not, however, trouble the house with any remarks of mine, were it not for what the honorable gentleman from New York, the chairman of the Committee of Ways and Means (Mr. Cambreleng) had said in regard to those who might vote for this amendment. He said, sir, if I understood him, that any man who might vote for it, and, at the same time, being a hearty opponent of the Bank of the United States, was wanting in sagacity. Sir, I mean to vote for the amendment of the gentleman from Kentucky, and also for the addition to that amendment offered by my colleague; and I thought I had sagacity enough to know that it will have no tendency to recharter that bank. If it has any such tendency, I would be glad to be informed how, and will go against it. The gentleman from New York has not shown how. He has shown that if any profit can be made, the Bank of the United States of Pennsylvania will make it. This I knew. If there be any profit to be made of consequence, that bank, or some bank, or some capitalist, or some association of capitalists, will make it. But that is not a re-charter of the bank.

Sir, I am against a Bank of the United States, from the heart outward. I am not one of those who would have the constitution altered to allow one. I am not one of those who, while they are against a Bank of the United States, will ransack new and old—heaven and earth—to find reasons to show we cannot do without one. I am opposed to it on the ground of unconstitutionality, for reasons often urged, familiar, and not necessary to be repeated here. I am against it, because I am against privileged orders in this country. I am not willing to give any heartless corporation the right and the power to raise the price of property to what it pleases, and depress it to what it pleases, without the consent, or even the knowledge, of the owner. This corporation, the Bank of the United States, certainly had this power, and as certainly exercised it, by expanding or contracting its issues. Issue a great deal, property sells high; contract a great deal, property sells for nothing, or next to nothing. Sir, I listened with the attention due to talent and character to the gentleman from Pennsylvania (Mr. Sergeant) as I had opportunity for several days. I did so, with that pleasure that a display of talent always gives me. He spoke with great earnestness of the condition of his constituents, who, it seems, are mostly merchants, and it made me feel more sensibly for my own.

He spoke of their enterprise and perseverance, skill and success in trade, and I feel a pride in their character as citizens of my own country. Sir, I knew that they had taken to themselves wings and flown to the uttermost parts of the earth, and over the most dreary and dangerous regions of the sea. He said they were in great distress, and I was sorrowful to the heart that they should be so. I have inquired into the cause of that distress, and understand that, in a regular course of trade, they endeavored to purchase the produce of the farmer and planter—of my constituents, who are farmers and planters—at a price at which they could make a profit, and behold they made a loss, and were obliged to sell for half what they gave. If they had made a profit, as they anticipated, we should have heard nothing of their afflictions; they have made a hard bed for themselves, and their faithful and talented representative argues, as I understand the effect of his proposition, to have a United States bank, or, rather, the same one rechartered, to take his constituents off that hard bed and put mine on. Now, sir, I have regard for the merchants, as I have for all the citizens of the United States: but when the question is simply, whether his constituents shall lie on this hard bed of their own making, or mine shall; when the question is simply between his constituents and mine, which shall be in affliction, I prefer mine should not be.

Sir, I have listened to the various arguments coming from a certain large portion of this house; friends of a bank of the United States; and they appear to resolve themselves into this, "there is no other name given under heaven whereby a man might be saved," excepting only by and through a bank of the United States! Sir, if I believed that it would relieve the people, or even the merchants and not hurt the other people, and was not unconstitutional, I should be greatly tempted to go for it; for it gives me pain to see any suffer. But, sir, I cannot believe it will relieve the people in general, or fail to ruin a vast proportion of them—whatever it may do with the merchants.

Its paper, truly, might enable the merchants to pay their debts in Europe. But how? By restoring specie payments. And how is this to be done when there is, proportionally to the engagements now due, or to come due shortly, from the banks and their customers, scarcely any specie in the country? Sir, it must be by substituting the paper of the United States bank for that now in circulation. How can they pay specie without reducing the quantity of paper circulation? This might enable the merchants to pay their debts in bank notes of the Bank of the United States; and probably would, if they be prudent, without trouble. But what would become of my constituents? Sir, they would be put upon the hard bed, and those of the gentleman from Pennsylvania, (Mr. Sergeant,) be taken off it. Mine would be sold out, instead of his, to raise this specie—to make a currency to pay debts abroad. To make a fit currency for a man to travel from one end of the world to the other without suffering discount, wearing their pockets out with specie, or be troubled with changing notes. Sir, my constituents owe no debts abroad beyond seas, and few of them travel beyond their own credit; much fewer beyond the credit of their own bank paper. Why then should they, or I for them, take steps that will reduce all their paper contracts to specie settlements, and thus sell themselves out? Sir, it was against the wish and will of the people that banks, such as we have them, were created. They were made by their agents, and they with their love of peace and order submitted, and submit to it.

The people were then compelled, by the laws of the United States, to make their contracts, in effect contrary to the Constitution of the United States, and to that of every State, in paper. Sir, the contracts, whether cash or credit, are all in paper prices. If you have your gold, and I have my paper, and you bid and I bid, my paper fixes the price, unless the paper is above par with the gold. All contracts, executors' bonds, guardians' bonds, and all, are in paper valuation; and, while a man has money out on loan, and thinks himself safe, he may be sold out; his bed may be sold from under his wife, to pay off some security debt in gold and silver, for a debt contracted as security for some prudent man possibly some twenty years since; and when a debt, when contracted, was contracted in paper. Or it might possibly be, as security for some guardian of an infant, having the utmost confidence in the prudence of the guardian,

as well as of his solvency and integrity, who might be himself a money lender, and who, with the consent of the security, had received the sales of produce on property, all at paper prices; and, however worthless and extravagant the ward might be, the guardian and security, both money lenders, both prudent men, might be sold out to raise specie, if suddenly called upon, to make a better currency, or, for other reasons, just as this ward came of age. A public creditor, in order to get his money in United States Bank notes, liable neither to discount nor overburthen a man, to the amount of a thousand dollars, may, and will find, in many instances, his bed sold from under him to pay some other contract made, perhaps, years ago, either his own, or as security for some one, who, let things go on gradually, could pay. Many a man, to save five or ten per cent. discount, on the transfer of a note from one distant State to another, would have me vote for an United States Bank, when, were I to do it, and mine were the casting vote, it would, for other contracts made at paper prices and resolved into specie settlements, now when there is a great debt beyond the seas, sell the bread out of the mouth of his children. I think I know a case of this sort. Sir, I am against selling the people out in this way, either by the help of a Bank of the United States, or without it, in order to make a better currency for merchants and travellers, or for the next generation.

As to banks, I never would have originated them, and would get rid of them all, if I could do so without ruining the people or greatly injuring them. They came on gradually. Let them go off gradually. If one lose 5 per cent., and another the like, until the bank note is lost, it does not press as hard as for one to lose all, and be sold out. Let them go off by depreciation by degrees, as it came on by appreciation by degrees.

Sir, I view a bank of the United States compared to a State bank, as a royal Asiatic tiger to a cat. The same in species, nature, and manner of doing mischief; differing only in the power. They have, generally, as far as I have looked into their charters, this other odious exclusive privilege. The property of the stockholders is exempt from execution by a creditor or a bank, while a co-partner of a mercantile company, or an individual, is liable in his property to the last cent, and his body liable to be incarcerated, put in prison. This, then, may happen: a stockholder in one of these banks may buy your whole estate, worth one hundred thousand dollars, and take possession of it and hold, and, together with his brethren who may have done the like with others, declare the bank broken, taking care to have no tangible property, and leave you with their notes. You cannot touch them or their property. Nay, worse. The one that bought your property and holds it in defiance of you, may, with one of the notes of this bank, have bought your bond for a thousand dollars, more or less, and put you in jail for it, and, sir, walk at large himself. Sir, they have, at this time, the hitch upon us; not we upon them. Much as I dislike such exclusive privileges and monopolies, and unjust advantages, I am not willing to sell the people's beds from under them for the benefit of one of them, to the exclusion of all the rest, or to spite them all by requiring settlements of paper contracts now in existence, at specie prices now when there is none in the country, or next to none. Sir, I understand that, in a very short time past, forty millions have been laid out in land in the wilderness; that, clear of interest on the purchase money, will not yield forty cents profit to the present holders in forty years to come. That something like fifty millions are lost on the last crop of cotton, and proportionally in tobacco and rice, amounting, in the whole, to something like one hundred millions. This, of itself, has created a great debt abroad, and a consequent demand for specie at this time, and must put our banking institutions to much difficulty, in relation to specie, without any thing else. Authorized as they are to issue three or four, or more times as much in notes as they have specie in their vaults, it is obvious, if they do any profitable business, and are tried by their ability to pay debts on demand in specie, they are broken from the first. Their solvency, in that view, depends on the accidental circumstances of their creditors all coming at once. If too many do not call at an unlucky time they can pay in specie. Otherwise not; so that our security depends wholly, in good times or bad times, upon the accidental circumstance of all their creditors; or even of less than a moiety of them, call-

ing upon the banks all at once. When, then, there is such a demand for specie to pay this great debt abroad, and when there is one great corporation with such vast resources, still clinging to the name of Bank of the United States, endeavoring to convince us by all possible means—I will say all proper means—that she alone can keep on a good currency; and when there is a powerful party fully persuaded, and by all laudable means endeavoring to show that this Administration has produced, and is producing confusion and mischief in all our fiscal concerns, is it strange that so many should call at once that these banks cannot pay specie for their notes? Certainly it is not; and the people do not consider it strange. Their notes, in their respective districts, will buy more property than specie would have bought last year. This shows the people are not surprised or alarmed at the fact of their stopping payment of specie. Yet, we are told by gentlemen, that there is great distress, and it is intimated that there is no relief but by a Bank of the United States. Where is the distress? What is it? These land speculators and merchants have bought at high prices and sold at low prices. They have often bought at low prices and sold at high prices, and have stopped payment, and the banks stopped paying specie, but not making money by shaving the people. Travellers are pestered with shin-plasters; yet, the bulk of the people are yet unhurt, except by the dread, that, by a Bank of the United States being created, or in some other way, their paper contracts will be forced to be adjusted in specie, and thus sell their property for little or nothing, as was done in 1818, 1819, and 1820, and to make a nice currency. Sir, the Bank of the United States then made it, but how and at what expense? It was my hard fortune to taste some of the bitter fruits of relief then offered and now offered, by a Bank of the United States. Having encouraged speculation in that day, as banks have done in this day, so much that the president was so disapproved of that he was dismissed and another one chosen. That bank began to make a good currency; such an one as is now offered us, having less specie than almost any other bank of any credit in her vaults; but, backed by the Congress of the United States, and the receipts of the revenue of the United States, to the amount of some twenty or more millions, she required all other banks, but herself, to pay specie, needing not to do it herself except nominally, because she had the receipt and disbursement of the revenue. Her stock stood at something like an hundred and fifty; and that of a bank, having more specie, and under better management, sunk to sixty. Then it was, sir, that the State banks, being called on to resume specie payments, which could be done in no way but by drawing in their own notes to give place for some few in proportion of the United States Bank, that I tasted the full, no sir, not the full, for others got greater benefits and relief than I did—then it was that I myself enjoyed a portion of the relief now offered by the Bank of the United States and its friends, having just before purchased property, land, at the previous paper prices. To make a good currency for travellers and merchants, the relief I obtained was that I found infinite difficulty of getting either specie or paper to meet these engagements. Others of my friends, more prudent but less fortunate, had their property sold out entirely to meet engagements which were as prudent and circumspect, but for this relief, as could well be,—then it was that a vast proportion of the land-owners on the Roanoke, from the mountains to the ocean were relieved of the further trouble of their estates which had been in the hands of them and their forefathers for ages before. Some had bought an advancement for a child; some owed a small store debt; some one small matters and some another, nothing unusual; when this relief came and they enjoyed the whole benefit of it by being, with their families, turned adrift upon the world, to make a good currency for others. Sir, a traveller is a good deal plagued to change his money, and it is very comfortable to have money that is not heavy and will pass any where if convenient. It is not so wonderful, considering the nature and frailty of man, that such men should be willing to give every thing up to the control of a Bank of the United States, for convenience. A man goes to a certain place hereafter, which from all accounts is not desirable for convenience, he cannot deny himself the present gratification to avoid the distant but great evil before him. Interest never carried a man there; but what think you, Sir, of a man who has

no occasion to travel, no debts beyond the seas, nor out of his neighborhood, no debts at all; suffering all these privations and sacrifices, availing himself of this kind of relief and begging his whole family and his neighbors. This may happen to a man out of debt. There are few who have not been guardian or executor, administrator or security, for some of them who may, though ever so prudent, be called on to suffer this kind of relief. I cannot speak for days, I leave statistics to periodicals, and details to those who may choose to indulge in them; but I submit to you [Mr. Speaker,] whether the previous banks that have been chartered, and especially the Bank of the United States, have not taken the people rather by surprise? Whether the people have not, when they were informed that one was contemplated, generally refused to elect men who went for them? I will not assert that is true in every case, but I believe it to be true generally.

To come more closely to the amendments now under immediate consideration. Having said enough, I hope, to satisfy any one that I have not only voted and spoken hitherto against a Bank of the United States, but am against it. I have little veneration for our banking institutions of any sort. I will now come more closely to the consideration of the amendments immediately before us. Sir, I said, a few days ago, that I preferred to make sale of these bonds due for the stock of the Bank of the United States, as a means of raising money, but did not think there was any chance to get it through this house. I am for it still; I am for getting clear of all the money in the Treasury not necessary. I want as much there as is necessary and no more. I want the administration to have its constitutional patronage and no more.

Sometimes it seems we have millions on millions; then we have none; which is it, sir? If these bonds are of no value, let them go; do not tantalize us with them as means. If our deposits in the State banks are of no value, let us know it; if they are, let us use them. They are certainly considered as of value; for the bill to withhold the payment of the fourth instalment put every State in the Union, as it appears to me, in a state of duress but a few days ago. The money being, in any way, under the control of the Executive to such an amount is dangerous in the extreme. The mere supposition that it is there, should it not be really there, is capable of producing all this duress and confusion. Let us, in some way, get clear of it if we have it, and of the mischievous delusion if we have it not. If we sacrifice some of it, it is the people's own money, and they can better bear this sacrifice than the sale of their property or taking more money out of their pockets.

I have said nothing, sir, in regard to the particular merits of the bill, but only of some of the amendments, and have availed myself of this opportunity to throw out some of my opinions generally in regard to the means of relief from the present difficulties. I will go a very little further, and trouble the house no longer. In my opinion, the whole difficulty arises from our having, or having had, or having supposed we had, and still supposing we have, too much money in the Treasury. Remove this, and all is simple and easy. I agree perfectly with the President of the United States in believing we have nothing to do in providing a currency, further, or other, than as the constitution literally mentions. That instrument fixes a standard to be used when debtor and creditor come to points and cannot agree as to what the debt shall be paid in. The debtor can get clear by offering, and the creditor can require, if he pleases to do so, this specie which is the standard. Congress cannot add to, nor take from, this privilege, in regard to either. Every law about money, without saying more, refers to specie only. Every judgment; every execution for money, without anything more said in relation as to that point, is for specie of course. The Treasurer and Secretary of the Treasury have, by the constitution, the control of the money belonging to the United States to a great extent. You may shelter them by authorizing them to place the money in this or in that bank. But you cannot make them more responsible.

I heard, sir, a great man, I admit him to be so, proving that somehow the notes of a bank which did not pay specie were paper money, but that the notes of a bank that paid specie, at the pleasure of the holder, were not paper money. The notes of banks last year were not paper money! The notes of the same bank this year are paper money! Yet the same notes this year will buy more property

than the specie they promised to pay, had it been got; would have bought. Paper money this year then is better than specie last year. Make a law directing the officer to place his money in a specie paying bank; it is grounded on distrust of the officer. If he be not honest, I say it shatters him; for he may take witnesses, and demand specie for perhaps a note of one hundred dollars, and get it, and then deposit five hundred thousand under the law, and he and the bank may divide it in specie, and stop specie payments.

There is no getting round it. Put the money in an iron chest, and who is to keep the key. Defend it with bayonets, and who is to keep the bayonets off it? There is no way to keep such vast sums safely out of the hands of the immediate owners.

But stick to the simplicity of the constitution. Collect money for the only legitimate object for which you have the right to collect it. Let the law call for money, and nothing more; and direct money to be paid, and nothing more—I mean, naming the amounts, to whom payable, &c.

If the public creditor demand specie, by the constitution he must have it. If he should not, the collecting officer being, as he should always when he can be, the disbursing officer, the thing is settled naturally and easily in the usual way, in any money that is current at the time. How simply and easily this thing is exemplified in the case of sheriffs, constables, and such like officers in the collection of private debts, and the revenue of some of the States. Very little money is lost in their hands. None are very jealous of their power and station. Ten times the amount of the proper revenue of the United States is thus collected of private claims and demands, with very little loss in the course of the year.

All these judgments and executions, &c., or scarcely with any exception, are for gold and silver, and yet they produce little or no difficulty or alarm. And why, sir? It is, that there is a creditor, or plaintiff, watching and ready to receive his debt in any current money, and specie is not either demanded, or expected to be demanded. So it always has been, and will be, with the Government, when it had no more money than it needed, and did not attempt, by bank or otherwise, to regulate the currency. If the Government have a little more than it can immediately pay out, and lose some by depreciation or otherwise, it will be but small in all probability, and they ought to lose it as others are liable to do. As to large surpluses either here, or lodged about among the States, I would as soon undertake to administer medicine to the dead as to produce a cure for the evil effects while the fact remained.

These operations, sir, are simple and easy in my estimation; but let the sheriffs and constables, banks and the like, undertake to regulate the currency and demand specie, and insist upon it whether the creditor or debtor wanted either to receive or to pay it or not, you would have trouble enough. No man would venture to inflict this generally. Few men fail to adjust these things to the satisfaction of the people if possible. It is only in a roundabout way through a bank, as it was done in 1819-'20, and about that time, that this cruelty can be extensively inflicted.

To conclude then, sir, I will vote for the sale of these bonds, or any other funds, belonging to the United States, with a view of getting clear of all surpluses, real or supposed. I want to square off. The more we are entangled with or without money, the more likelihood there is that we may at last have to open the doors to this bank, which, with its old name and old propensities, is just at the threshold waiting for a chance to enter. It has been often said that that bank makes no application here at this time, but waits for the proper time. And when is the proper time? Just, I suppose, when it has thrown so many difficulties, and obstacles, and arguments, and objections in the way of every thing we can propose or offer that we are willing to call on them. They do not bring in any bill truly, but they endeavor to drive out all bills until some one shall bring that in. It appears to me impossible that a man should not feel himself besieged here by that corporation from year to year. It has been the case ever since I came here. The stages were broken down, and wrapping paper reduced in price from four cents a pound to three, with melancholy and alarming representations of evils that never have happened. I have voted for measures, I expect again to vote for measures I do not alto-

gether like, for fear that, at last, that institution should be rechartered, which I view as injurious to the whole Union, and, particularly, destructive to the prosperity of the South. Sir, why is it that New Orleans, exporting as she does, an amount of produce far more than any one State in the Union, even than New York, should not be able to import directly any thing worth speaking of from abroad? It is not because she wants currency, either in paper or specie; she has that which is better than either—cotton, that will buy any thing in any market. I cannot but believe that it is owing to the concentration of moneyed capital, produced in the North, by the former Banks of the United States, trading upon that which is our own money; (for cotton, tobacco, and rice, amount to eighty out of one hundred millions, and in that proportion of all the exports of the whole United States,) the profits from which, must pay for all the imports, if they are ever paid for, into the United States, in that same proportion; and these banks must have been the cause, in some degree, if not mainly, of that unnatural and apparently unaccountable fact.

## REMARKS OF MR. TOWN<sup>S</sup>,

OF GEORGIA,

In the House of Representatives, September 29, 1836.—Upon the Mississippi Election.

MR. SPEAKER: I concur with the honorable member from Tennessee, (Mr. Turney) who has just taken his seat, that much respect is due to the will of the people of Mississippi, as expressed at their late election. I will not yield to that gentleman, or any other, in giving effect to the popular will, when I can do so, consistent with the high obligation I owe to the Constitution and laws of the country. Nor do I admire less than the gentleman the course of the sitting members in meeting promptly, and without reserve or concealment, the question raised on the first day of this session by the honorable member from Virginia, (Mr. Mercer) affecting their right to a seat on this floor. Whatever may be the decision of the House, I am free to admit—I am gratified to say—that the deportment of the gentlemen from Mississippi (Messrs. Claiborne and Gholson) throughout the investigation, has been characteristic of an elevated feeling, a high sense of honor, and a thorough conviction, on their part, that they are duly authorized to discharge the duties of representatives on this floor.

Mr. Speaker, my situation is somewhat peculiar, in reference to this subject. I was one of the committee to whom this question was referred, and one of the minority of that committee, who dissented from the report of the majority. A duty I owe myself, as well as the House, requires that I should distinctly state the grounds of my opinion. Let me premise, sir, that I claim but little weight for my opinions. I have at best but little relish for the discussion of a purely legal question. But, sir, when I say this, I should add, that the honorable gentlemen from Mississippi are my personal and political friends, than whom there are none more entitled to my regard, or enjoy my good opinion in a higher degree. Sir, I will go further: it is due to candor, that I should state that my feelings have been with the sitting members, while my judgment has been against them. Having said this much, I will at once proceed to the question.

The fourth section of the first article of the Constitution of the United States provides that "the times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State thereof; but the Congress may, at any time, by law, make, or alter such regulations, except as to the places of choosing Senators." This provision of the Constitution imposes an obligation on the States of the Union, to fix by law "the times, places, and manner of holding elections" for representatives to the Congress of the United States, but in the abundant precaution of the framers of that instrument, in order to guard more effectually the right of suffrage to the people, should the legislative authorities of the respective States fail to discharge their duty, the latter part of the clause expressly reserves to Congress the power to regulate, make, or alter, the legislation of the States, should it at any time be deemed necessary. It is

worthy of remark, that the Constitution of the United States, so far as can be gathered from the instrument itself, nowhere, but in the section under consideration, enjoins the performance of a specific duty on the State Legislatures, while at the same time, it retains to Congress the power to do and undo, at pleasure, the very duty required of the respective States. The irresistible conclusion to be drawn from this fact is, that the framers of the Constitution regarded, with intense interest, the necessity and propriety of organizing the legislative department of the Federal Government according to some uniform rule of law in each State. The legislative department of Government, so essential to the happiness of the people, so indispensable to regular government, we can well imagine, justly claimed from the great men who gave birth to our Federal Constitution, their most undivided and patient consideration. Upon the organization of the representative branch of Congress essentially depended the great experiment of free government. However wise the balance of power, as respects the Judicial and Executive departments of the Government, however restricted and regulated by constitutional law, the framers of this instrument could but have foreseen the necessity of leaving nothing to chance as relates to the formation of the popular branch of Congress. In submitting these views, I claim no more for this section than was asked for by my friend from Virginia (Mr. Pennybacker) for the 2d section of the same article. If, then, sir, we go by the letter or the intention of 4th section, it seems to me equally clear that, in that section, and the laws of the respective States passed in pursuance of the same, are we alone to find the true channel through which all members composing this House must enter. But, sir, it is not alone the mode by which members are to come here, that has been cautiously prescribed by the Constitution; they must also have certain qualifications after getting here, without which, however regular their election, they cannot exercise the right of a representative on this floor. Sir, the Constitution provides that "no person shall be a representative, who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of the State in which he shall be chosen." Will it be contended by any one that we can disregard either or all of the above qualifications? Could we, sir, say, by a decision of this House, that a member returned here not twenty-five years of age, should be recognised as a representative of any portion of the people? I apprehend not. If it, then, be true that we cannot discard the qualifications prescribed by the Constitution, can we disregard the mode prescribed with equal certainty in the same instrument? If the qualification of age and citizenship be necessary on the one hand, on the other of how much more importance is it that the law prescribing "the times, places, and manner of holding the elections," should be complied with? If public policy and the good of the people required that their representatives in Congress should have attained the age of twenty-five years, it seems to me the same considerations would apply in enforcing the laws of the respective States. It should be remembered, sir, that the laws of the States regulating the times, places, and manner of holding elections, are made by the very people who are mostly interested in their execution; and if you do not permit the people to act under them in choosing their representatives, you, in effect, say they are not capable of judging of what suits themselves. But this is not all. What, sir, let me ask, gives official character to the members of this House? What is it that gives them the power of speaking in the name and in behalf of the people? Why can they speak authoritatively, and bind not only their constituents, but those who are to come after them? It is because we stand here under the qualifications prescribed in the Constitution, selected, chosen, and sent here as directed by that instrument; and then it is that the official character attaches to the person of such member, and our acts are binding upon our constituents. If, sir, we come here without the requisite qualifications, or in a manner different from that prescribed by the Constitution, and the laws of the States passed

in pursuance thereof, we are not here as representatives of the people, but as private individuals, unauthorized to speak in their name. The acts we would do, would be our own—not binding on us, much less upon the people. Sir, it would have been worse than folly to have thrown around the person of the representative, the qualification of age and residence, in order to insure discretion and community of interest between the constituent body and the representative, unless you steadily adhere to that portion of the Constitution, which, according to the letter and spirit, intends to give notice to the voter of the time, manner, and place, he may exercise the right of suffrage.

Mr. Speaker, from what I have said, it seems to me I have established that the object of the fourth section of the first article of the Constitution, was the establishment by law in each State, of a time certain, places public and notorious, and a mode steady and uniform, whereby the qualified voters of the most numerous branch of the State Legislature, could exercise the right of voting for members of this body, as secured to them under the Constitution.

This brings me now to the inquiry whether the legislative authority of Mississippi has enacted a law in conformity with that clause of the Constitution establishing the times, places, and manner of holding elections for representatives to the Congress of the United States.

Yes, Mr. Speaker, the Legislature of Mississippi has passed a law literally complying with the Constitution, fixing, as the time of holding elections for members of Congress, the first Monday and the day thereafter in November, 1823, and the same days every two years thereafter; under which law, the first Monday and day thereafter in November next is the only time known to the statute book of Mississippi for holding an election to this Congress. Under this statement of the case, two inquiries present themselves to the mind: first, has the law of Mississippi been complied with? secondly, if not, what is the reason? To the first inquiry, it is not pretended that the sitting members were chosen by virtue of an election held in pursuance of the law of Mississippi; but, on the contrary, in direct contravention of, or, at least, non-compliance with, that law. Well, sir, what is the excuse for this violation, or rather disregard, of the law of Mississippi? Why, sir, we are told that a vacancy had happened, and that my honorable friends are representatives on this floor, because they were elected to fill vacancies. This is the broad ground taken by a majority of the committee in their report, and to which I will now invite the attention of the House.

Mr. Speaker, it is due to candor to admit that if a vacancy, in the meaning of the Constitution, has happened in the representation of Mississippi at the time Executive of that State issued his proclamation, ordering an election on 1st July last, then in my opinion, if the election was valid, the sitting members are clearly the representation from that State for the whole of the 25th Congress. The proclamation and writ of election of the Executive of Mississippi, it is true, restrict the term of service to 1st November next, the time by law of holding the regular election. But, sir, I am not aware of any power in the Governor of Mississippi, conferred by the Constitution or laws of that State, authorizing him to change, in any respect, the tenure of office of a Representative to Congress. Such assumption of power has never been attempted before, that I know of, by the Executive of any State, and I trust will never again be attempted. All the Governor of Mississippi could do, under the Constitution, was to order an election to fill vacancies, and the unexpired term, of whatever duration, constituted the period of the official service of the incumbent thus to be elected. If, sir, the Governor of Mississippi could, by his gracious writ of election, divide the congressional term of service into two distinct parts, from 1st July last, to 4th March, 1839, I do not see why, by the same rule, he could not favor us with at least one dozen different Representatives before the close of the 25th Congress. I will not trouble the House but with one or two remarks more, on this branch of the subject. Of the motives of the Exe-

cutive of Mississippi I know nothing; but, sir, I must confess, no matter what the decision of this House may be, that I am at a loss to understand why he should have adopted the course he has thought proper to pursue, full of danger, as he must have foreseen, when he had at his command a remedy adequate to the emergency.

Mr. Speaker, I will return to the consideration of the latter part of the second section of the first article of the Constitution, relied on by the friends of the report. Let us examine this provision of the Constitution. It reads as follows: "When vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies." Sir, you have heard much said in debate as to the true significance of the word "happen." I will not pretend to take part in this contest. I will leave it for other gentlemen to consult the lexicographers of this or of another age, as to the true meaning of the word "happen." To my mind, sir, it is of no consequence whether the one or the other of the views of the gentleman from Virginia, (Mr. Pennybacker,) or the gentleman from Tennessee, (Mr. Maury,) be correct. I shall meet the question broadly, disclaiming any distinction between a vacancy that may happen, or one that exists. My remarks shall be directed to the inquiry whether, in point of legal fact, a vacancy existed at the time the election for members to the Twenty-fifth Congress from the State of Mississippi took place. If, sir, it be true that a vacancy at that time existed—I mean a vacancy in the representation from Mississippi, under the Constitution of the United States, and the laws of said State, passed in pursuance thereof—then the right of the honorable gentlemen (Messrs. Gholson and Claiborne) to a seat on this floor can not be questioned. But, on the other hand, if no such vacancy existed, they have come to this hall, not in pursuance of law, but against law. Let us, sir, look for a moment to the express language of the Constitution, "when vacancies happen in the representation from any State." Can language be more explicit? Is there a man whose mind has not been crowded with too much learning, that can doubt as to the distinct idea, intended to be conveyed by the framers of this instrument? Does it not mean precisely what the ordinary acceptance of the words conveys to every intelligent mind?

Mr. Speaker, I may be too old fashioned in my notions on this subject. It may be that the language of the day when this instrument was framed, is not the same of the present day. It may be, sir, that when the framers of this instrument said one thing, they meant another; but for one I shall take what they did say, as the best evidence of what they meant. Then, sir, they have said, that when vacancies happen in the representation from a State, "the Executive authority thereof," shall perform a certain duty. What is understood by the term representation from a State? Does it mean the office of representative? Or does it mean the persons who may be chosen as representatives? Who, sir, constitute the representation from the State of Georgia in this House? Nine individuals, and these nine individuals compose the representation from the State of Georgia. How is it that those nine individuals compose the representation from Georgia? When, sir, they were duly elected members of the 25th Congress, under the law of Georgia fixing the times, places, and manner of holding elections for members of Congress, they assumed an official character, and then it was, and not until then, that they collectively constituted the representation from Georgia. Well, sir, having shown what is meant by this term, "representation," as thus used in the Constitution, it remains only to be shown what is meant by the word "vacancy" in the same clause. If, sir, I am correct in what I have said of the true meaning of the words representation from a State, it will follow, as a necessary consequence, that the word "vacancy" has a direct reference to the representation thus regularly selected, and out of which, from some cause, either from death, resignation, or otherwise, the functionary ceases. Whenever, from any cause, a representation from a State, in a part or in the whole, shall cease to exist, it is then competent; but on no other contingency, for the

Executive authority of a State to order an election to fill such vacancy, or vacancies, as the case may be. The very word "vacancy" presupposes an office once filled, but now vacant. But this is not all. The clause under consideration not only means that there must be a vacancy in the representation, but that it must "happen," thereby absolutely excluding the idea that the vacancy here alluded to was to be the result of the regular operation of law, but something unforeseen and unexpectedly happening, which, when occurring, should be provided for by the power vested in the Executive authority of the State. But, sir, if the words be not sufficient to give us the most unerring indication of the true meaning of the framers of the Constitution, I ask gentlemen to consider the fourth and second sections of the first article of that instrument in connection; and no one, it seems to me, can doubt but that the fourth section was intended to prescribe a rule by which alone the House of Representatives was to be elected, and that the second section was only intended to provide that, should a vacancy happen by the death, resignation, or expulsion of a member by the House, such vacancy could be filled by the Executive authority of the State. This construction, Mr. Speaker, gives full effect to every portion of the Constitution, and, I may also add, gives harmony, beauty, and strength, to the whole plan of representation.

But, sir, if it be insisted that the case of these gentlemen, (Messrs. Claiborne and Gholson,) from the facts submitted, constitutes a vacancy, in the meaning of the Constitution, you then, by such construction, put to rest, for ever, the fourth section of the first article of the Constitution, in order to sustain the second section of the same article. Sir, one of the best rules of construction for the liberty of the people that this instrument can receive, is that which will harmonise the whole with all the parts—sustaining all, giving effect to all, to the degree which the plain and ordinary acceptance of the words used would indicate. Do this, sir, now and hereafter, and the institutions of the country are destined to flourish, and become more solid from age.

Mr. Speaker, what are the arguments of gentlemen against the construction I contend for? The gentleman from New York, (Mr. Bronson,) insisted that there was a vacancy, in the meaning of the Constitution, from the 4th of March last up to the 1st of July, the time of the election of the sitting members. He contended, and properly, too, that the time of service for the members of the Twenty-fourth Congress expired on the 3d of March last. Thus far he was right; but his conclusion from these facts that there was a vacancy, is not authorized.

Sir, even if it was true, it would not help the gentleman, unless he intends to prostrate, at one blow, the portion of the Constitution which requires the State Legislatures to fix the times, places, and manner of holding elections. Whatever is certain, uniform, and regular, cannot be said to be accidental, casual, or to "happen." But, sir, the law of Mississippi absolutely prescribes the first Monday in November, biennially, as the time of holding the election for representatives from that State; and yet, when that law was passed in Mississippi, it was as well known then as now that the term of service of members expired on the 3d of March anterior to 1st November, and that the State from that time would have no representation in the House; and yet, sir, Mississippi had nothing to fear, under ordinary circumstances; for the time of the regular meeting of Congress was fixed to the first Monday in December, every year, until otherwise changed by law, which has not been done. To this I may also add, that the power of the President to convoke Congress on extraordinary occasions was doubtless known to that Legislature of Mississippi which fixed on the first Monday in November, biennially, for holding elections for members of Congress. Yet, Mr. Speaker, with all these facts before us, with a full view of the power of the President under the Constitution, the Legislature of Mississippi, to whose control alone, under the Federal Constitution, was properly entrusted this subject, has thought proper to select, as the time of holding elections

for representatives to Congress, the first Monday in November. And now, this House is called upon to sustain the right of the sitting members to their seats on this floor, on the ground that a vacancy had happened in the representation from that State. If, sir, the seats of the honorable gentlemen from Mississippi are to be sustained, on the ground that a vacancy has happened, I do not hesitate in saying, as the result of a deliberate conviction, that such a decision will annul the 4th section of the 1st article of the Constitution, and, perhaps, what is not of less consequence to the people of Mississippi, their own State laws, securing to them the free exercise of a right—dearer to freemen than all others—the right of suffrage. What, Mr. Speaker, is the apology for this ruthless assault upon the Constitution and laws of Mississippi? Why, sir, we are told that each State shall be represented, and that the qualified voters of Mississippi have enjoyed this privilege in the selection of the sitting members. This is true; and so far as the people are concerned, what they have done is most creditable to them.

But, sir, that is no argument for this House. Our duty is to inquire whether the sitting members come here, according to the form and ceremony of law; for if they appear on this floor, otherwise than by the ceremony of law, they have no official character. And if we are true to the interest of the people of Mississippi or any other State, no gentleman should be permitted to speak in their name, who was not returned here, in pursuance of their own State regulations. For although a temporary inconvenience may result to them in the present instance, yet the evil, if the principle be once established, may subject them to bitter disappointment hereafter.

Let us look little more closely to this subject. Gentlemen in support of their views of the majority, admit that, but for the extra session of Congress, no vacancy, under the Constitution, would have "happened." Look, sir, at the magnitude of this proposition. Is it possible that the mere act of the President can unsettle the law of all the States regulating the elections? Not only unsettle the law of the States, but absolutely change the Constitution of the United States, under which the laws of the respective States are authorized, and which enactments of the respective States are the law of this House in settling such questions? Sir, the proposition is monstrous. Give this power to the President, and, I ask, of what materials might not this House be composed? Let it be once admitted that the mere will of the President, in convoking Congress, constitutes a vacancy in the States that may not have elected their representation, and who will pretend to foretell the disasters that will befall this country? No, sir: the President has no power to vary or change any provision of the Constitution, or any law of a State passed in pursuance of that instrument, and the laws of the United States. His duty is to enforce the law, to see it faithfully executed, not to annul or suspend it. Nor can the Executive of any State, of his own good will and pleasure, defeat the regular operation of election laws passed in pursuance of the Federal Constitution, though his only motive may be no other than to secure to the qualified voters of his State a free and full opportunity of selecting their representation in this branch of Congress.

Mr. Speaker, having shown that there is no power either in the President, or in the Executive of Mississippi, to suspend or alter, to enlarge or contract, either the Constitution of the United States or the laws passed in pursuance thereof, I will now give an example which it seems to me cannot fail in putting this question to rest. Suppose, sir, that there had been no call of Congress by the President, that the members present had been elected by virtue of a proclamation of the Governor of Mississippi, ordering the election to take place on the 1st Monday in July last, and that on the first Monday in November next, in conformity with the laws of Mississippi, an election is held for members to represent that State in strict compliance with the laws of Mississippi, and that election different individuals should be returned as having received a majority of the quali-

fied votes of the State: I ask, sir, what would be the decision of the House in that case? Is there an honorable member in this hall who could doubt as to which representation would be entitled to their seats on this floor? It seems to me that but one opinion can be entertained; and if the representation chosen 1st November next, would be entitled to their seats, as against the rights of those chosen on the first of July, under the authority of the Governor's proclamation, I ask gentlemen to point out the difference between the case supposed, and the present. Sir, the principle would be the same, unless there be a magic power in the proclamation of the President, when he convokes an extra session of Congress, whereby he can cause the law and Constitution to sleep, until the Executive of Mississippi can order and hold elections to fill vacancies, where vacancies did not exist. The President and the Governor of Mississippi, by their joint action, would have the power, under this view of the subject, to set aside the law of elections of the State of Mississippi, provided the principle contended for by the report of the committee be correct.

Mr. Speaker, my honorable friend from Virginia, (Mr. Pennybacker) in his very able speech on this question, objected to a literal construction of that part of the Constitution which says: "when vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies," on the ground that if we adhere to the letter, should a vacancy happen, there is no power in the Executive to fill such vacancy. I believe, sir, that there are cases in the books where their construction of penal laws, involving the life and liberty of the accused, would sustain the principle insisted on by the gentleman. But before the gentleman can make good his position, he should at least show that this clause of the Constitution falls within the reason of the decisions upon penal laws; a task I apprehend my honorable friend will not attempt before this House. But, says the honorable gentleman, in settling upon the rights of the members to their seats here, we should take an enlarged and comprehensive view of the whole ground, having constantly in mind that the boasted right of freemen is a representation of their own choice. And, sir, the honorable gentleman from New York, (Mr. Bronson,) with like feelings with the gentleman from Virginia asserted "that the interest of Mississippi was to be sacrificed upon the mere play of words." I hope that I should be among the last, now or at any other time, to sacrifice the interest of any portion of the people of this Union upon technicalities, much less the high-minded and patriotic citizens of Mississippi. But so long as I advocate the supremacy of the law, whatever inconvenience to the people of Mississippi, or their most deserving and talented representatives on this floor, may be the consequence, I shall feel that I deserve from their hands the respect due to all whose acts are alone prompted by honesty of purpose. Sir, the construction for which I contend, will never mislead or deceive the people, but will at all times enable them to know the "times, places, and manner" of choosing their representatives to Congress. Whatever inconvenience may attend the people of Mississippi, or the honorable members now here, is the fault alone of the Governor of that State; who, in my opinion, has utterly mistaken his duty to the people of his State, by ordering an election; instead of calling the Legislature together, to alter the time of holding that election.

Sir, to show that I am not mistaken in the views I have presented, I think I may safely affirm, that in all the reported cases of contested elections that have fallen under my notice, in none of them do I find a single decision contravening the election laws of the States prescribing "the times, places, and manner of holding elections;" but, on the contrary, whenever the question has been whether the election law of the State has been complied with or not, in every instance, so far as I have examined, it has been considered necessary.

Now, sir, in answer to so much of the argument of gentlemen who have advocated the right of the sitting members on the ground that the true

intention of the Constitution is that each State should be represented, and that a decision against their right would be productive of great inconvenience and hardship to the people of Mississippi, I beg leave to give one or two rules of construction laid down by Mr. Livingston in his able speech on the subject of the Turkish mission. "I consider (said Mr. L.) it (meaning the Constitution) as I would any other written instrument, by its words when they are explicit; when there is doubt, by the context; by the plain object of its framers, by a view of the evils it intended to remedy." Again; "I must not be understood as saying that an inconvenience attending any construction is sufficient to show it to be false, or that to be the true reading which avoids it. When the words are express, when the intention is evident, however inconvenient, they must be obeyed." Here, Mr. Speaker, with these rules to guide us, might I not rest the case.

Mr. CAMBRELENG here moved the orders of the day, Mr. T. yielding the floor.

### SPEECH OF MR. BUCHANAN, OF PENNSYLVANIA.

*In the Senate of the United States, on Friday the 29th September, 1837—On the bill imposing additional duties, as depositories in certain cases, on public officers.*

MR. PRESIDENT: It cannot be denied that the commercial and manufacturing classes of our people, throughout the Union, are now suffering severely under one of those periodical pressures which have so often afflicted the country. Neither has the agricultural and other interests escaped without injury; although they have not suffered to the same extent. The exhaustion of the human system does not succeed a high degree of unnatural excitement, with more unerring certainty, than that a depression in the business of the country must follow excessive speculation. The one is a law of nature, the other a scarcely less uniform law of trade. The degree of this depression will always bear an exact proportion to the degree of overaction. As many degrees as the system has been elevated above the point of healthy action, so many degrees must it sink below, after the effects of the stimulus have passed away.

What has been the history of the country in this respect? One of constant vibration. I can speak positively on this subject in regard to the period of time since I came into public life. What has been will be again. The same causes will produce the same effects. We can cherish no reasonable hope of a change, unless the State legislatures should take a firm and decided stand. The history of the past will become that of the future. This year we have sunk to the extreme point of depression. The country is now glutted with foreign merchandise. There will, therefore, be but few importations. All our efforts are now directed towards the payment of our foreign debt. The next year, the patient will begin to recruit his exhausted energies. Domestic manufactures will flourish in proportion as foreign goods become scarce. The third year, a fair business will be done. The country will present a flourishing appearance. Property of all descriptions will command a fair price, and we shall glide along smoothly and prosperously. The fourth or the fifth year the era of extravagant speculation will return, again to be succeeded by another depression. At successive periods the best and most enterprising men of the country are crushed. They fall victims at the shrine of the insatiable and insatiable Moloch of extravagant banking. It is an everlasting cycle. The wise man says there is no new thing under the sun; and we are destined, I fear, again and again to pass through the same vicissitudes. The aspect is perpetually changing, but is never new.

Senators have pined themselves, and their admirers throughout the country have applauded them, as being wonderfully sagacious in their predictions. Their respective partisans are ready to exclaim—

"The spirit of deep prophecy he hath.  
Exceeding the nine Sybils of old Rome;  
What's past and what's to come he can descry."

But no deep penetration into futurity was required to make these prophecies. Until existing causes shall be removed, the future must be the counterpart of the past.

Whence this eternal vicissitude in the business of the country? What is the secret spring of all these calamities? I answer, the spirit of enterprise, so natural to American citizens, excited into furious action by the stimulus of excessive banking. It operates as does the inhaling of oxygen gas upon the human mind, urging it on to every extravagance and to every folly.

I do not deny that several subordinate circumstances have operated in unison with this grand cause to make the present catastrophe more severe than it otherwise might have been. Still it is the root of all the evil. It is the chief and almost the only source from which the existing distress has flowed.

I was not a member of this body when the discussion took place on the veto of the bank charter, or the removal of the deposits. Although both these measures received my cordial approbation, yet I refrain purposely from replying, at this late period, to the remarks which have been made on these subjects. They have already passed into history, and been sanctioned by the public approbation.

Amongst these subsidiary causes of the existing distress may be enumerated the destruction of capital by the great fire at New York in December, 1835: The wild speculations in public lands, and in splendid towns and cities, upon paper throughout the western States, which withdrew capital from the commercial cities, where it was most wanted, to portions of the country where it was not required; and the specie circular, if you please, which, however wise it may have been in its origin, ought not, in my opinion, to have been continued in force, after it had performed its office and had checked the wild speculations in public lands. I voted in favor of the bill at the last session which repealed this circular; and, under the same circumstances, I would again act in the same manner. But permit me to say that its effects have been greatly exaggerated. It did not carry to the west any thing approaching the amount of gold and silver which Senators have estimated. According to the report of the Secretary of the Treasury, all the specie in all the western deposite banks, including Michigan, but little exceeded four millions of dollars at the date of the suspension of specie payments; and in the southwestern deposite banks it did not amount to one million two hundred thousand dollars. I shall not stop to inquire how much less gold and silver there would have been in these depositories had the specie circular never existed. Certain it is, that the comparatively small amount of specie, which came into these banks in consequence of this circular, could have produced but an inconsiderable effect on the business of our commercial cities, and still less upon the suspension of specie payments.

These causes may have made the revulsion a little more severe; but had they never existed, still it must have come with desolating force.

Senators have attributed some portion of the existing distress to the act of 1834, regulating the standard of our gold coins. They have not told us, and they cannot tell us, how this act could have produced such an effect. It was no party measure, and upon its passage, there were but few, I believe seven, votes against it in the Senate. It was a measure of absolute necessity, if we desired that our own gold coins should ever circulate in this country. Before its passage, a half eagle, as an article of merchandise, was intrinsically worth about five dollars and thirty-three cents in silver, whilst its standard value, as currency under our laws, was only five dollars. It is manifest, therefore, that eagles and half eagles never could have entered into general circulation, had it not been for the passage of this act, which is now condemned. It was a mere adjustment of the relative value of gold to silver, according to the standard of other nations; and, if I am not greatly mistaken in my memory, conformed exactly in this particular with the laws of Spain and Portugal.

I have been utterly at a loss to conceive the cause of the hostility of Senators to this necessary measure, unless it be from a feeling similar to that which, it is said, made a distinguished gentleman desire to kill every sheep which came in his way. He could feel no personal hostility to these innocent and harmless animals; but was such a violent anti-tariff man, that the sight of them always reminded him of our woollen manufactures. Certainly no gentleman can entertain any objection to the eagles and half eagles themselves; but they may remind Senators of the efficient and untiring exer-

tions of the Senator from Missouri (Mr. BENTON) to introduce a gold currency into circulation. As gold, they may like these coins; but as Bentonian mint drops, they are detestable.

Senators have also contended that the present depressed condition of the country has been produced, in some degree, by the large importations of specie which were encouraged by the administration of General Jackson. I shall not be diverted from my main purpose by answering this objection in detail. Even if their position were correct, which I by no means admit, that more gold and silver had been forced into the country than our necessities demanded, or the fixed laws of trade would have justified, still the effect would have been transient and trifling. It would have immediately flowed back through the channels of commerce to the places from whence it came, until the par of exchange had been restored. This is one of the fixed and invariable laws of trade, from the obligation of which we can never be released.

The Senator from Kentucky, (Mr. CLAY,) in the course of his remarks upon this subject, involved himself in a strange contradiction. At the commencement of his speech he deprecated, with his usual eloquence and ability, the policy of the past administration in forcing specie into this country contrary to the laws of trade. Towards the conclusion, when his fancy became excited by the contemplation of the splendid bank of the United States which it was his purpose to establish, he seemed entirely to have changed his opinion. In order to obtain the necessary amount of specie capital, he proposed that some twenty or twenty-five millions of this bank stock should be transmitted to Europe and sold to foreigners in exchange for gold and silver. It was a violation of the laws of trade, which must recoil upon us, to force a greater amount of specie into the country than our just proportion, for the purpose of putting it into circulation among the people; but when the purpose is to furnish a specie capital of twenty or twenty-five millions for a new bank of the United States, then all difficulties vanish from the mind of the gentleman.

No, sir, said Mr. B., without the agency of any of these secondary causes, the present distress must have come. It was inevitable as fate. No law of nature is more fixed, than that our over-banking and our over-trading must have produced the disastrous results under which we are now suffering.

Is there now, in any of our large commercial cities, such an individual as a regular importing or commission merchant? I mean a merchant who is content to grow rich, as our fathers did, by the successive and regular profits of many years of industry in his own peculiar pursuit. If there be such persons, they are rare. No, sir, all desire to grow rich rapidly. Each takes his chance in the lottery of speculation. Although there may be a hundred chances to one against him, each, eagerly intent upon the golden prize, overlooks the intervening rocks and quicksands between him and it, and, when he fondly thinks he is about to clutch it, he sinks into bankruptcy and ruin. Such has been the fate of thousands of our most enterprising citizens. It is enough to make one's heart bleed to contemplate the blighted hopes and ruined prospects of those who have fallen victims to the demon of speculation. Many of them have been the most promising, and, but for this fatal error, would have become the most useful citizens of our country. Under the influence of this feeling, they not only risk their own all, but often the all of others which has been confided to them; not, as I firmly believe, with any deliberate purpose of being dishonest, but in the confident but delusive hope that fortune may smile upon their efforts and enable them to meet all their responsibilities.

Far be it from me to utter one word against the profession of the merchant. By their ability and enterprise our merchants have cast lustre upon the character of our country throughout the world. They are amongst our most useful citizens. They are agents for exchanging our productions with distant nations and among ourselves. Commerce is the handmaid of agriculture and manufactures; and Heaven forbid that I should be the instrument of exciting hostility between them. Again: I am the last man in the country who would crush that spirit of enterprise and of untiring effort which belongs to the American character. It has produced miracles. It has covered every sea with our flag. With a rapidity unexampled in the history of the world, it has converted the wilderness into fruitful fields and flourishing towns and cities. It has erected splendid improvements of every kind. It

has covered and is covering the face of our vast country with rail-roads and canals, and has enabled a nation, centuries behind in the start, to surpass all her rivals in the career of internal improvement. If I had the power I would regulate this spirit; I would limit it within proper bounds; God forbid that I should destroy it.

It is impossible that manufactures and commerce can flourish to any great degree in this country without the aid of extensive credit. I would not, therefore, abolish banks if I could. A return to a pure metallic currency is impossible. To make such an attempt would be ruinous as well as absurd. It would at once diminish the nominal value of all property more than fifty per cent.; and would, in effect, double the amount of every man's debts. It would enrich creditors at the expense of their debtors, and thus make the rich richer, and the poor poorer. It would paralyze industry and enterprise. I would give enterprise wholesome food to feed upon; but would not drive it into mad speculation, by administering unnatural stimulants.

What power does this Government possess to regulate the banking system of the country? None—comparatively none. It belongs to the States. We shall soon see whether they will exert this power in a wise and beneficial manner. Every obstacle has been removed from their course by the general suspension of specie payments. But the banks are all powerful. Their presidents, their directors, their cashiers, their stockholders, and their agents, pervade our whole society. They are spread over the land. A common interest will unite them in a solid phalanx for the purpose of making a common effort. They will invade our halls of legislation, and exert all the influence which they may possess with every department of our State Governments, for the purpose of preserving their exorbitant privileges. The people may now establish these institutions upon a stable and useful foundation. The conflict will be tremendous, and I confess I tremble for the result. The weal or the woe of this country, for many years to come, depends upon the issue.

In this crisis all which the General Government can effect is, in the first place, to withhold its deposits from the banks, and thus refrain from contributing their funds to swell the torrent of wild speculation; and, in the second place, to restrain the extravagance of their credits and issues, in some small degree, by collecting and disbursing our revenue exclusively in specie, or in the notes of banks who will pay the balances due from them in specie, at short intervals. To accomplish these two purposes, as well as to render the public revenue more secure, are the objects of the bill and amendment now before the Senate.

The evils of a redundant paper circulation are now manifest to every eye. It alternately raises and sinks the value of every man's property. It makes a beggar of the man to-morrow who is indulging in dreams of wealth to-day. It converts the business of society into a mere lottery; whilst those who distribute the prizes are wholly irresponsible to the people. When the collapse comes, as come it must, it casts laborers out of employment, crushes manufacturers and merchants, and ruins thousands of honest and industrious citizens. Shall we, then, by our policy, any longer contribute to such fatal results? That is the question.

The system of extravagant banking benefits no person except the shrewd speculator, who knows how to take advantage of the perpetual fluctuation in prices which a redundant paper currency never fails to produce. He sees, in the general causes which operate upon the commercial world, when money is about to be scarce, and when it will become plenty. He studies the run as a gambler does that of the cards. He knows when to buy and when to sell, and thus often realizes a large estate in a few happy ventures. Those who have been initiated into the mysteries of the paper money market, can thus accumulate rapid fortunes at the expense of their less skillful neighbors.

The question before the Senate is not, whether we shall divorce the Government from the banks. The banks themselves have done that already. The alliance is already dissolved. The question now is, shall we, with all the experience of the past, restore this ill fated union. No propitious divinities would grace the new nuptials; but the fatal sisters would be there ready again to cut the cord at the first approach of difficulty and danger.

The Senator from Virginia, (Mr. Rives,) has appealed to us in the name of consistency to sup-

port his amendment. But circumstances have entirely changed since we voted for it at the last session. Then the union existed between the banks and the Treasury, and his bill prescribed the relative duties of the contracting parties. Now the contract is at an end. The banks have violated its fundamental obligations, and the Government is free. The preliminary question now is, shall we enter into a new alliance. We must first determine that we shall, before any question of consistency can arise. Should we again connect ourselves with the banks, then, and not till then, can we be called upon to adopt rules regulating the union. The amendment of the Senator from Virginia proceeds upon the assumption that our former relations are to be restored. I oppose the amendment mainly because I am hostile to this reunion. If Congress should first determine to restore the old relations between the parties, then, and not till then, might there be some force in an appeal to our consistency.

We are left at this moment entirely free to decide what is best to be done with the public money. To use the language of the Senator from South Carolina, (Mr. CALHOUN,) we have reached a point from whence we are about to take a new departure. But three courses have been, or in the nature of things can be, presented for our selection. We must either deposit the public money in a bank of the United States, to be created for that purpose; or restore it to the State banks; or provide for its safe custody in the hands of our own officers, without the agency of any bank—state or national.

And first, in regard to the creation of another bank of the United States.—It was not my purpose, at this time, to offer my objections in detail to such an institution. Even if I had intended to present my views fully upon this subject, the overwhelming vote of the Senate on Tuesday last, against the establishment of such a bank, would warn me to forbear. It would be labor lost and time expended in vain. I shall content myself, therefore, with a few general observations upon this branch of the subject, and a short reply to some of the remarks which have been made by the advocates of a new bank.

In my opinion the most alarming dangers which would result from such an institution, have never yet been presented in bold relief before the people. This has arisen from the unnatural position of that institution towards the Government. We have seen it struggling against the Executive power; and its efforts have been tremendous. They would have been irresistible against any other President than Andrew Jackson. As it was, the conflict was of the most portentous character and shook the Union to its centre. But we have witnessed the exception; not the rule. It is the natural ally, not the enemy of power. Wealth and power necessarily attract each other, and are always ready to rush to each others embrace. In the language once used by a distinguished orator now no more, (Mr. RANDOLPH,) "male and female created he them." Suppose General Jackson and the bank had been in alliance and not in opposition? What then might have been the consequences, had he been an enemy to the liberties of his country? Armed with all the power and all the patronage which belong to the President of the United States, enjoying unbounded popularity and wielding the combined wealth of the country through the agency of this all powerful bank and its branches, planted in every portion of the Union; can any man say that our liberties would not have been in danger? All the forms of the constitution might have remained; the people might still have been flattered with the idea of electing their own officers; but the animating spirit of our free institutions would have departed forever. A secret, an all pervading influence, would have sapped the foundations of liberty and made it an empty name. Under such circumstances a President might always select his successor. But, thank Heaven, the danger has passed away and I trust forever.

If any of my friends on this side of the house, who advocate the establishment of a national bank, should be elected President, and if their political principles are to prevail with a majority of the people of this country, that majority could not make a better selection, in what situation shall we be placed? One of the first measures of the administration would be to establish a magnificent bank of the United States, with a capital of at least fifty millions of dollars, and with branches throughout the different States. A feeling of gratitude towards their creator would render them subservient to his

will. It would be their pride and their pleasure to promote his influence and to extend his power. We should have no more wars between the bank and the Government. They would move on harmoniously together. In other days, the time might arrive when the bank would be used by some bad and aspiring President as a powerful instrument to subvert the liberties of his country.

Even if such a bank could better regulate the currency and the domestic exchanges of the country than any other instrument, still it would be infinitely better to bear the ills we have than to endanger the existence or the purity of our free institutions.

But would such a bank control and regulate the issues of the State banks? I answer, no. It would not if it could, it could not if it would. In the affairs of human life, if you expect one agent to restrain and control another, you ought to render either their interests or their inclinations different and counteracting. To accomplish this purpose, they must be "antagonistical" to each other. When such agents are corporations, this is emphatically true. Peculiarly governed by self interest, they feel no enthusiasm unless it be to make large dividends for their stockholders. Now a bank of the United States would have precisely the same interest with the State banks, in making extravagant loans and issues. Whenever, in their estimation, they could extend their accommodations, without endangering their own security, they would pursue that course. This is the powerful instinct of self interest. You cannot change the fixed laws which govern human nature, by making men directors and stockholders in a bank of the United States. It is absurd to suppose that a large moneyed corporation, having in view solely its own interests, will voluntarily become the regulator of the paper currency of a great nation, and prevent those ruinous contractions and expansions under which both England and this country have periodically suffered. It would be easy for me to prove, at least to my own satisfaction, that in point of fact, neither the first nor the last bank of the United States, ever did exercise a regular and efficient control over the issues of the State banks. On the contrary, whenever their interest impelled them to extend their own issues, they have pursued this course, and thus instead of checking they have given loose reins to the State banks. Both the one and the others have thus rushed together, and have together ministered to that spirit of over-trading and extravagant speculation which has so often desolated our country. To pursue such a course of illustration would, however, be to revive the old controversy; to tread the ground which has been so often trodden, and to divert me from that which more essentially belongs to the present question.

The mistake committed in regard to the deposit banks, was the belief that they would be able and willing to restrain the issues of the other State banks. Fortified with the public deposits, and numerous as they were, they might possibly have done something towards the accomplishment of such a purpose. But bank like—human nature like, instead of aiming at any such result, the Government deposits became the instrument in their hands of still more extravagant credits and circulation. Their object seemed to be not to restrain, but to give loose reins to the other banks, and to themselves, and thereby increase their own profits.

But could a bank of the United States, even if it would, regulate and control the issues of the State banks. I have a striking fact to present to the Senate which bears directly upon this point. The Bank of England has recently been placed in such a peculiar situation that it became its interest to use its power for the purpose of contracting the circulation of the local banks throughout the kingdom. It was compelled to make the attempt by an over-ruling regard, not only for its own security, but for its very existence. This effort proved wholly unavailing.

The Bank of England was re-chartered for ten years in August, 1833. Previous to its re-charter its capital was £14,553,000 sterling. This whole sum was loaned to the Government. According to the provisions of the last charter, one-fourth part of the debt due from the public to the bank was to be repaid. This was done by the assignment of that amount of three per cent. stock to the bank by the commissioners for the reduction of the national debt. But as no division has been made of this amount among the proprietors, the bank capital, for every practical purpose, may still be estimated at £14,553,000, or \$70,000,000. This bank has

branches at ten of the most important commercial and manufacturing points in the kingdom. Now, if such a bank be incapable of regulating and restraining the issues of the country banks, then no similar institution of which we can conceive could efficiently exert this power.

On the 28th December, 1833, the bank had in its vaults £10,200,000 sterling in bullion, or nearly one-third of the amount of its circulation and deposits combined. On the 15th November, 1836, this amount of bullion had decreased to £4,933,000, or less than one-sixth of its deposits and circulation.

After long experience, it is admitted by all sound practical men in England, "that the true principle upon which bank issues should be governed is, that the circulation should at all times be kept full, but without any redundancy; and the simple means by which this state of things may be determined and regulated, are, (except on very extraordinary emergencies,) offered by the state of the foreign exchanges." When these become against England so much that bullion is exported, then the issues of bank paper ought to be contracted to such an extent as to restore the equilibrium. The reason is obvious. When the paper currency becomes redundant, prices rise in the same proportion; and then it is more profitable to remit specie abroad, than to export any other article.

The state of the foreign exchange was against England. The specie of the bank was, therefore, gradually drawn from its vaults for exportation. It became necessary that it should make a vigorous effort to diminish the amount of the circulating paper medium, and thereby restore the equilibrium of the foreign exchanges. For this purpose it contracted its issues in the vain hope that the joint stock and private banks would be compelled to follow the example. What was the consequence? I will not repeat the facts which have already been stated, though for another purpose, by the Senator from Georgia, (Mr. KING.) It is sufficient to say, that, as it contracted, the other banks of the kingdom expanded their issues; and that too in a greater proportion than its issues were diminished. Prices still continued to rise, and bullion still continued to be drawn out of the bank for exportation. The utter impotency of this grand regulator of the currency to keep the paper circulation of the kingdom within such limits as to prevent the exportation of gold and silver, has thus been so clearly demonstrated, that several of the ablest men in England despair of accomplishing the object in any other manner than by restricting the issues of paper money to a single bank, and regulating their amount by the Government. Here, then, is an important fact, incontestably established. If this be true, and there can be no question of it, I would ask Senators how a national bank, even with a capital of fifty millions of dollars, could regulate and restrain, within proper limits, the issues of eight hundred State banks, scattered over the whole extent of this vast country. The thing is impossible. It cannot be done by such a bank. I call upon Senators who entertain a different opinion to furnish any explanation of this conclusive fact. Unless they can do so, then they must abandon one of their strongest arguments in favor of the creation of a bank of the United States.

By the same fixed and universal law of commerce, which I have just stated, whenever the paper currency of the United States becomes so inflated that prices rise beyond their proper standard, then it becomes profitable to import every foreign production into our country, and for the same reason our exports are diminished. Specie must then go abroad to pay the balances against us. In order to supply it, the banks must be exhausted of their store. They must contract their issues, and their debtors must suffer distress. Such has been the history of our country at several successive periods, and such it must continue to be, unless bank issues should be regulated by the State legislatures.

The Senator from Kentucky (Mr. CLAY) has contended that the constitutionality of a bank of the United States ought no longer to be considered an open question. That it ought to be regarded as settled by the past action of Congress, and by the decision of the Supreme Court of the United States. From this opinion I beg leave to dissent. From my early education and my pursuits in life, I have been taught to entertain a high degree of reverence for judicial decisions. I feel disposed in all cases to yield to them their proper influence. If Congress should create a new bank of the United States, and the judiciary should decide it to be

constitutional, I would bow with submission to their authority. The good order and peace of society require that such should be the conduct of our citizens whatever may be their private opinions. But after the charter has expired by its own limitation, and when Congress are again called to act *de novo* upon the subject, I should feel myself at perfect liberty to exercise my own judgment. In forming my opinion, I should treat with great deference and respect the former acts of Congress and the opinion of the Supreme Court; but, after all, if they should fail to convince me, I would consider myself guilty of moral perjury before Heaven if I voted for such a bill. I have sworn to support the Constitution of the United States; and my own judgment must be convinced that a law is constitutional before, acting in a legislative capacity, I can give it my sanction. I cannot cast the responsibility of such a vote upon others. It is exclusively an affair between me and my own conscience. If men, acting in a legislative character, should, in all cases, consider themselves bound by judicial decisions, what would be the consequence? The judges who, in all ages and in all countries, have had a leaning in favor of the prerogatives of Government, would be the arbiters of popular rights and popular liberty in the last resort. There could be no appeal from their decision upon great questions of constitutional liberty; even when they arose before the Legislature in cases where the personal or private rights of the citizen could not be affected. Their decisions would become as irreversible as the laws of the Medes and Persians. They would be sacred as the constitution itself.

Congress passed the sedition law in 1798 in express violation of that provision of the constitution, which declares that "Congress shall make no laws abridging the freedom of speech or of the press." This act was more equitable in its provisions than the common law, because it permitted the defendant to give the truth in evidence. The popular odium which attended it was not excited by its particular provisions; but by the fact, that any law upon the subject was a violation of the constitution.

It is now admitted by ninety-nine persons out of a hundred, that Congress, in passing this act, transcended their powers; and yet this law was declared to be constitutional by the Judiciary, doubtless with honest intentions. American citizens were indicted and tried and convicted, and sentenced and suffered fine and imprisonment under its provisions. If it were again proposed to pass a similar law, I ask the Senator from Kentucky whether he would feel himself bound by these decisions to believe and to vote that such a law was constitutional. I feel assured that he would not. Upon the same principles, the infamous decisions of a Jeffries or a Scroggs against the rights and liberties of the people of England, ought to have been held sacred, and the glorious revolution of 1688 was an act of usurpation. The decisions of judges, except on the particular case before them, must, like all other human things, be corrected by the experience of time and the lights of knowledge.

The Constitution of the United States confers upon Congress the power "to lay and collect taxes, duties, imposts and excises," &c. and after enumerating other powers, authorizes us "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." The advocates of a national bank have derived the power to create such an institution from these two clauses. They have contended that a national bank is a necessary and proper instrument to collect, to keep securely, to transfer, and to disburse the national revenue; and therefore that it is constitutional. Such seems to have been the opinion of the Supreme Court, as delivered by Chief Justice Marshall in the case of McCulloch against the State of Maryland. But that very decision is based upon the principle, that if Congress have determined such a bank to be an appropriate means to carry into execution this taxing power, the Judiciary could not interfere and declare that it was not. The degree and the urgency of this necessity must at last be left to the Legislature, unless in extreme cases. Upon an application for a new charter, the question appears thus to be referred by the Judiciary itself to the Legislative authority. Every member, should the case arise, must ask himself whether a Bank of the United States be a necessary and proper instrument to

carry into execution the taxing power of the Government. If he decides in the negative, he can not vote in favor of establishing such a bank, without personally violating the Constitution.

And here I should have concluded the observations which I had intended to make on the subject of a Bank of the United States, had it not been for the remarks made yesterday by the Senator from Massachusetts, (Mr. Webster.) He came out strongly in favor of a bank—no, I ask his pardon, he did not—because he solemnly disclaimed any such imputation when it was made upon him by the Senator from New Hampshire, (Mr. Hubbard.) I confess, if it had not been for this disclaimer, I should have fallen into the same error; because he insisted upon it, that during forty years of the period which had elapsed since the adoption of the Constitution, the first and the last Bank of the United States had furnished the country a perfect currency, and had regulated our domestic exchanges to admiration. The gentleman had urged these topics strongly; and had pointed out no other specific mode of regulating the currency and exchanges but through the agency of a bank; hence it was natural to infer that he intended to advocate such an institution.

What then was the Senator's main position. In this I think I cannot be mistaken. I wish to state it distinctly and fairly. He contended that Congress not only possess the power under the Constitution, but that it is their imperative duty, to create and furnish for the people of this country, a paper currency which shall be at par in all portions of the Union, and every where serve as the medium of domestic exchanges. In what particular mode, or by what means, this paper currency was to be called into existence, the Senator did not explain. On this point he was quite mysterious. He infers the existence of this power from two clauses in the Constitution; the first, that which confers on Congress the power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes;" and the second, "to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures."

[Here Mr. WEBSTER also referred Mr. B. to that clause of the Constitution which prohibits the States from coining money or emitting bills of credit.]

What in my opinion constitutes the chief excellence of the Senator from Massachusetts, as a public speaker, is the clearness with which he states his propositions, and his power of condensation in maintaining them. Which he happens to be in the wrong, these high qualities operate against himself, and render his errors more conspicuous. Such was my conviction yesterday, when he undertook the Herculean task of deducing the power to create a paper currency, without any limit but the discretion of Congress, from the simple powers of regulating commerce, and coining hard money.

By the state of the question before the Senate, the gentleman has been driven into a narrow place, and has chosen a position which his great powers will not enable him to maintain. The bill upon your table proposes to keep on deposit, and to transfer the public revenue where it may be required, without the agency of any bank. If these duties can be successfully performed by the officers of the Government, then there can be no pretence for claiming the power to incorporate a National bank, from that clause in the Constitution giving Congress the power "to lay and collect taxes, duties, impost and excises, and to pay the debts of the United States." The present bill provides for all these purposes, independently of all banks. There can, then, be no necessity to create one as a fiscal agent of the Government; and, of consequence, the ancient argument in favor of its constitutionality falls to the ground. This was its origin: this was the foundation on which it has formerly rested. The power to issue notes, and that to regulate the exchanges of the country, have heretofore been considered as merely incidental to the bank itself, after it had been called into existence as a necessary fiscal agent of the Treasury. These have never been considered as powers inherent in the Government, but as mere consequences of the regular ac-

tion of a national banking institution. Under existing circumstances, the Senator is driven even from these comparatively narrow limits. He disclaims the idea of advocating, at present, the establishment of a national bank. Hence he has never once, throughout the whole course of his argument, called to his aid the power "to levy and collect taxes." He has not even mentioned it. He casts this power into the background; whilst he claims for Congress, from the other clauses of the Constitution which I have read, the transcendent power of creating a paper currency without limits.

Let us for a few moments examine his argument. The framers of the Constitution were sturdy patriots, who, with a bold but cautious hand, conferred upon the General Government certain enumerated powers. Dreading lest this Government might attempt to usurp other powers which had not been granted, they have expressly declared that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." This caution was absolutely necessary to prevent astute and subtle lawyers from extending, by forced and ingenious constructions, the clear and explicit grant of powers which was traced by the hand of our fathers. Does the Constitution, then, any where expressly confer upon Congress the power of creating a national paper currency? This is not pretended. But the Senator from Massachusetts has found it lurking under the power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes." What is the signification of the word "regulate?" Does it mean to create? No, sir. Such a signification would be to confound the meaning of two of the plainest words in the English language. You create something new; you regulate the action of that which has already been called into existence. The meaning of the word *regulate*, as used by the framers of the Constitution themselves, clearly appears in a subsequent clause of the instrument: "Congress shall have power to coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures." To coin money, is the creation of the subject; after it has been coined, and thus brought into existence, you regulate the value of it and of foreign coin. There are no two words in the English language which have more distinct and precise meanings than to create and to regulate. The word *regulate* necessarily presupposes the previous existence of something to be regulated. Such is its plain, clear signification in the Constitution. Commerce had long existed "with foreign nations, and among the several States, and with the Indian tribes," previous to the date of the Constitution. Its framers took the subject up as they found it, and, acting upon the existing state of things, they authorized Congress to regulate, or to prescribe rules for conducting this commerce in all future time. To infer, therefore, from this simple power of regulating commerce, that of creating and issuing a supply of paper money for the country, strikes me as one of the most extraordinary propositions which has ever been presented to the Senate.

The limited signification of this word "*regulate*," will appear conclusively from the history of this provision of the Constitution. Under the Confederation, each State acted independently of the others in framing commercial regulations. The consequence was, that whilst some States imposed high duties on the importation of foreign merchandise, others admitted it into their ports at low rates, or free of duty altogether. No commercial treaty upon principles of reciprocity could be carried into execution with foreign nations, because, whilst the several States exercised this prerogative, there could be no uniformity of duties. Again: those States which admitted foreign productions either without duty or at low rates, endeavored to force them into the consumption of the neighboring States where the duties were higher. They could, of course, under-sell the merchants who had been compelled to pay these higher duties of their own States. Thus the revenue laws of one State were counteracted by those of another; and a war of commercial restrictions arose among themselves. These were not only the reasons for adopting the

clause in the Constitution authorizing Congress to regulate commerce, but they were the immediate cause for assembling the convention which framed the Constitution itself. This may be seen from the proceedings which led to the adoption of that instrument, contained in the first volume of the Laws of the United States.

The States were jealous in the extreme upon this subject. They were reluctant to yield to Congress the power of regulating commerce. Some of them proposed to surrender it for a term of years, whilst others refused to do any thing. On the 13th July, 1785, a committee of Congress, of which Mr. Monroe was chairman, recommended an amendment to the articles of confederation, containing, among other things, a provision that the United States, in Congress, should have the exclusive power "of regulating the trade of the States, as well with foreign nations as with each other, and of laying such impost and duties upon imports and exports as may be necessary for the purpose." This provision was subject to several conditions and limitations which I need not repeat. The meeting at Annapolis, in September, 1786, was held for similar purposes, but commissioners from five States only were present, who declined to act upon the subject, and recommended the assembling of the convention which formed the present Constitution of the United States.

From this brief review you may judge, Mr. President, what would have been the astonishment of those jealous patriots, who, with a reluctant hand, conferred this power upon Congress to regulate commerce, if they had been informed that it contained within itself the vast, the undefined and undefinable power of creating a paper currency, without limit and without restriction. In some of the State conventions which were assembled for the purpose of ratifying the Federal Constitution, extreme inferences were drawn, according to the spirit of the times, as to the powers which might be assumed by Congress from the language of the instrument. But no man in America, however haunted he might have been with the wildest apprehensions of Federal power, ever imagined that there was lurking under the simple power to regulate commerce that of establishing a national paper currency. The Senator from Massachusetts has first detected this slumbering power. The word "regulate," says Crabbe, in his Synonyms, "is applicable to things of minor moment where the force of authority is not so requisite." It is inferior in potency to the words "rule," "govern," or "direct." In the hands of the Senator from Massachusetts, however, it becomes all-powerful. He can conjure with it, and raise up the phantom of an all-pervading and unlimited paper currency.

The Senator from Massachusetts has commented upon the propositions laid down by the President in his Message, that "it was not designed by the Constitution that the Government should assume the management of domestic and foreign exchanges," and "that as justly might it be called upon to provide for the transportation of the merchandise of individuals." Now, sir, might not the gentleman as fairly deduce this power from that of regulating commerce, as the power of issuing paper money? Nay, might it not be done more directly? The first implication would naturally be, Congress possesses the power to regulate commerce, therefore, you may infer the power of transporting merchandise, without which commerce cannot exist. But commerce is the exchange of commodities; and where they are not of equal value, some medium is necessary to pay the difference; therefore Congress possesses the power of creating a paper currency for this purpose. The power to transport merchandise is one step nearer to the fountain head than that of issuing paper. If you adopt such constructions of the Constitution, you are at sea without chart or compass; and that instrument may be made to mean any thing or nothing. The plain and obvious intention of its framers is sacrificed to the spirit of metaphysical subtlety, and to the desire of extending the powers of the Federal Government.

The Senator asks is it possible that the Constitution has given to Congress the power over commerce, and yet has provided no currency by which

it may be conducted? I answer that the framers of that instrument were guilty of no such absurdity. They have provided a medium of exchange the best in the world. They have empowered Congress to coin money, and to regulate the value thereof and of foreign coin. They were hard money men. To use a forcible expression of the Senator himself, they made gold and silver currency the law of the land at home, as it was the law of the world abroad. This is the medium and the only medium of exchange which they have provided.

And yet, sir, from this clear and precise power "to coin money and regulate the value thereof, and of foreign coin," the Senator from Massachusetts also deduces the power of issuing paper money; and he has seriously insisted upon this argument. I confess I feel myself utterly at a loss to answer it: To contend that because Congress have derived from the Constitution the express power, and that only of coining gold and silver money; that therefore it is their right and their duty to create paper money, appears to me, with all due deference, to be a monstrous proposition. It can not be maintained for a moment. The framers of the Constitution have evinced their intention as clearly as human language can manifest it, that our currency should be gold and silver alone; and they have prohibited the States from making any thing else a legal tender. And yet the Senator contends, that from these very provisions, a power results to Congress of creating a paper circulation for the country. The framers of the Constitution knew nothing of any paper currency, except that of the Revolution. This they would not touch; they did not name it. It was an example forever to be shunned, and never to be followed. And yet they have done their work with so little skill, that they have authorized Congress to create a paper currency for the whole Union, which shall serve as the medium of our domestic and foreign exchanges! The Constitution has established gold and silver as the currency of the country, and therefore it is contended they have authorized the emission of a vast paper circulation!

Now I most sincerely believe, that if any such constructions can prevail, then all the boundaries of federal power are at once prostrated, and we are rapidly on the march towards consolidation. It was in vain that our ancestors granted powers to this Government with a jealous hand, and studiously sought to preserve the rights reserved to the States. It was in vain that they made a specific enumeration of the powers of Congress, and withheld from us all incidental powers, except such as might be necessary and proper for carrying those which were expressly granted into effect. All limitations are at once prostrated, and our written Constitution secures us nothing. It has become clay in the hands of the potter, ready to assume any shape and receive any impression which the passions or the prejudices of the hour may dictate.

Two political schools have existed in this country from the time the Constitution was adopted. The one favored a strict, the other a liberal construction of the instrument. The one has been jealous of State rights, the other the advocate of federal power. The Senator from Massachusetts, if we may judge from his argument upon the present occasion, is far in advance of those who have hitherto gone the farthest in support of federal power. He has made large strides towards consolidation or centralism. I use these terms with no offensive meaning.

I have now reached the question whether the public depositories ought to be restored to the State banks. I contend that they ought not; first, because these banks are not and never have been safe depositories of the public money. In other words the experiment has entirely failed.

What is the great and peculiar privilege conferred upon a bank of deposit, discount, and issue? A bill or promissory note is presented, with one or two good endorsers, and between six and seven per cent. per annum is discounted from its face. What does the bank give in return? Either a credit entered on its books, or bank notes payable on demand; and in either case without interest. Their offer to their customers is: I will give you my notes without interest in exchange for your notes, from which the

interest shall be deducted in advance. In consideration of enjoying this profitable privilege, banks are bound by the duty which they owe the public, always to preserve themselves in such a condition as to be able to answer all the demands made upon them in the regular course of business, in bad as well as in good times. It is not sufficient that they should be able to navigate a smooth sea when the gales are prosperous. They ought to be strong enough to endure the storm. If they fail when the community most requires their support, then they are worse than useless. They have not answered the purposes of their existence.

It is a common remark that the public will not eventually suffer from their failure, provided their debtors be at last good for the amount which they owe. The same observation might be made with equal justice in regard to a man not worth a dollar, if he had been able to issue his own notes without interest, to the amount of one hundred thousand dollars, in exchange for a like amount of the notes of solvent individuals bearing an interest. If his debtors should be able to pay him, he will eventually be able to redeem his notes. But this is not banking; it is speculating upon mere credit, without any solid capital to sustain it.

According to the testimony given before the secret committee of the House of Commons by the directors of the Bank of England, previous to its recharter, it appears that the principle upon which they had proceeded in regulating their issues, was to have as much coin and bullion in their coffers as amounted to a third part of the liabilities of the bank, including sums deposited, as well as notes in circulation. This rule of one for three may, or may not, be a correct standard. I shall not pretend to determine this point. That bank has since been compelled to depart from it by causes similar to those which have crushed our own banking institutions. This I will say, however, that if one dollar in specie, for three of circulation and deposits, be no more than a safe standard for the Bank of England, then our banks ought to have a larger proportion of the precious metals to render them secure. The circulation of each one of our eight hundred banks is limited within a narrow sphere. Their paper does not travel far from home. When a panic arises, from any cause whatever, nearly their whole circulation may be poured in upon them in the course of a very few days, and thus they may be compelled to suspend specie payments. Not so the Bank of England: its circulation is co-extensive with the kingdom, and its notes are every where a legal tender, except at its own counter. The joint stock and private banks pay their own notes with notes of the Bank of England. It follows, as a necessary consequence, that it would require much time to make an extensive run upon this institution; and any panic which might arise, would have ample opportunity to subside before their specie could be exhausted.

When the deposit bill was before the Senate at its last session, the Senator from South Carolina offered an amendment prohibiting the Secretary of the Treasury from employing any bank as a depository of the public money, unless it had one dollar in specie for five of its circulation and deposits, public as well as private. This proposition, at that time, received my hearty support. The whole subject was afterwards referred to a select committee, of which I had the honor of being a member; and they reported a provision in substance requiring each depository to have one dollar in specie for five of its circulation and private deposits. You will observe, sir, that the public deposits were entirely excluded from this provision. They were not taken into the estimate. No proportion of specie was required to secure them. One would suppose that, in all conscience, this provision was sufficiently liberal towards the banks. When the bill afterwards came to be discussed before the Senate, it was found that even this limitation would deprive many of these banks of the public deposits; and according to my recollection, in which I think I can not be mistaken, if we had made it one for ten, several of them would have been excluded. For this reason the Senate determined, against my feeble efforts, not to require the banks to hold any fixed proportion of specie compared with their cir-

ulation and deposits. Every provision on the subject was stricken out of the bill, and the amount of specie which the banks were to hold was left entirely to the discretion of the Secretary of the Treasury. On that occasion I turned prophet myself, as several of my friends on this floor can testify. I anticipated an explosion of several of the deposit banks, but it came sooner than I had expected.

Under these impressions, you may judge of my astonishment when I saw it stated by the Secretary of the Treasury, in his late report, speaking of the deposit banks in the aggregate, that "their immediate means, compared with their immediate liabilities, were somewhat stronger in November than May, but were at both periods nearly one to two and a half, or greater than the usual ratio, in the best times, of most banks which have a large amount of deposits in possession." To sustain this assertion, he refers to table Q in the appendix of his report. Upon examining this table the difficulty at once vanished. I found that the Secretary, instead of deducting the amount due by these banks to other banks, from an aggregate composed of the amount due from other banks to them, and the notes of these other banks in their possession, and setting down the balance as an item of the immediate means of the deposit banks, had placed the sums due to other banks on one side of his statement, and the notes of other banks, and the sums due from them, on the other. The inaccuracy of this course of proceeding will appear clearly from a brief example which I shall present. Suppose a bank to possess \$100,000 in specie, and its circulation and deposits to amount to \$400,000. It would then stand as 1 to 4. But suppose it owed a balance to other banks of \$200,000, and other banks owed it precisely the same amount; by adding these sums of \$200,000 to the one and to the other side of the statement, you would change the apparent condition of the bank, and make its immediate means the one-half, instead of the one-fourth, of its immediate responsibilities. The statement would then stand thus, immediate means \$300,000, and immediate responsibilities \$600,000, or a proportion of \$1 for \$2. In this very manner, as all can perceive who will examine the Secretary's statement, has he brought the average condition of the deposit banks up to the standard of one for almost two and a half.

These accounts between the banks are often adjusted. Balances are suffered to remain with each other, because they can at all times be readily commanded for immediate use. If one bank has money in the vaults of another in its immediate vicinity, it is the same thing as if it were in its own vaults. Upon the least pressure it would be withdrawn. Therefore, the balance due to one bank from another upon settlement, and not the full amount, can only be estimated among its immediate means.

According to this method of calculation, which is clearly the only just mode which can be adopted, the deposit banks, in the aggregate, have not quite one dollar of immediate means to meet \$4 40 of their immediate responsibilities; and that they have even this proportion, proceeds upon the supposition that they can command the balances due to them from other banks in specie. If they can not, the specie in their possession would not equal one dollar for seven dollars and fifty cents of their circulation and deposits.

Now this is the average condition of all the banks. Many individual banks among them are in a better condition, whilst many others are in a much worse.

The Secretary of the Treasury, in the same table, (Q,) has presented the "condition of deposit banks on or about June 15, 1837, in different sections of the country." In this table he classifies these banks under six different heads, according to the different portions of the Union within which they are situated. One of these classes is Alabama, Mississippi, Louisiana, and Tennessee; and it appears that the deposit banks in these States have not one dollar of immediate means for twenty dollars of their immediate responsibilities! The whole amount of specie in their vaults is \$1,168,022, whilst the balance due by them to other

banks is \$2,516,773. All the specie which they possess would thus be less by \$1,348,751 than sufficient to pay this balance. Independently of it, there would then be left \$21,480,819 of circulation and public and private deposits, without one dollar of specie to meet it; and in these banks a large proportion of the public revenue is now deposited.

The deposit banks in New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia, are classified together. Their specie and the balance due to them from other banks, amounted on the 15th June last to the sum of \$1,732,478; whilst their circulation and public and private deposits were \$9,357,947. Thus it appears that these banks had not one dollar of immediate means for \$5 40 of their immediate responsibilities. If the balance due to them from other banks, which amounted to \$987,921, is not to be considered as immediate means, then their specie, to wit, \$744,557, is not equal to one dollar for \$12 50 of their immediate responsibilities.

The deposit banks of Virginia, North Carolina, South Carolina, and Georgia, which are classed together, had in specie, and the balance due to them from other banks, \$2,245,423, whilst their circulation, and public and private deposits, amounted to \$13,423,627. Thus these banks had not one dollar of immediate means for \$5 95 of their immediate responsibilities. If the balance due to them upon a settlement with other banks, amounting to \$176,469, be excluded from the estimate, then their specie, to wit, \$2,068,954, is not equal to one dollar for \$6 45 of their immediate responsibilities.

The deposit banks in each of the other three classes, composed of the New England States, New York, and the western States including Michigan, were not in so bad a condition. Their immediate responsibilities were so much greater than one dollar for four dollars and forty cents of their immediate responsibilities, as to bring the general average of all the deposit banks throughout the Union nearly down to that standard.

I have not examined each of these banks in detail. No doubt many of them are in a sound condition. My object is to show that the system, as a whole, cannot be relied upon by the General Government. I am one of the last men in the Senate who would attack the credit of individual banks. I therefore purposely avoid going into particulars. I shall proceed no further than the course of my argument renders indispensable, and therefore justifies.

The suspension of specie payments throughout the country, has, in one respect, been a most fortunate occurrence for the deposit banks along the Atlantic seaboard. It has enabled them to pay nearly the whole amount of the public deposits in their possession in their own depreciated paper. The public creditors were compelled to accept drafts upon them, because the Secretary of the Treasury had nothing better to give; and thus their debt to the Government has been nearly extinguished. The balance still remaining due to us is chiefly deposited in banks beyond the mountains.

The Senator from Kentucky (Mr. Clay) has used some strong expressions in regard to the power which the bill authorizing the Secretary of the Treasury to settle with the deposit banks has conferred upon that officer. He said it was greater than ever ought to be confided to any man under a free Government, and would operate severely upon the banks. And what is this power? These institutions had agreed to receive our funds on deposit, and to credit them as cash to our account. They are liable, by the terms of their own contracts, to be drawn upon, at any moment, for the whole amount in their possession. We know that they are unable to pay, and therefore interpose for their relief. We authorize the Secretary to give them time, and to accept the balance due from them in three instalments, payable at the end of four, six and nine months, charging them no more than two per cent. interest. If they fail to comply with these reasonable terms, then we direct suit to be brought. And yet this has been denounced as confiding a dangerous discretion to the Secretary, and as a great hardship upon the banks.

—with what justice, I shall leave the Senate to decide.

And this is the experiment, which, according to the Senator from Virginia, (Mr. Rives,) has not failed. This is the experiment to which we ought to give another trial. I tremble for my country when I reflect what may be its condition hereafter, should its treasures be again entrusted to such depositories. No nation can expect perpetual peace. Dark and portentous clouds are now gathering in the north. The Maine boundary question is assuming a threatening aspect. In the South, we have serious disputes with Mexico. If war should come, and find us with our treasures locked up in such depositories as we have had, the embarrassments of the country will be of the most formidable character. Many of these banks could not exist for a moment, if it were not for the boundless, extravagant, and foolish confidence of the public. The inflated bubble when touched by the spear of Ithuriel, must explode and dissolve into thin air. The whole fabric is built upon the sand, and "when the rain descended, and the floods came, and the winds blew, and beat upon that house, it fell; and great was the fall of it." Nay, sir, a puff of air was sufficient to overturn it.

Apprehensions have been expressed, and no doubt felt in the course of this debate, lest a perpetuation of the divorce which now exists between the Treasury and the banks, might lead to the establishment of a Bank of the United States. This event would, in my opinion, be much more probable should the late system be restored. It is, therefore, natural that the friends of such a bank should be in favor of this restoration. In such an event, let war come when it may, you will then not only be deprived of your own treasures, but specie payments will be suspended, the currency of the whole country will be deranged, and you will not be able to collect taxes from the people, unless it be in depreciated paper. At such a crisis, a Bank of the United States becomes inevitable. Let us then keep our money under our own control. Let us always have it ready for use when it is required. Let us depend upon no banks, whether State or national, for this purpose.

It may be said that although the banks have suspended specie payments, yet the deposits which we have made with them will eventually be paid. This may, or it may not be. I doubt extremely on that point. If the event were certain, however, this is no answer to the objections against employing such depositories. In the day of danger they cease to be banks. Your money, which is the sinew of war, is withheld from you at the hour of your utmost need. Your resources are dried up, and your energies paralysed, at the very moment when the most energetic exertions are demanded. It would be but a poor consolation, either to the Government or people of this country, that after having suffered all the evils and calamities of such a catastrophe, the Commissioners of Insolvency should finally pay them twenty shillings in the pound.

In the second place, I am opposed to returning to the system of deposit banks, because I feel no confidence that upon a second trial, it would prove better than it did on the first. From the very nature and present organization of our State banking institutions, they must go from bad to worse. Their tendency is downward, and unless arrested by the vigorous action of the State Governments, the whole system must rush to inevitable ruin. I defy the art of man to devise a worse banking system than that which prevails throughout this country. The model of it upon paper was the Bank of England; but the whole capital of this bank is vested in loans to Government, and is therefore as secure as the Government itself. Such is not the condition of any of our institutions. The public have no security that the whole amount of their capital stock may not be squandered; and the fact is, according to the statement of Mr. Gallatin, that one hundred and sixty-five of our banks broke between 1811 and 1830.

These banks, or all of them with which I am acquainted, enjoy, under their charters, a privilege which exempts their stockholders, in their individual capacity, from the payment of any of the notes

or debts due by the corporation, in case it should become insolvent. There is, I believe, no restriction any where upon the amount of their profits or dividends, unless it be a trifling tax. And they are no where required to have any fixed proportion of specie in their vaults, compared with the amount of their circulation and deposits: certainly they are not in the State which I have the honor in part to represent.

If the Senator from Massachusetts and myself enter into a partnership to prosecute any business, and the partnership should fail, the private fortunes of each of us would be responsible for the debts of the concern. The partners and shareholders in the private or joint stock banks of England are placed in the same situation. No holder of such bank notes in that country, none of their depositors can lose one dollar, until after the private fortunes of all the stockholders shall have been exhausted. This is a great security to the public. Not so the bankers in this country. They are a privileged class. That business which is more profitable than any other is conducted without any such risk. Cupidity is unrestrained by any such apprehension. It has a fair field to display itself. Each man puts into the concern the amount of his stock. When that is paid, the bank proceeds to make money as fast as it can, without the fear of future responsibility. How great is the temptation to excess! These banks create money as if by magic, in the form of bank notes or bank credits. These they exchange with individuals for their own notes or bills of exchange, discounting a high rate of interest from their face. Their extravagant issues and credits give a stimulus to extravagant speculations; and our past history proves that the more they loan, the greater is the demand for new loans. The supply never equals the demand. The last few years has been the golden age for banks. I have no means of ascertaining their profits in different portions of the Union. I am sorry that the deposit law did not require the deposit banks to return to the Secretary of the Treasury the amount of their dividends. From all the information which I have received, they have been enormous. The Senator from Georgia (Mr. King) has informed us that the banks in the city where he resides (Augusta,) have divided, during the last year, at the rate of fifty per cent. per annum.

These extravagant profits have tempted the avarice of our citizens. Each one desires to reap his portion of the golden harvest. Our legislative halls have been beset by bidders for new banks, genteelly denominated lobby members. Rich rewards and splendid gifts have been made to those of them who proved successful. The State Legislatures have too often yielded to their importunities. Then comes the struggle among competitors to obtain the stock. The scenes which have occurred upon such occasions, in some of our large cities, I shall not attempt to describe. It rises instantly above par; and those who have been fortunate in the struggle, may sell out at an advance. This stock, in many instances, is not paid for in money, but in what are called stock notes. The new bank starts, often without any large proportion of solid capital, to run the same career, which seems to be prescribed to it by the law of its nature.

Bank capital, bank notes, and bank loans, have increased with alarming rapidity for the last few years. The President, in his Message, states that between the commencement of the year 1834, and the first of January, 1836, the bank capital of the country had increased from \$200,000,000 to \$251,000,000, the notes in circulation from \$95,000,000 to \$141,000,000, and their loans and discounts from \$324,000,000 to \$457,000,000. We know that since the first of January, 1836, the increase has still been proceeding at a rapid rate, and many new banks have been created; but after that period, we have received no accurate information of their capital, or of the amount of their issues and loans.

Upon any sudden revulsion of trade, these banks either sink under the weight they have heaped upon themselves, as they have recently done; or, if they survive the shock, they greatly injure, or wholly ruin, those members of the community around them who have unfortunately become their debtors. In struggling for existence themselves, necessity

compels them to press their debtors with an iron hand.

When a bank fails, what classes of society are most likely to suffer from the explosion? Who do you suppose, Mr. President, held the notes of the hundred and sixty-five banks that proved insolvent between 1811 and 1830? Not the shrewd man of business, not the keen speculator; because they snuff the danger from afar. It was the honest and industrious classes of society, who are without suspicion, and whose pursuits in life do not render them familiar with the secret history of banking.

We are now just experiencing another great evil which has resulted from the extravagant loans and issues, and consequent suspension of specie payments by the banks. The country is now deluged with small notes, vulgarly called shin plasters. They are of every form and every denomination between five cents and five dollars, and they are issued by every individual and every corporation who think proper. It is impossible for the poor man to say he will not take them; for there is scarcely any silver change in circulation any where. He must receive them for his labor or starve.

The paper on which these small notes are printed is often so bad, and they are so inartificially got up, that it is almost impossible to distinguish between the counterfeit and the genuine. To counterfeits they have become a regular business, and it has been carried to a great extent.

Our currency below five dollars now consists of this combined mass of genuine and counterfeit shin plasters; and many of the counterfeits are intrinsically of equal value with the genuine. Some are payable in one medium and some in another. Some on demand, and others have years to run before they reach maturity. The very moment the banks resume specie payments, this mass of illegal and worthless currency will be rendered entirely useless. It will fall dead in the hands of its holders, and these will be chiefly the very men who are least able to bear the loss. A scene of confusion and distress will then be presented which I need not describe. Such is one of the effects of extravagant banking.

There is a class of society for whom I have ever felt a deep interest, whose attention I should gladly awaken to the evils of an excessive issue of paper currency—I mean our domestic manufacturers. Do they not perceive that all the protection which our laws afford them is rendered almost entirely useless by the extravagant amount of bank notes now in circulation?

It has been stated, in general terms, by those who best understand the subject of political economy, that if you double the amount of the circulating medium of a country, you thereby double the nominal price of every article. "If, when the circulating medium is fifty millions, an article should cost one dollar, it would cost two, if, without any increase of the uses of a circulating medium, the quantity should be increased to a hundred millions." Although we cannot apply strict arithmetical rules to this subject, yet all will admit that the proposition is substantially correct. Let us then suppose, that our currency has reached such a point of depreciation, when compared with that of our rivals in foreign countries, that an article which could be manufactured abroad for one dollar, would cost one dollar and fifty cents at home; and what is the consequence? A premium of fifty per cent. is thus, in effect, given to foreign manufactures over those of domestic origin. For example: A piece of broadcloth costs one hundred dollars to the French manufacturer; he brings it here for sale, and, on account of the depreciation in our currency, he receives for it one hundred and fifty dollars; what advantage does he thus obtain? Being the citizen of a foreign country, he will not accept our bank notes in payment. He will take nothing home except gold and silver, or a bill of exchange which is equivalent. He does not expend this money here, where he would be compelled to support his family, and to purchase his labor and materials, at the same rate of prices which the domestic manufacturer is compelled to pay. The depreciation in our currency below the standard of that of France or England is, therefore, equivalent to a proportionate di-

rect protection to the foreign over the domestic manufacturer. The conclusion is inevitable. It can not be denied. It is impossible that our manufacturers should long be able to sustain such an unequal competition. They, above all men, ought to exert their great influence for the purpose of confining the paper currency of our country within some reasonable limits. The fate of the great interest in which they have embarked depends upon it.

Our farmers in the grain growing States are placed in a similar situation. The amount of our currency must be diminished, or foreign wheat will continue to be imported for domestic consumption. The farmer in the north of Germany will be able to undersell us in our own markets.

The banks, by their refusal to pay specie, have now placed themselves in the power of the State Governments. They have forfeited their charters; and it now remains for the different Legislatures to decide upon what terms they shall be restored. Amidst the general misfortunes of the country, it is one source of consolation that the banks have placed themselves within the power of the people. Had they not done this by their own conduct, we know that a numerous and powerful party exists in this country who consider a charter of incorporation so sacred, that no State Legislature, by any future law, could ever restrict their own banks from issuing notes under ten dollars, if their charter authorized them to issue notes of a less denomination. According to the doctrines of this party, all power over the paper circulation of the country, which is one of the highest attributes of sovereignty retained by the States, has, by them, been irrevocably transferred to eight hundred banks. Thank heaven every difficulty on that subject is now removed; and it will depend upon the wisdom and firmness of these Legislatures, whether we shall have a sound paper currency in time to come, proportioned in amount to the wants of the people, and placing the banks themselves in a secure condition; or whether we shall again be overwhelmed with a deluge of paper money and all its attendant evils. If they will but secure a specie basis for our paper circulation, by prohibiting the issue of bank notes, at first under ten dollars, and afterwards under twenty; if they will render the stockholders of banks personally responsible, at least for the amount of notes which they may issue; if they will limit the dividends of the banks to a reasonable profit on the investment of the stockholders; if they will require the banks to keep a just proportion of specie in their vaults compared with their circulation and deposits; and above all, if they will adjust the whole amount of bank notes to be issued to the wants of the people, upon principles which have been sanctioned by experience, so as to prevent ruinous fluctuations in the amount of our currency—then, indeed, the evils which we have suffered will be compensated by the benefits we are destined to enjoy. But I confess I dread the result. We are a strange people. The lessons of experience make but a feeble impression on our minds. We rise with so much buoyancy from our misfortunes, that when they have passed away they are instantly forgotten. Should the banks resume specie payments before or shortly after the next meeting of our State Legislatures, and the current begin to run smoothly again, I fear that no such changes will be made in the existing bank charters, and that we must await the event of another crisis, which would then be inevitable.

Until these or some such restrictions shall have been imposed by the States on their banks, they never can, they never will, become secure depositories for the revenues of the Government.

In the third place, the union which is now dissolved between the banks and the Treasury ought not to be restored; because the public depositories would again become the fruitful source of over-issues, and extravagant speculation. We have no power to regulate the State banks; but we can withhold from them our revenue, and thus prevent them from using our means for the purpose of deranging the business of society. If we can not eradicate, we are not bound to aggravate the radical sin of their constitution. If we cannot prevent, we need not become accomplices in their misconduct. But I have already incidentally said so

much in the course of my remarks on this branch of the subject, that I need not trouble the Senate with any further observations.

In the fourth place, the divorce now subsisting between the Treasury and the banks ought to be rendered perpetual, because of their supposed or actual subservieny to the Government, and the dangerous influence which might be exerted over them by the Executive.

I am not one of those who believe that, hitherto, any attempt has been made to exert such an influence; yet every effort has been used by a portion of the press to produce such an impression. These institutions have been denounced as "the pet banks" of the Government, and they have been charged with granting peculiar favors to the minions of Executive power. True or false, this charge has produced some effect on the public mind. Besides, all the transactions of the Secretary of the Treasury with these banks, rendered necessary by existing laws, have been denounced as tampering with the currency. And thus the administration is always blamed for every disaster which occurs in the money market. A connection with these banks is thus made to assume a political character, and is mixed up with all the party strife of the day. The public mind is inflamed upon the subject, and the public suspicion is excited. This is an evil which can only be avoided by a permanent divorce between bank and State.

But again: If a Secretary of the Treasury were disposed to exert an improper influence over these banks, with what prodigious effect might they not be used to accomplish his purposes? At the time of the suspension of specie payments there were eighty-six deposit banks planted throughout our country. The letters which were read the other day by the Senator from Mississippi, (Mr. Walker,) prove how low some of the State banks were willing to cringe in order to obtain the deposits. Their language is unworthy of the proud bearing which ought to characterize American freemen. It proves at least, that some of them are not very scrupulous, when "thrift will follow fawning." Such was the anxiety to obtain a portion of this boon, that two of the most respectable banks of the city of Philadelphia procured resolutions to be passed in the House of Representatives of Pennsylvania, recommending them to the Secretary of the Treasury as depositories of the public money; and these resolutions were sent to my colleague and myself, with a request that we might exert our influence to accomplish this purpose. Eighty-six affiliated banks, scattered over every State, and intent upon a common object, could exert an immense political power. An ambitious and able Secretary of the Treasury might use them with prodigious effect in order to make himself President. And this could be done with the greater effect, because it would escape detection. The agent of the banks at Washington city might be used as the instrument, and all the necessary measures might be adopted in the secret parlors of the bank directors throughout the country. A concerted movement might thus be made in every portion of the Union at the same moment, which would almost be irresistible.

I do not know but that such a league of associated banks might be rendered more dangerous than even a Bank of the United States. This bank would have its rights and its duties defined by law. It could claim the Government deposits, and that its notes should be received in payment of the Government dues, under the provisions of its charter. But the selection of these depositories, the amount of the public money which they shall receive, how long they shall retain it, in what manner they shall conduct their banks, all, all is left to Executive discretion. What a boundless field for Executive patronage! And yet the administration which anxiously desires to surrender this fruitful source of political power, has been charged with designs of extending Executive patronage! And for what reason? Simply because it proposes that the existing officers of the Government, without adding one to their number, should be substituted as the depositories of the public money instead of these banks. Even if it should become necessary to appoint some ten or twenty additional officers at the most important points to perform

this duty, I would not compare this increase of Executive patronage with that which the Executive Government is now voluntarily willing to abandon. It would be but as a drop compared with the ocean. Talk not, then, to me of the increase of patronage which the bill upon your table would confer on the Executive. They form a very unjust estimate of the intelligence of our citizens, who would attempt to make them believe that a few Executive officers, known to be such to all the surrounding community, can exercise an influence over the people at all to be compared with that of a league of eighty-six banking institutions.

This now brings me to the bill upon your table. This bill is the only remaining plan to which we can resort. It recommends itself to public approbation by the simplicity of its provisions. The existing officers of Government already collect and disburse our revenues. It merely superadds to these duties, that of safely keeping and transferring the public money, according to the exigencies of the Government, during the time which must necessarily intervene between its receipt and disbursement. This is the whole bill. If it be justly liable to any criticism, it is that the security of the public money might require the appointment of a very few additional officers in our large commercial cities. It has perhaps been framed more exclusively with a view to economy, than is consistent with the public interest. The object is a great and important one, and no moderate additional expense ought to be spared which may be necessary for its accomplishment. Such is the bill.

The Senator from South Carolina (Mr. Calhoun) has proposed an amendment to this bill, prescribing the funds which shall be received in payment of the public dues. And here permit me to observe, that in discussing that amendment I shall not inquire whether the Senator has come over to us, or we have gone over to the Senator. This is a question of but small moment, so that we are now together. The first extended effort which I ever made in Congress, was in defence of the conduct of that Senator, when I thought he had been unjustly assailed as Secretary of War. We stood together shoulder to shoulder in 1827, and throughout the trying conflict which resulted in the election of General Jackson. I rejoice that he is now found sustaining the leading recommendation of the Message at this important crisis, and I trust that on future occasions we may receive his able and efficient support.

With all these feelings of distinguished respect for the Senator, I am still sorry that he has offered his amendment. I should have been glad if the vote of the Senate could have been taken upon the simple proposition to divorce bank and State. On this single question we should have, I think, presented a more united front than when it shall be connected with the Senator's amendment. It would have been better first to have established the divorce, and afterwards to have determined, by a separate bill, the nature of the funds which our depositories shall receive.

For my own part, as to the funds receivable, I feel strongly inclined to support the recommendation of the Secretary of the Treasury. In page 23 of his report, when speaking on this subject, he says:

"This could be effected by directing what alone appears safe, and what is understood to be the practice in both England and France. It is, that the bills of no local banks be taken, which shall not, from the near location of the bank, be equivalent to specie; be able to be converted into specie at very short periods by the receivers and collectors, so as to pay the public creditors legally, if demanding specie; and be thus accounted for at par, and without expense to the Government. Another advantage from this course would be, its salutary check on over-issues by the neighboring banks."

If the depositories were authorized to receive and disburse the notes of such banks, calling upon them at short intervals to settle the balances in specie, it might, I think, have promoted the convenience of the public, as well as afforded a salutary check upon the issues of the surrounding banking institutions. I understand such was the course pursued by the late Bank of the United States. I was

willing to proceed cautiously, and not, at the first, go the length of demanding exclusive specie payments.

But the Senator from South Carolina has thought differently, and I shall be compelled to vote for or against his amendment. Giving every consideration its proper weight, I have, since he has agreed to modify it, determined to yield it my support. As it now stands, the notes of specie-paying banks will be receivable in the payment of all the public dues up till the last day of the year 1838; during the year 1839, one-fourth will be required in specie; during the year 1840, one-half; during the year 1841, three-fourths; and not until the year 1842 shall we reach the point of exclusive specie payments. Its operation will be slow and gradual; and if, in the mean time, we should discover, at any stage of its progress, that it is too severe, we can easily change the law.

What objections have been urged against the entire system presented by the bill and the amendment?

The first is, that it will increase Executive patronage. To this I flatter myself I have already given a conclusive answer.

The second is, that it will operate with such severity upon the banks, and through them upon the country, as to produce wide-spread disaster and ruin. Gentlemen have taxed their imaginations to present the scene of suffering and desolation which it will produce.

Now, sir, I cannot realize any of these horrors. The cause is too impotent to produce any such effects. On the contrary, I fear that it will go but a small way indeed towards checking the extravagant issues of the banks, and that its influence will scarcely be felt. With the public revenue reduced to the standard of the public expenses, which it now is, and probably will be for many years to come, the specie will flow out of the Treasury almost as rapidly as it flows in. It will be kept in constant circulation. The accumulation must be comparatively trifling. According to the estimate of the President, ten millions of dollars in gold and silver will be sufficient for the purpose of paying and disbursing our annual revenue. I think his estimate extravagant, because one dollar will make many payments in the course of the same year. The operation of the system will be very gradual, and the necessary quantity of specie will gradually be brought into circulation without producing any injurious results to the banks. It may, and I trust will, in some degree curtail their extravagant issues, and thus benefit the community, and render their own condition more sound. After the year 1838, there probably may, and I trust will, be a somewhat greater demand upon them for specie than there has been; but this specie will go into the general circulation of the country, and thus gold and silver will be made, to a greater extent, the basis of our paper circulation. Will any Senator object to such a change?

Why, sir, when last in New York, I was informed that the money transactions in Wall street often amounted to \$5,000,000 per day. The trade and business of our country is vast, almost beyond conception. The receipts and disbursements of the Government bear but a very trifling proportion to the receipts and payments of individuals. How, then, can it be apprehended, for a moment, that ten millions of dollars in specie, flowing into the depositories in little rills, from every portion of the Union, and constantly flowing back again to the places from whence it came, can produce any injurious effects upon the business either of well conducted banks, or of the country? Away with such idle fears. Upon trial, they will be found to be the mere creations of fancy.

The banks might be injuriously affected, were it not for the amendment which was proposed by the Senator from Missouri, (Mr. Benton,) and which I trust may be adopted. This will oblige the holders of Treasury drafts on depositories to present them for payment, within a short period. Without such a provision, these drafts would inevitably go into the general circulation of the country. Representing the amount of silver and gold which appears upon their face, and having the eventual responsibility of the Government to sustain them,

if, in case of accident, they should not be paid by the depository, they would be more valuable than specie itself, for every purpose of remission. They would, therefore, remain in circulation, whilst gold and silver would accumulate in the Treasury. Specie would thus continue to be drawn from the banks, to pay the dues of the Government, and a great part of it would not return into circulation. The interest of the banks requires that this amendment should be adopted; although these Treasury drafts would constitute, to a limited extent, the soundest and best medium of exchange which the world ever saw.

A third objection to the proposed system is, that it will furnish one kind of currency for the people, and another for the Government; or, in the language of the Senator from Massachusetts, it will set the officers down to the first table, and the people to the second. Directly the reverse will be the effect. It is our object, by these measures, to elevate the people to the first table, from which they have been excluded by the bankers, and brokers, and speculators of the country. We wish to spread before the American people a rich repast, and place them all upon the same level. It is our purpose, so far as the influence of this Government can extend, to furnish them all with a currency of gold and silver, or of paper at all times convertible into gold and silver. The only means we possess of restraining these banks from making extravagant over-issues, and thus always preserving them in a condition to redeem their notes in gold and silver, is to withhold from them our revenue, and require the payment of our debts in specie. It would be a great blessing to the country if this can be accomplished. Has any Senator proposed that we shall receive depreciated bank paper in payment of the public dues? Not one. If we were to adopt such a measure, it is true we might all sit down to the same table, but it would be a table covered with irredeemable and depreciated bank paper, without hope for years to come of enjoying any better fare. The Government must stand firm at this crisis, in order to secure a sound currency for all the people.

A fourth objection urged against this system has been its want of security, and that the public money will not be safe in the hands of our depositories. This objection comes with a bad grace from those who desire again to entrust it to the keeping of deposit banks. I might say, if I thought proper, that it will be at least as safe in the hands of our officers as it has been in the deposit banks. They at least will not lock it up and keep it altogether, unless you will receive their own depreciated notes in payment. The one experiment has failed, and we have not yet tried the other.

But, sir, the proposed mode of collecting and keeping, and disbursing the public revenue, has existed throughout the continent of Europe from the days of the Roman empire. It is, therefore, not an untried experiment. Is there any reason why, under proper guards and restrictions, the officers of Government should not safely keep what they receive until it is necessary for them to pay it out again? Have we not as honest and capable men in this country as in any other? No plan which you can adopt will altogether secure you against speculation, whilst human nature remains as it is; but this plan, securing as it does the direct supervision of the Secretary of the Treasury, and the immediate responsibility to the Government of all the agents employed, furnishes as great security as any which can be devised. The truth is, that we have been so accustomed to lean exclusively upon banks in this country, that we fear to stand erect and walk alone, and rely upon our own native strength.

It has been suggested in a distinguished Southern paper, (the Richmond Enquirer) whose opinions are entitled to great respect, that the friends of the administration might all unite in making a few banks, at the principal points, the special depositories of our money. My objection to adopt this proposition arises from a conviction that it would bestow exclusive privileges and advantages upon these selected banks, to the injury of all other similar institutions, and that it would, therefore, greatly

extend Executive patronage? What would be its operation? The agent of the Government collects all its dues in gold and silver. These are placed in a strong box in the vaults of one of these banks. A draft is presented at its counter, whether drawn by the Secretary of the Treasury or the depositor, payable in specie. In most instances the holder of the draft would prefer receiving the notes of the bank, especially if they were in extensive credit. The cashier would pay him in bank paper, whilst an equal amount in specie would be taken from the strong box of the Treasury and transferred to the vaults of the bank. This would be the inevitable process. The officers of Government would thus be made collectors of specie for these favored banks, to the injury of all the surrounding institutions; and an extensive circulation would be secured to their notes by a knowledge of this very fact. No, sir, your true policy is to detach the Government from all banks. Let them all stand upon the same footing, and receive the same measure of justice from Congress.

If any thing could reconcile me to vote for the amendment of the Senator from Virginia, (Mr. Rives,) it would be the hope—if I could cherish any such—that, through the agency of the deposit banks, we might procure a more extended specie basis for our paper currency. But, even if we could prevail upon them, which I very much doubt, considering the small amount of our present deposits, to forego the advantage of issuing five, ten, or twenty dollar notes, and of receiving the notes of other banks who might refuse to enter into the same arrangement, what would be the consequence? Why, sir, the vacuum in the circulation thus created would be immediately filled by the notes of other banks, of the denomination of five and ten dollars. This you have no power to prevent. There would be precisely the same amount of circulation in these smaller notes. The only difference which could exist, would be, that they might be furnished by other banks of a less sound character. The Senator calculates much upon the moral influence which his amendment might exert. What, sir! a moral influence over a banking corporation in opposition to its interest! I venture to say, that no such agency as this can prove effectual. It is power alone which can produce this result. And where does this power exist? No where, but in the State Legislatures. It is doubtful, however, extremely doubtful, whether they can ever be induced to exert it. It is most difficult to unite twenty-six independent sovereignties, having different and ever-varying feelings and interests, in any such uniform system of policy; and especially against the opposition of the local banks. During the last session, I had prepared an amendment to the Constitution, (and had it in my desk for a long time,) conferring upon Congress the power of prohibiting the circulation of bank notes under twenty dollars; but declined offering it, because I then deemed it a hopeless attempt. Circumstances have now very much changed; and since the Senator from Kentucky (Mr. Crittenden) has so strongly advocated such an amendment, I feel some confidence that it would meet with a favorable reception from the States. Should I conclude to offer it at the next session, I shall count largely on his able and efficient support; or, if he should prefer to take the lead himself, I shall render him all the assistance in my power.

The Senators from Kentucky and Massachusetts (Messrs. Clay and Webster) have both loudly complained that we have proposed every thing for the relief of the Treasury, but nothing for that of the people of the country. Is this complaint well founded? Have we not extended to the banks a credit of four, six, and nine months on the deposits which they received from us as cash, and were bound to pay us on demand? Have we not extended for nine months the credit on merchants' bonds? These indulgences to the banks and to the merchants are, in effect, an indulgence to all their debtors. We do not press them; therefore, they are under no necessity of pressing the community. In order to enable ourselves to extend this relief, we have agreed to make a loan of \$10,000,000 in the form of Treasury notes, for one year. These notes, in relieving the community, will be equal to the

creation of so much gold and silver. Their credit will be such that they may be sent abroad as mittances, and thus pay our debt, equalize our foreign exchanges, and prevent the exportation of specie. I ask, what more could we have done to relieve the country? But we have not proposed a Bank of the United States; and in the opinion of some gentlemen, all which we can do is nothing, if this be left undone. It is the sovereign panacea for all the evils which flesh is heir to.

In addition to the relief measures which I have just enumerated, I ought not to forget the vote of more than two to one upon the resolution reported by the Committee on Finance against chartering a bank of the United States. I consider that vote by far the most important relief measure of the session. If the merchants of our country could but be prevailed upon to abandon every hope of the establishment of such an institution; and throw themselves upon their own resources, instead of expecting aid from the Government, how soon would the present gloomy aspect of affairs begin to brighten. Why should American merchants, whose abilities and enterprise render them more able to help themselves than those of any other country, be constantly invoking the aid of the Government to enable them to conduct their foreign and domestic exchanges. Let all hope of obtaining a national bank vanish from their minds, and we shall soon see the exchanges conducted upon the same principles, and with the same success, which characterize similar operations in Europe. Let our merchants first put their own shoulders to the wheel, and then they need never pray to Hercules for relief.

There is another cause which renders the charter of a new bank almost hopeless. It would be in bad taste for me to bring into the discussion upon this theatre, the Bank of the United States of Pennsylvania. Whether it shall continue to exist, is a domestic question which we shall settle at home. My opinions in regard to this institution have been openly avowed upon all suitable occasions. But if the people of Pennsylvania should tolerate its continued existence, you already have a Bank of the United States. That institution is too vast to be sustained by a single State. It must be a Bank of the United States, or it can be nothing. Mr. Biddle truly said, in presenting its charter to the stockholders, that it possessed greater advantages under it, than it had ever enjoyed before. It has the unlimited power of buying and holding banking stock. Under this provision, it has, I am informed, already purchased two banks; the one in Georgia and the other in Louisiana, and it will continue to acquire other State Institutions, which will act as its branches. Besides, its agencies are already spread over the Union. It is highly improbable that those interested in this institution will ever be the advocates of another National Bank. A new bank, with a capital of fifty millions of dollars, would not, probably, under any circumstances, be established in the same city beside a bank with a capital of thirty-five millions. Attempt to create such a bank in New York, and you will probably find almost the entire population of Pennsylvania, belonging to all political parties, against it. I throw out these suggestions merely to convince the mercantile community how very improbable it is that a new Bank of the United States will be established. If I could convince them of this truth, then the business of the country would soon conform to that state of things, and we should not be kept in eternal strife by the agitation of this question.

I should not further exhaust the patience of the Senate, had not the accuracy of some of the statements of the President, contained in his Message, been questioned in the course of this debate.

The President, whilst assigning the causes of our existing distress, for the purpose of proving that they were not peculiar to this country, but were general in their nature, asserts, that similar causes, operating at the same time, had produced similar effects in England and other commercial countries. He concludes his remarks upon this subject with the observations which I shall read. Here Mr. B. read the following extract from the message:

"In both countries, (the United States and Great Britain,) we have witnessed the same redundancy of paper money, and other facilities of credit; the

same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe. The most material difference between the results in the two countries has only been that, with us, there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payments by the banks.

"The history of these causes and effects in Great Britain and the United States is substantially the history of the revulsion in all other commercial countries."

The correctness of this statement, in point of fact, has been attacked in no measured terms; and it is my present purpose to prove that it has been assailed without any just cause.

Even if the President had been in error in this particular, what would it prove? Certainly not that he intended to mislead others; because such an error, so far from sustaining, would be directly opposed to his own position. If he could have said, with truth, that our peculiar system of bank credits was so very bad, that we alone, of all the nations of the earth, were now suffering under dreadful reverses, whilst other commercial nations had escaped unscathed, this would have given great force to his argument. It would have added another powerful reason to those which he had already urged in favor of divorcing the banks from the Treasury, and not contributing, hereafter, by the public deposits, to swell the tide of bank credits and paper currency, which, in our country alone, had caused so much ruin and distress. The only purpose, therefore, of those who had assailed his statements, must have been to convict him, not of intentional error, but of ignorance.

But is he justly liable to this imputation? Senators have attempted to prove it, by showing that during the last few years the circulation of bank notes throughout England has not materially increased; and upon this isolated fact they conclude, that there has been no over-banking nor over-trading in that country. Now, sir, the premises may be true; but I shall show they do not in theory warrant the conclusion, and that it is directly at war with the state of the fact.

Although excessive bank issues undoubtedly are a powerful incentive to extravagant speculations and overtrading, and such they have always proved, to a disastrous extent, in this country, yet these evils may, and sometimes do, exist in countries where the circulation scarcely varies in amount, and is almost purely metallic. If, then, gentlemen could show that the paper circulation of England had remained uniform for the last three years, this would not establish the fact that extravagant credits and speculations had not existed in that country. A friend has just reminded me of a case precisely in point. I refer to the French speculations in colonial produce, I think, of the year 1809. So intensely, at that time, did the spirit of speculation act upon the minds of the people, that the Frenchman forgot his love of pleasure, and his fondness for spectacles; and the very theatres, whilst the play was proceeding, became commercial marts for the purchase and sale of these commodities. They rose to a most extravagant price, and the public mind became excited to the highest pitch. Napoleon, in order to arrest this spirit, had it announced all over the country on the same day, that George the Third was dead. The bubble then burst; and the ruin of thousands was the consequence. These speculations were founded upon the prospect that the war with England would continue, and therefore colonial produce could not be imported into France; and they were suddenly checked, because it was believed that the death of the English monarch would be the harbinger of peace. It is scarce necessary to observe that the circulation of France is almost purely metallic.

But facts are stubborn things; and in the instance before us they will entirely destroy the conclusions of gentlemen. No country in the world has ever witnessed more extravagant bank credits and speculation than England has done within the last eighteen months; and this notwithstanding the amount of bank notes in circulation has not greatly increased.

In 1826, Parliament first authorized the establishment of joint stock banks, with any number of partners, at a distance of not less than sixty-five miles from London. Let us examine the history of their progress, and we shall find it exactly similar to our own. During the first seven years, thirty-four of these banks had been established. In the succeeding two years and eight months, ending on the 12th March, 1836, twenty-eight were added to the number. About this time speculation began to rage; and in April, May, and June, of that year, they increased at the rate of five per month. Two of the fifteen banks established within these three months had each about seven hundred and fifty partners;—one of them had eleven, and another thirty-four branches in different parts of the kingdom. The *Edinburgh Review*, for July, 1836, which is my authority for these facts, observes: "We have reason to think that the rate of this extraordinary increase has been since augmented rather than diminished. Latterly, indeed, the mania for joint stock banks seems to have become almost as prevalent as the mania for railways. It is in fact hardly possible to take up a newspaper without meeting with sundry announcements of such establishments, all, of course, dressed up in the most captivating manner." The conjectures of the author proved to be correct. I have a statement before me of the number of joint stock banks in England and Wales on the twenty-sixth of November last, and they amounted to one hundred and two, besides an immense number of branches. Thus it appears that their increase between the 1st of July and the 16th November, 1836, a period of less than five months, amounted to twenty-five. I have no later return in my possession.

In what manner do these banks make the enormous profits which we know they realise? Certainly not by the issue of bank notes; but by bank credits, or paper money in another form. Their notes in circulation in March, 1836, when their number was sixty-two, amounted to £3,094,025 sterling. In December, 1836, when their number had augmented to one hundred and four, their issues had increased to only £4,258,600, or about a million and a quarter.

They discount notes and bills, and, instead of paying out the proceeds in their own notes, they place the amount to the credit of their customers on the books of the bank. These credits then become deposits, and constitute the capital on which individuals speculate and trade. They are transferred from hand to hand by means of bank checks, which are only another form of paper money. In large transactions bank notes are rarely used. A owes B ten thousand dollars, and has a credit in a joint stock bank for that amount. He gives him a check in payment of the debt. The account of A is charged with this amount, and the account of B is credited. Thus ends the transaction, without the use of a single bank note.

If Senators will take up the Treasury report, in relation to any of the large banks in New York, they will discover that a very small portion of their profits proceeds from their issues. The Bank of America, for example, with a capital of \$2,000,000, has but \$425,000 of notes in circulation, whilst its loans and discounts amount to \$3,755,000. What has become of the remaining \$3,300,000, the difference between its circulation and its loans and discounts? This sum consists of bank credits—bank deposits, circulating from hand to hand by means of bank checks, which as well deserve the name of paper money as bank notes.

The largest importing merchants in New York rarely keep any money in their counting houses, except for incidental expenses. Their heavy business is all transacted by means of bank credits and bank checks.

The amount of bank notes in circulation, however much expanded, must necessarily bear some proportion to the day transactions—the common dealings of society, and can not be extended beyond a certain point. The amount of bank credits is not limited by any such rule. All the great speculations, all the large operations, are made through their agency.

On the 1st of January, 1836, the bank notes in circulation throughout our country, although

amounting to the enormous sum of \$140,000,000, did not equal the one-third of the bank loans and discounts.

Never, then, was there a more fallacious idea than this, that because the amount of bank notes circulating in England had not greatly increased, that therefore extravagant credits and extravagant speculation did not exist. We may form some idea of the enormous expansion of bank credits in that country, from a passage in the Review to which I have already referred.

Mr. B. here read the following extract:

"This rapid increase in the number and in the issue of joint stock banks, has been in part a consequence, but in a much greater degree a cause of the late rise of prices, and of the existing excitements.

"But we should fall into the greatest possible error if we supposed that the influence of the banks in question was to be measured by the amount of their notes in circulation payable on demand. These, in fact, constitute but a comparatively small portion of their obligations. Most of them have been in the habit of trading, not on their own capital, or on the deposits made with them, but on credit obtained in the metropolis and elsewhere. Instead of retaining the bills and other securities they have discounted in their coffers till they are paid, many of the banks have been in the habit of immediately forwarding them to London to be rediscounted. To such an extent has this system been carried, that we are well assured that certain banks, with less than £500,000 of paid up capital, have discounted bills and made advances to the extent of from FIVE to SIX millions; and the engagements of others have been even more incommensurate with their capital!"

Comment is unnecessary. The rapid increase in the number of banks, and in the amount of bank credits, has produced the same effects in England that they have done in the United States. I will venture to say that no portion of the history of that country presents a parallel to their late extravagant speculations of every description. The epidemic seems to have spent its force chiefly in the creation of joint stock companies, for almost every purpose under the sun. There are companies for the construction of railroads; for the manufacture of cottons; for tanning; for the manufacture of glass, pins, needles, soap, turpentine, etc.; for dealing in coals; for raising sugar from the beet root; for making railways in Hindostan; for the prosecution of the whale fishery; for trading and founding settlements on the southeast coast of Africa, and finally, for burying the dead.

During the first three months of the last year, one hundred and four joint stock companies were formed in Manchester and Liverpool alone, with an aggregate capital of £37,987,500 sterling! To complete this picture of folly and extravagance, Mr. Poulett Thompson stated, in his speech in the House of Commons, in the discussion relative to the budget, "that he had made a register be kept of the various joint stock companies then on the tapis in different parts of the kingdom, and he found their numbers amounted to between three and four hundred; and that a capital of nearly two hundred millions sterling, or about twenty times the capital of the bank of England, would be required, according to the statements of the parties, to carry them into effect!"

The proposed capital of these companies formed in a few months, amounts to the enormous sum of one thousand millions of dollars, or to nearly four times the whole banking capital of the United States on the first of January, 1836! And yet, when it becomes necessary to convict the President of ignorance and mistake, we are told, that there has been no over-trading, no excessive speculations, no extravagant bank credits in England; and that too, simply because the amount of bank notes in circulation has not greatly increased. Most astonishing effort! The statement contained in the Message is true, both in letter and in spirit.

If I were to contend, which I do not, that all our calamities in this country have proceeded from the extravagant expansion of the paper credits of England, succeeded by a sudden contraction, it would be much more plausible than the argument of gentlemen. What but this bloated credit tempted our

merchants to inundate the country with foreign goods? The ancient customs of trade were abandoned, and they were urged in every manner to accept credits, and to draw bills of exchange, not founded upon any actual exports, but on the hope that exports might be made at some future and indefinite period.

The two countries have proceeded together with equal strides on the road to ruin, stimulating each other in their downward career, and they have both suffered the same penalties, and endured the same misfortunes. As the President states, the chief difference in their condition is, that our banks have suspended specie payments, whilst those of England have been able to weather the storm.

But gentlemen allege that the President has committed another grave error, in stating that the foreign debt contracted by our citizens was estimated, in March last, at more than thirty millions of dollars. This estimate, they say, is below the truth some eighty or ninety millions. If it were, this would only be, as in the case of the other alleged mistake, so much in favor of the President's argument—not against it. But how do they prove this mistake? By adding to our actual foreign debt, now due and payable by the merchants, all foreign investments in our stocks, and all the permanent loans which have been made in England to the several States and to corporations. The bare statement of this fact is sufficient. It is evident the President was not estimating the amount of permanent investments made by foreigners in this country, but the actual amount of our commercial debt, due in March last, which it was necessary to extinguish before our trade could revive. This debt may have been thirty-five or forty millions of dollars; but, from the information communicated by the Senator from New York, (Mr. Tallmadge) a few days ago, that, in the opinion of the merchants of New York, it was now reduced to twelve millions of dollars, I should very much doubt whether it at all exceeded thirty millions in March last.

How cheering the intelligence that our foreign debt has been reduced to \$12,000,000! The resources of our country are so abundant, that this debt must very soon be extinguished. Our next cotton crop will create a large balance in our favor. The foreign exchanges will soon no longer be against us; and then the foreign demand for specie will cease. All sound banks may then with safety resume specie payments. They will have nothing to dread, except the want of confidence at home. This I fear has been greatly increased at least throughout the interior of Pennsylvania, by the refusal of the banks in Philadelphia to meet those of New York, even for the purpose of consulting at what time it was probable specie payments might with safety be resumed. I have received numerous letters on the subject, which all speak the same language. This refusal I feel confident, did not arise from any apprehension, that these banks were less able to resume specie payments than those of their sister city.

Mr. Van Buren is not only correct in his statements of fact, but, by his Message, he has for ever put to flight the charge of non-committalism—of want of decision and energy. He has assumed an attitude of moral grandeur before the American people, and has shown himself worthy to succeed General Jackson. He has elevated himself much in my own esteem. He has proved equal to the trying occasion. Even his political enemies who can not approve the doctrines of the Message, admire its decided tone, and the ability with which it sustains what has been called the new experiment. And why should the sound of new experiments in Government grate so harshly upon the ears of the Senator from Massachusetts? Was not our Government itself, at its origin, a new and glorious experiment? Is it not now upon its trial? If it should continue to work as it has heretofore done, it will at last secure liberty to the human race, and rescue the rights of man, in every clime, from the grasp of tyrants. Still, it is, as yet, but an experiment. For its future success, it must depend upon the patriotism and the wisdom of the American people, and the Government of their choice. I sincerely believe that the establishment of the agencies which the bill pro-

poses will exert a most happy influence upon the success of our grand experiment, and that it will contribute, in no small degree, to the prosperous working of our institutions generally. The Message will constitute the touchstone of political parties in this country for years to come; and I shall always be found ready to do battle in support of its doctrines, because their direct tendency is to keep the Federal Government within its proper limits, and to maintain the reserved rights of the States. To take care of our own money, through the agency of our own officers, without the employment of any banks, whether State or national, will, in my opinion, greatly contribute to these happy results; and in sustaining this policy, I feel confident I am advocating the true interest and the dearest rights of the people.

## SPEECH OF MR. BROWN, OF NORTH CAROLINA,

In Senate, September 30, 1837.—The bill imposing additional duties, as depositories in certain cases, on public officers, being under consideration.

MR. BROWN said, in rising to address the Senate, after the very able and luminous investigation which the subject then before them had undergone, he did so from no vain expectation that he should be able, by any thing he might say, to impart any new interest to the debate, which had been listened to so attentively, or to add any thing of force to the argument by which it had been sustained. The acknowledged importance of the question they were called on to decide, the powerful influence which it would exert on the future destinies of the country, either for good or evil, and the deep interest felt in relation to it by the citizens of the State which he, in part, represented, would, he trusted, excuse him for presenting some of the leading considerations which would govern his course on that occasion.

Before, however, he entered into an examination of the merits of the proposed measure, he would notice very briefly some observations that had fallen from several Senators who had preceded him in the debate. The honorable gentleman from South Carolina, (Mr. Preston,) who has just taken his seat, in the commencement of his remarks, had alleged that the late Bank of the United States, had been constantly the subject of reference, by those who had spoken in this body in defence of the measures of the administration, and had deprecated its introduction into this debate, as tending to make up an erroneous issue before the country. It surely could not have escaped the observation of that gentleman, that the course of the late administration, in relation to that institution, had been severely arraigned by many of those who were politically associated with him, in the progress of the present discussion. Thus invited by the political friends of that gentleman, in some measure, to bring into review the character and conduct of that institution, it could not justly be complained of, either by them or himself, that the invitation had been accepted, and that some reminiscences had been called up, not, perhaps, the most gratifying to its friends, and but little calculated to recommend it to the public favor.

While, said Mr. B. the gentleman evinces so much anxiety that we should avoid making false issues before the country, is he quite certain that he is not himself obnoxious to the same charge? When he imputes to the administration and its supporters, the design of attempting to establish an exclusive metallic currency throughout the country, is he certain that he presents the question fairly? Does he, when he represents them as entering on a crusade to annihilate the State bank, and destroy the paper system, make up an impartial issue? He was well aware, that many of the opponents of the administration had used no ordinary industry, for some time past, to produce the impression on the public mind, that it was a part of its system of policy to attempt the introduction of an exclusive metallic currency. The friends of a national bank, had been especially distinguished for their untiring zeal, in endeavoring to create this impression, no doubt hoping to profit by the

apprehensions and distrusts which they expected to engender in the public mind, by the use of it against those in power. Neither the late administration, nor the present, had, on any occasion, promulgated this as a part of its policy. Neither, he was entirely confident, had at any time entertained a design so utterly visionary and impracticable in the present condition of the country. How, he would ask, could any well-informed person believe, for a single moment, that such was the design of those now in authority, when the Federal Government was entirely powerless to accomplish, by legislation, any such purpose? The States had been in the undisturbed exercise of the right to incorporate banking institutions, from the adoption of the Federal Constitution down to the present time. A right now universally conceded by all parties, and which none were disposed to call into question. Congress could not, therefore, interpose its authority, either to suppress existing institutions, or to prevent the establishment of new ones, and could only exercise some indirect control over them through its revenue laws. Notwithstanding the insuperable difficulties which stood in the way of such an attempt, as well from the want of constitutional power in Congress to effect it, as its own absolute inexpediency, yet we daily heard attributed to the administration, as a part of its policy, the intention to destroy the banking institutions of the country, and to substitute in their stead an entire metallic currency. Although the power of Congress was impotent for such purposes of destruction as were imputed, yet apprehensions were gravely expressed, here and elsewhere, that some such deep design was in agitation against the entire paper system, and that the country was to be visited with ruin and desolation, in all its branches of business and industry.

Mr. B. said he thought gentlemen might well dismiss all apprehensions which they seemed to entertain for the safety of that system, as the danger, in his opinion, was much greater of its extending its power over the country, than of its being restrained within any reasonable limits. It had acquired a power, he feared, stronger than the Government, and above the control of the people themselves; a power which, if it remained unchecked, would, in his opinion, eventually overthrow our republican form of Government.

The friends of the administration had been reproached by the same gentleman, in no very measured terms, with having abandoned the State banks at this, the period of their greatest difficulty, and with having practised bad faith towards them, by refusing longer to employ them as depositories of the public revenue.

This charge was particularly applicable, said Mr. B. to the banks, and not to the Government. It was they who had abandoned the Government, and violated the trust reposed in them. By refusing to pay over large sums of the public money entrusted to them, they had deprived it, so far as depended on them, of the means necessary to conduct its ordinary operations. In having done this, they had voluntarily changed the relation which they had before stood in to the Government, and had incurred a forfeiture of their right to a longer continuance as its fiscal agents, under a provision of the deposit act. In this condition of things, when the trust reposed in them had been so grossly abused, was there any thing to justify the reproaches, which were thus attempted to be cast on the friends of the administration, because they could not again give the banks their confidence, and place the Government again in a situation to be embarrassed by them? The gentleman who had preferred these charges, seemed to adopt a rule which was the very reverse of that generally acted on in such cases. Precisely in proportion as the banks have abused the trust confided to them, does he give them his confidence, and insist on their worthiness to be continued as the depositories of the public money. When an individual employed an agent to transact his business, a flagrant abuse of the trust confided to him, was the best of reasons for his dismissal.

Those in opposition seemed, on the present occasion, to discard this valuable rule, founded as it

was in common prudence; and the very banks not long since so unceasingly denounced by them as wholly unfit to take charge of the public moneys, had suddenly become worthy of all confidence. The pet banks, as the gentleman from South Carolina had designated them, had cause to congratulate themselves that they had been so ably defended at this time by him, who but a short time since denounced their employment in the character of fiscal agents of the Government, as fraught with the most pernicious consequences to the country.

The same gentleman, said Mr. B. had alluded, in terms of sarcasm, to what he was pleased to call the repeated experiments of the party who for some time past had been in power, on the happiness and prosperity of the people of our country. He (Mr. B.) would ask what party was it that first commenced experiments on this subject, so far as the action of the Federal Government was concerned? Was it not those who had defeated the obvious intention of the framers of the Federal Constitution, to make it a hard-money Government? Was it not those who, in the early history of this Government, had established a national bank, and thus fixed on the country the paper system? The often-repeated charge of tampering with the currency, and experimenting on that delicate question, was due, and most appropriately due, to that party who had introduced, and continued to advocate, a paper system under the Federal Government; in doing which, they had not only experimented on the currency, but also on the Constitution under which they had professed to act. To recall the Government to the course on this subject, which he solemnly believed to be that originally designed by those who formed it, and to rescue it from the paper money experiments of those who advocated a national bank, was the great object which the friends of the present administration were endeavoring to accomplish.

If to bring the Government back, in this respect, to what its framers intended it, if to restore it to the true constitutional currency, constitute experiments, he, for one, was content to share in the reproach, in common with his political friends, which might be incurred by it.

But it seemed that the gentleman from South Carolina was not only opposed to what he had characterized as experiments, but he was most anxious that the people should get rid also of the experimenters. In this he was unquestionably sincere, as it would no doubt gratify that gentleman to see his political friends placed in power. The public good which the gentleman held out as likely to result from this change, reminded him, however, of an anecdote he had read of a queen of England, of German origin, who had but shortly before arrived in that country. While riding out one day in her carriage, she was saluted by many of the people of London with acclamations of great joy and respect; in return for which she most graciously assured them that she had "come to England for their goods." "Yes," added one of those in the crowd, "and for our chattels too." Mr. B. must be excused if he expressed the belief that the gentleman and his friends felt quite as much interest in the latter as they did about the former of those considerations.

The honorable Senator (Mr. Preston) has had recourse to his fruitful imagination to aid him in presenting the policy of the administration, in relation to its financial affairs, in the most unfavorable light. He represents it as a constant succession of changes—one thing to-day, and another to-morrow, and likens its course to the signs in the celestial system, to illustrate what he is pleased to consider its ever varying policy. He had undertaken freely to condemn all its imputed aberrations, but had not pointed out the manner in which they were to be corrected. He had undertaken to define the position of those to whom he stands opposed in politics, but has left it in some doubt under which of the signs of the political zodiac he himself will be found. But, if he did not err greatly, from certain mysterious givings out, which had fallen from that gentleman in the course of his remarks, he would finally settle down under the inauspicious sign of a national bank.

He had heard the remarks of the gentleman from

Georgia, (Mr. King,) in relation to the Message of the President of the United States, with mingled feelings of regret and surprise. He must be permitted to say, that he had done great injustice to that able document, characterized as it was, in his opinion, by decision, moderation, and dignity. The gentleman from Georgia had taken issue with the President chiefly as regarded the expansion of the paper system, alleged by him to have taken place contemporaneously in England with the expansion in this country, and also as to the amount of foreign debt owing from our citizens, which is estimated in the Message at thirty millions of dollars, on the 1st of March last. Mr. B. had thought, as well from the debates in the British Parliament as from such writings of that country on that subject as had fallen under his notice, that the expansion of the paper system there, in the last few years, was almost universally admitted. The gentleman from Georgia was the first, so far as he was informed, to attempt to controvert this opinion. This he had endeavored to do by reading a statement of the amount of bank notes in circulation in England for the last four or five years, in order to show that it had increased but little in that period. He then draws the conclusion, because the amount of bank notes have not much increased in that time, that the paper system had undergone no material expansion in that country.

This was a very fallacious standard, remarked Mr. B. by which to judge of the extent of business done by banks. Their transactions, in paper of various kinds, were often very large, when the amount of their notes in circulation was comparatively small. That the rule assumed by the gentleman from Georgia was not a fair one by which to test this question, and that an expansion of the paper system, to a very great extent, had taken place in England, he begged permission to read a few sentences from an essay on banking, in a late number of that very ably conducted journal, the *Edinburgh Review*. After exhibiting the great number of joint stock banks which had lately been established in England, the writer makes the following very just remarks: "This rapid increase in the number and in the issues of the joint stock banks, has been, in part, a consequence, but in a much greater degree, a cause, of the late rise of prices, and of the existing excitement. But we should fall into the greatest possible error, if we supposed that the influence of the banks in question was to be measured by the amount of their notes in circulation, payable on demand. These, in fact, constitute but a comparatively small portion of their obligations. Most of them have been in the habit of trading, not on their own capital or on the deposits made with them, but on credit obtained in the metropolis and elsewhere. Instead of retaining the bills and other securities they have discounted in their coffers till they are paid, many banks have been in the habit of forwarding them to London to be rediscounted. To such an extent has this system been carried, that we are well assured that certain banks, with less than five hundred thousand pounds of paid up capital, have discounted bills and made advances to the extent of from five to six millions, and the engagements of others have even been more incommensurate with their capital." Here, then, is a statement fully proving the expansion of the paper system in England, as alleged in the Message, and establishing the important fact that the national bank of England is incompetent to regulate it, and to prevent its running into those excesses, prompted by the inherent principles of the system itself. The great number of bankruptcies which, a short time since, occurred in the great commercial cities of England, was another proof that went to show the existence there of the same speculating mania which had produced such calamitous consequences in this country. He had, not long since, seen it mentioned, in some of the publications of the day, that the number of failures, among the merchants and traders in England, was much greater than the newspapers of that country had given an account of. There it was not necessary, for political purposes, to send forth exaggerated accounts of mercantile distresses, and to publish daily bulletins of mercantile failures, to alarm

the country. The disgraceful and extraordinary avidity with which disasters of that kind had been trumpeted to the world, by a large portion of the opposition press in this country, often magnified greatly beyond what in reality they were, afforded a melancholy example of the reckless spirit of party, which had proved itself but too ready to sacrifice commerce, credit, country, and every thing that was sacred, to the advancement of factious purposes.

There was another circumstance, which he had often seen stated in the publications of the day, and which remained uncontradicted, so far as he knew, that, of itself, and in itself, furnished the most irrefragable proof of the undue extension of the paper system in England; and that a spirit of wild speculation had been abroad there as well as on this side of the Atlantic. Many of her great banking houses connected with the American trade, are said to have actually despatched agents to the large commercial cities of this country, for the purpose of offering the most extended credit facilities to our merchants. It was in this way, that many who but a little while before were clerks, without either the capital or experience necessary to conduct large mercantile operations, were suddenly converted into great importing merchants; and having failed for millions, the consequences of their own imprudence were now to be charged to the policy of the administration. It was this stimulus to overtrading, which had been furnished by the great expansion of the paper system in that country, united with the same cause here, that had proved so disastrous to the merchants of our large cities. The very excitement which had characterized it, in England as well as in America, clearly made out its diseased state there as well as here.

As to the second issue which the gentleman from Georgia had made up with the President, no precise data had been furnished to the country by which it could accurately be decided. The President, in his Message, estimates the amount of debtowing in Europe, from our citizens, on the first of March, last, at about thirty millions. The gentleman from Georgia thinks it much larger, and undertakes to prove it, by adding to what he supposes to be the mercantile debt, all the loans which have been negotiated in Europe, by banks, railroad companies, and other corporations in his country. The President surely had never intended to comprehend, in his estimate, all the debts and loans contracted in Europe by corporations, some of which were payable not until many years hence. On the contrary, he speaks of the debts which had been contracted by our "citizens," thus obviously alluding to the mercantile debts due by individuals, as distinguished from those contracted by corporations. As he had already remarked, we had no means of arriving at certainty in estimating the foreign mercantile debt. He had, however, understood that the best informed merchants had supposed it not to have exceeded the sum of thirty millions on the first of March last. Its rapid liquidation, as is proven by the great fall in the premium on bills of exchange on England, goes greatly to favor the supposition that it had not exceeded that amount, or otherwise it could not have been so much reduced in so short a time.

The gentleman from Georgia attributes much of the disaster which has fallen on the nation, in its pecuniary affairs, to the policy of the late President in relation to the national bank, and thinks that what he has been pleased to call "glory," is in a rapid state of depreciation. Mr. B. was neither an admirer of what was called national glory nor of individual glory. If, however, it was meant to convey the idea that the distinguished individual who had lately retired from the station of Chief Magistrate of this nation to private life, no longer enjoyed that exalted eminence in public esteem which he had before occupied as a patriot statesman, he begged permission to differ from him. In the single act which the gentleman from Georgia had complained of, the late President had done enough to entitle him to imperishable fame, and to hand his name down to future ages as one of the great benefactors of mankind. In adding his humble testimony to the eminent public services of the late President, he was the more gratified to do so

as it was a just tribute due to an individual now no longer in the possession of official station, but in the unostentatious retirement of private life.

He could not concur with those who sought a solution of the causes which had brought about the present commercial distress and embarrassment of the country in the policy of the late administration. Cause did not more certainly produce effect than did the paper system occasional revulsions in trade and commerce, whether it existed in the form of a national bank or of State institutions. This was undeniably proven by parallel cases of distress, which had occurred in this country during the existence of the late national bank, and which had repeatedly occurred in England with a similar institution. But, besides the ordinary tendency of that system to visit on the country occasional pecuniary distress, he saw, in the violent political warfare which the United States Bank and its indefatigable partisans had waged against the party in power for the last five or six years, many of the causes which had led to the present state of things, and which the real perpetrators, with characteristic dexterity, were now endeavoring to charge to the policy of the late and present administrations.

The primary causes which had led to this catastrophe, in his opinion, were not of recent date, but had their origin some five or six years back. They originated in that rapid succession of expansions and contractions resorted to by the United States Bank when it was seeking to effect a recharter. The history of no similar institution in the world had been marked by so many and such sudden fluctuations in its management. Unless all past experience in banking is false, unless all that has been written by the wisest men on this subject is to be repudiated as untrue, this course of itself was sufficient to give an impulse to that spirit of speculation, which, roused into action then, has since spread far and wide over the country.

Among the most effectual of these expansions by the Bank of the United States in doing mischief, was that in the latter part of the year 1834, and in the beginning of that of 1835, by which it increased its discounts, in the course of a few months, from about forty-five millions of dollars to about sixty-five millions. It would be borne in mind, that this enormous increase took place some time after the removal of the public depositories from that institution, and after the State banks, strengthened by receiving them, had filled the vacuum in the moneyed circulation of the country, occasioned by the great reductions in its loans made by the Bank of the United States shortly after the depositories were removed. The United States Bank having thus discounted largely, when the channels of circulation were already full, powerfully contributed to create that redundancy in the paper system which has since produced so much mischief. Besides he would ask what period has there been, since that time, that the country has enjoyed repose, from the violent and continual assaults made by that bank, and the powerful party, which has acted with it, on the financial policy of the Government? What expedient has been left untried by them to frustrate and defeat that policy? Is it, therefore, now to be tolerated, that the perpetrators of so much of this mischief are to escape, by raising a false clamor against others? Imperceptible and difficult of detection as the means often were employed by a great moneyed power to accomplish its purposes, yet he could not doubt that the public intelligence was fully competent to understand the sinister agency which had labored with untiring perseverance, and at the hazard of destroying the prosperity of the country, to effect its designs.

They had heard much of reproach and vituperation cast on the administration for having, as was alleged, failed to present some plan by which to relieve the country of its embarrassments. Did gentlemen suppose, when they seemed to consider Congress so entirely competent to relieve the country from its embarrassments, that it would pay the debts of those involved, and restore the losses of those who had been unfortunate? Their knowledge of the principles of the Constitution forbade the supposition that this was the plan of relief desired by them. Every measure of relief, which, in his judgment, the exigencies of the times called

for, and which was compatible with the Constitution, had been presented for their consideration, and had received the sanction of that body.

Was the bill which extended a very liberal indulgence to the merchants on a large amount of debt due to the Government, a measure bringing no relief? Was the bill granting further time to the banks to pay over the Government deposits, and which would enable them to extend more lenity to their debtors, of no value to the community? Would the bill which proposed the issuing of ten millions of Treasury notes, rendered necessary by the indulgence extended to the merchants and deposit banks, produce no beneficial effect? The very anticipation of the passage of these measures, and of the latter more especially, it was said, had already, in conjunction with other causes, produced a favorable influence on the money market in the large cities. If gentlemen in opposition, who had presented such exaggerated pictures of distress, knew of other and better remedies than those already proposed, and did not bring them forward, the country would hold them answerable for a dereliction of public duty. The physician who stood by and witnessed the agonies of the patient, and who knew the remedy, and yet would not apply it, was guilty of culpable negligence. A national bank, though not openly avowed as such, is, no doubt, in the estimation of gentlemen, the sovereign cure for the distresses of the times. Why, then, is it not proposed? Wherefore is there delay in bringing it forward? Is it apprehended that the patient is not yet sufficiently afflicted by distress to make him willing to receive the remedy? Is it necessary that he should be further tortured by bank chastisements, and alarmed by panic cries of distress, to subdue him to an acquiescence in the plans of those who have his good so much at heart? This plan of operations had been once before tried: it had failed then, and he predicted it would fail again.

Having said Mr. B. replied to some remarks of honorable gentlemen which he considered of a character requiring especial notice, he would now present some of the principal considerations which had induced him to give the bill then before them, and the amendment proposed by the Senator from South Carolina, (Mr. Calhoun,) his cordial sanction and support. The same considerations of wisdom and of common prudence which would induce an individual to change an agent in whom he had reposed a trust, and who had proved unfaithful or incompetent, should admonish us, in our public capacity, to withdraw our confidence from those fiscal agents of the Government who had so signally failed in performing the duties undertaken by them. The State banks had been tried as fiscal agents of the Government, under circumstances the most favorable to success. The nation had seen, with astonishment, in a period of profound peace, with no public debt burthening our resources, and with a Treasury abounding in means beyond all former example, the Government of the United States suddenly deprived of the means to carry on its ordinary operations, by the determination of the banks having possession of its revenues to suspend specie payments. Was it the part of wisdom, under such circumstances, to renew the connection between the Government and the banks? Was it proper for those entrusted with the duty of conducting public affairs, again to subject the Government to the recurrence of the same evil, with, perhaps, still more aggravated injury?

For one, he wished to see the Federal Government taken out of the keeping of irresponsible banking corporations, and subject to be controlled alone by the will of the people, its only legitimate masters. So long as banks were made the depositories of the public revenue, the Government was dependent on them in conducting its most important operations, either in peace or in war. Its action might be arrested by their withholding its means in periods of the greatest public emergency. It could not in war command a squadron to sail or put a battalion in motion, if the banks entrusted with its revenue should determine to withhold it. Its very existence might be endangered by being brought to a pause for the want of means. The reflection was humiliating, that a Government,

25th Cong....1st Sess.

Making public officers depositories—Mr. Brown.

Senate.

which was noble in the republican simplicity of its structure, and destined to solve the problem of the capacity of man to govern himself, should be made to depend on the will of banking corporations for so important an element of its success as the certain command of its revenue. In placing it, in this way, at their mercy, it was exposed in its financial affairs to all the evil influences which they might exert, whether arising from caprice, political hostility, or the vicissitudes of trade. Nor was this exhibiting the danger arising from this system in its true extent. It could be demonstrated that the banks of *any single one of the large commercial cities*, in a period of over-trading, would have it entirely in their power, by suspending specie payments, to compel a general suspension of all the banks throughout the United States; and, by doing so, arrest the regular operations of the Government! The banks of a single city in one of the eastern States, at a very gloomy period of the last war, availing themselves of the balances which had accumulated in their favor, in the course of trade, against the large commercial cities of the middle States, had, by a demand on them for payment in specie, caused a suspension by the banks throughout the United States! This movement struck a blow at the Government, which had well nigh proved fatal to the success of all its operations in the great contest in which it was then engaged. That it was, in a great degree, the result of hostility to the cause in which the country had embarked, was then extensively believed, nor has that impression to this day been removed.

The State banks are, from the course of commercial transactions, so intimately and closely connected together, that what affects any portion of them in any one of the principal cities, is, to a greater or less extent, felt by all. The stoppage of the banks at either of the great commercial points, almost with the quickness of electricity is felt by all, and is followed by all throughout the country, as a measure of self-protection. If this was proven to have been the case by the occurrence of that kind which took place in the last war, the circumstances of the country which now exist, are still more peculiarly calculated to produce such a result. The great increase in our internal trade, as well as foreign commerce, and the rapidity of communication now existing between the remotest points of our country, had produced a still closer connection and sympathy between the banks than formerly existed, and doubly subjected all to the danger of being affected by causes operating on a *few at a single great commercial point*.

He had shown the great uncertainty and danger which the Government, by depositing its revenue with the banks, would be continually liable to, in its financial affairs. He had shown that these results might be brought about by the determination of the banks, at a single leading commercial city. Was it the dictate of wisdom thus to place this already great and rapidly growing Republic under the control of a few great commercial cities, in a matter so materially involving its success, as well as its very being? Was it sound policy in that way to expose its financial action to the deleterious influence of the national bank of England, and the great moneyed power of that country? Much the larger portion of the foreign commerce carried on by our great cities was with England. He was informed that even a very large portion of the trade carried on by American merchants with other foreign countries, was conducted by means of credit obtained through the great banking houses in that country.

It was the misfortune of our great cities, if it was to be regarded as such, almost constantly to stand indebted to England in a very large amount. Whenever our merchants overtraded with her to any considerable extent, her national bank could, if she chose it, produce a pressure through them on our city banks, and produce the hazard of their stopping specie payments. Her powerful agency to accomplish such a catastrophe may be seen in the suspension of specie payments by all of our banks which has lately occurred in this country. The first movement which led to that unfortunate result was that made by that bank, by which she compelled the great banking houses of England, connected

with the American trade, to discredit American merchants. Indebted to England as they were in a sum estimated at about thirty millions, and unable longer to draw bills to meet their payments on her banking houses, which had before given them almost unlimited credit, they were driven to the only other expedient left them of making remittances in specie, the demand for which compelled the banks first in our great commercial emporium to close their vaults.

Nor would a NATIONAL BANK have shared a different fate, if one had been in existence, under the same overwhelming causes. It would, no doubt, have been forced, under the great and extraordinary pressure for specie, to have yielded to the storm. To re-unite the Government with the banks, would be, therefore, to subject it, in a period of over-trading, to the dangerous influence of the great moneyed power of England, operating at such a time, first on our merchants engaged in foreign trade, next on the banks, and, through them, on the finances of the Government. If its independence was to be preserved—if its regular constitutional action was to be kept up, impelled alone by the vigor of the public will—then the separation of its financial interests from the banks entirely was a measure indispensable. That alone could secure to the people, in its administration, those great and important ends in a republican form of Government to which he had alluded, and free it from the extraneous influences which threatened such serious mischief.

Nothing, said Mr. B. was of greater importance to the happiness and prosperity of a people, than stability in the monetary concerns of a country. Could any one hope to see so desirable an object accomplished so long as the Government remained connected with the banks by whom the circulating medium of the country was almost entirely supplied? Could any one hope to see an end of those wars on the currency, which had been so incessantly waged, for some years past, by the party opposed to the administration, in the hope to convince the people that they had acted unwisely in refusing to agree to the recharter of the national bank? Was it to be expected, if the Government was again re-united to the banks, that party violence and ambition would not again strike at the moneyed affairs of the country, constituting as they did the most sensitive nerve in the body politic, with a view to drive the administration from power? When the national bank was refused a recharter, it became the signal for that attack on the State banks, which has been so incessantly kept up ever since. The removal of the public deposits from that institution, furnished another excuse for the same course of hostility, greatly embittered by their having been placed by the Government in the State banks. When commercial embarrassments began to thicken over the country, when it was plainly perceived by the keen-eyed sagacity of the managers of the moneyed power, that the banks had endangered themselves by excessive issues, then it was that the war was pushed with renewed vigor, in the hope, no doubt, that the blow which would result from the suspension of specie payments would prove decisive of the fate of the administration.

He had noticed some weeks previous to the banks having stopped specie payments, the simultaneous movements of certain presses, devoted to the interests of the Bank of the United States, tending to produce that result. They predicted that the banks would stop, and some of them zealously urged them to that course. He did not positively know that it was their design, through the instrumentality of a panic, to bring about that result, to which their labors had powerfully tended for so long a time; but the time, the manner, and the circumstances, all went strongly to favor that supposition. The time selected for this movement, when mercantile failures were daily occurring, was of all others the most favorable to produce distrust and alarm in the public mind, as to the solvency of the banks, and consequently, to cause a general demand on them for specie, by depositors, and those who held their notes. The manner of the attack, by commencing it about the same time at three or four important points, distant

from each other, showed it to be, if not a matter of concert, at any rate a singular coincidence. The circumstances under which it was made, were exceedingly well calculated to produce the political effect doubtless ardently desired by those engaged in the crusade against the administration. Very many of our citizens were involved in heavy pecuniary embarrassments, the fruits of the wildest speculation. The States—many of them in the anticipation of receiving their proportion of the surplus revenue—had embarked in expensive plans of improvement; and the whole of the public revenue belonging to the General Government was deposited in the banks thus liable to be affected. In this state of things, it was no doubt imagined by many of those who are desperately determined on producing a political revolution, that to stop the banks was to pull down the administration. It was a blow which, by the sufferings it inflicted, was to awaken the slumbering community to the merits of a national bank. It would disappoint the States in their expectations of receiving the surplus revenue. Finally, that it would stop the wheels of Government, and afford the enemies of those in power the opportunity of exultingly pointing to its bankruptcy, and proclaiming the mismanagement of its revenues. He regarded the great body of those in opposition as honest and patriotic citizens, and was far from believing that they were prompted by such motives as he had alluded to; but at the same time he felt regret at being compelled to express the belief, forced on him by the circumstances he had described, that there were some to be found among them ready to compass their objects at the expense of the prosperity and best interests of their country.

It would not, he thought, be doubted, on a candid review of the history of the last three or four years, that the connection between the Government and the banks had invited and been made the cause of the harassing warfare which, to subserve party purposes, had been, in that space of time, almost constantly kept up against the deposit banks; and, consequently, affecting to a great extent the interests and business of the country. The streams of the money circulation never can run clear or smooth while they are liable to be muddied and lashed into impetuous violence by being mingled with political excitement. The country will be perpetually liable to experience inundations at one time in its circulation, and at another to suffer sudden reactions. The true remedy is, then, to remove the cause, by severing the connection between the Government and the banks. By doing this, many of the most powerful motives to produce agitation on this most delicate and sensitive question will be effectually removed.

Another consideration, by no means of secondary importance, in favor of such a step, is the expediency, if not absolute necessity, of confining within more moderate bounds the relation of debtor and creditor between the Government and its citizens. While the banks are employed as the depositories of the public revenue, they must necessarily loan it out to individuals, to indemnify themselves for the trouble and risk in keeping it, and for the interest which they are bound to pay on it to the Government. The public money thus loaned out by them, though nominally due to the banks, is, in reality, owing to the Government. The relation of debtor to it, in this way, becomes ramified throughout every part of the country; a relation which, when it exists to any considerable extent, is dangerous to the existence of the Government which creates it, and destructive of patriotic sentiment in the citizen. It is the firebrand by which faction may inflame public feeling, and by which civil war may be lighted up. If the Government is at any time compelled to demand its money from the banks, when they are pressed, designing politicians would not fail to ascribe the pressure which it might occasion to tyrannical and unworthy motives.

Let us suppose that the Government, at the present time, instead of granting indulgence to the defaulting banks for the large amount of money due it, was to yield to its necessities, and resort to rigid measures to enforce its immediate payment, can any one doubt but that appeals would be made to all the interested and selfish motives of those who are indebted, to array them against those at

present in power? We need only refer to the criminal conduct of a certain class of individuals, who had threatened resistance to the Government not long since, because the postages were demanded of them in the legal currency of the United States, when they well knew it would be an open violation of law for officers of the Government to receive any other.

The measure proposed was no innovation on the principles of our Government; but was, in fact, a revival of those practised on in the early days of the Republic, under the very extensive powers given the Secretary of the Treasury, by the law first organizing that department. When but few banks existed at that time, individuals engaged in the collection of the revenue, in many instances, were required to keep and disburse the public moneys, when called on by that officer. To him, the system of collecting, keeping, and disbursing the public moneys of the Federal Government, through its own officers, was the most obvious and simple that could be devised. Nothing appeared more natural and appropriate, than that a Government should execute its own laws, through officers appointed by itself, and accountable to its authority. When the Constitution was framed, there were but few banks in the United States. Its framers, therefore, must have intended that its finances should be managed by its own officers; otherwise they would have given the power, in that instrument, to Congress, to create a bank corporation for that purpose. As the system now proposed, therefore, was that evidently intended by the framers of the Constitution, gentlemen paid them but a poor compliment when they denounced it as fraught with so much danger to the liberties of the people. Of nothing was he more entirely convinced, than that its tendency was to lessen greatly Executive patronage, instead of to increase it, as had been so confidently insisted on by those who were opposed to it. It proposed no addition to the number of public officers already existing. It involved an expense of only comparatively trifling amount. Where then was the increased patronage so much complained of? That it would greatly diminish the patronage of the Executive branch of the Government to discontinue the employment of the State banks as its fiscal agents, the speeches of gentlemen in opposition could be cited abundantly to prove.

When the law was, at a former session, under consideration, by which they were made the depositories of the public revenue, it was then represented by them as placing the State banks under the control of the Executive; and organizing a moneyed power to be wielded at his will for the destruction of the liberties of the country. Politically hostile to the administration, as he believed much the larger portion of those who managed them were, in reality, they brought no strength to the party in power, but were rather the source of weakness. But to an administration of congenial politics with themselves, they could bring a power and influence, dangerous to the liberties of the country. By ceasing to employ them, the Government in effect removed the means of its influence from a vast number of persons who were engaged in managing those institutions, and, so far as their fiscal agency was concerned, were to be regarded as its officers.

It was then almost susceptible of positive demonstration, that the proposed measure, by greatly reducing the number of those engaged in conducting the fiscal affairs of the Government, to that extent diminished the patronage of the Government.

The President, in recommending a severance of the connection between the Government and the banks, had assumed an attitude of dignified firmness and moral elevation, worthy the character of the Chief Magistrate of the nation. It carried out the doctrine into practice, that simplicity in the administration of a Government founded on the will of the people, while it is the readiest means of perpetuating its principles, is the surest way of securing their esteem and approbation. It voluntarily proposed to relinquish whatever of power and influence might be derived to the Executive branch of the Government from a connection with moneyed institutions, and in doing so, would leave

it to repose on the wisdom of its policy, and the merits of its measures, for public support.

The objection, said Mr. B. that to carry into effect the measure proposed, would be an attack on the banking institutions of the country, and, through them, on the people, was to his mind equally unfounded.

Unless it could be proved that the banks were the people, it would, he thought, be difficult to establish this assumption. He knew that the paper system was rapidly gaining a powerful ascendancy over public opinion; but it had not yet so entirely usurped their privileges and prerogatives, as to make them and the banks convertible terms. What right, he would ask, had the banks to the custody and enjoyment of the public revenue? Was it at all necessary to the maintenance of their proper credit, that they should be employed to manage it? The first inquiry was answered by the conduct of the banks, in withholding from the Government its means, and thus crippling its operations. To the second, it may very properly be answered that they, like individuals, should be left to their own intrinsic merits and means to sustain their credit. If they conduct their business on prudent and sound principles of banking, and act with honesty and fairness in their transactions, their credit will be, as a matter of course, established. To that extent they are entitled to credit, and no more. Any other credit beyond that is fictitious, and productive of injurious consequences.

Many of the banks who had been in possession of the Government deposits, had no doubt been injured by the excesses to which they had been stimulated in consequence of it, excesses proving alike injurious to themselves, and those who had borrowed of them. Its tendency was to expand the paper system beyond its proper bounds, by enabling the banks to discount largely on funds not their own; and when called for, as they must of necessity be by Government at short intervals, the frequent consequence would be a pressure on the community by the banks who loaned them, that they might be enabled to meet the Government demand. The effect then of using the banks as depositories, in this point of view, is to produce fluctuations in the bank note currency of the country, and to produce those shocks in trade and business, so detrimental to both.

An objection not less specious and unfounded, than that which he had just noticed, and which had been used as an argument against the policy of the bill, was that it attacked, what, in his judgment, was erroneously called the credit system. Towards the true credit system of the country, none felt more attachment and respect, and a more anxious desire to preserve it, than himself. But, if it was meant that the effect of the measure would be to put an end to that supendous system of legalized fraud and plunder, which, under every variety of the paper system, had for some time preyed on the industry and prosperity of the country, he, for one, would rejoice at such a result. He most sincerely wished to see that system of credit, which was the offspring of merit, probity, or wealth, protected to the fullest extent; but not that system which prompts its followers to seek their ends through all the avenues of gambling and fraudulent speculation. It was a system, by which the more honest, but less wary, class of society were made victims of the schemes and arts of the more practiced and designing.

Among the strong recommendations (continued Mr. B.) in favor of placing the public moneys in the hands of individual depositories, is the perfect and entire power which it affords to the Government at all times, through its agents, to look into the state of its funds by actual inspection. The bill provides that the Secretary of the Treasury shall cause examinations of the moneys on hand and accounts of each depository to be made at least once a year, and as much oftener as he may deem necessary; and, for this purpose, authorizes him to appoint special agents. In this way, the Government will always be enabled to know the actual condition of its finances. This power can not be exercised over the State banks, because they are corporations existing independently of the will of Congress, and, therefore, subject to no mode of

investigation by the Secretary of the Treasury other than that afforded by their returns. Nor would the case, in this point of view, be improved if a national bank existed, and was made the depository of the public revenues. The resistance made by the officers of the late bank to a committee appointed by the House of Representatives to examine its condition, shows the power, and will of moneyed corporations to evade investigation, even by those from whom they hold their charters.

As to the comparative safety of the two plans, in taking care of the public revenue, as a whole it was in favor of the system to be conducted by individuals. Some of them might, occasionally, become defaulters; as, in the management of human affairs, under the wisest system, it was impossible to avoid casualties and difficulties. But, under no circumstances, could it be expected a state of things would occur which would deprive the Government of the use of its entire means, as had lately been the case, by the banks having resorted to a suspension of specie payments. In that aspect of the case, then, the question of superior safety was against the banks as depositories of the revenue, and in favor of the plan proposed.

The proposition of the gentleman from South Carolina (Mr. Calhoun) so to amend the bill as to make the public dues, of every description, after a certain period, payable only in gold or silver coin, or in such notes, bills, or paper, issued under the authority of the United States, as may be directed to be received by law, met his hearty concurrence. The able arguments by which it had already been enforced would occasion him to confine his remarks to a few of the principal benefits which would result to the country from its adoption.

It would, in the first place, free the Federal Government from all the casualties, difficulties, and embarrassments with which its financial action had been so repeatedly oppressed by the receipt of bank paper. It was not only important, in the operations of Government, that it should be able promptly to command its money, but that it should be of a kind universally current, as well in the country as out of it. Money was the great agent which gave to Government its action and efficiency. In proportion as it was good, was the energy and success of its operations in periods of emergency. In proportion as it was debased, was its action weakened, and its success jeopardized.

Much of the success of a Government depended on its practising the principles of justice in its transactions with its citizens, by which it inspired sentiments of respect, and strengthened it in their affections. Disbursing, as it did, annually large sums of money in the public expenditures, made throughout the country, it could not fail to lessen those sentiments of respect and attachment by making its payments in a currency of less value than that recognised by its Constitution, because, in doing so, it would violate the principles of justice which itself had established.

Again: its tendency would be, if aided by the passage of another bill then on the table, proposing to abolish credits in the payment of all the public dues, and substitute cash payments in their stead, to check that spirit of over-trading and excessive importation which had prevailed to such an extent among our merchants engaged in foreign trade. From it, evils of the greatest magnitude had arisen to the currency of the country, as well as to our trade and commerce at home and abroad. The great facilities afforded by the banks in obtaining loans would powerfully stimulate our merchants to over-trade, so long as bank notes were made receivable by our laws in payment of the customs. The effect of this measure, then, would be to reduce the imports from abroad nearer to the standard of our exports, and remove the evil effects on the business and currency of the country, always the consequence of over-trading. In doing this, the receipts of the Government would be lessened and brought down to a point making it incumbent on it to practice economy in its expenditures.

Another effect, of not less public utility, which would result from it, in his opinion, as auxiliary to the benefit of placing the public money in the hands of individual depositories, was the suppression, to a great extent, of that system of fraud and

speculation in the public lands, which was so much and so justly complained of throughout the country. The Specie circular had proved inadequate to effect this object, though it had, no doubt, contributed to lessen the evil. The specie paid into the hands of the receivers for the purchase of public lands, was, under the late system, deposited in the banks, and by them again loaned out to land speculators, by whom it was again paid to the receivers, and again deposited in the banks—the same identical specie thus performing a perpetual round, and employed in that way to effect numerous purchases in the public lands. If bank notes are again made receivable in the public dues, the facility of obtaining them, by loans from the banks, will revive the spirit of speculation in the public lands, and the public domain will soon pass almost entirely into the hands of speculators. By requiring payment in gold and silver, and placing it in the hands of individual depositories when collected, it effectually cuts off the means of conducting these operations: first, because the banks will not loan their specie to speculators, when they know it will not be returned to them again in the shape of Government deposits. Secondly, when paid into the hands of individual depositories, it cannot be used in loans to speculators without incurring very severe penalties, but will return to circulation among the public only in the form of Government disbursements.

If the observation that the adoption of this principle would furnish "one currency for the Government; and another, of inferior value, for the people," was intended for argument, certainly none was more shallow and easily refuted. If it was intended as a mere attempt at popular delusion, then he would say none was more easily detected. To whom, he would ask, did the Government belong, for whom this money was to be collected? Why, to the people. To whom did the money belong, thus collected? To the people. For whose benefit was it to be expended? Certainly for their benefit. Nothing could be of such great public utility, as the steady and regular administration of the Government, for which purpose it was to be used.

If carried into practice, it was destined, as he believed, to perform an eminently beneficial public purpose. It would raise the Federal Government above the influence of bank corporations, and place it on its own proper energies, to discharge the great and important trusts confided to it. It would bring into circulation, necessarily, more of the precious metals, and in that way form a mixed currency, now almost exclusively composed of paper. The liberties and prosperity of the country were now almost sinking beneath the effects and abuses of the paper system. The Federal Government was the only power competent to redeem it from that situation. It was bound, constitutionally, to exert its power to restore, as far as it could, the only kind of currency it was authorized to establish.

That it would prove of great advantage to the country he could not doubt. Not only to the people themselves, by being the means of diffusing a more extensive metallic currency, but to the banks, likewise, by affording them, in its wider circulation, a fund to recruit from in times of exigency. In short, that which was denounced as a measure destructive to the banks, and to the interests of the people, was a measure, in his estimation, eminently calculated to benefit both.

Mr. B. in conclusion, said it was now very apparent, that the decision of Congress would be ultimately narrowed down to a choice between the plan of fiscal agency, then proposed, and the establishment of a national bank. The State banks had, on a fair trial, proved themselves incapable of fulfilling the duties of such a trust, and if again resorted to, would, in all probability, sooner or later, present a repetition of the difficulties in which they had recently involved the Government and the country. To the creation of a national bank, in any form, he had objections of an insuperable character. The argument made by gentlemen who had preceded him in debate against its constitutionality, was unanswered and unanswerable. The objections to it, as a measure of expediency, were equally strong and decisive. The remedy which

it would afford would be worse than the disease, which its friends professed its capacity to relieve. Besides its tendency to produce pecuniary distress for some time before it could go into operation, if established under the pressure of the present pretended necessity, it would be fixed on the country, notwithstanding any abuses it might commit, for ages to come. The argument would be constantly and readily used, by its advocates, that it must be continued, or the prosperity of the country ruined.

Its success would bring into power, as a necessary consequence, the political party who have supported such a system with such zeal and perseverance, in all its fortunes. With such an institution, devoted, as it would be, to the party that placed it in ascendancy, the Government would become stronger than the people, and their will would be superseded. It would be hailed as a triumph by the friends of the moneyed power in America and Europe, over that spirit of liberty and independence now existing in the Republic.

### SPEECH OF MR. CLAY, OF ALABAMA.

*In the Senate of the United States, Wednesday, Oct. 4, 1837.*—The bill "imposing additional duties, as depositories in certain cases, on public officers," being under consideration, and on its third reading—

MR. CLAY of Alabama, addressed the Senate to the following effect:

MR. PRESIDENT: Before the vote is taken on the passage of this bill, I must ask the indulgence of the Senate for a few moments. Until very recently, I had intended to remain silent; but regarding the importance of the measure, its capacity for good or evil effects throughout the country, and the responsibility of the vote I am about to give, I am anxious that the principles and views by which I am governed shall be correctly understood.

By the able debate, which has so long occupied the Senate, and to which I have listened with the deepest interest and attention, the measure before us has been made to assume a triple aspect. Shall we pass the bill under consideration, and confine the receipt and disbursement of the public money to individual officers and agents? Or, shall we continue the State banks and local institutions as our depositories and agents? Or, would it be better to charter a national bank? or recharter the late bank of the United States? Thus has been brought in review the whole history of the Government, as regards its financial affairs, and its agency in regulating the currency of the country.

I confess, sir, when this delicate and important subject was first brought forward, I had some hesitation, some doubt, as to its probable tendency; but the more I have reflected, deliberated, investigated the subject, the better I have become satisfied that its effects will be salutary, in regard to the immediate interests of the Government itself, and that they will not be pernicious; but, on the contrary, beneficial to the interests of the people—our constituents.

As the measure was first proposed by the Committee on Finance, I apprehended the disconnection—divorce, if you choose—of the Government from the banks would be too sudden, and would consequently cripple the banks, and occasion a shock in the monetary affairs of the country generally. But, sir, these apprehensions have been obviated and removed by the amendment offered by the Senator from South Carolina, (Mr. Calhoun,) as it is now modified. Under that amendment, the bills of such banks as now pay specie, or as may think proper to resume specie payments, will be receivable in payment, and to the full amount, of all public dues, for customs, lands, etc. till the 1st of January, 1839; thereafter, three-fourths of such public dues, till the 1st of January, 1840; thereafter, one-half till the 1st of January, 1841; and, thereafter, one-fourth till the 1st of January, 1842.

Here, then, is inducement held out to the banks now paying to continue, and to such as have stopped to resume specie payments. We say to them, in effect: "We invite you to resume specie pay-

ments; show that you are solvent, that your notes are convertible into specie when desirable, and we will receive them in payment for public lands, and for all other revenue;" in the strong language of some of the gentlemen who have addressed us, "do this, and we will endorse your notes." What stronger motive could be held out to such banking institutions as are solvent, honest, and desirous to effectuate the purposes of their creation? If the public interest and convenience be the object of bank directors, as legitimately they ought, would they not, by responding to this invitation and offer on our part, give greater value to their paper, give it a wider circulation, and adapt it to the use and interest of the community? And would not such banks as resumed at once derive all the advantages of superior credit, furnish the circulating medium, and do the business of the country, to the exclusion of such as failed or refused to comply? The answer is palpable; no man can doubt on these questions.

Again, sir: The change in the mode of collecting the public revenue, in the kind of money receivable for it, will be so gradual as to occasion no shock whatever, to the credit of the banks, or to the commercial community. Before we entirely discontinue receiving bank paper, more than four years will have elapsed. All this time will be allowed for the banks and merchants to adapt their business to the new system contemplated, and conform their business to the new state of things. It will give time for the State Legislatures to regulate their banking institutions, so as, in future, to prevent over-issues of paper—to restrain them from generating, or encouraging, a spirit of over-trading, and inordinate speculation—to restrain them from making promises they cannot redeem—and thus restore to the country a sound circulating medium, and the just equilibrium of trade, and business of every description.

Moreover, we, ourselves, shall have time to see how the new system works—to check its velocity, if it be too great—or accelerate it if it be too slow; and modify it, in all respects, as its results may indicate to be safe and expedient. As already shown, no change in the description of funds receivable for public dues, will take place for the next fifteen months; for the year 1839, a reduction of one-fourth; for 1840, one-half may be paid in specie-paying bank paper; and so on to the consummation of the plan. If it be discovered that the policy operates injuriously, there will be ample time to amend or modify it.

But, sir, I have no apprehension that any injurious result will follow the adoption of this measure. The chief embarrassments of the community have arisen out of inordinate expansions of the circulating medium, excessive accommodations, begetting extravagance and reckless speculations; and then sudden contractions, withdrawals of those enormous loans, reductions of the amount of circulation, and thus, almost in a moment, reducing the value of property one-third; sometimes one-half. The Government deposits have, doubtless, heretofore nurtured and increased this propensity of all banks to excessive issues and accommodations. They have loaned out the public money, as if their own; and when called upon to pay it over, they have been necessarily compelled to press and coerce payments from their borrowers, who had, in their turn, treated this borrowed money as their own, and have thus occasioned embarrassment, the sacrifice of property, and, in too many instances, the impoverishment and ruin of their customers. To illustrate the correctness of these remarks, I need only refer you to the greater pecuniary distress and embarrassment of communities around any of the banks which have been large depositories of the public money, compared with those remote from such institutions. If they have no large sums of public money on general deposit on which to grant accommodations, they will know and understand better the proper limits to prescribe to their liberality; they will have no fluctuations, no augmentations or diminutions of capital to mislead them; their accommodations will be more uniform, and the amount of their circulation bear some relation to the amount of specie in their vaults. This being brought about, the value of

25th Cong....1st Sess.

Making public officers depositories—Mr. Clay.

Senate.

produce and property of all descriptions will be more steady and uniform: we shall not have a negro, costing a thousand or fifteen hundred dollars to-day, sold twelve months hence to pay half the amount of consideration—land at one time worth fifty dollars per acre, at another not more than twenty—and our great staple one while commanding twenty-five dollars, and then not worth eight.

Let it not be said that the withdrawal of ten or twelve millions of dollars from the banks, were it even true that it is to be locked up for the year, is to produce any ruinous effect on the business of a country requiring a circulation of from one hundred and eighty to two hundred millions. Twelve millions will be a sufficient sum to carry on the Government, if economically administered; and, if collected and disbursed as the bill proposes, it will not be withdrawn from circulation or the general use. While it is being received almost daily, it will be returning to the circulation in payments to the officers and agents of the Government, and those engaged in the public works, through whose hands it will pass into those of the farmers, who supply them with subsistence; of the mechanics who build their houses and make their implements of husbandry; of the merchants who supply them with foreign and domestic manufactures; and, though last, not least with many of us, into the hands of keepers of hotels and boarding houses. Of the large sums which are almost daily paid to the heads of departments and their subordinate officers, to members of the two houses of Congress, to the military, judicial, and other officers of this Government; how much is locked up and withheld from circulation? Is it not a practical truth, which can be attested by all, that most of it is immediately paid out again to some of the other classes? How many members of Congress, heads of departments, or clerks, did any one ever know to hoard money or get rich? The question is almost enough to produce a melancholy smile. A member of Congress, or any other officer of the Government, get rich! Why, sir, it is absurd: we all (at least many of us) can too truly attest the groundlessness and absurdity of such a proposition.

Then, why talk of abstracting from the business operations of society the amount of the necessary revenue for the support of Government, as if, like the miser, the recipients would lock it up, or place it in the strong box of our Treasury, never again to see the light of day! Any such idea must be, practically, without foundation. With what propriety can gentlemen insist that we are establishing one currency for ourselves, and another for the people. No Senator has proposed, and I venture to say no one will propose, that the public dues should be received in any thing but gold and silver, specie paying bank paper, or Government securities or paper. No one, here, has offered a proposition that the Government shall receive depreciated bank paper, and I trust never will. Do gentlemen pretend that it is for the individual benefit of the officers of Government, that specie, or its equivalent, is required? On the contrary, is it not to sustain the Government and its credit, and to give efficiency to its operations?

It has been well maintained, that it will have the effect of making the local bank paper better. The issues of the banks being restricted, their paper will be convertible into specie; for all local purposes, at least, it will be of equal value, and answer the same ends; and if the banks are rendered sound, any one having their paper may get the specie, if desired.

But, sir, it is said this bill, if passed, will greatly increase the Executive patronage. This objection seems to have been transferred from the deposit banks, to which it was formerly urged, by the opponents of the Administration, and applied to the system under consideration, so soon as it was proposed by the Executive. Whilst the late plan of receiving and disbursing the public money prevailed, the "pet banks" were to be regarded as the most execrable instruments of despotism ever conceived; as increasing the Executive patronage most enormously; as placing both the purse and the sword in the hands of the President; as sub-

jecting every thing to the will of one man. Now, we find some of those, who formerly held these sentiments towards "the league of banks," after they have failed to realize the hopes and expectations of the Administration and the people, ready to continue them, and deprecating the adoption of the policy recommended, as dangerously increasing the power of the Executive! According to my view of the subject, the Executive power and patronage will be greatly diminished by the proposed change. It has not been yet recommended by the Secretary of the Treasury, so far as I have seen, to increase the number of collecting and disbursing agents; and I see little necessity for the employment of any additional officers, unless it be a few clerks. In most places, the same officers who have heretofore collected and paid over the public revenue to the banks, can collect, keep, and pay it out with equal facility. But, suppose one hundred additional officers were necessary, would it so increase the power of the Executive as to compare with that of seventy or eighty banking institutions? It is fair to suppose that there would be an average of a hundred stockholders, or more, in every institution—amounting in the aggregate to eight or ten thousand. These would be, principally, men of wealth and influence in society. Would not this number of individuals, under the influence of the Executive, with the control of such a vast amount of capital, be more dangerous to our liberties, than a few additional collectors or clerks, bound and restricted, as they are intended to be, by the provisions of this bill? It seems to me, sir, that instead of increasing, this measure might be much better entitled, a bill to diminish Executive patronage.

Sir, the Government ought, always, to be able to command its funds, and have them ever ready to meet any exigency. Experience has taught us, that this can not be expected while we rely on banks. Gentlemen tell us, that although the State banks have failed to meet our expectations, we ought to continue their agency. They ask us, would we discontinue the use of steamboats, because a boiler may sometimes explode, and produce fatal results? By no means, sir, while care and skill may reasonably be expected to insure safety, and prevent such calamities. But were we to discover that the machinery is entirely uncontrollable, and the boiler liable to spontaneous combustion—carrying universal misery and death among the passengers and crew, in despite of all the science, vigilance, and fidelity of the engineer—would it be wise or prudent to trust ourselves on board? What would have been the situation of the country in May last, when the banks suspended specie payments, had we been involved in war with some powerful foreign enemy? Whatever might have been the emergency, we should not have been able to have commanded the resources of the nation. We might have been without a dollar for the pay or subsistence of an army to resist the invaders; our energies would have been crippled; and the most disastrous consequences might have followed. When we find that such is the unfortunate tendency of "the experiment," as gentlemen choose to call it, it is time we should abandon it, by whomsoever instituted or approved heretofore.

But, sir, was not the Bank of the United States an "experiment," and has not that also failed to answer just expectation? No other Government, but our own, ever did employ such a fiscal agent, with powers of the same magnitude. It was, indeed, a fearful experiment, and well nigh fatal in its results. Yet, the recharter of the late United States Bank, or the establishment of a new one, is now announced, as the only efficient remedy—the sovereign panacea—for existing evils. The Senator from Kentucky (Mr. Clay) has, to my astonishment, gone so far as to identify the establishment of such an institution with the permanency of the Union! It would seem, the question of a national bank is always portentous—involving consequences of the most alarming character. Shortly after the removal of the deposits from the late Bank of the United States, we were told, by the same distinguished gentleman, that we were then "in the midst of a revolution!" and the sentiment was responded to, by the presses and politicians of the

opposition, from one end of the Union to the other. We were told, on the very floors of Congress, that the deposits must be restored to, or at revolution was at hand. The same sentiment was announced, when two members of Congress, during the same session, addressed an assembled multitude in Baltimore on Sunday. According to the newspapers of the day, it was said by way of justification, "there were no Sabbaths in revolutionary times!" Sir, the subject of a national or United States bank can not be touched without an attempt to produce excitement and agitation. It affords one of the most conclusive reasons against the establishment of such an institution, that it has the ability to produce such tremendous effects. The concentration of such an immense moneyed power, in the hands of a few individuals, is at war with our peace and quiet; too dangerous to our liberties. It would soon control all our elections, from the highest to the lowest, and direct the operations, may usurp the powers, of the Government itself.

The main, if not the exclusive, inducement relied on by most of the friends of the late Bank of the United States, to justify its establishment, was to make it the depository of our public moneys, and the fiscal agent of the Government. I repeat, sir, that it failed to answer the purposes of its creation. I lay down the broad proposition, and undertake to demonstrate its correctness, by a reference to historical facts, that it was neither a safe nor fit depository or fiscal agent. No agent can be safe and proper that refuses obedience to the instructions of his principal, or wilfully acts at variance with them; nor can that agent be suitable that seeks to control his principal. To this proposition, no intelligent and impartial individual or tribunal, can withhold ready assent. I might refer to many acts of the institution alluded to, showing its unfitness under the principle laid down; a few may suffice on this occasion.

"To pay the debts" of the nation is a power as expressly confided to Congress, and the Executive officers of the Government, as any other to be found in the Constitution. In the performance of this duty, about the month of March, 1832, the Secretary of the Treasury gave notice to the president of the bank of the intention of the Government to redeem one-half of the three per cent. stocks, (amounting to about six and one-half millions of dollars,) on the first day of July thereafter. The president immediately visited Washington, and urged and procured the postponement of payment, for the accommodation of the bank, till the first day of the succeeding October. Finding it inconvenient to make the payment, as the time approached, "the president of the bank, and the exchange committee, determined to open a negotiation in Europe, for the postponement, for one year, of the payment of five millions of the three per cent. stocks held abroad; but they carefully concealed their intention from the Government, and there is strong reason to believe, indeed it is certain, that it was concealed also from the Government directors, (placed there to represent the stock, and protect the interest of the United States,) and from the board itself." An arrangement was accordingly made by the agent, thus sent, "with the house of Barings, Brothers, and Co of London, providing for the purchase or postponement of five millions of the stock," alluded to, for one year longer, than the time appointed for payment. "The Barings proceeded, under this contract, to make purchases of stock, on account of the bank, and for the bank, to the amount of \$1,798,597 57, and procured the postponement of \$2,376,481 45, in all amounting to \$4,175,079 02." The speedy extinguishment of the public debt was at the time the favorite and laudable policy of the administration; indeed, it was the anxious desire of the great mass of the people; yet, this fiscal agent thought proper to pursue its own course, and disobey the express order of the Secretary of the Treasury. Not only this, but showing a disregard of all obligations, it violated the express letter, as well as spirit of the charter, which declares it "shall not be at liberty to purchase any public debt whatever."

Again, sir: The pension law of June 7, 1832, required payments to be made, "at such places and

times, as the Secretary of the Treasury may direct." A joint resolution, which passed subsequently, transferred this duty, with the power of performing it, to the Secretary of War, instead of the Secretary of the Treasury. Under these circumstances, the Secretary of War directed the transfer of the funds, books, and papers of the pension agency, in the possession of the Bank of the United States, to the Girard Bank. The president of the United States Bank refused to comply with this order; attempted to prove, by argument, that the Secretary was ignorant of his duty, and misunderstood the law; and, adds insult to disobedience, by saying, "that if the bank makes the transfer pursuant to the order, its accounts may be disallowed by the accounting officers!" Can any one believe this was the true reason? Could it have been reasonably supposed that the subordinate officers of a department would disallow a claim arising under the order of its head? Whatever may have been the opinion of the president, or the board of directors, it was, practically, a refusal of the agent to obey, and an attempt to control the principal.

To guard the interest of the United States as a stockholder, and to enable the Government to see how far its agent faithfully performed the trust reposed, the charter expressly provides "that it shall, at all times, be lawful for a committee of either House of Congress, appointed for that purpose, to inspect the books, and to examine into the proceedings" of the bank. Yet it will be recollected that, in the spring of 1834, a committee of the House of Representatives, appointed for the purpose, visited Philadelphia, and made an attempt, but were denied the opportunity of making such an examination as they proposed, and as was contemplated by the charter. Here, again, was a palpable disregard of the law of its very existence, and the assumption of the right to resist the acknowledged organ of the Government. This refusal on the part of the officers of the bank went to defeat the only means provided to enable the Government to detect violations of the charter, to arrest the abuse of the privileges conferred, and preserve its interest.

Did this fiscal agent show its fitness and claim to our confidence in the transaction of the draft drawn on the French Government for the first instalment of the indemnity payable under the treaty of 1831, when it claimed damages, on its protest for non-payment, to the amount of about one hundred and sixty thousand dollars, having in the mean time in its own hands, employed for its own benefit, a much larger amount of the money of the Government than that called for in the bill? In this instance, too, the bank pursued its usual course, by making itself the arbiter of its own cause, withholding the funds of the Government to the amount of its pretended claim, and not having paid them over to the present day.

Sir, I ask, can an institution be a safe and proper fiscal agent which has so repeatedly and recklessly violated the terms of its charter, defied and disobeyed the orders of the Government, and manifested its subordination to no law, but its own capricious will? Can that depository be safe, which withholds the funds of the Government when demanded, assumes the right to determine the extent of its own liabilities, and arrogates the power "to see the laws faithfully executed," to the exclusion of the Chief Magistrate, the constitutional organ, charged with that duty? On the same principle, the directors of the bank might have refused the payment of money, under circumstances of the greatest possible emergency. They might have differed in opinion with the constituted authorities, in regard to the policy, or justice of a war, or have determined that it had been unconstitutionally waged, and withheld the means of carrying it on. Admit the right of any fiscal agent to judge when it is proper to pay over the funds of the Government, though ordered and required by the proper organ of the Executive, and you at once place them beyond its control, whatever may be the exigency.

Even now, as I have been recently informed, the officers of the bank refuse to furnish the Secretary of the Treasury detailed statements of the management of the stock, one-fifth of which belongs to the Government, in direct violation of the fifteenth

fundamental article of the corporation. Thus the Government is denied information of the condition of its interest, amounting to seven millions of dollars. It is also understood, that a large amount of the notes of this institution (perhaps equal to \$7,000,000 or \$8,000,000) are now in circulation, having, as it is believed, been reissued since the expiration of the charter.

I beg gentlemen, who imagine that a majority of the people are favorable to the establishment of a national bank, to recollect that these transactions are too recent, and have made too deep an impression on the public mind, to be so soon forgotten. The intelligent freemen of this country can never forget the panic of 1834, when, in the midst of prosperity, and in a state of profound peace, the late bank and its friends left no effort untried to agitate and convulse the country from Maine to New Orleans, for the purpose of extorting from their fears what was condemned by their judgment—a recharter. Those of the west and southwest, I am sure, can never cease to remember the treatment they received at the period alluded to, when, after inordinate expansions of its accommodations for some time preceding, it began suddenly to curtail about the month of August, 1833, and by the month of March following, had withdrawn from its branches in the valley of the Mississippi about three millions and a half of dollars; and, of this enormous sum, nearly one million of dollars was withdrawn from the branch of the city of New Orleans alone, the great emporium of all that fertile region. No period of the year could have been so inauspicious to the interests of the inhabitants in that quarter of the Union, for so sudden and large a contraction of accommodations. It was the market season for all the products of the West, and the great staple of the South; and such a step was calculated to produce, and doubtless did have, most injurious effects on prices generally. But, sir, the intelligent and hardy yeomanry of that great region could neither be cajoled, nor terrified into acquiescence. Appreciating their constitutional liberty as above all price, they resisted all the machinations by which they were sought to be influenced or controlled, with a degree of inflexibility and moral firmness which would have done honor to any age, or any country.

Judging from the experience of the past, it seems to be among the unfortunate and most reprehensible characteristics of these great moneyed corporations, to intermeddle with the political affairs of the country. We have the high authority of the Senator from Kentucky, (Mr. Clay,) who was also a member of the Senate in 1811, that the old Bank of the United States was obnoxious to this charge. In his able and eloquent speech, delivered on that occasion against the bank, he made the imputation, on evidence which he declared satisfactory to himself, especially as regarded the exercise of its influence in support of Jay's treaty. We can not forget that the late Bank of the United States entered the arena of politics, almost without the modesty to attempt concealment. Up to the year 1829, when the late President first intimated the inexpediency of rechartering it, the sum paid for printing had not amounted to a thousand dollars in any one year; and, in some years, had been less than two hundred. Immediately afterwards, however, this item of expenditure began rapidly to argument and at the close of the year 1832, (according to the memorial of the Government directors,) for the three and a half years preceding, the amount paid for printing was about \$100,000! One fifth of this sum (being \$20,000) was the money of the people, expended not for any legitimate object under the charter, but to prostrate the then administration, and bring into power another disposed to favor its designs, and perpetuate its existence. What inducement could have prompted a loan of more than \$52,000 to the two editors of a widely circulating and influential political paper, against all the ordinary rules of banking, without indorsers, and a portion of it payable in five annual instalments? Whatever may have been the motive, the effect was soon apparent. For a long period before this "fair business transaction," the paper alluded to had been "warmly opposed" to the bank; a few days afterwards, it became its apologist, and then

its friend. These things can not, ought not, to be forgotten.

Sir, disguised as it may be, the real issue is, bank or no bank? Whether, after all the evidence we have had, we shall renew the "experiment" of a great national bank, with capital and power sufficient to control the numerous State institutions, and regulate the currency of our whole country? Ay, sir, to control and regulate the Government itself. And what reason have we to suppose that another institution, with like powers and privileges, would not be equally obnoxious? Have we any assurance that human nature has changed in all its principles, and propensities? Has man, within the short period of one or two years, become less avaricious, less corrupt, or less ambitious of power? If gentlemen say, we can impose new, or additional restrictions—I ask, of what avail will it be? The charter made the late bank the fiscal agent of the Government; yet, instead of subordination and obedience, we have seen it seeking to control its principal, and violating its commands. The charter expressly declared, "it should not be at liberty to purchase any public debt whatsoever;" yet we have seen it secretly, and in opposition to the instructions of the Secretary of the Treasury, purchasing a portion of the public debt, in the form of 3 per cent. stocks. By the charter, it was bound, "whenever required," to "give the necessary facilities for transferring the public funds from place to place;" yet it refused to transfer the funds of the Government to the Girard bank. But I will not fatigue the Senate, by reciting further evidences of its total disregard of all the restrictions imposed by the charter, on the late bank. It managed to elude the most efficient means provided to insure a revocation of its charter, on the ground of its violation, by refusing, as before shown, to submit to an examination of the committee of the House of Representatives, and has proved, most conclusively, that a moneyed corporation can be restrained by no compact, however solemn, by no penalties, however severe.

Sir, the power and irresponsibility of such an institution were properly understood, and deprecated, on the attempt, in 1811, to renew the charter of the first Bank of the United States. The honorable Senator from Kentucky, (Mr. Clay,) to whom I have before alluded, in reference to the capital then contemplated, much smaller, it may be presumed, than would now be satisfactory, then asked—"may not the time arrive when the concentration of such a vast portion of the circulating medium of the country in the hands of any corporation, will be dangerous to our liberties? By whom is this immense power wielded? By a body, who, in derogation of the great principle of all our institutions—responsibility to the people—is amenable only to a few stockholders, and they chiefly foreigners." The distinguished gentleman also alluded, on that occasion, with great force, to the dangerous potency of such an institution, in times of domestic or foreign war. How much more appalling would be the power deprecated, if, in addition to the vast concentration of individual capital, which would now be expected, it should also become, as desired, the depository of all the treasure of the Government, and its fiscal agent!

Gentlemen have ascribed to a national bank an efficiency and infallibility which are not supported by past experience. Neither of the institutions chartered by Congress was in operation in time of war with any foreign power. Whether, under such circumstances, they would have had the ability to sustain themselves, can not now be determined. We know, however, that in the early period of the late bank it became much embarrassed, was in great danger of stopping payment, and was only extricated by the great sagacity and financial skill of Mr. Cheves. We have seen the United States Bank of Pennsylvania, with as much capital, and, as it is alleged, a better charter than it had from this Government, sink under the pressure of the times, in common with similar institutions throughout the country. It is known, too, that the Bank of England, with its immense capital, and all the favor that could be conferred by that powerful Government, was unable to sustain itself during a period of war, and actually suspended specie

payments for more than twenty years. From these facts, we are not authorized to conclude that a similar national institution in this country would be able to afford the Government or the people a sound currency, or the necessary fiscal aid, in the time of our greatest need.

In regard to the passage of the bill under consideration, we are met, by gentlemen opposed to it, with the objection that it is "another experiment." It is true, sir, that the collection, safe keeping, and disbursement of the public revenue, exclusively through the officers and agents of the Government, has not been sufficiently practised in this country to give it the sanction of our own experience. But though it may be new here, it is not so in some of the most enlightened Governments of the world. It has been long tried, with success, in England and France. In the former, the public revenue is gathered from the people by a class of officers called collectors and distributors of stamps. When so collected, it is paid over to a superior class of officers called receivers general, by whom it is paid into the Exchequer; where nothing is received but cash, or what is, by law, recognised as such. The funds, thus received, are kept in the Exchequer, and disbursed by the officers of the Treasury. This system has been so long pursued in England, where they have a national bank, that it must be regarded as the highest evidence of its successful operation. In France a similar practice prevails. There, too, the taxes of different kinds are collected by local officers, in specie, or Government drafts, which are deemed equivalent, and paid over to creditors, or local paymasters or receivers. The residue is remitted to Paris under direction of a proper officer, and there kept in Exchequer chests. It appears then, sir, if this be an "experiment," it has been well tried; and, as the highest evidence of its approval, it is still continued by Governments having the full advantage of all the lights of experience. If it has been successful with them, it is not unreasonable to conclude it will eventuate in like manner here.

The provisions of the bill, now on its passage, Mr. President, embrace every guard and guaranty, for the security of the public treasure, and its honest and faithful disbursement, which could be devised. Under them, I believe, these desirable objects will be accomplished. With these views, of this important measure, I feel bound to give it my support.

*NOTE.*—In the course of his remarks, Mr. CLAY of Alabama, alluded to the argument of Mr. CLAY of Kentucky, that the charter of a national bank and the permanency of the Union were identified; and also remarked on the declaration made by the distinguished Senator from Kentucky, (Mr. Clay,) shortly after the removal of the deposits, (made in Philadelphia,) that "we were in the midst of a revolution." He also spoke of declarations made in newspapers and elsewhere, that the deposits must be restored, or a revolution was at hand; and that matters went so far, according to the accounts of the newspapers, that two members of Congress addressed the mob at Baltimore on Sunday; and, as he understood it, one of those members had said, by way of apology that there were no Sabbaths in revolutionary times.

When Mr. CLAY of Alabama concluded his speech—Mr. WEBSTER rose, and thanked him for having alluded to the subject; that he knew such a report had been in circulation through the newspapers, as that he, or another gentleman, (Mr. Binney,) then a member of the other House, had made it; but that it was false and calumnious; that he heard no such remark made on that occasion.

Mr. CLAY rejoined, that he believed, whatever might be the character of the report, it had emanated from newspapers which supported the correctness of the gentleman's position; that he spoke from the newspaper account, which he had never before heard controverted.

Mr. SOUTHWELL followed Mr. CLAY in opposition to the bill. Mr. CLAY of Kentucky asked for the yeas and nays on the passage of the bill, and they were ordered, and were—yeas 26, nays 20, as follows:

**YEAS.**—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, Clay of Alabama, Lynn, Lyon, Morris, Niles, Norvell, Pierce, Roane, Robinson, Sevier, Smith of Connecticut, Sprague, Walker, Wall, Williams, Wright, and Young—26.

**NAYS.**—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Davis, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Tipton, Webster, and White—20.

Mr. CLAY of Alabama again alluded to the Sunday affair, and produced the tenth volume, part second, of Gales and Seaton's Register of Debates of 1833-4, and, with the leave of the Senate, read the following report of Mr. Webster's own account of the affair alluded to, just after his return from Baltimore; having premised that, from the statement of the Senator from Massachusetts, no man would have supposed that any such remark had been made on the occasion by any one.

"Mr. WEBSTER said that he was very sorry to be compelled to rise again on this subject. But circumstances had come within his own knowledge which he deemed it necessary to mention.

When he arrived in Philadelphia, on his return to Washington, he received information of the very extraordinary communication sent by the President to the Senate; and certainly all that he conversed with, viewed it with the utmost alarm and disapprobation. When he arrived at Baltimore, he found multitudes of people in the streets, certainly not assembled in a riotous manner, but evincing a deep state of feeling from some great cause. When the boat arrived at the wharf, a gentleman came forward, and introduced one venerable man, who addressed him by saying, "I am a member of the Presbyterian church; and you may be surprised to see me in the crowd on such a day; but I remember that we had no Sabbaths in revolutionary times to interfere with our duty to our country. We know that our liberties are in danger; and we come down to you for the purpose of making you acquainted with our true situation, and to ask what we are to depend on."

Having read this extract from Mr. WEBSTER's account in the Senate, just after his return from Baltimore—

Mr. CLAY of Alabama, said he was willing to submit it to the Senate how far the declaration of the Senator from Massachusetts—that he had heard no such remark as the one mentioned at the Baltimore Sabbath meeting—was correct.

Mr. WEBSTER replied that he certainly did not make any personal imputation against the Senator from Alabama, in what he had before stated, but against the newspaper report.

Mr. CLAY of Alabama, rejoined that he (Mr. C.) certainly did not understand the Senator from Massachusetts (Mr. W.) as so intending, or he should have treated him very differently from what he did on the occasion.

## REMARKS OF MR. THOMAS,

OF MARYLAND,

In the House of Representatives, September —, 1837—

In reply to remarks of Mr. BIDDLE, concerning a bankrupt law.

Mr. THOMAS did not rise to participate in the discursive debate which had been invited by the speech of the gentleman from Pennsylvania, (Mr. Biddle.) His attention had been attracted by the closing remarks of that gentleman, and he would do now, what he had desired to do a few days since, and submit to the House, and to the country, a brief explanation, due to the committee of which he had the honor to be the chairman.

When the gentleman from Pennsylvania heretofore called on the chairman of the Judiciary Committee, to respond to certain inquiries, Mr. T. was about to give a full and detailed reply, but was warned by the Chair that such a proceeding would not be in order. Subsequently, a resolution declaring that it is inexpedient to report a bankrupt law at this special session of Congress, was adopted in the committee, and it became his duty to present it to this House. After the resolution had been agreed to by the committee, he inquired of the members present whether he should state to the House the reasons by which they had been influenced; and was told, that it would be most agreeable to all concerned to have the conclusion they had come to announced without comment. This was accordingly done.

The manner in which these proceedings have been adverted to by the gentleman, calls for a few words in explanation, to guard against misapprehension.

There has been no purpose to disguise the opinions of the Judiciary Committee, or of any of its members, on the grave subject committed to their consideration. The members have been frank with each other in the committee room, and have nothing to conceal from this House, or from their constituents. It is to be hoped that no man supposes that they have sought to avoid a direct decision on any question that could be at this time, with propriety, disposed of. At their first meeting, no opinion could be formed as to the probable duration of the present session of Congress. If it was to be extended beyond the first Monday of December, ample time would be afforded to act upon the business to be reported by the Committee of Ways and Means, and also to establish a uniform system of bankruptcy. But if the session was to be closed before that period, and in time for members to go home, and return again, all foresaw that the whole time of the House would be engrossed by the measures expected from the Committee of Ways and Means. Under these impressions, the committee determined not to act upon the matter referred to them, until they could be satisfied that the House would take that subject into serious consideration at the present session. After it had been ascertained that the present session would not be blended with the regular session of Congress, the committee again assembled, all the members being present but one, (Mr. Hoffman.) A motion was made that

the committee be discharged from the consideration of the policy of establishing a uniform system of bankruptcy. This proposition was rejected—for its two, against it six votes. The resolution declaring it to be inexpedient to report a bankrupt bill at the present session was then adopted without opposition.

These particulars are given, that the public may see that a decided majority of the committee are disposed to examine further at the next session, if that duty should be imposed upon them, into the propriety of exercising the powers conferred on Congress respecting bankruptcies.

The establishment of a uniform system on that subject is now a work of great difficulty and delicacy. The people of the several States have been long accustomed to insolvent systems, differing essentially from each other. If an attempt is to be made to supersede them by a general law of the United States, it is certainly desirable that ample opportunity should be first afforded for a full development of public opinion on the subject. Since the Message of the President, and the report of the Secretary, was referred, a very short time has elapsed. Notwithstanding this, if the committee had supposed that there existed any necessity whatever for speedy action, they would doubtless have proceeded with the lights already before them. But this is manifestly not the case. We have been invited by the President and the Secretary of the Treasury to explore the power granted to this Government concerning bankruptcies, to see whether we can not, in a manner authorized by the Constitution, impose some salutary check upon the issue of paper money, and guard against a recurrence of that great catastrophe which has inundated the whole country with a depreciated currency. The evil to be remedied grows out of the mismanagement of the banking corporations created by the several States. Now, whether the operations of a bankrupt system is to be extended to banks already in existence, or only to such as may be hereafter created, there can be no necessity for hasty action. It is not probable that any State will, under existing circumstances, create any more institutions similar to those whose dark bodies now cloud the landscape of the whole Union, and whose misconduct and misfortunes have prompted a thorough examination into all the powers of this Government, to discover, if possible, some means to make them respect our fixed policy, and act in strict subordination hereafter to the laws of the land. Neither is it probable that Congress would be inclined to subject existing banks, without delay, to the operations of a bank law. Time ought to be given to these institutions, on account of their numerous stockholders and debtors, to recover from the dilemma into which they have fallen. Before we undertake to enforce a new rule of morals, altering essentially the past policy of the country, all parties to be affected should have time to prepare for the change. In no event, then, can there be a necessity for acting on the recommendation of the President, concerning banks, at the present session. At the regular session it can be deliberately disposed of without injustice to any interest involved. Moreover, it will be perceived, that neither the Message of the President, nor the report of the Secretary, referred to the committee, contains any proposition to devise a general system of bankruptcy, applicable to merchants and others; and the committee believed that they would not have met the expectations and requirements of the country, if they had reported a bill applicable to banking corporations alone. Between the close of this and the commencement of the next session, the public mind may be turned to this very important subject, and Congress will re-assemble in December, with the advantage of much additional information.

How far these considerations, or any of them, have operated on other members of the Judiciary Committee, Mr. T. was not prepared to say. Suggestions similar to these were made, when the resolution was assented to, which has been handed to the House. But he was not authorized to say whether any one, or all of the majority of the committee are ready to adopt or repudiate the measure recommended by the President. On that point he

could speak for himself only. He had bestowed upon that measure a good deal of reflection; and had examined and listened to many of the arguments urged against it, and yet had not heard nor found any thing to bring to his mind the unwelcome conviction that there is no power in any of our Governments, State or Federal, to check and control effectually the corporations of the country. He was reluctant to believe that a State can, by a grant of a charter, secure to a portion of its citizens an exemption from the obligations intended to be imposed on all the people of the United States, by one of the most important articles in the Federal Constitution. That instrument denies to the States the power to impair the obligations of a contract. There is no distinction to be found there between the contracts of corporations and those of individual citizens. The obligations of all are to be held sacred, untouched by State legislation. Nearly all, if not all, the corporations that have secured banking privileges from the States, are required to pay specie on demand for their notes and other liabilities. In fact, nothing but specie can be made a legal tender by a State in payment of any contract into which they may enter. The notes containing such a promise are received by the community, and without that promise they would not be accepted. And he was unwilling to believe that Congress can not interpose when these contracts are violated, and deny to any State the right to impair their obligations, by attempting to legalise a suspension of specie payments. The position of the banking institutions of the country at this moment can not but induce a strict search into all the powers of the General Government for a remedy co-extensive with the evil now afflicting the country.

For inviting attention to this subject, the President is entitled to the thanks of every patriot and philanthropist. The banks of the States ought to be indulged in the free exercise of all powers lawfully granted. But they must not be permitted to inundate the whole country with their promises to pay, and then, with impunity, depreciate the currency thus put afloat, and subject the people at large to the evil consequences of this mismanagement, while their stockholders are not only exempt from the losses incurred, but have an opportunity, in common with the whole community, to speculate in, and profit by, the fluctuating value of their own contracts. The directors of these institutions may be all honest and honorable men, but, assuredly, they often set on foot a system of shaving—he had almost said of plunder and robbery—by which the speculator snatches from the hand of industry half the bread it has earned.

The gentleman from Pennsylvania has read to the House a portion of a speech made by Mr. Van Buren, in the Senate, in 1827, to show that the sentiments then entertained by that distinguished man differ widely from those contained in his late Message to Congress. Supposing that he had established this inconsistency, the gentleman tells us that he will not indulge in harsh epithets. Be it so, sir. If, however, the gentleman should change his mind, and think proper to characterize harshly what he considers an inconsistency, Mr. T. presumed that, if the Chief Magistrate did not think proper to defend himself, some one of his friends could, without difficulty, satisfy the country that he had been unjustly assailed; but he flattered himself that this would not become necessary. When the gentleman has deliberately reviewed the speech and the Message, and has taken into calm consideration the circumstances under which they have been severally uttered, he thought the gentleman would find that denunciations of their author would be misplaced.

The President, in his Message, suggests "That it is our duty to provide all the remedies against a depreciated currency which the Constitution enables us to afford. The Treasury Department, on several former occasions, has suggested the propriety, and importance, of a uniform law concerning bankruptcies of corporations, and other bankers. Through the instrumentality of such a law, a salutary check may, doubtless, be interposed, on the issues of paper money, and an effectual remedy be given to the citizen, in a way at once equal in all

parts of the Union, and fully authorized by the Constitution."

This language the gentleman from Pennsylvania supposes conflicts with the declarations made by Mr. Van Buren, in a speech delivered in the Senate, in 1827, against an amendment offered by Mr. Branch to the general bankrupt bill then and there under consideration. If this supposition was well founded, there would be no just cause to apply "harsh language" to the President. He could have avoided, without censure, making the suggestions in the Message, which have exposed him to the charge of inconsistency. This will not be denied. If, then, he was not compelled to speak; if Mr. Van Buren could with propriety have been silent, let us inquire with what propriety any unworthy motive could be imputed to him? No one will maintain, Mr. T. imagined, that the Chief Magistrate has not a large share of sagacity and foresight. His enemies impute to him powers of mind almost magical. He must have known, then, that he has, by suggesting a bankrupt law as a remedy against depreciated currency, put in peril his popularity at home, where he must be most anxious to stand firm in the affections of the people. He has, too, by the same step, risked an addition to the number of the enemies of his administration throughout the country.

Whatever might be, therefore, thought of the wisdom of his opinions, surely no one ought to impute to him selfish or unmanly inducements, if, in fact, he had in the Message contradicted the doctrines of the speech. But is this true? To test the correctness of the charge, it will be necessary to examine what would have been the effect, and look to the object, of the motion which Mr. Van Buren resisted.

The bill before the Senate in 1827 was founded on the assumption, that all who were to be subjected to its provisions were natural persons. For the enforcement of its requirements, heavy personal penalties, including imprisonment, were to be resorted to. Mr. Branch proposed to amend this bill by inserting, in the first section, the words "or other banking corporations." This amendment was opposed by Mr. Van Buren, in the speech from which extracts have been read to the House. If the motion had been assented to, without other material alterations in the bill, it would have been an anomaly in legislation.

Banking corporations are intangible, ideal beings, and could, of course, do nothing which, according to the bill, would have amounted to an act of bankruptcy. Seeing this, Mr. Van Buren supposed, if the amendment prevailed, that it would become necessary to new model the whole bill. He therefore proceeded to inquire, if the clause were to be inserted, upon whom the pains and penalties of the law could, with propriety, be made to rest. He insisted that the officers of the banks ought not to suffer in their persons or private property, on account of the failures of the banks. They are but the employed agents of the stockholders, and must act in obedience to the directors of the institution; and it would be the grossest injustice to make them individually responsible, not only for their own acts, but for the misfortunes and losses of corporations which they had no power to control. He maintained, also, that the private property of stockholders in banks then existing ought not to be subject to seizure by commissioners of bankruptcy, to satisfy the debts of the corporation.

By the charters of these institutions, the stockholders were expressly exempted from all liability for the disasters of the corporation; and Mr. Van Buren contended that Congress could not, by an *ex post facto* law, inflict upon individuals serious personal penalties, and seize their private property, to enforce contracts entered into by their agents under an authority which exempted them from all liability whatever.

These opinions are not antagonistical to the suggestions contained in the President's Message.

The Constitution of the United States, without attempting to define the provisions or objects of a bankrupt law, clothes Congress with power to establish a uniform system of bankruptcy. The President has not pointed out any specific mode in which this power shall be exercised. But says,

that, through the instrumentality of that power, such regulations may be established as will impose a salutary check on the issues of paper money, and give to the citizen an effectual remedy, equal in all parts of the Union, against some of the evils of a depreciated currency. If this cannot be done without controlling the laws of the States, as proposed in 1827, then the suggestions of the Message are inconsistent with the views of Mr. Van Buren, as expressed in the debate in the Senate, but not otherwise.

This is not a proper occasion to inquire whether it is competent for Congress to bring the general authority conferred upon it by the Constitution over the indebtedness of bankers, whether individual or corporate, in aid of the State laws. But it will not be difficult, when that effort shall be made, to show that it can be done conveniently, and in strict accordance with the constitutional doctrines contended for in the speech of Mr. Van Buren.

If the bankrupt question should come, while he was a member, fairly up for discussion in Congress, Mr. T. would undertake to examine how far the several States can limit and restrain the Government in the exercise of an undoubted power, expressed clearly in the Constitution, by grants of privileges and immunities to their citizens, incompatible with that which may be made the supreme law of the land. But, at present, it was not necessary to enter upon what is well known to be debatable ground. The suggestions of the Message can be readily carried out, without trenching upon the privileges secured to incorporated bankers, by the laws of the several States. The condition of the country, at this moment, furnishes an opportunity for an apt illustration of this opinion. The charters of nearly all the banks of the country have been forfeited, by a suspension of specie payments. Until this occurred, the evils of our banking system, although known to be great, were not generally esteemed to be intolerable. Since that event, speculators and shavers are out like hawks upon the wing, preying without restraint upon the community, by buying and selling a depreciated and fluctuating paper currency. In many cases, those who are interested in fallen banks, may, and probably will, amass fortunes, at the expense of the producing classes, by purchasing at a discount, the liabilities of the institutions with which they are identified. It will be confessed that this state of things aggravates essentially the calamities incident to a suspension of specie payments. If the States do not, could not Congress effectually interpose to correct this revolting spectacle? Could not Congress, after a specified delay, in the payment of their notes and other liabilities, which they are required by their charters to redeem in specie, provide by a general law, that the creditors of such banks may apply to the courts of the United States for adequate process. It would not be requisite to inflict upon the contractors, or their agents personal penalties; but commissioners might be appointed to take into custody their effects, for the benefit of all their creditors. Such a proceeding towards an insolvent corporation, would produce measurable relief against some of the mischiefs often complained of. The acts and doings of such a commissioner would be public. All parties interested would have access to his papers, and thereby be able to estimate correctly the value of the liabilities of the corporation. At present, under the existing systems of many of the States, the managers of banks that have failed, continue to direct secretly their operations. They, and they alone, know minutely their condition, and can ascertain clearly the value of their engagements. The directors may, too, give improper preferences to creditors, or transfer the whole funds of the banks to trustees, instead of making a fair and speedy distribution of them for the benefit of all concerned.

Would not all these mischiefs be prevented by a transfer of the papers and effects of a bankrupt corporation to a public officer, to whose proceedings all parties interested could have unrestrained access? And would not a measure of this character operate to restrain the issues and business of banks within reasonable bounds? If the stockholders were apprised, that on the happening of a certain

event the assets of the bank were to be disposed of for the benefit of all concerned, it is not unreasonable to believe that they would take care to guard against the occurrence of such a contingency, by precautions better than those which have been generally used. This being true, here is a simple mode in which the suggestions of the Message can be responded to, not inconsistent with the Constitution of the United States, which does not in the slightest degree encroach upon the authority of the States to grant bank charters, or interfere with the personal immunities intended to be secured by such grants; and it has none of the attributes of the measure proposed by Mr. Branch, and opposed by Mr. Van Buren in 1827.

There are other modes in which the great object of the Message—a remedy against depreciated currency—could be furthered through the instrumentality of a bankrupt law, not inconsistent with the doctrines contended for in 1827. But it is unnecessary to dwell longer on the subject. Enough has been said to show that the President has not exposed himself to just censure or denunciation, and that the Committee on the Judiciary has discharged faithfully the duty imposed on it by the House.

Mr. T. had arisen to establish those two positions, and not to enter into the debate at large; and having said all that he thought needful for that purpose, he concluded.

### SPEECH OF MR. WRIGHT, OF NEW YORK,

*In Senate, October 2, 1837.*—The bill reported by the Committee on Finance, imposing additional duties as depositories of the public money, upon certain public officers, and the amendment thereto, offered by Mr. CALHOUN, to prescribe the currency to be received in payment of the public dues, being under consideration:—

Mr. WRIGHT said, but for his situation upon the committee, which reported the bill upon the table he should not only not feel it to be his duty, but he should not even feel excused, for occupying the attention of the Senate at this time, and adding to this already full debate. Indeed, so extensively had all the important points presented by the various propositions been referred to, and ably debated, by those who had preceded him, that he should feel justified in preserving silence, had not certain charges been made against the committee, touching the discharge of their duties, which he felt himself compelled to notice. He did not use the term "charges" in any offensive or improper sense, but as expressing strong differences of opinion between himself and those who had complained.

The reference of this and all the other important subjects which had occupied the attention of the Senate during its present session, to a single committee, though strictly appropriate, had necessarily devolved upon the members of that committee some labor, great anxiety, and high and delicate responsibilities. It was impossible, therefore, that any one of them, and most especially any one of the majority of the committee, who had concurred in its reports, could have listened to this debate with any other than the most interested feelings; nor could they pass in silence, charges of insensibility to the crisis, and its influence upon all the citizens of the country, or of a culpable neglect of any important duty confided to them. What then were the charges to which he had referred?

The first was, that the committee had confined their deliberations, and the measures they had proposed, simply to the wants of the Government, in disregard of the higher and paramount wants of the people. It had been said that the great and important purpose of this extra convention of Congress was to relieve the people, and that the wants of the Government were secondary and unimportant in the comparison. He did not himself understand this new doctrine of a separation of interests between the Government and the people. He had supposed that the wants of the people, which it was within the constitutional power of the Government to relieve, were, of necessity, the wants of the Government itself; nor could he un-

derstand how it was possible that the Government could have any want, which was not a want of the people. The public Treasury wants money. Is that a want of the Government and not a want of the people? For what is the money wanted? To carry out the dearest interest of the people, in all the objects of a good Government, of a Government of their own choice. Why is the want of money for the public Treasury a want of the Government? Simply because it is a want of the people, inasmuch as, without it, their Government can not be carried on.

He would examine, for a moment, the measures which the committee had reported to the Senate, that, in that way, it might be seen what was their tendency and effect, and how far the committee had been derelict in their attention to the wants of the citizens generally, or in proposing such measures of relief as the Government could properly adopt. He certainly did not intend to discuss now measures which had passed the Senate and gone to the House many days since, but he trusted a reference to these measures, for the purpose he had avowed, would be not only pardonable, but proper.

The first was the bill to postpone the transfer of the fourth instalment of the deposit with the States. The committee found that the existing law made it the duty of the Secretary to make this transfer to the States, of about nine and one third millions of dollars, on the first day of the present month; on yesterday. They found that the means in the Treasury, from which alone it could be made, were in the late deposit banks, and in the deferred and unpaid merchants' bonds for duties. If the transfer must be made, the banks and the merchants must be called upon for immediate payments, to enable the Treasury to make it. Consequently, the customers of the banks, and of the merchants, must be called upon to pay them, that they might be able to pay the Government. The committee supposed it impolitic to make the call, and oppress the debtor citizens, merely that the Treasury might obtain the money to transfer for safe-keeping. They considered it wiser and better to postpone the transfer, and give time to the banks and merchants to pay. Therefore they presented the bill in question: and was it not a relief bill? Did any one look on it as a relief to the banks and merchants only? Did any one suppose that the banks actually had in their possession, locked up in their vaults, the money they owe to the Government, or that the merchants were in funds to pay their deferred bonds, without a call upon their customers? On the contrary, did not all know that the banks had loaned these moneys in the ordinary course of their banking operations, and that they could not pay without collecting in these loans at this difficult period for borrowers to pay? Did not all know that the inability of the importing merchants to pay, proceeded from the inability of their customers to pay, and that, if pressed for payment by the Government, they must press those customers? And who are the customers of the banks and the merchants? Are they not the people, and the whole people? Would any one say, then, that this was not a relief bill? That this was a bill for the Government, and not for the people?

The second bill reported by the committee, was to authorize the emission of ten millions of dollars in value of Treasury notes; in this form to borrow upon the credit of the United States the sum of ten millions of dollars in money—and for what? To enable the Treasury to get on, and grant time to the debtor banks and merchants. The committee found the Treasury in want of means to answer the ordinary calls upon it, and that those means must be realized, either from a prompt collection of the demands due to it, or from moneys raised upon the public credit. For the reasons which induced them to recommend a postponement of the further deposit with the States, they were also induced to present this bill to the Senate, and thus, so far as the current calls upon the Treasury should require it, to interpose the public credit between the wants of the Government and the rigid collection of its dues. Was this bill to be considered in the mere light of a care for the Government, without regard to the interests of the citizens? Who were to be affected by a prompt and rigid collection of the

public dues? Not the Government, or the Treasury, but the public debtors: Who were the public debtors? The banks and the merchants immediately: the borrowers from the banks and the customers of the merchants substantially. And, who were the borrowers from the banks and the customers of the merchants but the people of the country?

The third bill reported by the committee was to grant time to the importing merchants upon their bonds due, and to become due, for a year from the present time. The extension, as assented to by the committee, and ordered by the Senate, was nine months upon each bond. Would any one question that that was a relief measure to the merchants? Did any one suppose that the relief afforded by that bill was designed to reach no farther than the merchants who owed the bonds? No, sir. It was the customers of those merchants, the persons who had purchased for consumption and use the goods upon which the duties were payable, that the bill was to relieve. Few, comparatively, of those who occupy these seats would have voted for that measure, had its influence and action been confined to the merchants only. But they could not indulge their debtors unless they could be indulged by the Government, because they must collect if they must pay. To enable them to grant the indulgence which the state of the times and the condition of the monetary affairs of the country demanded, was the design and object, and would be the effect, of the bill. Who, then, would deny to it its relief character?

The fourth bill which the committee presented for the acceptance of the Senate, was one to extend a proportionate indulgence to the late deposit banks for the payment of the balances remaining due from them to the public Treasury. It was true that these institutions stood upon a different footing from the merchants. They had merely received the public moneys for safe keeping. The moneys were legally and technically in the Treasury, but were they there in fact? Could the Treasurer command them for the uses of the Government, or the people? No. They were unavailable funds in the Treasury. And why were they unavailable funds? Because the banks had got them locked in their vaults, and were not willing to pay them upon demand? No, sir: but because the banks had them not; because they were loaned to the customers of the banks, the citizens of the country, who could not pay on demand. The relation of debtor and creditor, in its ordinary acceptation, was not intended to be created by the law establishing the late bank deposit system. It was a mere agency for the safe keeping of the money, which the law recognised, but that agency had been turned into the relation of debtor and creditor by the failure of the banks to fulfil on their part—the most unpleasant relation of debtor and creditor; a creditor who wants and debtors who can not pay. Indulgence, therefore, became a matter of interest to the creditor, as adding to the chances of eventual payment; and of favor to the debtors, as giving them time to collect the means for payment. To whom, then, was the favor, the relief, extended? To the banks or to their customers? Most assuredly to the latter. The banks could pay if they could collect; and, if compelled to pay, they would be compelled to collect. Their power to indulge depended upon the indulgence extended to them; and could it be said that a measure giving to them four, six, and nine months, to pay their balances to the Treasury, was a measure solely confined to the protection of the Government, without regard to the relief of the people?

These were the first four bills presented by the committee to the Senate, and yet they were told that they had forgotten the suffering interests of our great community in their exclusive care for the Government and its officers. Was the charge just or merited? These bills had all received the final action of the Senate, and all, save one, had passed this body by nearly unanimous votes, while that one had passed by a large majority. It was true that the connection between them was intimate, and that, to a greater or less extent, each subsequent one was predicated upon the success of its predecessor, while all were most intimately con-

ected with the condition and action of the public Treasury.

Indeed, it was but candid to say that the committee knew of no direct relief which Congress could properly afford to the distresses of the people of the country, but such as should grow out of the existing connection between the means of the Treasury and the banking and mercantile interests. These bills covered all that ground, and no difference of opinion could possibly exist as to them, unless it should arise upon the principle of indulgence, or the time of indulgence. No such difference had been manifested in the action of the Senate upon the respective measures, and therefore it was right to assume that none existed. Some had supposed that it was the duty of Congress to borrow the nine and one-third millions, covered by the first bill, that it might be transferred to the States for safe-keeping; and propositions having that tendency had been presented to, and acted upon, by the Senate, but they did not meet with favor. The body did not seem to suppose that such a disposition of the public credit would be a measure of relief either to the Government or the people, and it was rejected.

Take, then, the four measures referred to, sum them up in their combined action, and to what do they amount as relief to the community? The first is equal to a forbearance to collect nine and one-third millions of dollars from the customers of the banks and the merchants, to be transferred to the States for safe-keeping. The three last authorize a loan, upon the public credit, to the amount of ten millions of dollars, to pay the expenses of the Government and meet the public appropriations, and a forbearance of the collection of that sum from the public debtors, that they too may be able to forbear collections, at this trying period, from those who are indebted to them. Here, then, is direct and positive relief to the amount of nineteen and one-third millions of dollars. Might he not, then, ask, with some force and some justice, whether the committee were obnoxious to the charge of having forgotten the interests of the people in their care for the Government? He would here dismiss this topic.

The next and only remaining charge against the committee which he proposed to notice was, that in their action they had entirely overlooked, or wholly neglected to act upon, one of the most, nay, the very most, important of the subjects presented for their action in the Message of the President referred to them; that they had reported no bill declaring the description of currency which should be receivable in payment of the public dues. He did not refer to this complaint against the action of the committee for the purpose of representing it as unjust or ungenerous; not even for the purpose of refuting it. It had come from opposite sides of the house, and it might be well founded. The fact was certainly as alleged; and his only purpose was to give the reasons which governed himself, and which, he was certain, governed the majority of the committee, in the conclusion to report no bill upon the subject of the currency to be received into the public Treasury. Those reasons had been, and still were, satisfactory to himself, as he doubted not they were to his colleagues upon the committee; but the course of action of the Senate upon this bill seemed to indicate, and its final action would probably show, that they were not satisfactory to the majority of the body. Should this be so, the committee would be content, when their reasons had been placed fairly before the Senate and the country.

They found the Message presenting, among others, two distinct points, both, in the judgment of the committee, most deeply interesting to the public Treasury, the Government, and the country. The first was a continuance of the separation between the moneys of the people and the State banks, which the operation of the existing laws and the conduct of the banks had already produced. The other was a gradual and safe discontinuance of the reception of the bills of the State banks in payment of the public dues, and an eventual return to the collection of gold and silver and such paper as should be issued upon the faith and credit of the United States, and be, by the laws of Congress, made receivable for debts due to the United States. The laws as they are, upon the subject of the de-

posite and safe keeping of the public moneys, seemed to the committee to require immediate action, if the recommendation of the President was to be carried out and made a part of our permanent policy. Hence they reported to the Senate the bill now under discussion. They were not unmindful that some regulation as to the descriptions of currency to be received in payment of the public dues might become necessary, in case the new system of deposits should be adopted and the present condition of the banks should be changed; but in the present condition of the banks and of the law upon this point, they could see no necessity for immediate action, or for any present change of the existing laws. They felt that the two subjects were somewhat connected, but not so intimately as to require or demand that both should be embraced in the same bill. They knew that great diversity of sentiment prevailed as to both, and that different opinions were held by those who had hitherto been friends and supporters of the administration, as well as between them and their common political opponents. Under these circumstances, and with the distinct expression of a desire, on the part of a large majority of the Senate, that the present session should be terminated at the earliest possible day, the committee felt bound to present every subject from their hands in the most simple and distinct form, and in a shape which might receive the definitive action of the body with the least possible consumption of time. With this view they reported separate bills upon every subject upon which they did report, and the same consideration influenced them to omit reports upon all subjects which they supposed might be deferred to the regular annual session, without injury to any important interest, public or private. By the law, as it stands, the notes of non-specie paying banks can neither be received in payment of the public dues, nor paid to the public creditors. He was sorry to be compelled to say that, for all practical purposes either to the Government or the people, there were, at this time, no other banks in the country, and he was much more sorry to be compelled to believe that there would not, in a practical sense, be any such banks until after the time when Congress would be again in session. No one had proposed, and he was happy to know that no one would propose, to make the inconvertible notes of non-specie paying banks receivable at the public Treasury, and surely no one could have expected such a proposition from the committee. The revenues, then, to every practicable extent, are now receivable in gold and silver only, unless Congress shall, at its present session, create a paper upon the faith and credit of the Government, and make it receivable for the public dues. Hence the absence of any immediate necessity for legislation upon this point. The committee further believed, what has already been proved to be true, that any bill upon this subject would lead to long and grave discussion, and tend to protract the session. For these reasons they had omitted to report upon this subject, and he had as yet seen nothing to change his opinion of the wisdom of their course. He still believed that the connection of these two subjects in the same bill was undesirable; that it would retard action, and he greatly feared, embarrass the bill which the committee had reported, and the passage of which they considered to be of high public importance. The matter, however, was now with the Senate, and he should cheerfully submit to its choice. If called upon to vote upon the propositions before it, he was ready to vote, whether they should be insisted upon as amendments to the committee's bill, or as an independent measure.

Having said thus much by way of explanation, and he hoped, to some extent, justification, of the course and action of the committee, he would now pass to a brief discussion of the bill before the Senate.

The crisis, he said, was one of the deepest interest. Every man in these seats, every citizen of the country, felt it to be so. Still, its peculiar character could not be too often adverted to, or too firmly fixed in the memory of all. During a period of profound peace; after a series of years of unexamined abundance in every production of the earth,

and every product of labor; with a currency more abundant than our young country had ever before witnessed, and standing as strong in the public confidence as our paper currency had ever stood; with ready markets, and prices higher than any former period of peace had sustained; under the influence of all these elements and evidences of prosperity and wealth, national and individual, and at the entrance upon another of those rich and fruitful seasons with which a kind Providence so frequently blesses our fertile soil—a season not surpassed by any which has preceded it in the abundance it has returned to the husbandman for his labor—at such a time, and under such circumstances, the revulsion came, and in an instant, as it were—in a single night, the whole beauty of this rich scene was changed. That currency, so abundant and creditable, became depreciated, inconvertible, and debased. Those markets, so quick and active, and profitable, became stagnant and deserted. Those prices, so alluring to enterprise and industry, were changed to a priceless mass of unsaleable commodities.

That all should have inquired after the causes of this sad and sudden change, was most natural. That statesmen should have done so was necessary to the discharge of their delicate and responsible duties. The President of the United States, to qualify himself for the performance of his constitutional duty of giving to Congress "information of the state of the Union, and recommending to their consideration such measures as he shall judge necessary and expedient," has done this. In his Message, he has given to us his opinion of the causes which have brought upon our country this sudden and sweeping revulsion. It was not his purpose to examine the correctness of these opinions of the President. No one had expressed a doubt that they were honestly entertained, and all admitted that they had been clearly, frankly, and firmly expressed. They had been the subject of able and extended criticism in the course of this debate, and he thought also the subject of equally able and perfectly triumphant defence. Entertaining this opinion, he had but a single remark to make in regard to them, and that was, that he had heard criticism and contradiction from some quarters of the house delivered in a manner and in language which excited his profound regret—in a manner and in language which he would not, if he could, (and he was most thankful he could not,) imitate, towards friend or opponent.

He had listened to the debate, however, with profound attention; and while all had their peculiar views of the causes of the present derangement in our monetary affairs, and while the views of the different speakers differed materially as to the immediate and most active causes, he thought there were certain general positions substantially conceded by all; which, being drawn out and placed in their proper order, would advance us very far in the wide field of discussion presented and occupied by the various members. He had endeavored, therefore, to place these positions upon paper, and to give them an order best calculated to promote this object. They were as follows:

1. That wide-spread and highly injurious derangements have been, and are experienced, in the banking concerns, and in most of the business transactions of the country.

2. That the present embarrassments in the affairs of individuals are, to a greater or less extent, caused, or greatly increased, by the existing embarrassments in the affairs of the banks.

3. That an undue multiplication of banks by many of the State Legislatures, and excessive issues of paper money by the State banks, are among the most prominent of the causes which have brought about these embarrassments of the banks, and consequently of business generally.

4. That a material enlargement of the specie basis for our paper circulation, is indispensable to the security of the banks, and the stability of the paper currency.

5. That all banks of issue and circulation are liable to excesses, and that the State banks, from their distant locations, rival interests, and the variety and diversity of their business and associations, are peculiarly so liable, which renders it desirable and important that the fiscal action of this Govern-

ment should never be so directed as to promote these excesses, while, so far as that can be safely and constitutionally done, it should be so directed as to have an equal tendency, in all parts of our extended confederacy, to check them.

6. That the powers of Congress, to prevent the evil of excessive banking by the State institutions, are, in no sense, direct and positive, but are, in whatever form they may be exercised, incidental and consequential, growing out of the expressly granted powers.

So far he thought all could agree and walk together in this trying crisis. He was not aware that any one would controvert either of these positions, while he was sure that most of those who had addressed the Senate, in the course of this debate, upon whatever side of the house, had substantially assumed them.

The difference seemed to arise as we passed the last proposition, and came to inquire how this incidental power of Congress should be exercised. The late catastrophe to the banks and business of the country, had satisfied all that something was wrong in the working of our monetary system, but the seat of the disease, and the appropriate remedy, were questions upon which opinions differed.

The President was bound, in recommending to the consideration of Congress, such measures as he judged necessary and expedient, to point out his view of the evil, so far as he should consider it connected with and remediable by federal legislation, and to present his plan of remedy. He has done so frankly and fully, and as the majority of the Committee on Finance have agreed with him, and have reported the bill under consideration to carry out his recommendation upon this point, it would be his duty, Mr. W. said, to examine that bill in its favorable and unfavorable influences upon the Treasury, upon the Government, upon the banks, and upon the currency generally. The safe keeping of the public moneys became separated from the State banks, in May last, by the voluntary suspension of specie payments by the banks, and the operation of the existing laws upon that act, and the bill proposes to continue the separation.

Before he could proceed with his argument, he must here notice a position taken by the Senator from South Carolina, who addressed the Senate yesterday, (Mr. Preston,) and which position, he must say, he heard assumed with some surprise. It was, that the existing law had not produced a separation between the public Treasury and the State banks; that they were not legally separated, and that the only separation which did exist was one forced by the Secretary of the Treasury, without the requirement of law and against the public interests. If he correctly understood the Senator, this was a fair statement of his argument; and he would repeat, he had heard it with surprise. The answer to it should be an extract from the law itself; and it would be found a triumphant answer. That part of the eighth section of the deposit act of the 23d of June, 1836, which prescribed the rule for the action of the Secretary upon this subject, was in the following words:

"Sec. 8. And be it further enacted, That no bank which shall be selected or employed as the place of deposit of the public money, shall be discontinued as such depository, or the public money withdrawn therefrom, except for the causes hereinafter mentioned; that is to say, if at any time any one of said banks shall fail or refuse to perform any of said duties as prescribed by this act, and stipulated to be performed by its contract; or if any of said banks shall at any time refuse to pay its own notes in specie if demanded; or shall fail to keep in its vaults such an amount of specie as shall be required by the Secretary of the Treasury, and shall be, in his opinion, necessary to render the said bank a safe depository of the public moneys, having due regard to the nature of the business transacted by the bank; in any and every such case it shall be the duty of the Secretary of the Treasury to discontinue any such bank as a depository, and withdraw from it the public moneys which it may hold on deposit at the time of such discontinuance."

This was the law. What had the Secretary done? He had discontinued the defaulting banks

as public depositories. Had he obeyed the law in doing this, or had he forced the separation? It was true, as the gentleman had stated, that there were yet six specie paying banks, and consequently six deposit banks upon the list; but where were they located? What were the collections of the revenue at those points? What was the importance of any one of them as a fiscal agent of the Treasury? The gentleman had not seen fit to give to the Senate these facts in connection with his claim on behalf of this remnant of the deposit banks, and certainly he did not intend to detain the Senate to do it. It was enough for his purpose that the connection was, for all practical and useful purposes, either to the Government or the people, wholly dissolved; and if it again existed, must exist by a re-union, not as a continuance of any present existence.

The conduct of the Secretary of the Treasury was complained of by the Senator. Had the Secretary attempted to force a separation between the public deposits and the six remaining deposit banks? This was not alleged. They were placed upon the list of depositories in the report of the Secretary, laid before Congress at the commencement of the present session; and in the same statement the location of each, and the amount of public money on deposit in each, to enable the Senate and the country to judge of the importance of a continued connection with these banks as fiscal agents of the Treasury, were plainly given. From this statement the assertion had been made, and was now repeated, that, for all practical and useful purposes to the Treasury or the people, the connection between the deposit banks and the public moneys was at an end. Nor was the Secretary of the Treasury in any sense chargeable for the dissolution of this connection. So far from it, his own statements to Congress show that he has fallen short of the execution of the law. It commanded him, upon the failure of any bank to pay specie for its notes, when demanded, not only to discontinue such bank as a depository, but to "*withdraw from it the public moneys which it may hold on deposit at the time of such discontinuance.*" Has he done this? No: for he tells us that the larger portion of the means in the Treasury, at this moment, exist in balances due from these banks as portions of the deposits they have received for safe keeping. Has the Secretary brought suits to recover these balances, when the banks have failed to make legal payment? He tells us not, except in a few cases where it was considered necessary, for the eventual security of the public property. He, then, is the last person in the world who should be charged with persecution against the banks, or with an attempt to force a separation between them and the public Treasury. If he is culpable at all, it is in not having obeyed the law, by withdrawing from them the moneys they held in deposit at the time they discontinued the payment of their notes in specie, when demanded. If he has violated the law, he has violated it from lenity to the banks; and all know that this lenity has been wholly compulsory, growing out of the situation in which the banks have placed themselves. So much for the charge that the Secretary of the Treasury has forced the separation between the banks and the Government.

He would now proceed to inquire what influences, favorable or unfavorable, the bill to make this separation between all banks and the public money permanent, would exert upon the public Treasury. It would give to the Treasury direct possession, and a perfect knowledge, of its means, at all times, and under all circumstances. They would consist not of bank credits, but of money, and would, therefore, not be subject to any of the fluctuations to which bank credits must be always liable. The means of the Treasury would be the value received, and not the mere representation of that value in account.

It would give to the Treasury the perfect command of its means. It would no longer be troubled with unavailable funds, a description of funds well known to it for the last twenty years; which have always grown exclusively out of its connection with banks; which now constitute almost its only resource for the payment of the public creditors; and the consequence of which character given to

the means of the Treasury, so far as he was informed, had, more than any other single cause, compelled the convention of Congress at this inconvenient, and he thought he might safely say, dangerous season of the year. It might be well here to define this term "unavailable funds," as applied to the means in the public Treasury. He understood them to consist, now and upon all former occasions, either of bank notes, which the banks issuing them could not redeem in specie, or any thing else which would pay the debts of the Government; or of moneys received by the banks for safe keeping, and which they could not pay, upon demand, in the legal currency of the country, or in any currency, which the creditors of the Government would consent to receive as money. An entire separation from banks would, of course, relieve the public Treasury from this embarrassment for the future. It would, at all times, enable the Treasury to pay the demands upon it, when the money of the people had been collected and placed in its keeping for that purpose; whereas, under the connection, these moneys were liable to become unavailable in the hands of the banks, and the people again to be called upon to raise, either from their pockets, or upon their credit, the means to pay those very debts for the payment of which they had once provided, by depositing the money in bank.

A continuance of the separation would further relieve the Treasury from the necessity of using its means to sustain the credit of banks, when revulsions in trade, and general shocks to credit, should bring the banks in jeopardy. These revulsions must be always more or less frequent in every commercial country, and most frequent, and most severe, in those which most extensively adopt a system of paper or credit circulation and currency. If, then, the means of the National Treasury are confined to the safe keeping of the banks which furnish that paper or credit circulation and currency, they must be always subject to the fluctuations, revulsions, and incidents, to which the credit of the banks are subject. They become mere credits with the banks, and cannot be exempted from the influences which affect its other credits. Can the fiscal officers of the Government, then, neglect to put forth their exertions, and the means at their command, to sustain the credit of those banks, when occasion shall call; whose credits constitute the means of the public Treasury itself? He was not ignorant of the fact, that loud and startling complaints had been made in this hall, against a late Secretary of the Treasury, upon the mere suspicion that he had used the means of the Treasury to sustain the credit of the deposit banks; but would any gentleman deny that, under this concise and practical view of the consequences of a connection between the Treasury of the people and the banks, it must frequently become the imperative duty of that officer, a duty as binding as that of keeping the Treasury in a situation to answer the calls upon it, to exert this power, and so to locate the means of the Treasury, as to render it as effective as possible? The consequence was unavoidable, and still the exercise of such a power would always be odious in a political sense, and must always be more or less invidious in a financial sense. It could never be exerted equally towards all the banks, but must be used especially in favor of those which should be, for the time being, the depositories of the public funds. Its influence, then, might often be unfavorable, and even injurious, towards institutions which had promoted, as much as any other, the collection and prompt payment of the public revenues, but which should not, on the day of trouble, be safe keepers of any portion of those revenues. Is it not desirable, if it can be done with safety to all interests to be regarded, to relieve the Treasury, and the head of the fiscal department of this Government, from this always so delicate, and frequently so odious, an exercise of the power and influence of the public funds, upon the credit of the banks and the business of the country? He must say that a proper national pride, and a just feeling of patriotism, seemed to him to demand it, at any expense short of the positive sacrifice of some paramount public interest.

A further benefit to be derived from a system

which shall make the Treasury the keeper of its own means, and especially if those means shall be collected and disbursed in the legal currency of gold and silver, or of paper issued upon the faith and credit of the Government only, will be a perfect uniformity of value in the collections and disbursements of the Treasury, wherever made. Its operations will become stable and certain in every sense, and all the contracts with the Government may be made without the customary deductions on account of the anticipated receipt of a depreciated medium of payment. Every citizen can make his proposals for the public works or public supplies, wherever may be the place of his residence, or the place of payment under the contract, based upon the par of money, and will not be driven to an uncertain calculation upon the fluctuations of exchange and the uncertainties of credit.

These are some of the benefits to be anticipated to the public Treasury from a permanent separation from the banks. What are the injuries, the unfavorable influences, if any, to stand against these benefits? He had heard but one suggested, so far as the interests and conveniences of the Treasury are concerned, and he must say but that one had occurred to his mind. The expense and trouble of remitting specie, in cases where that should become necessary, was, he believed, the only drawback upon the Treasury for all these benefits, and a short examination would show the weight of this objection.

Under the system of bank deposits, drafts from the Treasurer, upon the different depositories, and from one depository upon another, are made the medium of remittance in all ordinary cases, and, where the drafts are fully credited, supersede the necessity of an actual transportation of the money in almost all the operations of the public Treasury. Nothing, in the system proposed, prevents the use of the same medium for remittance and exchange. The drafts of the Treasurer of the United States upon a receiving officer of the Government will certainly have as good credit as his drafts upon a deposite bank, and when they are known to be drawn upon the specie in safe keeping, and upon nothing else, they can not fail to be as acceptable to the public creditor as any similar drafts have heretofore been. The trouble and expense, therefore, of transporting specie funds from one portion of the country to the other, for disbursement to the public creditors, will not probably be more extensive under this bill than under the bank system, which it proposes to supersede.

But we here meet an objection from the Senator from South Carolina, (Mr. Preston,) which requires an answer. He says the system proposed, thus carried out, will constitute a bank, a bank of discount, a bank of issue, a national bank, a Government bank. He reasons thus. One of the depositories constituted by the bill will make his draft upon another and deliver it to the public creditor. The receipt of the draft by the public creditor is a discount of the paper of the officer making it. The person receiving the draft may transfer it to his neighbor before it is presented for payment, and it may pass from hand to hand, before it finds its way to the officer upon whom it is drawn, and who has the specie in keeping for its payment. This will convert the draft into an issue of paper, and as it is drawn upon specie funds in actual deposite in the hands of the drawee, the whole machinery must constitute a bank, and a bank, too, of deposite, discount and issue. Now the only answer which this argument requires is simply to say, that if this constitutes a national bank, a Government bank, or a bank of any sort, then we have had such a bank under the system of deposite with the State banks, because the public disbursements have constantly been made, and the public funds distributed and equalized by exactly similar drafts. He saw no force whatever in the argument, unless it was designed to frighten those who, like himself, were not very partial to banks of any description, and were most distinctly hostile to a national or Government bank, with the apprehension that such a bank was insidiously buried under the bill, and would be disinterred and spring into life at its passage. Now he was ready to say to the Senator from South Carolina, and to all the friends of that

Senator, who were so very anxious for the establishment of a national bank, that, opposed as he was to such an institution, in name or in principle, is they would compromise by the acceptance of such a bank as this bill would establish, they should have it with his cheerful assent, and this long and heated agitation about a Government bank should be for ever amicably settled.

He would now look at the influences of this measure upon the Government.

It would discharge its legislation from bank influences of all sorts. He spoke not of improper or corrupt influences, but of those constituent interests, which must be represented in Congress so long as the connection between the public Treasury and banks of any description was maintained. He addressed those who must understand him, and who must have seen and felt these influences in our official action here. Who, he would ask, had occupied one of these seats for the last five years, and had not seen the power of this influence upon our deliberations? Who had failed to see that it was an influence more nearly overpowering and beyond our control than any we had been called to encounter? Who did not see and feel it now as pressing upon us with a giant force? It was true, we had formerly and most usually encountered it in the consolidated form of a national bank, and that it now presented itself to us in State detachments; but it was the same influence similarly exerted. It was the effort of cupidity on our free institutions—an effort to make money out of the money and means and credit of the people.

He uttered these sentiments with extreme reluctance, and with the most extended charity towards all those who differed from him. He knew well that not only political opponents, but those who had ever been political and personal friends—those towards whom he had ever entertained, and still did entertain, the kindest feelings, did differ with him upon these points. He most cheerfully yielded to their integrity, sincerity, and patriotism, every indulgence which he asked for himself, but the crisis, the importance of the questions presented, and our imperious duty to our constituents, demanded from us frank and fearless action.

Was it not, then, in case he was right, most desirable to free the legislation of Congress from bank influence altogether? Would it not tend more than any other single act we could perform, to take from our debates and deliberations that bitterness and acrimony which had too strongly characterized them for the last few years, but which, he was proud to say, had entered, in a much less degree, into the present debate in the Senate, than into any similar debate for many years? For himself, he felt that this consideration alone demanded the passage of this bill; that it was entirely paramount to any objections he had yet heard urged against it; that it was as much superior to considerations of financial convenience and pecuniary profit, as was the purity and permanency of our political institutions to the temporary advantages of a bargain or the facilities of borrowing money.

This was not the only advantage the Government would derive from a permanent separation of its finances from the banks. It would discharge it from that eternal round of imputations to which, under the connection, its every fiscal action is subjected. If it be a time of prosperity and plenty, all are struggling for the profits arising from the safe keeping of the Government funds; and the failure on the part of its fiscal officer to select a given bank as a public depository, is not only matter of personal offence, but is immediately converted into the active cause of all the pecuniary calamities which the friends and customers of that bank may experience through all time to come. If it be a time of scarcity and pressure, like the present, the drafts of the Treasurer upon the money of the people in safe keeping with the banks is a ruthless attack, a war upon them, and is intended to prostrate the institutions. The former keeping of the funds becomes a merit and a virtue, and to ask for their payment to the public creditors is ingratitude and injustice.

If the Executive, in the exercise of a sound discretion, sees proper to issue an order requiring payment in money for the whole, or any portion, of

the public revenue, this is converted into an attack upon the banks, a distrust of their credit and solvency, and a wrong inflicted by the Government upon the whole people. Can it be desirable to preserve a connection which is the subject of incessant complaint on the part of the banks and their friends, and of constant embarrassment to the operations of the public Treasury, and of imputation upon the most faithful and worthy public officers? He thought not. He considered this connection of the fiscal affairs of the Government with the credit and business of the banks, and of business and commercial men, and the constant imputations brought upon the Government thereby, as promoting a political morality in the public mind most dangerous to our institutions; as doing more to weaken the confidence of the people in the Government of their choice, than any and all other causes of distrust combined. If we would listen to the slander and misrepresentations of the times, we must believe that all our misfortunes, public and private, are imputable to our Government—all our prosperity to a resistance to its measures and its policy. And whence do these imputations come, but from our connection with the banks? They all emanate from that source, and from no other. That connection is now dissolved, by the operation of law and the voluntary action of the banks themselves; and he would say, let it be perpetual—let it never be renewed.

The effect of this measure upon the banks should next occupy his attention.

It had been considered as a measure of open and violent hostility to those institutions, as fraught with unmixed evil to them. Was this the true view of it? Had it these exclusive tendencies? He thought not, and he would attempt to point out some positive benefits to the banks from its adoption.

It would leave the State banks to operate upon their own means—upon the capitals which the respective State Legislatures had thought proper to give to them, and upon the funds derived from their private depositors. These means would be perfectly certain and uniform, so far as they consisted of the capitals of the banks, and would be subject to no dangerous fluctuations, so far as they consisted of private depositories. Hence the action of the institutions could always be regulated by a certain standard—the extent of their means for the accommodation of their customers. This would discharge them from the inducement to those dangerous expansions and contractions, which not only promote, but cause, revulsions such as that under which the country now suffers.

The Government has been charged with being the cause of the present pecuniary embarrassments of the country, and he thought not without some foundation, but he considered the connection between the Treasury and the banks the only foundation for such a charge. What had we done? We had deposited our funds in the State banks. A period of unexampled prosperity had visited our country. Importations had become excessive, and the duties thereupon had swelled the public revenue from that source beyond all reasonable anticipation. The banks received the excess of revenue which the wants of the Government, and the public appropriations, did not call for. The same causes promoted unusual and unexampled sales of the public lands, and thus, from both of the great sources of revenue to the United States, streams were poured into the public Treasury, widened and deepened by their own accumulation and velocity. The banks were the safe keepers of the public funds, the fiscal agents of the Treasury, and they were also the reservoirs from which the importing and other merchants drew their means, and from which the speculating purchasers of our immense domain were supplied with funds for their operations. So far as the Government was concerned, the consequences are obvious. The moment the revenue exceeded the wants of the Treasury, the excesses fed the passion they ought to have controlled. The banks were the receivers and the payors. They received, to keep for the Government, and loaned to the merchants and purchasers of our lands. The system, in fact and in practice, was one of indefinite credit for both duties and

lands. The money paid for both went into the banks for safe-keeping. The Treasury did not want it or call for it for payment of the public dues. The banks loaned it to their customers, who were the payors for duties and lands. Under these circumstances, and this action of the system, excesses were inevitable; and they had visited their consequences sweepingly upon the country and upon the Treasury itself.

Ought not this state of things to be a lesson to the wise not to renew a connection which had been so disastrous to every interest involved? To the Government and the public Treasury, as a creditor of the banks; to the banks, as debtors to the Treasury and creditors to the citizens; and to the people at large, and especially to the commercial community, as debtors to the banks.

That the times have promoted over-trading and over-banking no one will deny; but that the connection between the Government and the banks, and the forty millions of dollars of surplus funds in deposit with them, immensely increased the over-banking, is equally undeniable. It is not to be expected that the managers of banks will keep money without making profitable use of it, when that use is presented and urged upon them. This remark was not made in censure of the officers of the deposite banks. Their stockholders, and the community about them, knew that they were in possession of the funds; and the use would be demanded, nay, he might say commanded, had the officers of the institutions resisted. The evil lay farther back. It was in placing and retaining the funds in the banks, which the immediate calls upon the Treasury did not require.

The fault of the Government, however, did not stop here. We passed a law exacting from the banks interest for these funds, and thus not only sanctioned, but compelled, their use of them in their ordinary loans and discounts. Could a bank keep money, and pay interest upon it, and derive no interest from its use? Most certainly not, and we, therefore, compelled the banks, by our express legislation, to promote the evils of which we now complain. We compelled them to loan our money in their hands for safe keeping, by charging and exacting from them an interest for its use, and thus stimulated them to increase the excesses of over-trading and over-banking. We furnished them with a capital of some forty millions of dollars, and forced them to use it in making loans.

Can any thing more strongly, or clearly, show the impolicy to every interest of any connection of a financial or interested character, between the local banks of the country, and the Treasury of the nation? The imputations cast upon us, as having caused the present pecuniary embarrassments of the country, have this justice, and let us discharge ourselves from similar imputations for the future. Our real fault has been, not that we have unduly checked the excesses of the times, but that, in the outset, we promoted the expansions by the banks which necessarily led to those excesses, and that all our efforts, legislative, and executive, have been insufficient to avert the catastrophe which has now come upon the country. We see our agency in the mischief, when it is too late for us to apply a remedy. The incidental relief in our power, we have already offered to the country, so far as the action of this body is concerned, and now let us pass this bill, and protect ourselves against all imputation as wrong doers for the future.

A further benefit to the banks, to be derived from a continuance of the separation is, that when they shall win the public confidence by their sound management and permanent means, they will possess and retain it, independent of public patronage, independent of any action of the Federal Government, and exempt from the fluctuations which congressional legislation or Executive discretion may otherwise cause. This is the description of public confidence which these institutions should possess and rely upon, and these should be its foundations. Its own capital, and the integrity and ability of its managers, should be the dependence of a banking institution; not the uncertain and changing patronage of any body, much less the fluctuating and dangerous patronage of Governments, State or National. A credit founded upon

such patronage must be delusive. To-day you deposit with a bank a million of dollars; to-morrow it extends its accommodations upon the strength of your funds in its keeping: the day following its favored customers expand their business, and enlarge their credits; on the fourth day you require your funds, and draw upon the bank for them. Your deposit has given to the bank a false confidence in its means; its extension has given its customers a false estimate of its ability to indulge them; their expansion has given to the community false expectations as to their power of indulgence; and your call for your money undeceives all, after the mischief is done, the excess committed, and just in time to produce the derangement and distress and suffering which must always, sooner or later, follow excessive credits and mistaken confidence. The institutions which are to furnish to the people of this country a circulating paper to answer the purposes of money, ought not to be subjected to fluctuations of this description. Their love of gain ought not thus to be stimulated, and especially by this Government, which has none but an incidental control over their proceedings. They should be left by us to operate upon their own means, to rest their credit upon their own ability and good character, and not upon our funds.

But it is said the withdrawal from the State banks of our confidence, countenance and patronage, in this particular, will prostrate and destroy those institutions; that the attempt to separate the finances of this Government from them, is, in effect, a declaration of war against them, which they can not survive. Is this, can this, be so? Will any sound and solvent State bank fail, because the United States does not entrust to it the safe keeping of the moneys of the people? Did the State Legislatures, in chartering these banks, expect, or intend, that their credit, or solvency, should be sustained by the legislation of Congress, or the use of the funds of the Federal Government. If so, why have they limited and fixed their respective capitals, and attempted to set bounds to their operations? Why have they assigned different amounts of capital to different banks, dependent upon their location and business associations? Certainly no other answer can be given to these interrogatories, than that they intended that each bank should have a capital equal to the wants of the business community surrounding it, and that all the banks of their creation should have a credit and confidence with the people, and should transact a business proportioned to the capitals granted to them respectively, and not beyond that limit. You, then, by making your deposits with these institutions, destroy the proportions which the State Legislatures have intended to establish and preserve. Your deposits are treated as capital by the banks, and an extension of their loans, and an augmentation of their business, beyond that which their own means would allow, is the necessary consequence of your patronage. Can this disposition of your moneys fail to promote excessive banking? The members of the State Legislatures have a knowledge of the business wants of all the places at which they locate banks, and their object is to measure the banking capital at any given point by the wants of business at that point. When they have done that, you come in with your deposits, distributed not upon the basis which governs the State Legislatures, but according to your own convenience for receipt or disbursement. The consequence is, that you pour your millions into these State institutions, without reference to the legitimate business calls for banking facilities at the points where your deposits are made; and thus derange and destroy the proportions, as to these facilities, which the local Legislatures have determined to be safe and proper. In this way your patronage becomes an evil, and not a benefit. It stimulates the cupidity of the banks, and they, in turn, stimulate the cupidity of the business community around them, until excesses on the part of all produce revulsion, distress, and bankruptcy.

Still it is urged that our withholding this evidence of our confidence in the State banks will destroy their credit, and prostrate the institutions. Will any one pretend that the States have rested the credit of their banking institutions upon the

patronage or confidence of this Government? Can that man be found who will admit that, as a member of the Legislature of his State, he has voted for banks with the expectation that they must be solvent, or insolvent, as the pleasure of Congress shall determine? Will not every such man tell you that he has given to the banks, which he has aided to create, a capital stock upon which its solvency and credit with the people is to rest? That, with honest and prudent management, each bank has within itself, and under its own control, the elements of its own prosperity, and is not dependent upon your smiles, or to be ruined by your frowns? This ought to be so, and is so.

How was it with the State banks during the period from 1816 to 1836? The Bank of the United States then enjoyed the exclusive privilege of keeping the public funds, and its notes alone were by law made receivable in payment of the public dues. Were the State banks discredited, or ruined, then? Was that separation between them and the funds of the Government treated as a war upon them? a war of extermination? No, sir. The operations of these institutions were never more stable and safe than during that period; nor did they ever stand stronger in the public confidence than then. Away, then, with the idea that the solvency or credit of the State banks rests upon our patronage, or favor, or that our frown upon them is annihilation.

He knew that, were we to withdraw our confidence from a particular bank, and extend it to all others, the inference would justly be that we suspected its solvency and responsibility, and that this might do it injury. But when we separate ourselves from all banks, State or National, and declare our object to be a political as well as a financial separation, will it be said that we cast distrust upon the banks, which will destroy their credit? Will it be contended that the banks established by the States have a right to the safe-keeping and use of the revenues of the nation? He thought not; and if not, then could the separation of our finances from them be justly termed a war against them? No. The position was absurd and unsustainable. He had no feeling of hostility to the State banks, but he was not to concede their right to the possession and use of the moneys of the people, lest they should choose to consider a denial of that right an act of hostility. He would go as far as any man should go to protect these institutions in the full enjoyment of all their constitutional and legal rights; and he would go quite as far to compel them rigidly to fulfil their most sacred obligations to that confiding people who take their promises to pay upon demand as money.

In every light, then, in which he could view this matter, it was his deliberate opinion that the banks would be benefited, and not injured, by making the existing separation between them and the public Treasury perpetual. The passage of this bill, at this time, might have some tendency to weaken the confidence of the community in the institutions; but if such a consequence must attend this change of our policy, could there be a better time than the present to make that change? The banks are now, he would not say insolvent, for he did not believe that was the condition of any large portion of them, but unable to pay the demands upon them. That fact was avowed by themselves, and known to all the world. They were in a quasi insolvent state, and all the distrust which could grow out of such a condition they had brought upon themselves by their voluntary suspension of specie payments. It was in vain, then, to talk of the delicacy of their present credit. That delicacy had been destroyed by their own act, and before they could ever again restore themselves to the confidence of the community, they must be sound in fact, and able to discharge, to the fullest extent, every obligation which general distrust could bring against them. It was erroneous to suppose that they could ever resume and sustain specie payments, until they were thus prepared and thus armed. They must build up for themselves a new character, based upon a perfect fulfilment of all their obligations. If, then, we are to separate from them, and that separation is to have any tendency to affect their credit, this is the very period when it

is most desirable to them that the declaration of a perpetual divorce should be made. Now it can do them no harm. They are already in a condition from which main strength alone can raise them; but at a time when their credit was unsuspected, and their operations unembarrassed and unimpeded, the measure might give them an injurious shock. Let it be done now, therefore, that when they do rise it may be distinctly known that they rise upon their own strength, unaided by our patronage, and untrammelled by our movements.

Mr. W. said he had touched but incidentally the question of the receptibility, or non-receptibility, of the notes of the State banks in payment of the public dues. He did not now propose to detain the Senate by remarks upon that point. The proposition affecting that question had not come from the committee, but from a member of the Senate in his place, and to him he should leave the discussion of that topic. For himself, he agreed with the view of this matter which he understood his honorable colleague to take, that, in case the deposits were confined to the safe keeping of the officers of the Government, it was a question of much less interest to the banks than seemed to be generally supposed. If the banks were not made the depositories, it could not be supposed that their notes, if made receivable, would be retained for any length of time in safe keeping. It would be a necessary result of this mode of keeping the public funds, that all bank notes received must be presented at short intervals for payment; and he could not see that it would be any very valuable favor to the banks, as a permanent system, to receive their notes merely for the purpose of immediate presentment and payment. In this respect, he was fully conscious that the change should not be precipitate or rash; most especially it should not while the heavy balances remain due to the Treasury from the late deposit banks. For this reason, the graduation provided for in the amendment proposed by the Senator from South Carolina (Mr. Calhoun) met his approbation; nor did he think time very material upon this point, and he should be willing to make the graduation even more slow than that proposed, in case any important interest would be favorably affected by further time. The preservation of the principle was what he wished, but he did not desire rashness or precipitancy in bringing it into practice.

He would now examine very briefly the influences which he supposed this measure would exert upon the currency generally.

It would give a stable and uniform value to the currency received into and paid from the public Treasury, in whatever portion of our widely extended country the receipts or payments should be made.

It would also preserve the currency of the Treasury at the standard fixed by the Constitution and the laws of Congress, and guaranteed to all the citizens of the country, as the only currency they should be compelled to take in payment of debts.

It would stimulate, if not compel, the banks to elevate their paper currency to a level with the currency of the public Treasury, and would go very far to measure the public confidence in these institutions by the standard which regulates the currency received and disbursed by the Government. If they keep their paper up to that standard of value, it will have currency and confidence; and if they do not, it will have neither. There will be a rule for judgment which cannot err, because it will be a rule of intrinsic value, and not of paper credit.

In this sense he deemed the measure of immense national importance. Hitherto the standard of currency fixed by the Constitution had been, in practice, erected no where; while the banks, State and National, had been left to establish the standards of value in all quarters of the country, and these standards had been as various, at different points, as the fluctuations of trade could make them. The fiscal operations of the Federal Government had, hitherto, been made, to every practical extent, to follow the interests of the banks, and the uniformity of receipts and disbursements in the various portions of the Union had only been the uniformity of bank credits; and the uniformity in value of bank

paper. It was high time that a more permanent standard, and one in conformity with the Constitution, should be established. Congress alone could establish it; and Congress, in his judgment, could only establish it in connection with the receipts and disbursements of the public revenue, and to the extent of those receipts and disbursements. He hailed this measure, then, as one calculated to produce this great reformation, and to bring us back to the starting point of 1789. With these feelings he advocated it, and hoped for its passage.

A further beneficial tendency of this measure will be an extension of the specie basis for our broad paper circulation. This is admitted by all to be a matter of indispensable necessity. Who then should contribute to it, if not the Federal Government. Are the banks expected to do it, when it is in the very face of their interests to promote the circulation of the metals? Are the States to do it, when they can not "coin money or regulate the value thereof?" Whence is this great good to the people of the country to be derived, unless Congress shall bring its powers to aid in the work? And how shall Congress accomplish this purpose but by the receipts and disbursements of the public revenue?

The adoption of such a system by Congress would constitute a point, in the broad field of our currency, exempt from the fluctuations and revolutions to which a currency of credit must be always subject. It would be a fortress to which public confidence would retreat in times of trouble, and within which it would remain uninjured, however violent the convulsion which should shake the monetary world. Now we were without any such rock of safety. The storm, which was now sufficiently powerful to agitate the great ocean of credit, shook alike the Treasury of our country and the humblest bank. This ought not so to be. The finances of a rich, and powerful and prosperous nation, ought not to be subject to these fluctuations. They ought to be exempted from the reverses and revolutions to which private cupidity will always subject the business of an enterprising people. Place them upon the basis of a currency of intrinsic value, and you accomplish this great object. Leave them to stand upon the credit of banks, and you ensure the recurrence of a crisis like the present, when, with abundant means in account, your Treasury is destitute of means at command.

But we are told that the passage of this bill will establish one currency for the Government and its officers, and another for the people. This argument had been repeated from various quarters of the House, and he was disposed to consider it as advanced in all candor and sincerity, and to reply to it in the same spirit.

He must premise, however, that he could not comprehend this mode of treating the Government and the people of this country as separate interests, much less as antagonist interests. He had supposed that our Government consisted of mere servants of the people, charged, in their several stations, with the execution of the will of the people; and that, beyond the execution of that temporary trust, the officers of the Government were, to the extent of their numbers, the people themselves, and one with them in feeling and interest. How, then, it would be possible to create or establish a currency which, properly and practically speaking, should be a currency for the Government, and should not, at the same time, be a currency for the people, was entirely beyond his comprehension. The officers of the Government principally reside in the country, and among the people. They receive their compensation, whatever it may be, from the people, and the expenses of themselves and their families are paid, like those of other citizens, to the people from whom they purchase and with whom they deal. The currency they receive from the people as a compensation for their services, they must pay to the people in discharge of their debts; and how a currency thus employed, received from the people and paid back again to the people, could be a Government currency as contra-distinguished from the currency of the people, he must again repeat, he could not at all comprehend.

But he would look at the argument in another

aspect. It necessarily presupposes that a better currency is to be secured to the Government and its officers, and a baser for the people. The currency proposed to be secured to the National Treasury is gold and silver, or their equivalent. The currency which the argument assumes the people are to have, is bank paper. What, then, do those who use the argument assume? Most certainly that the currency of bank paper is always to be baser than the currency of gold and silver; because if the currency of paper be equal in value to the currency of gold and silver, then the argument has no force, as urged, to show that the Government and its officers are to be preferred in our legislation to the people at large. Taking the argument with this assumption, and in what predicament do those who use it place themselves? They, by their own assumption, urge us to adopt, by a law of Congress, a standard of currency for the Treasury of the nation baser than gold and silver, to avoid the invidiousness of giving to ourselves a better currency than the people are to have. Has this argument been well considered, and its consequences duly weighed? He thought not, or it would not have been presented.

Gentlemen might suppose it popular to talk about the currency of the people as base and depreciated, but they would permit him to ask, to whom are the people to look for an elevated standard of currency—for a standard of currency such as is guaranteed to them by the Constitution—if not to Congress? Shall they look to the banks? The complaint of the argument is that the banks are to furnish them a base paper currency, while the Government secures to itself a currency of gold and silver. Are they to look to the States? They have no power to fix a standard of currency even for their own citizens, much less for the nation. They must, then, look to Congress and to the Constitution. And what shall Congress do to promote the interests of the people in this matter? Fix a standard of value baser than that which the Constitution has guaranteed to the people? Adopt bank paper as the standard of value of the country, for fear that the Government will have a better currency than the people? Can the people ever have a better currency than the Government, so long as the regulation of the standard rests with the Government? Most certainly not. If we adopt a standard baser than the coins, the people cannot elevate it. If we keep our standard upon the level of the Constitution, the people can compel the banks to come up to that standard, because no law can obligate them to receive the paper of the banks, or to give to them their confidence, and they will, of course, do neither, unless the banks furnish them a currency equal to the legal standard of the country; but, adopt by your legislation a baser standard than gold and silver, and do you think—does any one think—that the banks will furnish a better currency for the people than you prescribe for the public Treasury? No, sir. The supposition would be absurd. If you do not fix and maintain a proper standard of currency, none can exist in the country. If you adopt and adhere to the constitutional standard in your transactions, the influence of your example will be all-powerful with the banks, and with all future State legislation, in regard to them.

The Senator from Massachusetts, (Mr. Webster,) manifested some alarm, lest the officers of the Government should be set down at the first table, and the people left to supply themselves at the second. He was one of those who claimed to be as democratic as the honorable Senator, and as unwilling to degrade our masters the people, but if the cook were to supply the first table with base food, in order that the master of the mansion might set at it with the servants, he could not believe that the honor of the situation would compensate for the unwholesome character of the bill of fare. Would it not better comport with the duty of a faithful servant to provide sound, healthful, nutritious food for every table, and thus enable the master to consult his pleasure, as to which he would be fed from, without danger to his health. True, if bad food were not provided and cooked, the servants could not eat bad food, but it was as true, that if sound food were not provided, the master could not have sound food, whatever table he might choose it from.

If we do not provide a sound standard of currency, our masters, the people, cannot enjoy a sound currency, for to us, they have entrusted the duty of selecting and establishing that standard. We act for them, and not for ourselves, and the standard of currency we adopt for the public Treasury, is adopted for them, and not for us.

Another argument, very nearly allied in character to the last, is urged against the passage of this bill. It is said its effect will be to raise the salaries and compensations of the public officers. Some have stated the increase to be equal to ten, some to twelve and a half, and he believed he had seen some statements raising it as high as twenty per cent. upon the present compensations. What foundation had this argument? The same as the former. It went upon the assumption that the currency of the country was now, and was always to remain, base and depreciated. That a dollar of currency was not, and was not to be equal in value to a statute, standard dollar. Look at the position in its true light, and its fallacy will be instantly manifest. The compensations of all public officers are fixed by law. Take our own compensation for example. We are to receive a given number of dollars per day, for each day of our service. This is the contract between us and the people. How then are we to be paid? Are we to have eight dollars for each day we occupy these seats, or are we to have eight promises of some bank to pay, which are worth but four dollars? Does any man doubt which was the intention of the law? Will any man contend that we are over paid if we receive eight dollars in gold or silver, as the value thereof is regulated by Congress? Will not all admit that we are not paid according to the law unless we receive that value? But, say gentlemen, gold and silver bears a premium in the market, and therefore any given amount paid in the standard coins of the country, is over paid to the extent of the premium upon the coins. Here rests the error. The premises are false, and the conclusion, therefore, falls to the ground. Gold and silver does not, and can not, properly speaking, bear a premium: An American silver dollar can no more be worth one hundred and ten, or one hundred and twenty-five cents, in this country, than a standard pound can weigh a pound and a quarter. The one thing is as impossible as the other. Both are themselves standards, the one of value, and the other of quantity; and the former can no more vary than the latter. The dollar is worth exactly one hundred cents. It is the measure of that value, and cannot be worth either more or less than that sum. It is itself the par of money. Whatever is above it bears a premium, and whatever is below it is at a discount. This error in computing the value of money, and the value of our paper currency, is so universal, that it is not singular this argument should appear plausible to most minds, without a somewhat close examination. All the statements we see published, adopt the value of the paper as the par of money; and because the gold and silver are more valuable, and command a higher price in the market than paper, they are said to bear a premium. The error arises from adopting an erroneous standard for the par value. The paper is not par when gold and silver are worth more than it. They are the par, and the paper is depreciated. A moment's reflection will show every man that this is the true position. Why, then, it will be asked, are not the statements of the market value of our currency, daily published to the country, made upon the true, and not upon a false basis? The boards of brokers and bankers and dealers in money would probably be able to account for the manner in which these statements are made. It is much more acceptable to them, and doubtless much more favorable to the circulation and credit of the depreciated bank paper, to use it as the par, the standard of value, and to present gold and silver at a premium, as being actually worth a tenth beyond its statute value, its value as a tender in the payment of debts.

A single fact which transpired in this city but a day or two since will show the practical effect of this mode of computing the value of money. A member of the Senate, within the last few days, related to me the following incident. The Senator

stepped into a shop upon the Avenue to purchase some small article. The price was given to him by the shopkeeper at eighty-seven and a half cents. He presented a dollar in silver to make payment; when he was informed that the price was given at eighty-seven and a half cents under the expectation that payment would be made in paper, in "shin plasters," as they are called, and that it was but seventy-five cents if paid in specie, and he received a quarter of a dollar in change and the article he desired. Was this difference of price a premium upon the silver? No, sir. It was an addition to cover the depreciation of paper. The seventy-five cents was the value of the article in money. The eighty-seven and a half cents was the value in depreciated paper. This little incident shows us the tax which would be imposed upon the public creditors, including the officers of the Government, if we were to pay them in a depreciated currency. It shows us that we should, at once, sink their compensations about one-sixth, as that would be the additional charge against them for every necessary of life, because they must make payment in a currency so much depreciated. It shows us also the immense tax which the whole community must pay so long as they are compelled to use a base currency; and shall we then be urged to adopt a standard of currency for the public Treasury below the value of gold and silver?

A third argument against the passage of this bill, urged with great zeal and earnestness by those who put it forth, is, that it will extend most fearfully the Executive patronage of this Government; that it will tend to strengthen the Executive arm, to the danger of public liberty itself. He would examine concisely this startling objection. The bill creates no new officers. It proposes to entrust the safe-keeping of the public funds with the officers who now collect them. These officers are all appointed by the President and Senate, by the President alone, or by the heads of some one of the Executive Departments. They are all public officers of the Government, responsible to it, and to the people, for their official acts. They are all now removable at the pleasure of the President. The bill does not propose to change the mode of their appointment, or to increase their liability to dismission from office by the Executive. In what way, then, does it increase the Executive power over them, or strengthen that arm of the Government for good or for evil? He would take a case, the more clearly to illustrate his views: the collector of the port of New York, a place of high trust and responsibility already, and to be made much more so if this bill becomes a law, is appointed by the President, by and with the advice and consent of the Senate; he is removable at the pleasure of the President without cause, either proved or assigned; this is the relation of that officer to the Executive branch of the Government, under the existing laws. Does the bill before us propose to change that relation? Not in any way whatever. It merely proposes to make that officer keep and disburse the money he collects, instead of handing it over to a bank for safe-keeping; and it will require that he should strengthen his official bond and sureties to meet the increased official responsibility. But would any gentleman explain to him how the power or influence of the Executive over the officer was to be increased by these proceedings. That power and influence could only be exerted in reference to his appointment to, or removal from office; and the existing law upon that subject was not to be changed. The office was made no more valuable by this addition of duty and responsibility, and, therefore, the bill would cause no increase of a desire for the possession or retention of it.

It was a mistake, then, of fact, that the Executive patronage was increased, or the Executive arm strengthened, by the provisions of the bill. It was a delusion, which gentlemen had permitted their imaginations to practice upon them, which had no foundation in the proposed law. This would be rendered more apparent by the fact that this argument was most urged by those who preferred a return to the system of deposits with the State banks. Had any gentleman, who had occupied a seat here for the last few years, or who had turned his attention at all to the proceedings of Congress since the

public moneys were transferred for safe keeping from the late Bank of the United States to the State banks, forgotten the vivid pictures, daily drawn upon this floor, of the immense stride which had been taken by the Executive power in the adoption of that system of deposits? Were we not constantly told of the army of bank agents, bank officers, and bank directors, persons unknown to the Constitution, and the law, and not responsible to Congress or the people, which that system had brought within Executive influence, and engaged in the service of the Executive? Who did not then feel that there was some force in these remarks? And who that was a friend to the then administration, did not struggle incessantly to procure the passage of some law which should bring that system of deposits within the power and control of Congress? And are we now to be urged to return to that system, to re-enlist that numerous body of bank managers, and reconnect them with the Executive branch of the Government, to prevent an extension of Executive patronage and power, by the simple employment of officers of our own appointment, directly responsible to the people, and to the representatives of the people here? The position was absurd. It was to urge us upon the very evil we were cautioned to avoid; to embrace a danger existing in its worst form, to discharge ourselves from one of a merely imaginary character.

No, sir; if gentlemen would take a calm and dispassionate view of this subject, they would see that the bill would increase immensely, fearfully, the Executive responsibilities, not the Executive power. If the system proposed be adopted, the people will hold the President responsible for his selection of the officers to be entrusted with the safe keeping of their treasure; and they will hold the head of the Treasury Department responsible for an incessant and sleepless vigilance over these depositories. This will be the influence the bill will exert upon the Executive branch of the Government. It will throw upon the Executive officers a great increase of care and responsibility—not an increase of power or influence.

Indeed, so strongly had this increase of responsibility, even upon the minor Executive officers, impressed itself upon the mind of one of the gentlemen who had addressed the Senate, (Mr. Rives,) as to induce him to entertain the apprehension that men of proper character, standing, and responsibility could not be found willing to accept the trusts. For himself, he was almost ready to say that he wished he could entertain more apprehension upon this point than the argument of the Senator had inspired him with. He had no fear of living to see that period when the lucrative and honorable and desirable offices of this Government would go begging for incumbents; when candidates, of the most unquestioned qualifications in every sense, would not voluntarily present themselves, and conflict with each other for the places. At points where the emoluments of office did not present adequate temptation, the collections must be small, and the trust light; so that he was at perfect ease upon this point, and had only alluded to it to enforce his own position, that the bill was calculated to increase Executive responsibility, not to extend Executive power.

A fourth argument against the bill claimed a passing notice. It was that it would work the entire destruction of credit in the country. This appeared to him to be, most clearly, an objection springing from an excited imagination. What were the premises from which this frightful conclusion had been drawn? State them in their worst form and utmost extent, and what were they? That the Government of the United States was, hereafter, to confine the safe keeping of the public moneys to the hands of its own officers, and was gradually to discontinue the receipt of bank notes in payment of the public dues. These were the things proposed to be done. The effect of such a policy upon the credit and business of the local banking institutions of the country he had already fully discussed; and, to his own satisfaction, had shown that its adoption would promote, and not injure, the usefulness of those institutions, considered in the light of public institutions, founded for the benefit of the people at large.

and deserving credit and confidence precisely in proportion as they should confine their operations within their fixed means, and should discharge faithfully and promptly all the obligations imposed by their charters. In this light only was he disposed to discuss the claims of the local banks upon the country, or the confidence of the people. The profits of the corporators was not a consideration to enter into a discussion like the present. It was a mere consequence of the faithful discharge of one of the highest trusts which any Government could delegate, the trust of making a currency for the people of the country; and if he had succeeded in showing that this trust could be more safely and perfectly executed without, than with, a fiscal connection with this Government, he had accomplished his object, and proved that the just credit of these institutions was not to be injuriously affected by the bill.

Who would contend that its provisions were calculated to injure any other description of credit? Would not wealth and integrity receive the same confidence with the community, whether the funds of this Government were kept in the State banks, or in the hands of the officers of the people? Would not industry and enterprise gain the same esteem, and command the same credit, wherever the Government should choose to place its strong box? Would neighbor cease to trust and confide in neighbor, because bank notes were not to be received in payment of the public dues? Certainly not. The picture was an imaginary one, and this consequence of the passage of the bill, upon the credit between man and man, was not to be apprehended. It was the objection of an excited mind, and not of sober reason.

An argument of a character very similar to that last noticed, had proceeded from the same source. It was that the passage of this bill, the separation of the funds of the Government from the banks; and the gradual suspension of the receipt of their paper in payment of the public dues, would lead to an universal and exclusive metallic currency for the whole country in all its business operations. That it would lead to a currency equal in value to gold and silver, and convertible into gold and silver at pleasure, he hoped and believed. But that it would destroy the State banks, and send us back to an exclusive metallic currency, there was not the slightest reason for believing. If he had not labored in vain, in a former part of his argument, he had shown that the effect of this policy would be favorable to the banks, favorable to the certainty of their means, to a safe measure for their operations, and to the stability of their credit and confidence with the people. If these positions should prove to be true, there was no just fear that the banks would be destroyed, or that banks chartered by the States would not continue to exist. And surely, while banks of issue were in operation in the country, no one need fear the prevalence of an exclusive metallic currency; for nothing was more certain than that bank paper and gold and silver of equal denominations could not circulate together. The paper might be made, for the general purposes of business, of equal value with gold and silver; but while the one was the promise of a bank to pay, and the other the means by which alone that promise could be redeemed, and while it was the direct interest of the bank that the promise should take the place of the real value, and circulate in its stead, the one would be withdrawn from circulation and hoarded, and the other would be scattered upon the wings of the wind.

His fear was, that the whole operations of the public Treasury would be inadequate to furnish a sufficient specie basis for our paper circulation. What were those operations in the aggregate, compared to the monetary operations of the country? The Senator from Massachusetts (Mr. Webster) had said they were estimated at from one and a half to two per cent. Call them two per cent; call them five per cent, and will they distribute a quantity of the metals sufficient to sustain the immense superstructure of paper, amounting to the remaining ninety-five or ninety-eight per cent? And from what other source were we to look for an extension of our specie basis, if not from the operations of this Government? Here then was

the fear, and not that too extensive a metallic currency would be diffused among the people.

He would notice a single other objection to this system, and close his remarks upon this branch of the subject. It had been said that its effect would be to hoard vast amounts of cash capital from the uses of business. How far was this effect to be anticipated? When the revenues of the country were made to bear a just relation to its expenditures—a relation which he hoped our recent experience would induce us most rigidly to preserve for the future—there would be nothing to hoard, in the practical sense of that term. We should receive with one hand, and disburse with the other. The payments into the public Treasury, and the payments out of it, would be made in the same description of currency; and what was taken from the uses of business by the receipts, would be given back to those uses in the disbursements, without material delay. It was true that the great extent of our territory, the great number of points at which both receipts and disbursements were to be made, and the wide distance of their locations from each other, and from the Treasury here, keeps a large sum in suspense, and in transitu, during the whole time. That sum might be liberally estimated at from three to five millions, and it was the whole amount which the ordinary operations of the Treasury would, in any sense, hoard—the whole amount which it would withdraw from the uses of business, when the revenues and expenditure of the Government should be justly measured together. This same sum was now exactly similarly employed, and was suspended in the deposit banks to await the presentation of outstanding drafts: that is, it would be so suspended if the banks were in a condition to fulfil their obligations, and meet the drafts of the Treasury in specie or its equivalent.

But it might be said that, when our revenues should again become abundant, and exceed our expenditures, so that another surplus should accumulate, this system of deposits would necessarily lead to hoarding. This consequence he most cheerfully admitted, and he considered it one of the strongest merits of the system. He hoped never again to see the time, when a surplus revenue should afflict us; but if that time did ever again come, it must proceed from an excess of impositions, and a renewal of the speculations in our vast public domain. In that case he wished to see the excess of the revenue hoarded, closely locked up from the uses of the trading community, as the most efficient, speedy, and certain check to the over-trading and speculations.

What, he would ask, would have been the surplus of revenue during the late excesses, had the accumulations of money in the public Treasury, paid for duties and lands, been hoarded then, and not surrendered to the uses of the customers of the banks? That surplus, under the system of deposits then in use, reached an amount beyond forty millions of dollars. Does any one suppose it would have reached one-third of that sum, if the gold and silver had been demanded in payment of the public dues, and closely locked up in the public depositories? No, sir; a pressure upon the money market would have been produced, and the excesses arrested before you would have hoarded ten millions of coin by this process. What an infinite benefit to the country would have been produced by such an action. We should have been saved from the almost incurable evils of a surplus revenue, and of its practical distribution among the States of the Union; and what would have been of far more importance, we should have been saved from this tremendous revolution, which the excesses of credit have brought upon us.

What, sir, has been our own agency in this national calamity? Our revenue was accumulating millions upon millions beyond our wants. We placed it in the banks for safe keeping, exacted from them interest for its use, and thus compelled them to make loans upon it in the ordinary course of their business. It was a time of plenty, and their own means were full, but yet they must use ours to indemnify them for the use which the law compelled them to pay. Could any system have been better devised to promote the excesses of which we now complain. Every dollar collected towards the public revenue added, not one dollar simply, but, being used as capital, two or three dollars, to the loans which the cupidity of the banks stimulated them to make. Hence the evil, so far as the funds of the Government were concerned, promoted its own increase, and so it must ever be while the banks are made the depositories of the public moneys. Should we not, then, dismiss the idea that a hoarding of capital is to be a dreaded evil of the proposed system; so regulate our legislation that the revenues and expenditures, in times of stability and regularity of business, will meet each other; and desire to hoard, when excesses in trade, or credit, or speculation, threaten to disturb the healthful equilibrium of the currency, and to plunge us into reverses such as we are now experiencing? For himself, he had no hesitation upon the subject. If a regulator of the general currency of the country was within the power of Congress, he thought this that regulator, and this action of the proposed system of separation from the banks seemed to him to be more valuable than almost any feature in it.

In addition to the remarks he had made, and the objections he had attempted to answer, he found it to be his duty to notice a single feature of the bill which had been the subject of much apprehension and criticism. He referred to the provision for the security of the public moneys in the hands of the depositories proposed to be established. The committee had here introduced a guard of a most rigid character, new to him, and he believed new to our laws. It was that of making a use of the moneys a criminal offence, punishable by fine and imprisonment, in addition to the usual pecuniary liabilities. Their object was to draw the characters of the officers into security for the public, and to interpose that guaranty against an abuse of their trust. He considered this feature of the bill of vital importance to its successful operation, although the usual pro-

visions for sureties and pecuniary liabilities were full and complete without it.

The Senator from Delaware (Mr. Bayard) had expended much of his argument in showing that the public funds would be insecure in such keeping; and, to fortify himself in his position, he had exhibited to us the long list of defaulting public officers which is annually laid before us, and which comprises every defaulter from the commencement of the Government to the present day. This was a part of the history of our country most unpleasant and painful, and he could not dwell upon it with any pleasure; but the Senator, in bringing it to his aid upon this occasion, seemed to have forgotten that all these defaultations had happened under an established system of bank deposits, State or national; and, therefore, did not go a step to show either the danger of a permanent keeping and disbursement of the public moneys by the public officers, or the greater security of a system of deposit in bank than of a keeping by the officers themselves. The cases cited did go to show that there would sometimes be defaulting officers; and he did not flatter himself that the present bill, or any other which human ingenuity could form, would constitute a perfect exemption of the Government from such losses, or a perfect security to the public funds in any condition. One thing, however, was clear, and would be conceded by all, which was, that the depositories proposed to be established by this bill would not all fail at once, and thus effectually block the wheels of the Treasury, with an abundance of means in its possession, in case those means could be commanded. Such was its present condition under the system of State bank deposits. With millions in the banks, the Treasury had not a dollar at command, and is now, at this moment, compelled to resort to the public credit to carry on the Government. No such revulsion to the Treasury could be experienced under the system of deposits proposed to be adopted; and even if we should occasionally lose a small sum by a defaulting officer, we should not be driven to the expense of extra calls of Congress in consequence of such defaults.

He would not detain the Senate, to add any thing further to this branch of the argument. The President, in his Message, had placed the ordinary aspect of the subject too clearly before Congress and the country, to admit of confirmation by any thing he could add to these forcible and practicable views.

This closed the examination he proposed to make of the plan of the administration, for the exercise of the incidental powers of Congress over the general currency of the country, and of the prominent objections to that plan; and he would now pass to the alternatives proposed by those who differed from the President.

The first of these was the plan proposed by the honorable Senator from Virginia, (Mr. Rives,) which, in substance, is a return to the system of State bank deposits, connected with the general receptibility, upon certain conditions, of the notes of the State banks in payment of the public dues. What he had already said in reference to the administration plan, would excuse him from any further discussion of this proposition, than what related to its limitations. The proposition was, in substance, similar to one formerly introduced into this body by the same distinguished Senator, and upon that occasion it underwent a full discussion. It was not, therefore, a proposition new to the body; but as he had not taken part in its discussion then, and as it was now brought in conflict with a system he approved, he felt it to be his duty to test its efficacy to accomplish its proposed objects.

Those objects seemed to be two; the first of which was to strengthen and sustain the State banks, and facilitate their return to specie payments; and the second, to extend and strengthen the specie basis for the paper circulation of the banks, by expelling from circulation small bank notes.

The first object was proposed to be accomplished by a continuance of the public deposits with these banks, and by making their notes, when redeemed with specie, receivable in payment of the public dues. He had already discussed both these points, as fully as he proposed to do it, under the head of the influence upon the banks of the passage of the bill before the Senate. He had there given his reasons for the opinions that even a connection, as depositories, between the State banks and the National Treasury, was injurious to the banks; that if the connection as depositories did not exist, the receptibility of the notes of the banks in payment of the public dues was a matter of little practical interest to them, because the notes so received must be immediately presented for payment, and could not be permanently retained in safe keeping, and that if the separation between the banks and the Treasury was to be made perpetual, the present was the most favorable time, so far as the banks are concerned, to make that declaration.

It therefore remained for him simply and concisely to examine the efficacy of the Senator's plan to exclude small notes, and extend the circulation of specie.

These two great objects were proposed to be accomplished by the enactment that no note of any State bank should be received in payment of the public dues, which bank should, after a specified day, issue notes below a specified denomination. The restriction is made to commence at the passage of the act, with a limitation of notes not below five dollars; after the year 1839, no notes are to be issued below ten dollars; and after the year 1841, no notes below twenty dollars; and the receptibility of the bank paper by the public Treasury is made dependent upon an observance by the banks of these restrictions. No alteration of the present bank deposit law is proposed; and that compels the banks, as a condition of their participation in that patronage, not to issue notes below the denomination of ten dollars. Neither the deposit law, nor the proposition of the honorable Senator, appeals to the controlling power of State legislation to make them effective. Neither could do so, with propriety, as both are mere regulations of federal legislation, addressed to the interests of the State banking institutions. This address to such institutions is always the safe one, so far as their power of action is within their own control; for no principle can be more safely depended upon than that a moneyed incorporation, by whatever authority brought into existence, will govern its action by its interests.

It is in this single sense, then, that the practical results to be expected from the adoption of the plan of the Senator from Virginia are to be examined. How far will the interests of the State banking institutions of the country induce them to subject their action to his proposed restrictions? The inducement offered is the receptibility of their paper in the payment of the public dues. The disability is that of issuing no small notes. He had before suggested, as the result of his reflections, that, unaccompanied by a portion of the public deposits, the receptibility of the notes of a local bank in payment of the public

dues was a very trifling, if not a very questionable, boon. That impression confidently remained. He therefore concluded, that the interests of no banks would induce them, voluntarily, to subject themselves to the restrictions proposed, except such as should be selected as depositories. The value of this patronage would be greatly impaired, if the notes of the deposit banks were not so receivable. These institutions, therefore, would bring themselves within the restrictions and within the benefits of the system. What, then, would be the effect, in practice, upon the currency of the country? There are now some eight hundred State banks in organization. The greatest number selected under the late deposit law was about one-tenth of the whole; and it is known at the Treasury, and will be readily seen by all who will make a practical examination of the subject, that one of the greatest evils of that law was the large number of banks which its provisions compelled the Secretary of the Treasury, in the then bloated state of the public funds, to select as depositories. From thirty to forty is the largest number which the convenience of the receipts and disbursements, and the safe management of the public funds, can ever require. But suppose the highest number heretofore employed should be retained; still we should have more than seven hundred banks not submitting themselves to the proposed restrictions, and consequently not restrained, except by their charters, from the issue of small notes. Go farther, and suppose that the interests of one-half of all the banks of the country should induce them to come within the provisions of the proposed bill. The field for the circulation of small paper would only be made richer for those which did not come in, and until the established law of currency be radically changed, and silver dollars and half eagles can circulate in common with one and five dollar bank notes, the four hundred banks would make much more from this circulation, than from any additions we can make to their business, by receiving their notes. The inducement which the proposition holds out, is wholly inadequate to the accomplishment of the objects proposed, and not a dollar will be added to the specie circulation of the country under it. These considerations rendered this plan less desirable to him than that proposed by the President.

True it might be said that the plan of the President did not act upon the banks by way of restraint upon the amount or description of their issues. It was true as to the description of their issues. That was left to State legislation, the source from which they derived their existences, and to which belonged the limitation of their powers, so far as they were to be limited by legislation. The plan of the President sought to act upon these institutions in a different way, and by a more powerful lever. Specie was their life-blood; and the creation of a demand for it was the only efficient control over them. Bring the public revenues, then, to a specie standard, and you most effectually limit the amount of issues of the banks, so far as your operations can impose such a limit. Make your disbursements in gold and silver; and although the small bank paper will displace it, your continued and perpetual action will draw the same specie again from the banks, and will thus keep an amount, equal to your receipts and disbursements, in a constantly active state. In this way alone, in his judgment, is it in the power of this Government to expand the specie basis for our immense paper circulation.

He could not see that the action of the bill proposed by the Senator from Virginia would accomplish this object, while it did appear to him that a perfect separation from the banks, and a gradual return to a metallic currency for the operations of the National Treasury, might reach it.

The only other alternative which had been presented was a national bank. No distinct proposition, in a legislative form, for such an institution, was before the Senate; but the debate had developed the fact that such an institution was the favorite alternative of a large minority of the body, and therefore he made this allusion to it. It was not his purpose to discuss it in any manner. In the absence of any distinct proposition, and after the recent expression of the Senate upon that point, he could not feel warranted in taking the time even to reply to the arguments which had been advanced in favor of this plan. The whole subject had constituted a topic of constant discussion before the country for years, and he could not hope, at this late day, to give any new ideas upon it to the Senate, or to the public.

He had upon his notes several other replies which he had intended to make, but the lateness of the hour, and the full discussion which every important point in the debate had received from others, would induce him to omit them, with a single exception.

The honorable Senator from Virginia, (Mr. Rives) had seemed to suppose that nothing had transpired to weaken the confidence of those who had formerly favored the system of State bank deposits. He was one who had favored that system, when it was adopted by the Executive in 1833-4. He then expressed his confidence in the ability and fidelity of the State banks to discharge the trusts confided to them. At that time he entertained fully and honestly the confidence he expressed in those institutions. Their subsequent conduct had gone far to convince him that his confidence was excessive and misplaced. He would not say that that system of deposits had entirely failed, as that seemed to be a point of debate and question, but he would say that the banks had failed to comply with their obligations; that both the Government and the people had been reduced to extremities by this failure on their part; that we found ourselves here, at this unreasonable period, in consequence of it; and that, in view of these facts, he heard with some surprise, the declaration confidently pronounced, that nothing had taken place to authorize a change of opinion as to the feasibility of that system.

He had been repeatedly published to the country as grossly inconsistent, for supporting and sustaining that system of deposits in 1834, and for failing to support it now. He did not feel the force of the charge; but whether inconsistent or not, when convinced of his error, he was most cheerful to retract it. Time had shown that he then possessed a confidence in the banks which they had not sustained, and which he was bound to presume they could not sustain. Was he, for the sake of consistency, or for any other cause, to assume to entertain his former confidence, when every foundation for it had been swept away, by the voluntary action of the banks themselves? No, sir, such was not his course. He left the defence of such a position to those who could see no difference between sound specie paying banks, and banks which refused to pay specie upon their promises; between banks which promptly, upon demand, fulfilled all their obligations to the public and the National Treasury, and banks which complied with their engagements to neither.

## REMARKS OF MR. CALHOUN.

*In Senate, October 3, 1836.*—In reply, on his amendment to separate the Government from the banks.

MR. PRESIDENT: In reviewing this discussion, I have been struck with the fact, that the argument on the opposite side has been limited, almost exclusively, to the questions of relief and the currency. These are, undoubtedly, important questions, and well deserving the deliberate consideration of the Senate; but there are other questions involved in this issue, of a far more elevated character and commanding control, and which more imperiously demand our attention. The banks have ceased to be mere moneyed incorporations. They have become great political institutions, with vast influence over the welfare of the community; so much so, that a highly distinguished Senator (Mr. Clay) has declared, in his place, that the question of the disunion of the Government and the banks involved in its consequences the disunion of the States themselves. With this declaration sounding in our ears, it is time to look into the origin of a system which has already acquired such mighty influence; to inquire into the causes which have produced it, and whether they are still on the increase; in what they will terminate, if left to themselves; and, finally, whether the system is favorable to the permanency of our free institutions; to the industry and business of the country; and, above all, to the moral and intellectual development of the community. I feel the vast importance and magnitude of these topics, as well as their great delicacy. I shall touch them with extreme reluctance, and only because I believe them to belong to the occasion, and that it would be a dereliction of public duty to withhold any opinion, which I have deliberately formed, on the subject under discussion.

The rise and progress of the banking system is one of the most remarkable and curious phenomenon of modern times. Its origin is modern and humble, and gave no indication of the extraordinary growth and influence which it was destined to attain. It dates back to 1609, the year that the bank of Amsterdam was established. Other banking institutions preceded it; but they were insulated, and not immediately connected with the systems which have since sprung up, and which may be distinctly traced to the Bank of Amsterdam. That was a bank of deposit—*a mere store-house*—established under the authority of that great commercial metropolis, for the purpose of safe-keeping the precious metals, and facilitating the vast system of exchanges which then centered there. The whole system was the most simple and beautiful that can be imagined. The depositor, on delivering his bullion or coin in store, received a credit, estimated at the standard value on the books of the bank, and a certificate of deposit for the amount, which was transferrable from hand to hand, and entitled the holder to withdraw the deposit on payment of a moderate fee for the expense and hazard of safe keeping. These certificates became, in fact, the circulating medium of the community, performing, as it were, the hazard and drudgery, while the precious metals, which they, in truth, represented, guilder for guilder, lay quietly in store, without being exposed to the wear and tear, or losses, incidental to actual use. It was thus a paper currency was created, having all the solidity, safety, and uniformity, of a metallic, with the facility belonging to that of paper. The whole arrangement was admirable, and worthy of the strong sense and downright honesty of the people with whom it originated.

Out of this, which may be called the first era of the system, grew the bank of deposit, discount, and circulation—a great and mighty change, destined to effect a revolution in the condition of modern society. It is not difficult to explain how the one system should originate in the other, notwithstanding the striking dissimilarity in features and character between the offspring and the parent. A vast sum, not less than three millions sterling, accumulated and remained habitually in deposit in the Bank of Amsterdam—the place of the returned certificates being constantly supplied by new depositors. With so vast a standing deposit, it required but little reflection to perceive, that a very large portion of it might be withdrawn, and that a sufficient amount

would be still left to meet the returning certificates; or, what would be the same in effect, that an equal amount of fictitious certificates might be issued beyond the sum actually deposited. Either process, if interest be charged on the deposit withdrawn, or the fictitious certificates issued, would be a near approach to a bank of discount. This once seen, it required but little reflection to perceive, that the same process would be equally applicable to a capital placed in bank, as stock; and from that the transition was easy to issuing bank notes, payable on demand, on bills of exchange, or promissory notes, having but a short time to run. These combined, constitute the elements of a bank of discount, deposit and circulation.

Modern ingenuity and dishonesty would not have been long in perceiving and turning such advantages to account; but the faculty of the plain Belgian was either too blunt to perceive, or his honesty too stern to avail himself of them. To his honor, there is reason to believe, notwithstanding the temptation, the deposits were sacredly kept; and that for every certificate in circulation, there was a corresponding amount in bullion or coin in store. It was reserved for another people, either more ingenious or less scrupulous, to make the change.

The Bank of England was incorporated in 1694, eighty-five years after that of Amsterdam, and was the first bank of deposit, discount and circulation. Its capital was £1,200,000, consisting wholly of Government stock, bearing an interest of eight per cent. per annum. Its notes were received in the dues of the Government, and the public revenue was deposited in the bank. It was authorized to circulate exchequer bills, and make loans to Government. Let us pause for a moment, and contemplate this complex and potent machine, under its various character and functions.

As a bank of deposit, it was authorized to receive deposits, not simply for safe keeping, to be returned when demanded by the depositor, but to be used and loaned out for the benefit of the institution, care being taken always to be provided with the means of returning an equal amount, when demanded. As a bank of discount and circulation, it issued its notes on the faith of its capital stock and deposits, or discounted bills of exchange and promissory notes backed by responsible endorsers, charging an interest something greater than was authorized by law to be charged on loans; and thus allowing it, for the use of its credit, a higher rate of compensation than what individuals were authorized to receive for the use and hazard of money or capital loaned out. It will, perhaps, place this point in a clear light, if we should consider the transaction in its true character, not as a loan, but as a mere exchange of credit. In discounting, the bank takes, in the shape of a promissory note, the credits of an individual so good that another, equally responsible, endorses his note for nothing, and gives out its credit in the form of a bank note. The transaction is obviously a mere change of credit. If the drawer and endorsers break, the loss is the bank's; but if the bank breaks, the loss falls on the community; and yet this transaction, so dissimilar, is confounded with a loan, and the banks permitted to charge, on a mere exchange of credit, in which the hazard of the breaking of the drawer and endorser is incurred by the bank, and that of the bank by the community, a higher sum than the legal rate of interest on a loan; in which, besides the use of his capital, the hazard is all on the side of the lender.

Turning from these to the advantages which it derived from its connection with the Government, we shall find them not less striking. Among the first of these in importance is the fact of its notes being received in the dues of the Government, by which the credit of the Government was added to that of the bank, which added so greatly to the increase of its circulation. These again, when collected by the Government, were placed in deposit in the bank; thus giving to it not only the profit resulting from their abstraction from circulation, from the time of collection till disbursement, but also that from the use of the public deposits in the interval. To complete the picture, the bank, in its

capacity of lending to the Government, in fact paid in its notes which rested on the faith of the Government stock, on which it was drawing eight per cent.; so that, in truth, it but loaned to the Government its own credit.

Such were the extraordinary advantages conferred on this institution, and of which it had an exclusive monopoly; and these are the causes which gave such an extraordinary impulse to its growth and influence, that it increased in a little more than a hundred years, from 1694 to 1797, (when the second era of the system, commenced with the establishment of the Bank of England, terminated,) from 1,200,000 to nearly \$11,000,000; and this mainly by the addition to its capital by loans to the Government above the profits of its annual dividends. Before entering on the third era of the system, I pause to make a few reflections on the second.

I am struck, in casting my eyes over it, to find that, notwithstanding the great dissimilarity of features which the system had assumed in passing from a mere bank of deposit to that of deposit, discount, and circulation, the operation of the latter was confounded throughout this long period, as it regards the effects on the currency, with the bank of deposit. Its notes were universally regarded as representing gold and silver, and as depending on that representation exclusively for their circulation; as much so as did the certificates of deposit in the original Bank of Amsterdam. No one supposed that they could retain their credit for a moment after they ceased to be convertible into the metals on demand; nor were they supposed to have the effect of increasing the aggregate amount of the currency; nor, of course, of increasing prices. In a word, they were in the public mind as completely identified with the metallic currency as if every note in circulation had laid up in the vaults of the bank an equal amount, pound for pound, into which all its paper could be converted the moment it was presented.

All this was a great delusion. The issues of the bank never did represent, from the first, the precious metals. Instead of the *representatives*, its notes were in reality the *substitute* for coin. Instead of being the mere drudges, performing all the out-door service, while the coins reposed at their ease in the vaults of the banks, free from wear and tear, and the hazard of loss or destruction, as were the certificates of deposits in the original Bank of Amsterdam, they substituted, degraded, and banished the coins. Every note circulated became the substitute of so much coin, and dispensed with it in circulation, and thereby depreciated the value of the precious metals, and increased their consumption in the same proportion; while it diminished, in the same degree, the supply, by rendering money less productive. The system assumed gold and silver as the basis of its circulation; and yet, by the laws of its nature, just as it increased its circulation, in the same degree the foundation on which the system stood was weakened. The consumption of the metals increased, and the supply diminished. As the weight of the superstructure increased, just in the same proportion its foundation was undermined and weakened. Thus, the germ of destruction was implanted in the system at its birth; has expanded with its growth, and must terminate, one day or other, in its dissolution, unless, indeed, it should, by some transition, entirely change its nature, and pass into some other and entirely different organic form. The conflict between bank circulation and metallic (though not perceived in the first stage of the system, when they were supposed to be indissolubly connected) is mortal; one or the other must perish in the struggle. Such is the decree of fate: it is irreversible.

Near the close of the second era, the system passed the Atlantic, and took root in our country, where it found the soil still more fertile, and the climate more congenial than even in the parent country. The bank of North America was established in 1781, with a capital of \$400,000, and bearing all the features of its prototype, the bank of England. In the short space of a little more than half a century, the system has expanded from one bank to about eight hundred, including branches, (no one knows the exact amount, so rapid the

increase) and from a capital of less than a half million, to about \$300,000,000, without apparently exhausting or diminishing its capacity to increase. So accelerated has been its growth with us, from causes which I explained on a former occasion,\* that already it has attained a point much nearer the assigned limits of the system in its present form, than what it has in England.

During the year 1797, the Bank of England suspended specie payment; an event destined by its consequences to effect a revolution in public opinion in relation to the system, and to accelerate the period which must determine its fate. England was then engaged in that gigantic struggle which originated in the French revolution, and her financial operations were on the most extended scale, followed by a corresponding increase in the action of the bank, as her fiscal agent. It sunk under its over-action. Specie payments were suspended. Panic and dismay spread through the land—so deep and durable was the impression, that the credit of the bank depended exclusively on the punctuality of its payments. In the midst of the alarm, an act of Parliament was passed making the notes of the bank a legal tender; and to the surprise of all, the institution proceeded on, apparently without any diminution of its credit. Its notes circulated freely as ever, and without any depreciation, for a time, compared with gold and silver; and continued so to do for upwards of twenty years, with an average diminution of about one per cent. per annum. This shock did much to dispel the delusion that bank notes represented gold and silver, and that they circulated, in consequence of such representation, but without entirely obliterating on that point the old impression, which had taken such strong hold on the public mind. The credit of its notes during the suspension, was generally attributed to the tender act, and the great and united resources of the bank and the government.

But an event followed of the same kind, under circumstances entirely different, which did more than any preceding, to shed light on the true nature of the system, and to unfold its vast capacity to sustain itself without exterior aid. We finally became involved in the mighty struggle that had so long desolated Europe, and enriched our country. War was declared against Great Britain in 1812, and in the short space of one year, our feeble banking system sunk under the increased fiscal action of Government. I was then a member of the other House, and had taken my full share of responsibility in the measures which had led to that result. I shall never forget the sensation which the suspension, and the certain anticipation of the prostration of the currency of the country, as a consequence, excited in my mind. We could resort to no tender act; we had no great and central regulating power, like the Bank of England; and the credit and resources of the Government were comparatively small. Under such circumstances, I looked forward to a sudden and great depreciation of bank notes, and that they would fall speedily as low as the old continental money. Guess my surprise when I saw them sustain their credit, with scarcely any depreciation, for a time, from the shock. I distinctly recollect, when I first asked myself the question, what was the cause? and which directed my inquiry into the extraordinary phenomenon. I soon saw that the system contained within itself a self-sustaining power; that there was between the banks and the community mutually the relation of debtor and creditor, there being, at all times, something more due to the banks from the community, than from the latter to the former. I saw, in this reciprocal relation of debt and credit, that the demand of the banks on the community was greater than the amount of their notes in circulation could meet and absorb, and that, consequently, so long as their debtors were solvent, and bound to pay at short periods, their notes could not fail to be at or near a par with gold and silver. I also saw, that as their debtors were principally the merchants, they would take bank notes to meet their bank debts, and that which the merchant, and the Government, which

are the great money dealers, take the rest of the community would also take. Seeing all this, I clearly perceived that self-sustaining principle, which poised and impelled the system self-balanced in the midst of the heavens, like some celestial body, with scarcely a perceptible deviation from its path from the concussion it had received.

Shortly after the termination of the war, specie payments were coerced with us by the establishment of a national bank, and a few years afterwards, in Great Britain, by an act of Parliament. In both countries, the restoration was followed by wide-spread distress, as it always must when effected by coercion, for the simple reason, that banks cannot pay unless their debtors first pay, and that to coerce the banks, compels them to coerce their debtors before they have the means to pay. Their failure must be the consequence; and this involves the failure of the banks themselves, carrying, in their consequences, universal distress. Hence I am opposed to all kinds of coercion, and am in favor of leaving the disease to time, with the action of public sentiment, and the States, to which the banks are alone responsible.

But to proceed with my narrative. Although specie payments were restored, and the system apparently placed where it was before the suspension, the great capacity it proved to possess of sustaining itself without specie payments, was not forgot by those who had its direction. The impression that it was indispensable to the circulation of its notes, that they should represent the precious metals, was almost obliterated; and they were regarded rather as *restrictions on the free and profitable operation of the system than as the means of its security*. Hence a feeling of opposition to gold and silver gradually grew up on the part of the banks, which created an *esprit du corps*, followed by a moral resistance to specie payments, if I may so express myself, which in fact suspended, in a great degree, the conversion of their notes into the precious metals, long before the present suspension. With the growth of this feeling, banking business assumed a bolder character, and its profits were proportionably enlarged; and with it the tendency of the system to increase kept pace. The effect of this soon displayed itself in a striking manner, which was followed by very important consequences, which I shall next explain.

It so happened that the charters of the Bank of England and the late Bank of the United States expired about the same time. As the period approached, a feeling of hostility, growing out of the causes just explained, which had excited a strong desire in the community, who could not participate in the profits of these two great monopolies, to throw off their restraint, began to disclose itself against both institutions. In Great Britain, it terminated in breaking down the exclusive monopoly of the Bank of England, and narrowing greatly the specie basis of the system, by making the notes of the Bank of England a legal tender in all cases, except between it and its creditors. A sudden and vast increase of the system, with a great diminution of the metallic basis in proportion to banking transactions, followed, which have shocked and weakened the stability of the system there. With us, the result was different. The bank fell under the hostility. All restraint on the system was removed, and banks shot up in every direction almost instantly, under the growing impulse which I have explained, and which, with the causes I stated when I first addressed the Senate on this question, is the cause of the present catastrophe.

With it commences the fourth era of the system, which we have just entered—an era of struggle, and conflict, and changes. The system can advance no farther in our country, without great and radical changes. It has come to a stand. The conflict between metallic and bank currency, which I have shown to be inherent in the system, has, in the course of time, and with the progress of events, become so deadly, that they must separate, and one or the other fall. The degradation of the value of the metals, and their almost entire expulsion from their appropriate sphere, as the medium of exchange and the standard of value, have gone so far, under the necessary operation of the system, that they are no longer sufficient to form the basis of the widely extended system of banking. From the first, the

\*NOTE.—See speech on Mr. WEBSTER'S motion to renew the charter of the United States Bank in 1834.

gravitation of the system has been in one direction—to dispense with the use of the metals; and hence the descent from a bank of deposits to one of discount; and hence, from being the representative, their notes have become the substitute, for gold and silver; and hence, finally, its present tendency to a mere paper engine, totally separated from the metals. One law has steadily governed the system throughout—the enlargement of its profits and influence; and under that operation, through which metallic currency became insufficient for circulation, it has become, in its progress, insufficient for the basis of banking operations; so much so, that, if specie payments were restored, it would be but nominal, and the system would in a few years, on the first adverse current, sink down again into its present helpless condition. Nothing can prevent it but great and radical changes, which would diminish its profits and influence, so as effectually to arrest that strong and deep current which has carried so much of the wealth and capital of the community in that direction. Without that, the system, as now constituted, must fall, unless, indeed, it can form an alliance with the Government, and through it establish its authority by law, and make its credit, unconnected with gold and silver, the medium of circulation. If the alliance should take place, one of the first movements would be the establishment of a great central institution; or, if that should prove impracticable, a combination of a few selected and powerful of the State banks, which, sustained by the Government, would crush or subject the weaker, to be followed by an amendment of the Constitution, or some other device, to limit their number and the amount of capital hereafter. This done, the next step would be to confine and consolidate the supremacy of the system over the currency of the country, which would be in its hands exclusively, and, through it, over the industry, business, and politics of the country; all of which would be wielded to advance its profits and power.

The system having now arrived at this point, the great and solemn duty devolves on us to determine this day what relation this Government shall hereafter bear to it. Shall we enter into an alliance with it, and become the sharers of its fortune and the instrument of its aggrandizement and supremacy? This is the momentous question, on which we must now decide. Before we decide, it behoves us to inquire whether the system is favorable to the permanency of our free republican institutions, to the industry and business of the country, and, above all, to our moral and intellectual development, the great object for which we were placed here by the Author of our being. Can it be doubted what must be the effects of a system whose operations have been shown to be so unequal on free institutions whose foundation rests on an equality of rights? Can that favor equality which gives to one portion of the citizens and the country such decided advantages over the other, as I have shown it does in my opening remarks? Can that be favorable to liberty which concentrates the money power, and places it under the control of a few powerful and wealthy individuals? It is the remark of a profound statesman, that the revenue is the State; and, of course, those who control the revenue control the State, and those who can control the money power can the revenue, and through it the State, with the property and industry of the country, in all its ramifications. Let us pause for a moment, and reflect on the nature and extent of this tremendous power.

The currency of a country is, to the community, what the blood is to the human system. It constitutes a small part, but it circulates through every portion, and is indispensable to all the functions of life. The currency bears even a smaller proportion to the aggregate capital of the community, than what the blood does to the solids in the human system. What that portion is, has not been, and perhaps can not be, accurately ascertained, as it is probably subject to considerable variations. It is probably between twenty-five and thirty-five to one. I will assume it to be thirty to one. With this assumption, let us suppose a community whose aggregate capital is \$31,000,000; its currency would be, by supposition, one million, and the residue

of its capital thirty millions. This being assumed, if the currency be increased or decreased, the other portion of the capital remains the same, according to the well known laws of currency; property would rise or fall with the increase or decrease; that is: if the currency be increased to two millions, the aggregate value of property would rise to sixty millions; and, if the currency be reduced to \$500,000, it would be reduced to fifteen millions. With this law so well established, place the money power in the hands of single individual, or a combination of individuals, and by expanding or contracting the currency, they may raise or sink prices at pleasure; and by purchasing when at the greatest depression, and selling at the greatest elevation, may command the whole property and industry of the community, and control its fiscal operations. The banking system concentrates and places this power in the hands of those who control it, and its force increases just in proportion as it dispenses with a metallic basis. Never was an engine invented better calculated to place the destiny of the many in the hands of the few, or less favorable to that equality and independence, which lies at the bottom of all free institutions.

These views have a bearing not less decisive on the next inquiry—the effects of the system on the industry and wealth of the country. Whatever may have been its effects in this respect in its early stages, it is difficult to imagine any more mischievous on all of the pursuits of life than the frequent and sudden expansions and contractions to which it has now become so habitually subject, that it may be considered its ordinary condition. None but those in the secret know what to do. All are pausing and looking out to ascertain whether an expansion or contraction is next to follow, and what will be its extent and duration; and if, perchance, an error be committed—if it expands when a contraction is expected, or the reverse, the most prudent may lose by the miscalculation the fruits of a life of toil and care. The effects are to discourage industry, and to convert the whole community into stock-jobbers and speculators. The evil is constantly on the increase, and must continue to increase just as the banking system becomes more diseased, till it shall become utterly intolerable.

But its most fatal effects originate in its bearing on the moral and intellectual development of the community. The great principle of demand and supply govern the moral and intellectual world no less than the business and commercial. If a community be so organized as to cause a demand for high mental attainments, they are sure to be plausible, without containing one particle of real development. If its honors and rewards are allotted to pursuits that require their development by creating a demand for intelligence, knowledge, wisdom, justice, firmness, courage, patriotism, and the like, they are sure to be produced. But, if allotted to pursuits that require inferior qualities, the higher are sure to decay and perish. I object to the banking system, because it allots the honors and rewards of the community, in a very undue proportion, to a pursuit the least of all others favorable to the development of the higher mental qualities, intellectual or moral, to the decay of the learned professions, and the more noble pursuits of science, literature, philosophy, and statesmanship, and the great and more useful pursuits of business and industry. With the vast increase of its profits and influence, it is gradually concentrating in itself most of the prizes of life—wealth, honor, and influence, to the great disparagement and degradation of all the liberal and useful and generous pursuits of society. The rising generation can not but feel its deadening influence. The youths who crowd our colleges, and behold the road to honor and distinction terminating in a banking house, will feel the spirit of emulation decay within him, and will no longer be pressed forward by generous ardour to mount up the rugged steep of science, as the road to honor and distinction, when, perhaps, the highest point he could attain in what was once the most honorable and influential of all the learned professions, would be the place of attorney to a bank.

Nearly four years since, on the question of the removal of the deposits, although I was opposed

to the removal, and in favor of their restoration, because I believed it to be unconstitutional and illegal, yet, foreseeing what was coming, and not wishing there should be any mistake as to my opinion on the banking system, I stated here in my place what that opinion was. I declared that I had long entertained doubts, if doubts they might be called, which were daily increasing, that the system made the worst possible distribution of the wealth of the community, and that it would ultimately be found hostile to the further advancement of civilization and liberty. This declaration was not lightly made; and I have now unfolded the grounds on which they rested, and which subsequent events and reflection have matured into a settled conviction.

With all these consequences before us, shall we restore the broken connection? Shall we again unite the Government with the system? And what are the arguments opposed to these high and weighty objections? Instead of meeting them and denying their truth, or opposing others of equal weight, a rabble of objections (I can call them by no better name) are urged against the separation; one currency for the Government, and another for the people; separation of the people from the Government; taking care of the Government, and not the people; and a whole fraternity of others of like character. When I first saw them advanced in the columns of a newspaper, I could not but smile; in thinking how admirably they were suited to an electioneering canvass. They have a certain plausibility about them, which makes them troublesome to an opponent, simply because they are merely son. I little expected to meet them in discussion in this place; but since they have been gravely introduced here, respect for the place and company excites a passing notice, to which of themselves they are not at all entitled. I begin with that which is first pushed forward, and seems to be most relied on—one currency for the Government and another for the people. Is it meant that the Government must take in payment of its debts, whatever the people take in payment of theirs? If so, it is a very broad proposition, and would lead to important consequences. The people now receive the notes of non-specie-paying banks. Is it meant that the Government should also receive them? They receive in change all sorts of paper, issued by we know not whom. Must the Government also receive them? They receive the notes of banks issuing notes under five, ten, and twenty dollars. Is it intended that the Government shall also permanently receive them? They receive bills of exchange. Shall Government too receive them? If not, I ask the reason. Is it because they are not suitable for a sound, stable, and uniform currency? The reason is good; but what becomes of the principle, that the Government ought to take whatever the people take? But, I go further: It is the duty of Government to receive nothing in its dues, but which it has the right to render uniform and stable in its value. We are by the Constitution made the guardian of the money of the country. For this the right of coining and regulating the value of coins was given, and we have no right whatever to receive or treat any thing as money, or the equivalent of money, the value of which we have no right to regulate. If this principle be true, and it can not be controverted, I ask what right has Congress to receive and treat the notes of the State banks as money? If the States have the right to incorporate banks, what right has Congress to regulate them or their issues? Show me the power in the Constitution. If the right be admitted, what are its limitations, and how can the right of subjecting them to a bankrupt law in that case be denied? If one be admitted, the other follows as a consequence; and yet those who are most indignant against the proposition of subjecting the State banks to a bankrupt law, are the most clamorous to receive their notes, not seeing that the one involves the right of the other. I am equally opposed to both as unconstitutional and inexpedient. We are next told to separate from the banks, is to separate from the people. The banks then are the people; and the people the banks—united, identified, and inseparable; and as the Government belongs to the people, it follows of course, according to this

argument, it belongs also to the banks, and of course is bound to do their biddings. I feel on so grave a subject, and in so grave a body, an almost invincible repugnance in replying to such arguments; and I shall hasten over the only remaining one of the fraternity which I shall condescend to notice, with all possible despatch. They have no right of admission here, and if I were disposed to jest on so solemn an occasion, I should say they ought to be driven from this chamber under the 47th rule.\* The next of these formidable objections to the separation from the banks is, that the Government, in so doing, takes care of itself, and not of the people. Why, I had supposed that the Government belonged to the people; that it was created by them for their own use, to promote their interest, and secure their peace and liberty; that, in taking care of itself, it takes the most effectual care of the people; and in refusing all embarrassing, entangling, and dangerous alliances with corporations of any description, it was but obeying the great law of self-preservation. But enough; I can not any longer waste words on such objections. I intend no disrespect to those who have urged them; yet these, and arguments like these, are mainly relied on to countervail the many and formidable objections, drawn from the highest considerations that can influence the action of Governments or individuals, none of which have been refuted, and many not even denied.

The Senator from Massachusetts (Mr. Webster) urged an argument of a very different character, but which, in my opinion, he entirely failed to establish. He asserted that the ground assumed on this side was an entire abandonment of a great constitutional function conferred by the Constitution on Congress. To establish this, he laid down the proposition, that Congress was bound to take care of the money of the country. Agreed; and with this view the Constitution confers on us the right of coining and regulating the value of coins, in order to supply the country with money of proper standard and value; and is it an abandonment of this right to take care, as this bill does, that it shall not be expelled from circulation, as far as the fiscal action of this Government extends? But having taken this unquestionable position, the Senator passed (by what means he did not condescend to explain) from taking care of the money of the country to the right of establishing a currency, and then to the right of establishing a bank currency, as I understood him. On both of these points, I leave him in the hands of the Senator from Pennsylvania, (Mr. Buchanan,) who, in an able and constitutional argument, completely demolished, in my judgment, the position assumed by the Senator from Massachusetts. I rejoice to hear such an argument from such a quarter. The return of the great State of Pennsylvania to the doctrines of rigid construction and State rights, sheds a ray of light on the thick darkness which has long surrounded us.

But we are told that there is not gold and silver enough to fill the channels of circulation, and that prices would fall. Be it so. What is that compared to the dangers which menace on the opposite side? But are we so certain that there is not a sufficiency of the precious metals for the purpose of circulation? Look at France, with her abundant supply, with her channels of circulation full to overflowing with coins, and her flourishing industry. It is true that our supply is insufficient at present. How could it be otherwise? The banking system has degraded and expelled the metals—driven them to foreign lands—closed the mines, and converted their products into costly vases, and splendid utensils and ornaments, administering to the pride and luxury of the opulent, instead of being employed as the standard of value, and the instrument of making exchanges, as they were manifestly intended mainly to be by an all-wise Providence. Restore them to their proper functions, and they will return from their banishment; the mines will again be opened; and the gorgeous splendor of wealth will again reassume the more humble, but useful, form of coins.

But, Mr. President, I am not driven to such al-

ternatives. I am not the enemy, but the friend of credit—not as the substitute, but the associate and the assistant of the metals. In that capacity, I hold credit to possess, in many respects, a vast superiority over the metals themselves. I object to it in the form which it has assumed in the banking system, for reasons that are neither light nor few, and that neither have nor can be answered. The question is not whether credit can be dispensed with, but what is its best possible form—the most stable, the least liable to abuse, and the most convenient and cheap. I threw out some ideas on this important subject in my opening remarks. I have heard nothing to change my opinion. I believe that Government credit, in the form I suggested, combines all the requisite qualities of a credit circulation in the highest degree and also that Government ought not to use any other credit but its own in its financial operations. When the Senator from Massachusetts made his attack on my suggestions, I was disappointed. I expected argument, and he gave us denunciation. It is often easy to denounce, when it is hard to refute; and when that Senator gives denunciations, instead of arguments, I conclude that it is because the one is plenty, and the other scarce.

We are told the form I suggested is but a repetition of the old continental money—a ghost that is ever conjured up by all who wish to give the banks an exclusive monopoly of Government credit. The assertion is not true: there is not the least analogy between them. The one was a promise to pay when there was no revenue; and the other a promise to receive in the dues of Government, when there is an abundant revenue.

We are also told that there is no instance of a Government paper that did not depreciate. In reply, I affirm that there is none, assuming the form I propose, that ever did depreciate. Whenever a paper receivable in the dues of Government had any thing like a fair trial, it has succeeded. Instance the case of North Carolina, referred to in my opening remarks. The drafts of the Treasury at this moment, with all their incumbrance, are nearly at par with gold and silver; and I might add the instance alluded to by the distinguished Senator from Kentucky, in which he admits that, as soon as the excess of the issues of the Commonwealth Bank of Kentucky were reduced to the proper point, its notes rose to par. The case of Russia might also be mentioned. In 1827, she had a fixed paper circulation, in the form of bank notes, but which were inconvertible, of upwards of \$120,000,000, estimated in the metallic ruble, and which had for years remained without fluctuation, having nothing to sustain it, but that it was received in the dues of the Government, and that, too, with a revenue of only about \$90,000,000 annually. I speak on the authority of a respectable traveller. Other instances, no doubt, might be added; but it needs no such support. How can a paper depreciate which the Government is bound to receive in all payments to it, and while those to whom payments are to be made be under no obligation to receive it? From its nature, it can only circulate when at par with gold and silver; and if it could depreciate, none could be injured but the Government.

But my colleague objects that it would partake of the increase and decrease of the revenue, and would be subject to greater expansions and contractions than bank notes themselves. He assumes that Government would increase the amount with the increase of the revenue, which is not probable, for the aid of its credit would be then least needed; but if it did, what would be the effect? On the decrease of the revenue, its bills would be returned to the Treasury, from which, for the want of demand, they could not be re-issued; and the excess, instead of hanging on the circulation, as in the case of bank notes, and exposing it to catastrophes like the present, would be gradually and silently withdrawn, without shock or injury to any one. It has another and striking advantage over bank circulation, in its superior cheapness, as well as greater stability and safety. Bank paper is cheap to those who make it, but dear, very dear, to those who use it—fully as much so as gold and silver. It is the little cost of

its manufacture, and the dear rates at which it is furnished to the community, which gives the great profit to those who have a monopoly of the article. Some idea may be formed of the extent of the profit, by the splendid palaces which we see under the name of banking houses, and the vast fortunes which have been accumulated in this branch of business; all of which must ultimately be derived from the productive powers of the community, and of course adds so much to the cost of production. On the other hand, the credit of Government, while it would greatly facilitate its financial operations, would cost nothing, or next to nothing, both to it and the people, and of course would add nothing to the cost of production, which would give every branch of our industry, agriculture, commerce and manufactures, as far as its circulation might extend, great advantages, both at home and abroad.

But there remains another and great advantage. In the event of war, it would open almost unbounded resources to carry it on, without the necessity of resorting to what I am almost disposed to call a fraud—public loans. I have already shown, that the loans of the Bank of England to the Government, were very little more than loaning back to the Government its own credit; and this is more or less true of all loans, where the banking system prevails. It was pre-eminently so in our late war. The circulation of the Government credit, in the shape of bills receivable exclusively with gold and silver in its dues, and the sales of public lands, would dispense with the necessity of loans, by increasing its bills with the increase of taxes. The increase of taxes, and, of course, of revenue and expenditures, would be followed by an increased demand for Government bills, while the latter would furnish the means of paying the taxes, without increasing, in the same degree, the pressure on the community. This, with a judicious system of funding, at a low rate of interest, would go far to exempt the Government from the necessity of contracting public loans, in the event of war.

I am not, Mr. President, ignorant, in making these suggestions, (I wish them to be considered only in that light,) to what violent opposition every measure of the kind must be exposed. Banks have been so long in the possession of Government credit, that they very naturally conclude they have an exclusive right to it, and consider the withdrawal of it, even for the use of the Government itself, as a positive injury. I have some experience on this subject. It was my fortune to take a stand on the side of the Government against the banks during the most trying period of the late war—the winter of 1814 and 1815—and never in my life was I exposed to more calumny and abuse—no, not even on this occasion. It was my first lesson on the subject. I shall never forget it. I propose to give a very brief narrative of the scenes through which I then passed; not with any feeling of egotism, for, I trust, I am incapable of that, but to illustrate the truth of much I have said, and to snatch from oblivion not an unimportant portion of our financial history. I see the Senators from Massachusetts, (Mr. Webster,) and of Alabama, (Mr. King,) who were then members of the House of Representatives, in their places, and they can vouch for the correctness of my narrative, as far as the memory of transactions so long passed will serve.

The finances of the country had, at that time, fallen into great confusion. Mr. Campbell had retired from the head of the Treasury, and the late Mr. Dallas had succeeded—a man of talents, bold and decisive, but inexperienced in the affairs of the Department. His first measure to restore order, and to furnish the supplies to carry on the war, was to recommend a bank of \$50,000,000, to be constituted almost exclusively of the new stocks which had been issued during the war, to the exclusion of the old, which had been issued before. The proposed bank was authorized to make loans to the Government, and was not bound to pay specie during the war, and for three years after its termination.

It so happened that I did not arrive here till some time after the commencement of the session, having been detained by an attack of bilious fever. I had taken a prominent part in the declaration of

\*NOTE.—It is the rule regulating the admission of persons in the lobby of the Senate.

the war, and had every motive and disposition to sustain the administration, and to vote every aid to carry on the war. Immediately after my arrival, I had a full conversation with Mr. Dallas, at his request. I entertained very kind feelings towards him, and assured him, after he had explained his plan, that I would give it my early and favorable attention. At that time I had reflected but little on the subject of banking. Many of my political friends expressed a desire that I should take a prominent part in its favor. Their extreme anxiety roused my attention, and being on no committee, (they had been appointed before my arrival,) I took up the subject for a full investigation; with every disposition to give it my support. I had not proceeded far before I was struck with the extraordinary character of the project: a bank of \$50,000,000, whose capital was to consist almost exclusively of Government credit in the shape of stock, and not bound to pay its debts during the war and for three years afterwards, to furnish the Government with loans to carry on the war! I saw at once that the effect of the arrangement would be, that Government would borrow back its own credit, and pay six per cent. per annum for what they had already paid eight or nine. It was impossible for me to give it my support under any pressure, however great. I felt the difficulty of my situation, not only in opposing the leading measure of the administration at such a crisis, but what was far more responsible, to suggest one of my own, that would afford relief to the embarrassed Treasury. I cast my eyes around, and soon saw that the Government should use its own credit directly, without the intervention of a bank; which I proposed to do in the form of Treasury notes, to be issued in the operations of the Government, and to be funded in the subscription to the stock of the bank. Treasury notes were, at that time, below par, even with bank paper. The opposition to them was so great, on the part of the banks, that they refused to receive them on deposit, or payment, at par with their notes; while the Government, on its part, received and paid away notes of the banks at par with its own. Such was the influence of the banks, and to such degradation did the Government, in its weakness, submit. All this influence I had to encounter, with the entire weight of the administration thrown into the same scale. I hesitated not. I saw the path of duty clearly; and determined to tread it, as sharp and rugged as it was. When the bill came up, I moved my amendment, the main features of which were, that, instead of Government stock already issued, the capital of the bank should consist of funded Treasury notes, and that, instead of a mere paper machine, it should be a specie paying bank, so as to be an ally, instead of an opponent, in restoring the currency to a sound condition on the return of peace. These were, with me, indispensable conditions. I accompanied my amendment with a short speech of fifteen or twenty minutes; and so overpowering was the force of truth, that notwithstanding the influence of the administration, backed by the money power, and the Committee of Ways and Means, which was unanimous, with one exception, as I understood, my amendment prevailed by a large majority; but it in turn failed—the opposition, the adherents of the administration, and those who had constitutional scruples, combining against it. Then followed various but unsuccessful attempts to charter a bank. One was vetoed by the President, and another was lost by the casting vote of the Speaker, (Mr. Cheves.) After a large portion of the session was thus unsuccessfully consumed, a caucus was called, in order to agree on some plan, to which I and the few friends who still adhered to me, after such hard service, were especially invited. We of course attended. The plan of compromise was unfolded, which approached much nearer to our views, but which was still objectionable in some features. I objected, and required further concessions, which were refused, and was told the bill could be passed without us; at which I took up my hat and bid good night. The bill was introduced in the Senate, and speedily passed that body. On the second reading, I rose and made a few remarks, in which I entreated the House to remem-

ber that they were about to vote for the measure against their conviction, as had been frequently expressed; and that in so doing, they acted under a supposed necessity, which had been created by those who expected to profit by the measure. I then reminded them of the danger of acting under such pressure, and I said that they were so sensible of the truth of what I uttered, that if peace should arrive before the passage of the bill, it would not receive the support of fifteen members. I concluded by saying, that I would reserve what I intended to say on the question of the passage of the bill, when I would express my opinion at length, and appeal to the country. My objections had not gone to the people, as nothing that I had said had been reported—such was my solicitude to defeat the bill, without extending our divisions beyond the walls of the House, in the then critical condition of the country. My object was to arrest the measure, and not to weaken confidence in the administration.

In making the supposition, I had not the slightest anticipation of peace. England had been making extensive preparations for the ensuing campaign, and had made a vigorous attack on New Orleans, but had just been repelled; but, by a most remarkable coincidence, an opportunity (as strange as it may seem) was afforded to test the truth of what I said. Late in the evening of the day I met Mr. Sturges, then a member of Congress from Connecticut. He said that he had some information which he could not withhold from me; that a treaty of peace had been made, and that it had actually arrived in New York, and would be here the next day; so that I would have an opportunity of testing the truth of my prediction. He added that his brother, who had a mercantile house in New York, had forwarded the information to him by express, and that he had forwarded the information to connected houses in the southern cities, with direction to purchase the great staples in that quarter, and that he wished me to consider the information as confidential. I thanked him for the intelligence, and promised to keep it to myself. The rumor, however, got out, and the next day an attempt was made to pass through the bill; but the House was unwilling to act till it could ascertain whether a treaty had been made. It arrived in the course of the day, when, on my motion, it was laid on the table, with less than fifteen votes against the motion; and I had the gratification of receiving the thanks of many for defeating the bill, who, a short time before, were almost ready to cut my throat for my persevering opposition to the measure. An offer was then made to me to come to my terms, which I refused, declaring that I arose in my demand, and would agree to no bill which should not be formed expressly with the view to the speedy restoration of specie payments. It was afterwards postponed, on the conviction that it could not be so modified as to make it acceptable to a majority. This was my first lesson on banks. It has made a durable impression on my mind.

My colleague, in the course of his remarks, said he regarded this measure as a secret war waged against the banks. I am sure he could not intend to attribute such motives to me. I wage no war, secret or open, against the existing institutions. They have been created by the legislation of the States, and are alone responsible to the States. I hold them not answerable for the present state of things, which has been brought about under the silent operation of time, without attracting notice, or disclosing its danger. Whatever legal or constitutional rights they possess, under their charters, ought to be respected; and if attacked, I would defend them as resolutely as I now oppose the system. Against that I wage, not secret, but open and uncompromising hostilities, originating not in opinions recently or hastily formed. I have long seen the true character of the system, its tendency, and destiny, and have looked forward for many years, as many of my friends know, to the crisis in the midst of which we now are. My ardent wish has been to effect a gradual change in the banking system, by which the crisis might be passed without a shock, if possible; but I have been resolved for many years, that should it arrive in my time, I would discharge my duty, however great the difficulty and danger.

I have, thus far, faithfully performed it, according to the best of my abilities, and with the blessing of God, shall persist, regardless of every obstacle, in performing with equal fidelity to the end.

He who does not see that the credit system is on the eve of a great revolution, has formed a very imperfect conception of the past, and anticipation of the future. What changes it is destined to undergo, and what new form it will ultimately assume, are concealed in the womb of time, and not given us to foresee. But we may perceive in the present, many of the elements of the existing system which must be expelled, and others which must enter it in its renewed form.

In looking at the elements at work, I hold it certain, that in the process there will be a total and final separation of the credit of Government and that of individuals, which have been so long blended. The good of society, and the interests of both, imperiously demand it, and the growing intelligence of the age will enforce it. It is unfair, unjust, unequal, contrary to the spirit of free institutions, and corrupting in its consequences. How far the credit of Government may be used in a separate form, with safety and convenience, remains to be seen. To the extent of its fiscal action, limited strictly to the function of the collection and disbursement of its revenue, and in the form I have suggested, I am of the impression it may be both safely and conveniently used, and with great incidental advantages to the whole community. Beyond that limit I see no safety, and much danger.

What form individual credit will assume after the separation, is still more uncertain; but I see clearly that the existing fetters that restrain it will be thrown off. The credit of an individual is his property, and belongs to him as much as his land and houses, to use it as he pleases, with the single restriction, which is imposed on all our rights—that they are not to be used so as to injure others. What limitations this restriction may impose, time and experience will show; but whatever they may be, they ought to assume the character of general laws, obligatory on all alike, and open to all; and under the provisions of which all may be at liberty to use their credit jointly or separately, as freely as they now use their land and houses, without any preference by special acts, in any form or shape, to one over another. Every thing like monopoly must ultimately disappear before the process which has begun will finally terminate.

I see not less clearly, that in the process a separation will take place between the use of capital and the use of credit. They are wholly different, and under the growing intelligence of the times, can not much longer remain confounded in their present state of combination. They are as distinct as a loan and an endorsement; in fact, the one is but giving to another the use of our capital, and the other the use of our credit; and yet so dissimilar are they, that we daily see the most prudent individuals lending their credit for nothing, in the form of endorsement, or security, who would not loan the most inconsiderable sum without interest. But as dissimilar as they are, they are completely confounded in banking operations, and which is one of the main sources of the profit, and the consequent dangerous flow of capital in that direction. A bank discount, instead of a loan, is very little more, as I have shown, than a mere exchange of credit—an exchange of the joint credit of the drawer and endorser of the note discounted for the credit of the bank in its own note. In the exchange, the bank insures the parties to the note discounted, and the community, which is the loser if the bank fails, virtually insures the bank; and yet, by confounding this exchange of credit with the use of capital, the bank is permitted to charge an interest for this exchange, rather greater than an individual is permitted to charge for a loan, to the great gain of the bank, and loss to the community. I say less; for the community can never enjoy the great and full benefit of the credit system, till loans and credit are considered as entirely distinct in their nature, and the compensation for the use of each be adjusted to their respective nature and character. Nothing would give a greater impulse to all the business of society. The superior cheapness of credit would add incalcula-

bly to the productive powers of the community, when the immense gains, which are now devised by confounding them, shall come in aid of production.

Whatever other changes the credit system is destined to undergo, these are certainly some which it must; but when and how the revolution will end—whether it is destined to be sudden and convulsive, or gradual and free from shock, time alone can disclose. *Much will depend on the decision of the present question, and the course which the advocates of the system will pursue.* If the separation takes place, and is acquiesced in by those interested in the system, the prospect will be, that it will gradually and quietly run down, without shock or convulsions, which is my sincere prayer; but if not—if the reverse shall be insisted on, and, above all, if it should be effected through a great political struggle, (it can only be so effected,) the revolution would be violent and convulsive. A great and thorough change must take place. It is wholly unavoidable. The public attention begins to be roused throughout the civilized world to this all absorbing subject. There is nothing left to be controlled but the mode and manner, and it is *better for all* that it should be gradual and quiet than the reverse. All the rest is destiny.

I have now, Mr. President, said what I intended without reserve or disguise. In taking the stand I have, I change no relation, personal nor political, nor alter any opinion I have heretofore expressed or entertained. I desire nothing from the Government or the people. My only ambition is to do my duty, and shall follow wherever that may lead, regardless alike of attachments or antipathies, personal or political. I know full well the responsibility I have assumed. I see clearly the magnitude and the hazard of the crisis, and the danger of confiding the execution of measures in which I take so deep a responsibility, to those in whom I have no reason to have any special confidence. But all this deters me not, when I believe that the permanent interest of the country is involved. My course is fixed. I go forward. If the administration recommend what I approve on this great question, I will cheerfully give my support; if not, I shall oppose; but, in opposing, I shall feel bound to suggest what I believe to be the proper measure, and which I shall be ready to back, be the responsibility what it may, looking only to the country, and not stopping to estimate whether the benefit shall enure either to the administration or the opposition.

#### SPEECH OF MR. GHOLSON, OF MISSISSIPPI,

*In the House of Representatives, October 8, 1837*—On the proposition of Mr. Underwood to amend the bill reported by the Committee of Ways and Means, to authorize the President of the United States to issue \$10,000,000 in Treasury notes, so as to defer the issue of the Treasury notes, except for the amount of \$3,500,000, until after the Government bonds held by the Bank of the United States shall have been sold: *Provided*, That, if those bonds are not sold at the expiration of three months, then the Treasury notes, to the amount of \$10,000,000, are to be issued, as proposed in the bill.

Mr. GHOLSON took the floor, and addressed the House substantially as follows:

MR. SPEAKER: If, by remaining in my seat, I believed the vote on the amendment proposed by the gentleman from Kentucky, (Mr. Underwood,) or on the bill itself, would be taken at an earlier period, I surely would content myself with giving a silent vote, however anxious I may be, or may have been, to express my views. I am in bad health, worn down with previous labor, and find myself but illy calculated for the effort of debate. The course of the whigs on this floor, ever since the commencement of the session, has assured me that their object is, and has been, that this House shall not act on any bill likely to relieve the embarrassments of the country.

Sir, I am justified in saying that the object of the whigs is, and has been, to keep up excitement

in the country, and add embarrassment to the already embarrassed condition of the Government and the people. When this session first commenced, we were told by the gentleman from Tennessee, (Mr. Bell,) and the gentleman from Virginia, (Mr. Wise,) who are regarded by me and by the country as the oracles of the whig party, that they had no measures of their own to bring forward to relieve the Union. The gentleman from Virginia went further. He requested or directed his whig allies to bring forward no measure to relieve the country. He said that, for one, he would let the country groan on; that it was not the intention of the administration party here to carry out the recommendations of the President; and even went so far as warn my friend from South Carolina (Mr. Pickens) to be on his guard, lest he were arrested and shot as a deserter. Being how hard pressed in this quarter, and this bill (which has been so bitterly denounced) being likely to be finally voted on before the close of the session, he calls in the aid of his ally from Tennessee, (Mr. Bell,) and solicits that gentleman to aid him in occupying the time of the House with fruitless discussion and rapid denunciation until the close of this extraordinary session; and thus prevent what is so much dreaded by both gentlemen—that relief which the country so imperiously demands, and which, if we possess the power, we are bound to afford to it.

Well, sir, the gentleman from Tennessee has not been unmindful of the appeal of the gentleman from Virginia. He has promptly obeyed the mandate, and has gone to his aid; and with the skill and management of a political grimalkin, he consumed the whole of Saturday in discussing a motion that he never intended should be voted on; and after a day and a part of the night had been consumed by descanting on that time-killing motion, the gentleman from Ohio (Mr. Whittlesey) came forward, and asked the gentleman from Tennessee to withdraw his motion. The request was instantly complied with, thus conclusively proving, to my mind, that the whole design and object of the gentleman was, and is, confusion, excitement, embarrassment, not action or relief to the Government or the people.

Sir, we have now progressed on this legislative journey till we have reached the last week of the session. And what, Mr. Speaker, let me ask, have we, the administration party, been permitted to do? By our untiring exertions we have got one little bill through the House! The suffering people have a right to know to whom this delay, this waste of time, of money, this trifling with their rights and interests, is to be ascribed. Sir, this remissness, this flagrant injustice, and wanton dereliction of duty, can not, and must not, be charged to the administration party; for if the whigs, as they avow, have no projects or plans of relief of their own, why have they not permitted us to carry out those plans of the administration, which we stand ready to execute? Is it because they fear the country will be relieved?

What, sir, said the gentleman from Tennessee, (Mr. Bell,) when he came forward, on Saturday, with his time-killing project? He said he had told the people, "the dear people," just before the election—at a time when he undoubtedly cherished a very warm and tender feeling of regard for the people—that it would be in the power of the administration to relieve the country in sixty days at furthest! Well, sir, why does not the gentleman bring forward the plan that he suggested to his constituents? Is he not bound to do so, if he believes what he has said in relation to the plans set forth in the President's Message? Surely he is. When he undertakes to say that the schemes suggested in the President's Message are wild and visionary, and impracticable, have we not a right to expect from him some plan that will, according to his own views, afford relief, practicable relief—a plan that is in itself practicable and reasonable? What was the vast and wonderful scheme that the honorable gentleman suggested to the people of his district? He says that it was a scheme to force the Government to take up the \$100,000,000 of irredeemable bank paper now afloat in the country! Indeed, sir!

Mr. Speaker, common sense, the commonest

reasoning, and the teachings of every day's experience and observation, all go to prove the utter impracticability of the proposition. I have too high a regard for the gentleman's intelligence, to believe, for a single moment, that he believes in the practicability of any such project. Those banks which have flooded the country with a redundant paper circulation, have failed, and their paper become worthless in the hands of the people, at the very time when they were sustained by all the resources of this mighty and munificent Government daily poured into their vaults. They failed, sir, when they were sustained, not only by the Government, but by the confidence of the whole American people, and by that still stronger power, public opinion. If they failed under the existence of such props and such patronage—if they could not exist as organic bodies, and perform the functions required of them by law and by their charters, under the existence of circumstances so favorable—and if their paper, as we all know to be the fact, has depreciated fifteen per cent. how much more signal and complete must be their failure, when they do not and can not obtain the confidence of the people?

Sir, I defy the Government to give the people confidence in these banking institutions. They have already failed, and without the confidence of the people, they can not be resuscitated; they can not sustain themselves.

Mr. Speaker, who, let me inquire, ever heard of a Government like ours, in a time of profound peace, dealing in paper known to be depreciated, and attempting to make that paper the circulating medium of the country? Do we not all know that this plan is wild, visionary, impracticable, and unheard of? I know, sir, the gentleman from Tennessee does not believe it practicable; if he did, he would bring it forward in a tangible shape. I have too much confidence in his ability as a statesman, too much confidence in his intelligence as a financier, to do him the injustice of believing him at all in favor of the plan of which he has spoken.

The causes that have moved the gentleman from Tennessee in this matter, are easily divined; nay, they cannot be misunderstood. He had said something on this subject to the people of his district, to his constituency if you please, and he wished to consume the time of this House, above all, he wished to aid the federal bank party in this House, and to attain his ends, he came out with the plans on which I have animadverted, and hoped to impose on the country. I say this, for this further reason, that the whole course of the opposition, with whom the gentleman from Tennessee is acting, has been directed to the single and sole purpose of preventing any thing being done by the administration to relieve the country. They are influenced in their course by the belief that if they can keep up the present excitement in the country, they can force from the necessities of the people the recharter of the United States Bank, or a national bank subservient to their wishes. They know that this question has been again and again submitted to the people, and the PEOPLE, after calm deliberation and reflection, have decided that they will not have a bank. But, not satisfied with the unqualified expression of the people's voice, they still cling with tenacity to the desperate hope, that has been made to tell its "flattering tale," by the present unnatural excitement and derangement that now pervades every section of the country. They know that if the country is relieved, and the present excitement can be quelled, their hopes of a national bank will be laid prostrate. And this is the reason, Mr. Speaker, this struggle has been so desperate; this, sir, is the reason that the cry of Executive Bank, has been sounded through this hall; this is the reason that we have been so often boastfully told, that unless a national bank were incorporated, the country would be convulsed. This is the true and only reason that exists for the cry we have so often heard, that this bill will sap the liberties of the country; that by means of this Executive bank, the President would be enabled to place his foot on the necks of the people. This cry has been raised because gentlemen know that a bank is yet unpopular; and they hope to prejudice the country against this bill before it passes, by calling it an Executive bank bill. Sir, they seek to frighten us by telling us that when

we give our assent to this bill we give our assent to a measure that is to convulse the country. For one, Mr. Speaker, let me tell gentlemen, that names have no terror for me. I have no fear that this bill will enable the President to place himself above the Constitution and the people; I am not so timid that I can be alarmed by such bug-bear appeals to my courage.

But why, let me ask, have we this constant cry of *bank, bank*, from the known bank party on this floor? It has been said that this bill was intended to defeat a National Bank. I am willing to place it on that issue before the American people; I will, and do, hereby declare my assent to this measure, humble as gentlemen say it is, and at the same time I avow my decided opposition to any national bank. And, sir, if convulsions, anarchy and confusion are to be the consequences of our refusal to charter a national bank, let them come, and I shall be prepared to meet them. Sir, I have stated that names have no terror for me. I am in favor of this bill. I wish these Treasury notes to enter into the circulation of the country, and if they do get into circulation, depend upon it, sir, the one-half of your embarrassments will be removed at the instant they find their way from the hands of the Secretary. This bill has no similitude to a bank, Mr. Speaker, and if gentlemen attempt to distort it into any thing of the kind, they will get their labor for the pains. The Treasurer, under it, has no power to issue bills, except as the creditors of the Government may require them. The passage of the bill will not enable the Secretary of the Treasury to throw thousands and millions of paper into circulation in a day, by which the price of property, and of labor, and of every thing else, will receive fictitious valuations, and then by suddenly withdrawing the circulation, depress the price of the same substances and properties far beneath their intrinsic value.

Mr. Speaker, I respectfully ask gentlemen to do me the favor of pointing out the resemblance that this bill bears to a bank; I ask them to particularly point out the characteristics by which they are enabled to determine that this is an Executive bank.

The next direct attack made upon this bill, is the one now pending in favor of that defunct monster, the late United States Bank, offered by the gentleman from Kentucky, (Mr. Underwood.) This amendment, has, I believe, been already twice rejected by this House, and is now properly out of order. But, as I am no stickler for points of order, I will make no question of that sort. This amendment, like the late United States Bank, is no sooner defeated in one shape, than it rises in another. By this amendment, it is proposed to offer in lieu of the bill, the bonds executed by the late United States Bank to this Government, in that institution. Then it is proposed to throw into the market in these times of general depression, \$6,000,000 of bank bonds due in the course of the next four years, payable by instalments of \$2,000,000, bearing interest from the date of their execution. Now, sir, who are to be the purchasers? We know in these times of general distress, no individual, and scarcely any incorporation, has the ability to make such a purchase. Then if these bonds are thus untimely thrown into the market, the Government must and will sustain an immense loss. The old bank may or may not be the bidder for these bonds. The course that that institution has heretofore, and is now pursuing, is this: A short time after the suspension of specie payments, that bank threw into the market \$5,000,000 of bank bonds, or post notes, payable at a future day in England. These bonds or notes were sold in the market for a premium of five per cent. The agents of the bank proceeded to the cotton-growing States, and with the notes of the Pennsylvania Bank of the United States bought cotton to meet these bonds. The notes of the institution commanded a premium, owing to the immense debt due from the South and West to the eastern and northern cities. The fund upon which these \$5,000,000 was first drawn, having been exhausted, this is the game that is now being played off by Mr. Biddle on the South. He has his agents there, selling the notes of the old bank, which neither the United States Bank of

Pennsylvania, nor any other institution, is bound to redeem. This paper, in these times of distrust and oppression, commands a premium over the local bank paper of the country. It first passes into the hands of our southern merchants, they paying a premium for it of about 15 per cent. above local bank paper. The merchants pay it over to the agents of the northern merchants, who are literally swarming like hungry locusts through the country; who, knowing its utter worthlessness, and that no one is bound to redeem it, immediately sell it for local bank paper at a premium. With this paper they buy cotton. In this way, one set of these irredeemable notes buys the cotton of the whole neighborhood at a discount of at least 15 per cent. Thus is the ghost of this institution enabled to plunder my constituents out of 15 per cent. of their labor.

This system of plundering the South, so long practised by the northern capitalists, has enabled that section of the country, through the agency of the institution of which I speak, to play a game that must be suspended, and it is to an evil so monstrous that I am anxious to apply a remedy. This can be done effectually by the rejection of the amendment and the passage of the bill. In this way, this institution will be driven out of the market; for when the notes proposed to be issued by this bill enter, as they will, into the circulation of the country, the worthless paper of this insolvent institution referred to, will be banished from circulation.

Mr. Speaker, the gentleman from Tennessee (Mr. Bell) complains that I have no right to place the construction on his acts that I have so freely and fully expressed; and, sir, he has added that I have expressed opinions in reference to him that are not justifiable by facts. Sir, I must be allowed to tell that gentleman that the actions and conduct of public men in this hall are, and of right should be, public property. As such, I have a right to come to my own conclusions in relation to them. Having formed my opinions as to the moving cause for the conduct of that gentleman in the present instance, I have taken the liberty to express those opinions, and I claim the right of doing so. Sir, I should be sorry to do any gentleman an act of injustice: I have misstated no matter of fact; and if I have otherwise done the gentleman injustice, I shall be found at all times ready to render him the most prompt and adequate satisfaction.

Mr. Speaker, the gentleman has taken occasion to say something in relation to the interest of my constituents. Now, sir, I will tell the gentleman that I am their representative, and that if I misrepresent them I am accountable to them for the act. Therefore, neither they or we require any aid or advice from the gentleman from Tennessee.

I know, sir, that I represent a suffering people, a people who are immensely in debt; but, thank God! we have a climate, a soil, and a production, that, when added to the never-ceasing vigilance of our people, will enable us to pay, in a short time, a larger debt than can be extinguished by any other people of the globe.

Much, sir, has been said about the immense debt our banks owe the Government, and not a little has been said and insinuated about the alleged insolvency of those institutions. Sir, I ask gentlemen, before they make any more assertions on this subject, to examine into the true situation of our banks. I make the assertion, without fear of contradiction, that our banks, THE BANKS OF THE STATE OF MISSISSIPPI, have as large an amount of assets in their possession as any banks in this Union which have not a greater circulation afloat. I have no doubt they are as solvent, and will resume specie payments as soon, as any banks in the Union having at the time of the suspension as large a circulation as they had.

But it is said the banks have asked for indulgence. I say it is untrue. If they have asked indulgence I am not informed of it. I, on my own responsibility, asked indulgence for them in order that I might favor their debtors. Now, sir, if the gentleman from Tennessee (Mr. Bell) with his proclaimed charity for my constituents, will aid me in keeping the hands of this Government off of

our banks for a short time, he will render us good service. Any attempt to force these banks to pay their debts unnaturally oppresses the debtor's interest. Whenever the Government presses the banks, it presses its own debtors, and thus the Government directly oppresses the people.

If the Government continues, according to the suggestions of the gentleman from Tennessee, who is so charitable, to draw on our banks, these drafts must, for some time to come, come back protested. This will keep down our money, and force us to pay the highest premium that we have heard so much talked of.

Sir, I care but little for those banks as mere corporations, but I have a great good feeling for the people who are in their power. You have relieved the balance of your Government debtors, and why not relieve them also? I am sure they are as meritorious as your northern merchants. Now, sir, the passage of this bill, without the amendment, appears to me to be the only means by which the country can be relieved. It is the only hope I have for our banks soon resuming specie payments; for, when this bill shall have passed, the Government will be relieved. Ten millions will be liable to be gradually thrown into circulation. You can then give our banks reasonable time; and thus the whole will be accommodated.

Sir, the gentleman from Tennessee (Mr. Bell) said something about forcing the Government into terms. What terms does he mean? The terms of these irresponsible banks? If these are his terms—if a submission on the part of this administration to the dictations of these banks are the terms upon which we are to buy the peace of the country, it is such a peace as I do not want. If this is the way that quiet in this land is to be kept, let us have the confusion of which we have heard so much since the commencement of the session. I think the sooner it comes, the better.

Sir, has it come to this, in this land of liberty and of law, that these banks can, and will, dictate to an American Congress? Are we to be no longer independent? Are we to be forced to ask these most soulless corporations what we shall do, and what we shall not do? Surely not yet. This is the direct policy of the bank party on this floor. I am prepared to record my vote; I am prepared to meet the crisis, and share my fate. I have no fears of the result.

Mr. Speaker, I had intended to have proceeded further in discussing these topics, but I find myself unable, from exhaustion and debility, to go on any further.

## REMARKS MR. HUBBARD, OF NEW HAMPSHIRE,

In Senate, October, 11, 1837.—On the bill to revoke the charters of certain banks in the District of Columbia.

MR. HUBBARD remarked that before the motion of the Senator from Massachusetts to strike out the first and second sections of the bill shall be voted upon, he should propose amendments, and his motion to amend the sections, takes precedence of the motion to strike out. He felt an entire confidence that the bill could be amended, so as to make it entirely acceptable to the banks in this city. He was well satisfied that there was no disposition in this body, nor was there any feeling among the members of the Committee on Finance, to harass or in any way to incommode the District banks. The committee felt it to be their duty to present the subject to the consideration of the Senate. It was here that Congress possessed the necessary jurisdiction. The banks created by their legislation, had all suspended specie payments; they had done no more than the other banks of the country had done; but it was here, and here alone, that Congress could act with effect; and Congress was now in session, and it seemed to the committee to be not only in itself proper, but in a measure indispensable, for Congress to consider the course which the institutions established by their power had taken, and to see if there was an unavoidable necessity for the action of the banks. No one doubted that

these local banks had violated their charters by refusing to redeem their notes with specie, when demanded; and yet there may have been such a controlling necessity for this measure, as would exonerate the banks from censure. The committee then had reported the bill now before that body as a measure called for by existing circumstances, by the exigency of the times; a measure due to the banks themselves, and due also to this community. But, sir, the committee felt no unkindness towards these banking institutions. The measure they have recommended would, if adopted, have a most salutary influence. He had no belief that the banks in this District could resume specie payments, while the banks of the surrounding States continued to refuse the redemption of their paper.

But if Congress should require the banks within their jurisdiction to resume specie payments within a limited time, it could not fail to produce upon the whole country a most happy and beneficial effect. It would induce a corresponding action in the several States; and, so far from expecting that the banks will be able within thirty or sixty days to resume specie payments, be believed that the Committee on Finance would sanction the proposition for amendment which he intended to make. He would move to strike out in the sixth line of the first section the words "sixty days," and to insert the words "four months;" and in the eighth line to strike out the word "thirty," and insert the word "sixty." If these amendments should be agreed to by the Senate, the banks would have sufficient time, it is believed, to resume specie payments, as the section would then require. He was satisfied that the banks in this city were in as good condition to resume specie payments as the other banking institutions of the country. The last official returns from these banks show this; and he had no hesitation in saying that those who had the direction of the banks in this city, as far as his knowledge extended, were anxious to have the banks resume specie payments. But it must occur to every man conversant with this subject, that the means of resuming specie payments must be drawn from the debtors of the banks. For it can not be questioned that the extent of bank credits has involved the banks in their present calamities—and as soon as this bank credit shall be in a measure cancelled—as soon as the debtors of the banks shall be able to satisfy their liabilities, then will the banks be able to fulfil their obligations to the people. The fact can not be denied, that the banks must be able to withdraw a portion of their paper circulation, before they can safely resume specie payments. This can only be accomplished through the agency and instrumentality of the debtors to these institutions. The banks in this District, and throughout the country, have, since May last, greatly curtailed their paper circulation. Their discounts have been, within that period, much reduced; and the time can not be far distant when these banks will be perfectly able to resume specie payments. As far as his own knowledge extended, and he had endeavored to make himself acquainted with the fact, these banks have had no connection with the manufacture of paper money of a less denomination than five dollars; if they have received the bills of other corporations of a small denomination, the fact is undeniable that the banks themselves are not justly obnoxious to the charge of making any such paper currency. Whether these banks can be justified in issuing small bills, he would not pretend to say; but the banks have not considered themselves as acting in the violation of their charters to receive and to pay out these small bills of other corporations; certain the fact is, that the banks have, in no instance, been guilty of manufacturing bills of a less denomination than five dollars. He was anxious to have his amendment adopted, and the sections, as amended, passed. He was persuaded that the effect here and elsewhere would be most salutary. He was also much in favor of an immediate action upon the third section of the bill: the interest and the well-being of this people demanded this measure at our hands. The state of the currency in the District of Columbia was such, that every Senator must feel himself called upon to correct this gross evil. And, sir, he did hope that

something would now be done. He thought the best interests of the banks demanded it, and that the best interests of this community demanded it; and if no other part of the bill could be acted on for want of time, he trusted that the knowledge of the present paper currency in this District would induce an immediate action upon the third section of the bill.

### REMARKS OF MR. BRONSON, OF NEW YORK,

*In the House of Representatives, October 7, 1837*—On the bill to authorize the issuing of Treasury notes; and on the motion of Mr. BELL of Tennessee to strike out the enacting clause of the bill.

Mr. BRONSON said he felt unwilling that the question should be taken on this motion now pending, and that the bill should finally pass from this House, without giving his views upon the measure under consideration; and, from the peculiar character which this debate had now assumed, and particularly since the remarks of the honorable gentleman from Tennessee, Mr. Bronson said he felt more strongly impelled to state some of the reasons which would influence his vote, and which rendered it clear to his mind that the bill under consideration should become a law. I have (said Mr. B.) regarded this measure as one peculiarly calculated to relieve the pecuniary distresses of the country generally, and to benefit the people, as well as to furnish immediate aid to the Treasury; as one which has been viewed in that light by all parties in and out of this House; and even till within the last forty-eight hours, I did not consider that there was any serious opposition to an issue of Treasury notes, or Government stock, in some form. On my journey to this city, I frequently heard it suggested that such a measure would be eminently calculated to give relief, and one which Congress should adopt by all means, if practicable; and, what is worthy of remark, these suggestions, in almost all instances, came from the opposition—from the political friends of those who are now opposing this bill on this floor. After my arrival here, the project was frequently spoken of, and always with favor; in fact, a sentiment decidedly friendly to the measure prevailed here, so far as I heard any expression on the subject, (with one or two exceptions,) until about forty-eight hours ago, and after this bill had been some time under discussion, when suddenly it seemed that new light had broken in upon this matter. Yesterday morning, Mr. Speaker, we heard from New York that specie had fallen in that great commercial mart—that Treasury drafts were worth as much all to about 1 per cent. as specie—stocks rising and trade apparently reviving. There was also, Mr. Speaker, every reason for the public then to suppose, not only that this bill would pass, but that the duty bonds would be extended and further time given to the deposit banks to pay the balances due from them as provided by the bills on your table. Now, sir, it is a little singular that on the receipt of this news, and when it would seem that better times were dawning upon the country, when business appeared to be reviving, and when this and other measures recommended by the Executive, which it might be supposed would pass this House, appeared to have the effect to allay excitement and restore confidence, I say it is singular, sir, at such a moment, that a most vigorous effort is suddenly made to defeat this bill, and prevent the issue of Treasury notes, which, on all hands, so far as I have understood, has been viewed as a measure so well calculated for the relief of the country. We have heard much, sir, on the subject of the Government taking care of itself without any care for the people. The measures recommended by the administration have been denounced on this floor as having a single eye to that object, and it has been made matters of complaint here that no measures of relief for the people were proposed. This, however, has been looked upon as a measure calculated to relieve the people as well as the Government; as a measure that would throw into circulation ten millions of dollars, which would be equal to so much addition to the

specie capital of the country—furnishing great facilities, either as remittances or domestic exchanges, particularly to all classes of the commercial community. And yet, sir, the moment there is a prospect that this measure will be adopted, and carried too as an administration measure, the whole opposition party are arraigned against it; and unless I have entirely misunderstood the scope and tenor of this debate, their hostility to the measure, if it did not originate on reception of the news from New York above alluded to, it did, at least, then assume a more vigorous, obstinate, and powerful shape, so much so as to impress upon my mind most strongly the belief that there was some connection between the cause and effect.

Did gentlemen of the opposition suppose that if this bill passed it would immediately give relief, restore confidence, and redound to the credit of the administration? That such will be the effect to a very great extent, I have no doubt; and I had hoped that this consideration might not be entirely overlooked by the opponents of this bill—or if noted by them, that it would not add zeal to their opposition. I hope it has not.

My Speaker: I have listened to the debates on this bill, and given them all due attention; and the various objections which have been raised in the progress of this discussion against an issue of Treasury notes, have received from me attentive consideration.

I was in favor of the project from the first, if the state of the Treasury was such as to warrant it, and I have heard nothing yet which to my mind is a sufficient objection against it. Let us look for a moment to the ground which we occupy in relation to this matter, and the point at which we have arrived in this discussion.

Is it not, sir, a conceded point that the Treasury is nearly or quite exhausted—that in a short time it will be necessary to raise money, either by loan or otherwise, unless the unavailable funds now in hand can be realized? I shall not here go into a review of the financial condition of the country, or the state of the Treasury, as exhibited by the Secretary's report, or the various explanations of that report, which have been made on this floor. I assume the position that there is no money in the Treasury, or that such will be the case very shortly—and that money is needed to carry on the operations of the Government. We are told so by the Secretary of the Treasury, and by the chairman of the Committee of Ways and Means. The whole of this debate has proceeded upon that supposition; and with the exception of the honorable gentleman from Tennessee, (Mr. Bell) and perhaps one or two others such has been allowed to be the true state of the Treasury by all who have addressed the House on this subject. There can be no question that such is the fact, and the point that is now presented is simply, in what manner shall we replenish the Treasury; I say merely ~~the~~ Treasury, and not an exhausted or bankrupt Treasury; for, sir, we have ample resources, as soon as they can be realized, without resorting to taxes or duties. It is only necessary to resort to some temporary expedient to enable the Government to go on and to furnish the Treasury with the necessary means, until the debts due to the Government, and the ample but at present unavailable means which we have, can be realized without unnecessary distress or pressure upon the people.

By the strong vote in this House last evening on the subject of selling the United States Bank bonds, it was unequivocally determined that we would not adopt that measure. We must then call upon the deposit banks for the immediate payment of all balances due from them, and also upon the merchants for the instant payment of the duty bonds, or a resort must be had to the issue of Treasury notes or Government stocks for a short time until those claims can be realized. Can gentlemen devise any other course?

You have now, sir, upon your table a bill postponing the payment of duty bonds nine months, and another allowing time to the deposit banks to pay the balances due from them, neither of which are yet acted upon in this House, but both of which, so far as any opinion has been elicited, meet with universal favor. In fact, sir, I doubt whether

there is a member on this floor who is not prepared to support both of those measures; and gentlemen opposed to the administration and to this bill, are supposed to be particularly favorable to those. Can gentlemen of the opposition then fail to see the effect that the defeat of this bill must have upon those measures? Are they sincere in desiring a delay upon the duty bonds, and the allowance of further time to the deposit banks, and yet oppose this measure, which if defeated must necessarily result in the defeat of both those bills? Are they willing to assume the responsibility of denying any extension to the banks, or on the duty bonds, which must be the inevitable consequence of refusing to pass this bill? I apprehend, sir, that gentlemen have not duly weighed these considerations, and yet it would seem impossible that they can have overlooked the fact that, by exacting immediate payment of the duty bonds and bank balances, not only the security or safety of the debts might be endangered, but that increased pressure and distress must be felt through all the ramifications of society; and yet, sir, how can that result be avoided if this bill is defeated?

But, sir, another and more weighty objection is now urged to this bill. After it had been debated nearly two days, it was suddenly discovered to be an enemy in disguise; a scheme fraught with all sorts of mischief to the country, and danger to our institutions: in short, an incipient step towards a Treasury bank, as an entering wedge towards a permanent national paper currency. The changes have been rung upon these words in all forms and shapes, until the ear is weary of the repetition; and, like the old United States Bank, which the gentleman from Massachusetts insisted had become a kind of "stalking horse" in this House, sir, this idea of a "Treasury bank," "a Government paper currency" has become a kind of "stalking horse" to this bill, which is led in upon this floor by every speaker of the opposition, to frighten members out of their votes in favor of this measure. Now, sir, I am as much opposed to a Treasury bank as any of the gentlemen who oppose this bill; and I would go as far in opposing any measure which would be an incipient step towards such an institution, or towards the establishment of an irredeemable Government paper currency, as the most patriotic of them; but after a very candid examination of the subject in all its bearings, and after a careful perusal of the bill, I can not discover the lurking dangers with which other gentlemen seem to think it is fraught. I am not able to perceive any foundation for a Treasury bank or for a permanent Government paper currency lurking about the bill, or incident to it. It is, sir, a very plain, intelligible bill; just what it purports to be on the face of it, and meaning nothing more than is expressed: a mere temporary expedient, to enable the Treasury, by an issue of Treasury notes, to a limited amount, to fulfil its obligations; thus anticipating the moneys due to the Government, and at the same time to do it without laying any taxes or new duties. The issue of Treasury notes is confined to ten millions, beyond which amount no issue can be made; and to make assurance doubly sure, I will myself propose the amendment offered in Committee of the Whole, by the gentleman from Maryland, (Mr. Johnson,) limiting the time within which these notes shall be issued to the first of June, 1839, or some other shorter time, so as to throw around the bill all those safeguards necessary to render it, as it is intended to be, and as it purports to be on the face of it, a measure merely temporary. By the passage of this bill we shall, sir, be able to extend all reasonable indulgence to the Government debtors, at a time when it is not only the interest but the duty of the Government to do so; we shall furnish a temporary circulation which may and will be used, not only as a remittance to Europe, but between the different parts of the Union—which will have a tendency to equalize exchanges, retain our specie from foreign exportation, restore commercial confidence, and in every way relieve the country, without injury to the Government or danger to our institutions. I say without danger to our institutions, for really, sir, I cannot see the least shadow of foundation for the apprehensions of gentlemen on that point.

This is a measure which has before been adopted by this Government, and without any objection as to its constitutionality. It is no new experiment, sir; no trifling with the supposed powers given us by the Constitution; but the judicious exercise of those powers clearly granted, and an exercise sanctioned as well by authority of a former Congress, as by sound discretion and a just regard for a suffering country.

But, Mr. Speaker, before resuming my seat, I feel bound to notice more particularly, some of the remarks of the honorable gentleman from Tennessee, (Mr. Bell.) That honorable gentleman, sir, addressed himself to various interests in this House—to the South and Southwest—and particularly to those members whom he denominated the *Conservatives* on this floor, and invited them most earnestly to come and do battle with him on this field, against this measure. Whether he intended to include me among the members of this latter class I can not say; but at all events I beg leave most respectfully to decline his invitation altogether. I can not do battle in any such cause or in such ranks. But the honorable gentleman says he does not understand the course of the administration party in this House; that he is mystified as to the conduct of a certain portion of the party which he denominates the *Conservatives*; that on all subjects they go with the administration, and are uniformly arrayed on this floor in favor of the measures of the administration; that he does not know what to make of it, and he inquires, very significantly, whether they have made peace, and what are the terms; and asks to see the bond of compromise, or to be told what is to be the future course of those whom he calls conservatives.

Now, sir, I shall not affect to misunderstand this, or doubt, whether I was one of those members to whom these queries were addressed. I was one of those who voted for Thomas Allen as printer to this House, and neither then nor now, here or elsewhere, have attempted to conceal my vote on that occasion. My reasons for that vote, I am not now called upon to give; this is not the time or the occasion for that, sir; but the fact, perhaps, furnishes a sufficient reason of itself, why, I may conclude that the honorable gentleman addresses himself, in part at least, to me. Neither, sir, will I affect to misunderstand the ultimate object of the gentleman's inquiries, and I beg to carry out those queries, and give them the point, to which the whole seemed to tend—to arrive at once to the gist of the matter, which the delicacy of the gentleman, and perhaps, his disposition to avoid bluntness, induced him to suppress—and which was no more or less, than asking myself and others, "Do you intend to act with the opposition? will you throw yourselves into the arms of the whigs?" I answer, no! and I thank the gentleman for the opportunity he has afforded me, of answering this question thus unequivocally and unreservedly in the negative. To my friends, no such answer was necessary; but if he or any other member of the opposition, have supposed from that vote that any such expectation could be fairly entertained, I now take this occasion to put a final extinguisher upon any such supposition or expectation. I speak without authority as to others, and only for myself; but I feel persuaded that I do but speak the well-known sentiments of those members of the New York delegation, who the honorable gentlemen calls conservatives, or who voted for Mr. Allen, when I say that there are no truer friends of the present Executive on this floor, than they are, and none less likely to abandon their principles or their party. They were elected as the friends of the present administration, and I have no doubt will sustain it in all honor and good faith. For myself, at least, I can say that I shall do so. And though I did differ, on the occasion above alluded to, in the choice of a printer, with some of my political friends, and may perhaps again have occasion to differ with some of them on unimportant or unessential points, or questions of expediency merely, not involving any political principle, and not touching the fundamental principles of the democratic party, yet I feel confident that I am surrounded here by political friends, who are too magnanimous, and who have too high a respect for personal independence and

freedom of opinion, to look upon every difference of opinion as a difference of principle; who do not consider that party faith means party servility; and who will respect honest differences of opinion, and not, as a test of party faith or political integrity, exact a blind and slavish obedience to every whim or project which any or every member of the party may bring forward. I stand here, sir, as the representative of a free constituency, to act as becomes a freeman, and to represent my constituents faithfully, so far as I am able to do it. I was elected as a friend of the administration, and by its friends; and while I have the honor of a seat here, it will be no less my inclination than my duty, to give to this administration that honorable and hearty support, which, from these circumstances, may be justly expected of me, and which shall be alike consistent with patriotism and principle, and a conscientious discharge of duty.

But, sir, the honorable gentleman from Tennessee asks, what are the terms of compromise between the members of the democratic party on this floor? what is the bond of union?—as though some contract had been drawn up and entered into between the friends of the administration, by which they were enabled to act in concert and harmony in the House; and one could suppose that he expected to see some written instrument, perhaps, with the great seal of state appended to it. I can assure the gentleman that there is no such document in existence, to my knowledge; but should there be, he shall certainly be gratified with a perusal of it.

But there is a bond of union, sir, between the friends of the administration, much stronger and more powerful than any such written instrument; and that bond of union, sir, is the political principles which we hold in common; those principles which were characteristic of the last and present administration; which were promulgated by Thomas Jefferson; which from his day to this time have distinguished the democratic republicans from their opponents, of whatever name or description, and have been sanctioned by the voice of the people, and by the dictates of justice and reason. This is the bond of union between the friends of the administration; and this it is that enables them to act unitedly; and this, sir, is the reason why the honorable gentlemen see such a uniform array on the floor of this House, in favor of the administration's measures; and why he will continue to see the same thing so long as those measures are in accordance with those principles, and while they tend (as they necessarily must, when in accordance with those principles) to the welfare of the country, and the permanency of the Union.

I trust the mystery is explained, and that the honorable gentleman will, hereafter, have no difficulty in comprehending the course of the friends of the administration, and the reason for their acting in concert.

I hope, Mr. Speaker, that the motion to strike out the enacting clause will not prevail; but that this bill, as well as the other one now before this House, which I have before alluded to, will pass; and that thereby the most essential and immediate relief will be afforded, (as I verily believe it will,) not only to an almost exhausted Treasury, but more especially to the people generally, whose patience, I fear, is as nearly exhausted as the public Treasury, and who are anxiously looking (and I trust not in vain) for such relief as it is in the power of Congress to afford, and such as we can consistently grant, and which the exigency of the times so imperiously demands.

## SPEECH OF MR. TURNEY,

OF TENNESSEE,

In House of Representatives—Upon the Report of the Committee of Elections in the case of the Representatives from Mississippi.

MR. SPEAKER: The question submitted for the consideration of the House, by the report of the Committee of Elections, now on your table, is one that is new and somewhat novel in its character. We are now called on, for the first time since the adoption of the Constitution of the United States, to put a construction on the second section of the first article of that instrument, which is in these

words: "When vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies." In order to arrive at the legitimate interpretation of this section, gentlemen advocating different sides of this perplexed question have had reference to the third section of the first article of the same instrument, which provides for the filling of vacancies that may happen in the United States Senate. They have also read and commented on the cases of Lanman and Sevier, and insist that those cases are decisive of the question now under consideration.

I have taken a different view of this subject. Let us for a moment reflect and see what was intended to be provided for by each of those sections, by which means I think we will be enabled to arrive at the true intent and meaning of the section which provides for the filling of vacancies in this House; and in doing this, I do not feel myself called on to inquire into the correctness of the cases before referred to. I hold, sir, that the framers of the Constitution did intend that each State should have its full representation in each branch of the Congress of the United States, and effectually to secure which, the two sections which I have adverted to, were inserted, and in each of which the word *happen* is used. The use of this word creates the only doubt or difficulty in the case. Let us compare the two sections, and see if we can not, by that means, arrive at the sense and meaning of the word *happen*, which the framers of that instrument intended it to have. Let it be borne in mind, that in the case of a Senator, the vacancy is to be filled, not by an election, the only safe and constitutional mode of appointing members of that body, but by the temporary appointment of the Governor, to continue only until the Legislature of the State shall be in session, when they shall fill such vacancy. This, sir, was conferring a very extraordinary power upon the Executive of a State; one, in the opinion of the framers of the Constitution, very unsafe, and therefore not to be exercised, except on extraordinary occasions, and times of great emergency. And, sir, to prevent an abuse of that power by the Executive authorities of the States, the framers of the Constitution have carefully inserted additional guards to prevent Executive usurpations of power. This, sir, brings us to a more minute and critical examination and comparison of the two sections of the Constitution now under consideration.

The second section, sir, simply provides that if vacancies should *HAPPEN* in the representation of any State, then the Executive thereof shall issue his writ of election to fill such vacancy. In the case of a Senator, the provision is very different. It provides that should a vacancy *happen*, by resignation or otherwise, in the recess of the Legislature, then the Executive may appoint, &c.

Here, sir, to authorize the Executive to make an appointment, there must not only be a vacancy, but that vacancy must have occurred in the recess of the Legislature, and by resignation or otherwise. Permit me to ask you, Mr. Speaker, why these words were used in the third section? Were they not used for the purpose of limiting and restricting the power of the Governor? and was not this limitation and this restriction imposed to prevent the frequent use of a power which the framers of the Constitution believed to be safely, and with more propriety, lodged with the immediate representatives of the people? This, sir, it seems to me, will not be controverted by any one. Then they fixed the tenure of the Senatorial office at six years. It was believed that no vacancy could, or would, happen in the recess of the Legislature, except those produced by resignation, death, or removal, and therefore they made the power to appoint to be dependent on the cause which produced the vacancy, to wit: by resignation or otherwise. It can not, and I presume, will not, be pretended, that the word "*otherwise*," as used in the section, will have the effect, or was designed, to destroy the sense and meaning of the words "by resignation;" but all must agree that that word was inserted to cover every possible case where a vacancy occurred by any unforeseen event, and in the recess of the Le-

gislature; and, sir, I am fully sustained in this conclusion, by the cases which have been referred to.

We come now, Mr. Speaker, to consider more fully the second section of the first article of the Constitution of the United States. Here we find no such language to limit and restrict the power of the Governor of a State to issue his writ to fill a vacancy in this House, that we find to limit and restrict his power to fill a vacancy in the Senate by his own appointment. In the case of a Senator, sir, I have shown the vacancy is to be filled, not by the safe and constitutional mode of an election, but by the legal constituted authority, giving rise to an uncertain and dangerous exercise of Executive patronage.

How, sir, in relation to filling vacancies which occur in this House, is there a departure from the fundamental principles of the Government. In this case the member is to be elected by the people, and will any member on this floor pretend that the people can not at all times, and under all circumstances, be trusted to choose their own agents to represent them in this House.

But, sir, to return to the section under consideration. If the framers of the Constitution intended to limit the power of the Executive to issue his writ of election to cases where the vacancy had not only happened, but to such vacancies as had been produced by "resignation or otherwise" of the incumbent, I ask why they did not so express it by their language, as they did in the case of a Senator? Sir, the fact of their failing to do so, coupled with the consideration that there was no good reason why this power should be limited, is conclusive, to my mind, that such was not their intention; and I am more inclined to this opinion from the consideration that the meaning of the word *happen*, as used in this section, was a subject of deliberation when the Constitution was framed, and that it was intended to authorize and empower the Executive to issue his writ of election in all cases where a vacancy existed in the representation of a State. In the case of Senator, the power of the State Executive is made to depend not alone upon the fact of vacancy, but that the vacancy must have been produced by a specified cause. There the Constitution looks not only to the vacancy to be filled, but also to the cause which produced it. In this case, however, the Constitution looks alone to the vacancy, and, if it is found to exist, it provides the mode and manner by which it is to be filled. This, sir, has been done in this instance, and in strict conformity with the provisions of the Constitution.

But suppose, sir, I was mistaken in this view of the subject, and that it should be believed, as insisted on by my colleague, (Mr. Maury,) that the second section is to be viewed and interpreted in the same limited and restricted sense that is embraced in the third section, still, sir, if the case of Sevier is to be received as authority, Messrs. Claiborne and Gholson are entitled to their seats. In that case the vacancy happened by the expiration of the term of service of the Senator, and that term was made to depend upon the allotment of the Senator, which allotment and expiration happened during the recess of the Legislature, and, of course, was unforeseen, and, consequently, could not be provided for. In this case, case, sir, the Senate has made the word "*otherwise*" embrace not only the cases of death or removal, but also to embrace every possible case of unforeseen vacancy, although that vacancy may happen by the expiration of the term of service. What, sir, is this case? The Constitution provides that Congress shall convene at least once a year, and that the time of meeting, until otherwise altered by law, shall be on the first Monday of December. It also authorizes the President to convene Congress on extraordinary occasions. Here, sir, the Legislature of Mississippi, with a full knowledge that Congress was not to meet until the month of December, had fixed by law the day of election in the month of November, in ample time for their members to arrive in time to take their seats on the first day of the session. But, sir, in the mind of the President of the United States, Congress ought to be convened to consider of and act upon weighty and important business of the nation, at an earlier day than that fixed by

the Constitution, and he accordingly issues his proclamation for that purpose. Did the Legislature of Mississippi know that the President would issue his proclamation? Could they have known of those extraordinary events which rendered it necessary for him to do so, or were not those circumstances which rendered the filling of the vacancies of the representation from that State at an earlier period than that fixed by the Constitution, and were not all these circumstances unforeseen by them? If so, sir, then, according to the strictest construction contended for, those gentlemen are entitled to their seats.

But, Mr. Speaker, it is contended by the gentleman from Kentucky, that for as much as the Constitution requires that the Legislatures of the States should fix the times and places of holding elections, that this election is void, because the Legislature of Mississippi had not by law fixed the day on which this election was held as the day of election of their representatives to this House. This argument, sir, if it proves any thing, it proves too much; for, sir, if no election but those held on the days fixed by law are legal, then, sir, if a seat was vacated, either by resignation, or death, or removal, the Executive of the State would have no power to issue his writ of election to fill such vacancy, because he would have no power to prescribe the time of holding the same. This general provision of the Constitution, and the laws enacted in pursuance thereof, were only intended to regulate the time, place, and manner of conducting the general elections; and was not intended to interfere with or to abridge the power in those special cases, provided for in the section under which this election was held.

Mr. Speaker, Permit me here to admonish gentlemen to pause and reflect before they give their votes, denying to the people of Mississippi the right to be represented on this floor; a right, sir, which has been secured to them by that instrument which gives life and existence to this Government, and which, sir, each of us stands most solemnly pledged to support. I am one of those, sir, who believe that the people are capable of self-government, and that they can, and ought to be, trusted at all times, and under all circumstances; and when I am called on to give a construction to the great charter of our liberties, I shall endeavor to adopt that rule of interpretation which will best secure to the great mass of the people their full privileges and powers; and knowing, as I do, that the State of Mississippi has an undeniable right to her representation in this House, and believing that her late election was at least authorized by the spirit and meaning of the Constitution, and also by its letter, I will, sir, unless the reasons which has brought my mind to this conclusion, shall be met and confuted, vote for a concurrence in the report upon your table.

#### SPEECH OF MR. PENNYBACKER, OF VIRGINIA,

In the House of Representatives, September, 1837—  
On the Mississippi Election.

MR. SPEAKER: I, like the gentleman from Tennessee, (Mr. Maury) am a member of the Committee of Elections. The relation which I bear to the report of the majority has caused me to rise. It is due to myself, due to the majority, and perhaps due to the House, to explain the reasons which induced the committee to come to their conclusion. In doing so, sir, I shall endeavor to be as brief as possible.

The facts of the case are simply these: Messrs. Gholson and Claiborne were members of the 24th Congress; their term of office expired with that Congress: this came to pass on the 3d of March last. By the law of Mississippi, her general elections are directed to be held in the month of November, biennially. The coming November will be the time at which her general elections would have taken place, under ordinary circumstances. But, the President of the United States having issued his proclamation convening Congress on the first of this month, it was seen by the Executive of the State of Mississippi, that, unless the elections were sooner brought on, the State of Missis-

issippi would be unrepresented in the extra session. To prevent this, he issued his writs, commanding the sheriffs to hold an election, in July last, for two representatives, to serve, however, until the first Monday in November next, when, it was supposed, their successors could be regularly chosen. The writs were executed, and Messrs. Gholson and Claiborne were returned as elected.

Upon this state of facts a question has arisen: are these gentlemen entitled to their seats? and, if so, for what period of time?

First. Are the gentlemen entitled to their seats?

This brings us immediately to the consideration of the clause in the Constitution read by the gentleman, (Mr. Maury,) and which is in these words: "When vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies." From this clause the Executive of Mississippi claimed his authority to issue his writs: under this clause the members elect insist upon their seats. We are bound, therefore, to ascertain its meaning.

Before Mr. P. would enter upon a particular examination of the clause in question, he would trespass upon the House a very few moments, by making some remarks of a general nature.

Sir, (said he,) the will of the lawgiver makes the law. The intention of the law is that which alone constitutes it "a rule of action." It is its essence, and must ever be sought after in cases of construction. How shall it be found? Partly by looking to the language employed; but not by looking to the language alone. The thoughts of man are almost infinite; the combinations of the human mind are almost infinite. Words are finite; language is finite; and the one, therefore, can never properly become the representative of the other. If it were otherwise; if it were possible for each word to have an exact and invariable meaning, and it were possible for every intellect to become acquainted with such meaning, and it were then possible for each word, or for any combination of words, to represent exactly the thoughts conceived, language of itself would be sufficient. But this, unfortunately, is not so. We are constrained (said Mr. P.) by our very natures to look to other aids. Happily for truth, such aids exist. One powerful one is ever at hand. What is it? A consideration of the object of the law. When this is ascertained and well understood, another aid rises and comes to our help. And what is this? The thought, sir, that where there is the like reason, there should be the like law; where the evil is the same, the remedy should be the same; where the mischief is identical, the means of removing it should not be different. Thus a standard is created: by this standard the given case can be judged. Tried by it, if it shall come up to it, we at once conclude that the framers of the law had the given case in view. And from this conclusion, though the language employed should seem not to justify it, we will not be driven; nay, sir, from this conclusion we ought not to be driven; for to be so, would be to say, we will be governed by an opinion formed only upon a given set of means, rejecting all others, no matter how powerful; and that, too, when the very means employed are acknowledgedly imperfect.

Bearing these remarks in memory, let us proceed (said Mr. P.) to the clause in question.

Its language is: "When vacancies happen, &c." Here, at the threshold, the inquiry arises, had vacancies happened when the writs were issued? That vacancies existed can not be denied. The thing of itself was nearly self-evident. Mr. P. did not know that he could make it any plainer; nevertheless, he would attempt to do so. By the Constitution of the United States various offices are created. Those of President, Vice President, Judge of the Supreme Court, Senator in Congress, and Representative in Congress, are among the number. By the same instrument, also, the tenures of those offices are fixed and established; those of President and Vice President being four years; that of Judge during good behavior; that of Senator, subject to classification, six years; and that of Representative two years. Though the terms of the offices may expire, the offices themselves remain with the Constitution. Now, the terms of office of Messrs. Gholson and Claiborne, as members of the 24th Congress, ex-

pired with that Congress. This came to pass on the 3d of March last. On the 4th of March, then, their offices were vacant. So they continued until after the writs were issued.

Having established this position, Mr. P. would proceed:

It was said by the gentleman, (Mr. Maury,) though vacancies existed they had not happened; that he had examined the dictionary for the meaning of the term, and found its meaning not to apply; that it was only applied to cases of casualty; that it would be absurd to say the sun happened to rise, the tides happened to flow, &c.; that there was nothing fortuitous in these events—they were foreseen, foreknown, and must occur—so with a vacancy by efflux of time; and that the obvious meaning of the Constitution was, vacancies occurring by death, &c. To this Mr. P. could not subscribe. It appeared to him that the term chance more exactly represented the gentleman's meaning. The Constitution did not read "when vacancies chance to happen;" but its terms were "when vacancies happen, &c." He, like the gentleman, had looked into authority. He had found one exactly in point. From it he learned (to use a figure) that to happen was a genus, whilst to chance was a species; that the one included the other, but not vice versa. Mr. P. then read from Crabb's Synonymes, (a book from the library,) the following: "To happen (that is, to fall out by a hap) is to chance as the genus to the species; whatever chances happens, but not vice versa. Happen respects all events without including any collateral idea; chance comprehends likewise the idea of the cause; and order of the events. Whatever comes to pass happens, whether regularly in the course of events, or particularly and out of order; whatever chances happens altogether without concert, intention, and often without relation to any other thing. The newspapers contain an account of all that happens in the course of the week." Now, (said Mr. P.) whilst I do not aspire to the character of a critic, and will not arrogate to myself any great degree of learning, I will say, upon the authority I have just read, that the rising of the sun may be well said to happen; the going down of the same may be said to happen; the flowing of the tides may be said to happen; eclipses happen; and that vacancies, occurring by the efflux of time, may be said to happen: And why, sir? Because they all come to pass.

Then, from the language of the clause, the Executive of Mississippi had authority for his writs.

But, sir, (said Mr. P.) let us still go further. Let us avail ourselves of the other great aids. What was the object of the clause in question? Was it not to keep the seats here filled? Was it not that each State, and the whole nation, might be fully represented upon this floor? It was, sir. None will deny it;—none can deny it. Now, what reason can exist for filling the one kind of vacancy, which does not exist, for filling the other? None can be conceived of. I can readily imagine some shades of difference; but they are merely shades—no substance—no reality in them, and very attenuated in themselves. Again, sir: If it be desirable that a single vacancy, occurring by death, resignation, &c. in ordinary times, when all is tranquillity, should be filled, how much more important is it, in extraordinary times, when all is dismay, confusion, and calamity, and when necessity has forced a call of Congress, that a whole State should not be unrepresented? But, again, sir: Every Government should be capable of self-existence; it should contain within itself the principle of its own preservation. It is true (said Mr. P.) that the Constitution provides, that "the times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State, by the Legislatures thereof," and "that Congress may, at any time, make or alter such regulations"—but what then? Congress has, as yet, made no such regulations; and suppose the States should omit to do their duties, will it be said that no means have been provided by which to keep full the national representation? Would not the State Executive, in a case such as this, though the vacancies had occurred by purpose and design, have a right to issue his writs to fill such vacancies? It will not do to say, that Congress might be conven-

ed "to make regulations." Suppose some six States, who hold the majority of the whole representation, should fail to do their duty; there would be no Congress which could be convened.

I know (said Mr. P.) I shall be met with an argument here. It will be said, if my construction be correct, the Executive of a State, though a time has been prescribed for holding her elections, may cause them to be held whenever he pleases:—Yea, sir, it will be said, the Executive of a State would be bound to issue his writs whenever the vacancies happened; for the language of the clause is imperative in that respect. In answer, I say: first, that the possibility that a power may be abused which has been granted, can never safely be made an argument against its existence. The President is empowered, "on extraordinary occasions," to call together Congress. He, too, alone, is the judge of those occasions. Yet, because he may upon ordinary occasions exercise the power, no one will say the power has not been granted. Secondly, I reply, I think differently from gentlemen. I construe the clause according to its spirit. Look at it. It obviously contemplates the existence of a necessity before it shall be exercised. Suppose a case to happen: suppose a gentleman has been elected; that he has served a first and second session of Congress; that the second session terminated on the first day of January, leaving a little more than two months of the Congress yet to expire; let the gentleman then die; will any one say that the Executive of the State would be justified in issuing his writs to fill the vacancy? harrassing the people by an unreasonable election, when there was no necessity for it; and that, too, when the member to be elected would go out of office in a few days? And yet, if the argument be correct, that the clause is imperative, such a result would necessarily be produced. Sir, (said Mr. P.) there must be a necessity for calling into action the latent power.

The language of the clause then, its spirit, its object, all go to prove the correctness of the report.

But, sir, (said Mr. P.) suppose, for the argument, that the language of the clause did not embrace the case. Will it be said, we must stick to its letter? By no means. Take the clause under consideration. Look at it. It says, when vacancies happen writs shall be issued. Now, will any one say, if a vacancy has happened a writ can not be issued? Again, sir, there is a parallel clause in the Constitution, which empowers the President "to fill up vacancies which may happen during the recess of the Senate, by granting commissions," &c. Suppose that, whilst the Senate were in session, and, consequently, when there was no recess, the collector of the port of New York should die, and the Senate should adjourn before the news of his death had reached the President, and, consequently, before it were possible for him to nominate his successor, would it not be competent for the President to fill the vacancy? Or, would he be required, though perhaps three-fourths of the revenue of the United States are collected at that port, to wait until the Senate should again come together, in order to be enabled to make a nomination? Sir, (said Mr. P.) the Constitution is a practical instrument, and as such should be practically construed: "Qui hæret in litera, hæret in cortice." Mr. P. regarded, also, the clause in question as analogous to a remedial statute, and felt disposed to apply to it the rules by which such statutes were always to be expounded. They justified a liberal construction, and enjoined it upon the judges as an imperative duty to "suppress the mischief, and advance the remedy."

The gentleman from Tennessee, (Mr. Maury,) had relied upon precedents. He had cited the cases of Johns and Lannan. On examination of them they would be found not to support him. In John's case, Mr. Read of Delaware, had resigned his seat in the United States Senate, on the 18th of September, 1793; that was during the recess of the Legislature. The Legislature met in January following; it adjourned in February, 1794. On the 19th of March, and subsequent to the adjournment, Mr. Johns was appointed Mr. Read's successor. Thus, it will be perceived, that the Legislature had met after the vacancy happened, and adjourned without electing any successor. Now

25th Cong....1st Sess.

Making public officers depositories—Mr. Robertson.

H. of Reps.

the Constitution authorized the Executive to appoint only in the recess. The appointment was to continue, too, only "until the meeting of the next Legislature." But the time had passed by, within which to make it; consequently the appointment was void.

The case of Lanman was as little to be relied on. He was appointed before a vacancy; though it was anticipated that one would happen. The ground of the decision could readily be imagined. The Executive of the State was only authorized to make his appointment "if vacancies happened." No such occurrence had taken place, and therefore the appointment was without authority. Look to the consequences growing out of this doctrine. If an appointment could be made before a vacancy, it might be made at any time before. Thus a Governor, elected simultaneously with a Senator, might appoint his successor; and this, though the appointment might not take effect for six years to come. This evidently was the ground of decision. In the report of the case, in a marginal note, it is said, *in italics*, that the appointment had been made before a vacancy had happened.

Mr. P. had himself looked into some precedents. Two had been found which seemed to be authority. The one was the case of Mr. Anderson, of Tennessee; the other the case of Mr. Smith, of Maryland. Both the gentlemen had been members of the Senate, and their terms had expired by efflux of time. They were reappointed by their respective Governors, and were solemnly pronounced to be entitled to their seats.

There were two more cases Mr. P. would allude to. He regretted exceedingly he had not been able to see them. They were the cases referred to by the gentlemen from Mississippi, (Messrs. Gholson and Claiborne,) in their printed argument. If those cases were properly stated, (and no doubt they were,) then here were the opinions of distinguished jurists (Messrs. Wirt and Taney, late Attorneys General) upon the very point. They had solemnly advised their respective Chief Magistrates that the Constitution of the United States empowered them to fill original vacancies.

So much, said Mr. P. for the first branch of the question. The gentlemen elect are entitled to their seats.

As to the second branch, Mr. P. would not discuss it. There was scarcely a diversity of opinion about it. The Constitution had settled the question. The tenure of office was fixed to two years, and no power of the Governor of Mississippi could change or alter it. As well might the President and Senate of the United States, in filling the office of one of the judges, attempt to change the tenure of the office.

Mr. P. would conclude. His remarks had been desultory. He had scarcely expected to speak upon the subject, and certainly not upon that day.

## REMARKS OF MR. ROBERTSON, OF VIRGINIA,

In the House of Representatives, October 11, 1837—  
On the bill imposing additional duties, as depositories in certain cases, on public officers.

MR. CHAIRMAN: As the gentleman from South Carolina (Mr. Legare) has declined for the present occupying the floor, and no other gentleman seems disposed to address the committee, I avail myself of the occasion to ask a share of its attention. Before attempting to express my views, permit me, sir, to advert to an amendment which I had the honor, some two weeks past, to lay upon the table, and which, with some modifications, it is still my wish, at a proper time, to present.

[Mr. ROBERTSON here requested that the Clerk might read a part of his proposed amendment.]

My proposition, sir, substantially is, that the public treasure shall be placed as a *special deposit* in the local banks.

The bill before us, Mr. Chairman, presents for our consideration two questions, essentially distinct, which, however, seem frequently confounded: one, as to the medium in which the public dues should be paid; the other as to the manner in which it

should be kept. The one is a question of currency: the other of custody merely.

Agreeing, sir, with my colleague, (Mr. James M. Mason,) that no Government ought to exact from the people a currency which they cannot command without a heavy sacrifice, I am prepared to go farther than he is. After so strongly protesting against such a policy, he must pardon me for saying that in insisting, as he does, on specie, or the notes of specie paying banks, he runs counter to his own doctrine. There is but little difference between his scheme indeed, and that of the bill before us, which he denounces as oppressive. The only difference is, that he would permit the whole revenue to be paid in notes of specie paying banks, whereas this bill permits three-fourths only for the ensuing year, gradually diminishing the proportion, until, at the end of four years, specie only shall be received. But at this time, and until the banks shall open their vaults, both propositions are equally oppressive; for until that shall happen, and no man can foretell the day, there can be no notes of specie paying banks, and gold and silver therefore is exacted by both. To afford any effectual relief, we must receive such currency as the people can procure; we should take from them, until the resumption of specie payments by the banks, such notes as they take from each other; such as the State Governments receive in payment of public dues—provided they be not too greatly depreciated. If gentlemen can ensure a speedy resumption, it may be well to insist on gold and silver, or the notes of banks which pay it out; but to exact either at this time, is to be guilty of the very oppression my colleague so justly denounces. The only remedy for the evil which those who have the power, propose to apply, is to be found in the plan they have adopted of issuing Treasury notes. The manufactory of paper money just established in Washington, is to afford us a currency adequate to all our wants. My colleague who supported the measure, disavows any design of creating this currency with a view to circulation. I am glad that he does. But the object has been explicitly avowed by many of its friends on this floor. We have been told by the President that eight or ten millions will suffice for public payments; and with the view of meeting those payments, we authorize the issue of ten millions in Treasury notes. It only requires authority to continue them in circulation, by a reissue, to supply the whole annual revenue. Should this system become established, all the channels that lead to the Treasury will be supplied with our new paper money, and not a dollar of specie, in all probability, find its way to it, except what may flow from the mint. This is the plan of our hard money Government; and to reconcile us to it, the gentleman from Maryland, (Mr. McKim) by a strong figure of speech, calls this paper gold and silver.

I do not profess to measure the consequences of this new issue of paper money. I believe it to be calculated, if not intended, to throw discredit upon the State banks, and am unwilling myself to engage in a war upon them. All the States have adopted the policy of banking. Their right to do this none will question: they have a deep interest in their respective banking institutions. The State represented by myself and colleagues has invested in them her funds for education and internal improvement. Under these circumstances, it is not in our place to read homilies to the State Governments on the impolicy of banks, nor to do any thing here in our representative character, with the view of crippling or destroying them. On the contrary, within our constitutional power, we should rather endeavor to restore their credit and stability.

As for that part of the bill which directs in what currency the public dues shall be paid in all time to come, it seems to me unnecessary and premature. We need not legislate in this matter for posterity; nor even for the next three or four years. The present state of the currency is such, that we should act more wisely to leave this question to those who will come after us, and content ourselves with providing for the present emergency. But, sir, I waive the subject of currency, as one in regard to which the Government has already settled its policy, and pass on to the other very interesting question

presented by the bill—that relating to the custody of the public money.

The plan which I have had the honor of suggesting—by no means, however, of originating—that of *special* depositing the public funds in the local banks, is essentially different, not only from the bill, but also from the amendment, of my colleague, (Mr. Garland.) It maintains the principle of separating this Government, both in its pecuniary and political concerns, from banking corporations, which my colleague's amendment, providing for a general deposit, does not, and at the same time secures the public treasure from the risk to which the bill subjects it, by leaving it in the custody of individuals. We have already experienced the ruinous consequences of leaving the vast revenues of the Government in the banks as a basis for banking operations. The plan of special deposits, if adopted, will prevent their recurrence for the future; and prevent, too, the no less serious evils which may be anticipated from suffering these immense treasures to remain in the hands of our revenue officers. There is every reason to fear that those officers will themselves use the money, as the deposit banks have done, by way of loan and discount, or be tempted to employ it in private speculations. The instances of such abuses are, unfortunately, but too frequent. I must say, however, that those alluded to by my colleague, (Mr. Garland,) as having occurred in Virginia, do not justify the use he has made of them to show that his plan of general deposits in bank is exempt from danger; for they occurred under that very system, and not, as he seems to have supposed, under a system resembling what is called the Sub-Treasury. The same may be said of the almost innumerable defaults in the Post Office. Still, they prove the difficulty of resisting temptation, and the danger to which the public treasure must be always exposed under the most guarded regulation; and, it must be acknowledged, apply with increased force to the scheme contained in the bill.

There are but three modes suggested, of providing for the custody of the public money; by placing it in bank as a general deposit; or as a special deposit; or leaving it in the hands of individuals. I prefer the plan of special deposit; but if compelled to select between the bill upon your table, and the amendment, imperfect and exceptionable as it is, I must say unequivocally, I will take that which insures a separation, rather than that which perpetuates the union between the Government and the banks; between political power and moneyed capital. I hope, sir, the measure in its present shape will not be forced upon us. It is because I wish the principle to be successfully carried into practice, that I object to a plan almost certain, by its failure, to give a triumph to its enemies, and pave the way for a national bank.

All agree, Mr. Chairman, that a national bank, at this time, is inexpedient and unattainable. Yet no one can be so blind as not to see that the friends of such an institution have it in full prospect. The whole course of the debate during the present session proves that they by no means despair of its ultimate establishment. Elaborate arguments have been urged with a view to forestall public opinion. I must, therefore, sir, ask the indulgence of the Committee, not to enter at length into the examination of a subject so thoroughly investigated by the ablest statesmen that an idea can scarcely be presented that has not been repeatedly presented before; but to glance at the grounds upon which it is urged, and the reasons which render it the object with me of apprehension and aversion.

The power to establish a national bank is deduced from various clauses in the Constitution. No one pretends that it is granted in express terms; and the variety of sources from whence it is inferred, is a strong argument against the pretension. We are referred to the clause which authorizes Congress to regulate commerce with foreign nations and among the several States. The term *regulate* is expounded as synonymous with *facilitate*, and then the grant of power is made out without difficulty; for banks, none will deny, facilitate commerce; and so, it may be asserted with equal truth, do ships, and canals, and roads;

and the conclusion to which we arrive that Congress may incorporate a bank, is equally strong in favor of the right to build ships or incorporate companies for constructing roads and canals; and this conclusion, accordingly, Mr. Hamilton and the federalists have always adopted. It leads us still farther: for it would justify, as indeed Mr. Hamilton asserts, the power to incorporate companies to carry on a foreign trade, and, as may upon the same principles be maintained, to incorporate companies to carry on agricultural pursuits—for commerce is essentially dependent upon agriculture, and, indeed, cannot exist without it. The argument that proves all this, proves too much; and, proving too much, proves nothing.

But Congress may coin money and regulate its value, and, therefore, may establish a bank. Making bank notes is not, in the sense of the Constitution, or in any sense, "coining money." It would be a reflection upon the understanding of those who framed the Constitution, to suppose they did not know the meaning of the terms they used. If to issue paper be to coin money, then every State bank has exercised this high prerogative of sovereignty, and usurped the power exclusively conferred upon Congress. Printing or stamping paper is not *coining*, more than a bit of worthless paper so printed or stamped is really what the gentleman from Maryland terms it, gold and silver. I will not admit, sir, that bank paper or Treasury paper is a coinage; but I fear that in establishing this manufactory of paper money, the friends of State rights have done the very act which they denounce. They have established a bank—the worst of all banks—a Government bank. Let gentlemen turn to the able argument of Mr. Hamilton—for able it unquestionably is—and they will find that one of his strongest reasons in favor of the right to incorporate a national bank is deduced from the power, which he contends they possess, to establish just such a manufactory of Treasury notes as that which we have recently created. Assuming that power, which he considers in essence the power to engage in banking operations, he readily and plausibly at least contends, that it to create a bank be lawful, it cannot be unlawful to incorporate it. Sir, I will not say that; but I will say, if it be lawful to create a bank, it is wholly immaterial whether the power to incorporate it exist or not. It is the banking principle to which I am opposed, not the mode in which it shall be carried into practice; or rather I would say, this power to engage in banking operations, is more odious when exercised directly by the Government, than when exercised through the instrumentality of a corporate body. One man may be a banker, as well as a corporate body; a Government as well as an individual. Gentlemen war against the power of incorporation; but the real danger is in the power of banking; and of all the modes of which that power can be exercised, the most odious, I repeat, and the most dangerous, is that by its own direct agency; in other words, a Government or Treasury bank, such as we have just created.

Gentlemen tell us again, that all duties must be uniform, and that this provision presupposes the right to establish a national bank. No, sir, it requires nothing more than to exert the power vested in Congress to coin money, and regulate its value. When this is done, all duties are easily made uniform by requiring them to be paid in the same currency, or in other equivalents. It requires no bank to do that.

There is yet another ground: the plea which justifies every usurpation—the plea of necessity. Congress may make all laws necessary and proper to carry into effect its granted powers; and we are told that a bank is necessary to enable the Government to collect and disburse its revenue. I deny the necessity or propriety of such an institution for such a purpose. That institution can not be regarded as necessary or proper in the contemplation of the Constitution, which did not exist for years after it was adopted; without which we conducted our fiscal operations from 1811 to 1816, and from 1832 to the present moment. We have the authority, too, of Mr. Madison, recently after its adoption, uncontradicted, that the power to grant corpora-

tions was applied for, and refused. It would be a reflection upon the understanding of the sages who framed that instrument, to hold that the incorporation of a bank was necessary and proper, and yet that all power of incorporating such an institution was denied.

Sir, to assert the necessity of such an institution is to fly in the face of facts, and to endow Congress with a discretionary power to do whatever they may choose to declare necessary. It is to assume absolute and unlimited power.

If the constitutional right of Congress, however, sir, were undisputed, I should still oppose a national bank as inexpedient. I concur, sir, most fully, with my colleague, (Mr. Hunter,) that the credit system needs no artificial stimulus; or, if it does, that it has no claim to derive its aliment from the public treasure. I am no enemy to the credit system within its legitimate bounds: that credit which rests upon anticipated returns of capital or labor, will deserve aid and encouragement; but a credit having no such solid foundations, leads to far different results. The facilities afforded by an undue increase of banking capital, often tempt those who rest solely on borrowed means, to engage in wild and reckless adventures; speculations in fancy stocks, in lands yielding no product, in cities without a house, harbors without a ship. If the gambler in these lotteries should fail, the loss falls on the laborer or the capitalist. If he succeed, it is often at their expense. His palaces rise like exhalations, and he lolls in his magnificent coach, while the farmer or the mechanic, often with ten times his substantial capital, can scarcely afford a humble dwelling or a one-horse chaise.

But the gentleman from New York (Mr. Hoffman) informs us that the credit system works well: not, I believe, sir, just at present. Doubtless it has worked well, through the aid of the Bank of the United States; at least in the North, and so it may again. But what has been its effect at the South? Upon this subject, my friend from South Carolina (Mr. Pickens) has given us some interesting details. Look back, sir, to the condition of the South before and since the establishment of the first national bank, and you will not fail to be struck with the rapid advance of the northern States compared with the southern. It may be that other causes have conspired to increase the relative prosperity of the North, and depress the South. But the result is most striking: Virginia, with one of the finest harbors in the Union—with three large rivers leading to the interior; rich as she is in vegetable and mineral wealth—is tributary to the North for most of the foreign goods she consumes. And is it not reasonable to suppose that much of this may be attributable to the cause I have mentioned? Would not the necessary effect of such an institution be to afford superior facilities to those among whom its capital was principally divided, and render it impossible that the southern merchant could come in competition with the northern?

There is another and obvious injury which a national bank may inflict upon the South. The able man who presided over the last, has boasted, it is said, of his power, whenever he pleased, to crush the banking institutions of the States. This power—the power materially to affect our prosperity, by sudden expansions or contractions of its loans—may never be exerted. But it is one too dangerous to be entrusted with those whose interests are not identified with our own. Money, sir, it has been often and well said, is power. We should not be satisfied to look at the mere expediency of the moment! We should look to the future, as well as to the past. In all free States, collisions may be expected to arise. An oppressive tariff has once, already, nearly shaken our confederacy to its centre, and brought us to the very verge of civil war. A restless band at the North are even now plotting the destruction of our domestic institutions. We have heard of a Pennsylvania legion of ten thousand ready to draw the sword at the command of the Executive. Such threats should not disturb us; but for one, sir, I frankly declare that I should be unwilling the South should contribute the means which may be employed for

her own destruction. A national bank was never a favorite measure in Virginia. Even in 1816, though many yielded to the pressure of the times, a majority of her delegation voted against it, and in 1791, when the original sin was committed, it received the support of but three members of the entire representation from the south side of the Potomac. I trust the attempt will never again succeed.

I say not this, sir, in an invidious spirit, or with any unkind feelings to the North. But the common treasure—the credit of the Government—should not be made the means of aggrandizing one section of the Union exclusively, still less made the instrument of oppression to another. It is for these reasons, Mr. Chairman, I have no desire to see a national bank ever re-established. Sincerely approving the principle which the bill upon your table proposes to carry into practice, I would have it as free as possible from all serious objection; that this Government may be once again, and for ever, separated from any direct interest in the business of banking corporations, and they cease to have any influence over the political movements of the Government. That principle, assailed as it has been by argument and ridicule, every friend of our free institutions should wish to see successfully adopted. It is not, as my colleague (Mr. Wise) supposes, a novel one, originating in an agrarian spirit. It claims a much loftier origin. It received the sanction, many years ago, of Mr. Jefferson. Sir, it is not my habit to lean upon the authority of great names; but it may be regarded as among the evil auguries of the times, that the opinions of Mr. Jefferson are made the theme of ridicule, while the ultra federal doctrines of Mr. Hamilton are quoted with approbation in this hall. No man was ever more ardently devoted to the cause of liberty than Mr. Jefferson; few ever possessed a more vigorous or original mind, or more independently expressed the opinions he entertained. It is to him, as much at least as to any of the great statesmen of his day, that we are indebted for what is most valuable in the free institutions under which we live.

But, sir, we need not the aid of his name to vindicate the principle we maintain. Our own history gives us proofs that it is neither a new idea, nor had its birth in a factious spirit. We need only go back to the session of 1834 to find it supported by men whose patriotism and sound republican principles will not be questioned. Early in that session, Mr. Gamble of Georgia moved an inquiry into the practicability of dispensing with banks in our fiscal operations. Subsequently, when the deposit bill was before the House, Gen. Gordon, then my colleague, proposed his plan for what is now called the Sub-Treasury. Approving the principle, but believing it imperfect in details, I had the honor of submitting a motion to recommit the bill, with instructions to amend it so as to dispense with bank agency. On this motion the yeas and nays were called: ninety-one members, including Gen. Gordon, himself, and the opposition party almost to a man, voted in favor of the motion: one hundred and fifteen, almost exclusively the friends of the administration, voted against it. Were those who sustained it agrarians, or actuated by a spirit of factious opposition? None will assert it. For myself, I can truly say the motion was made in good faith. It was placed upon the ground of the insecurity and danger, both in a pecuniary and political view, of a connection between this Government and banking corporations. On the contrary, the administration party derided the proposition; those particularly, who have since occupied conspicuous stations in the House. The present Speaker, then chairman of the Committee of Ways and Means, warmly commended the State banks as every way competent, and worthy of all confidence. The present chairman of the Committee of Ways and Means (Mr. Cambreleng) also opposed it. He has reminded us of his speech, in which he said he concurred with me in the principle, but did not think that the proper time to assert it. Yes, sir, I remember it well. He approved the principle, but refused to carry it into practice: he spoke in favor of the proposition, and voted against it. The bill providing for a general deposite of public

money in the State banks was passed. It was the favorite measure of the party in power. But, sir, strange to say, those who seemingly, at least, favored the principle of separation, now denounce it as factious and chimerical; and its opponents have become its warmest advocates. It is not for me to question the sincerity of either party. That is between them and their consciences. We have to do here with measures, not motives. I think now, as I thought then; and will not change my course, because the administration party, or the opposition party, may think fit to change theirs. I have never so far enlisted under the banners of either, as to give up the exercise of my own judgment, nor consented to submit to the dictation of any party, or of any man in this House—or in the other House—or in the White House. Still less will I yield up the convictions of my own mind, because my political adversaries have acknowledged their truth. The experience of the last two years has been enough to open their eyes; and I will hope, sir, they have seen their error. To adhere to an opinion, when reason and experience show it to be erroneous, is to be a bigot, or a hypocrite. It is equally true that those who desert their own principles, and act in opposition to their own judgment, are slaves, mere puppets, moved by the will of another. Maclellan could construct a House of Representatives, as fit to exercise the functions of legislators—yes, sir, Speaker, orators, and all, down to that important personage—The Previous Question.

But it is asked, why legislate upon the subject now? The separation has taken place, and the Sub-Treasury scheme is in full operation. True, sir; but how has this been effected? By the simple mandate of the Executive. Is it not obvious, too, that this plan itself, as now practised, is insecure, and stands in need of legislative provisions?

It is the duty of Congress to provide for the safety of the public treasure. We can not justify ourselves if we abandon it to the control of the Executive. It is a power never safely entrusted to any but the immediate representatives of the people. Yet our legislation is almost wholly shaped, so far as concerns the revenue, by the other House, or by the Executive. We have even received bills for raising supplies from the Senate almost without a murmur. The bill for depositing the surplus with the States, it has been often said, was amended at the White House, so as to meet the views of the President. Look, sir, to the history of the Treasury circular—a measure, adopted in known opposition to the will of Congress:—and the act repealing it:—pocketed by the President, and, for aught we know, now at the Hermitage. Look to the course pursued for years past, in regard to the custody of the public money: removed from the place where you had appointed it to be kept, to places you had never authorized to receive it. Yes, sir, you had ordained an union between the Government and the national bank; not, perhaps, strictly in the bonds of lawful matrimony. This union lasted for years; it was severed by the Executive fiat; our Chief Magistrate cut the knot with as little ceremony as Henry VIII., and then took up with almost as many wives as surrounded King Solomon—forty or more—eighty, sir, it is said around me. The State banks came into favor. It was an illicit connection; the bans had never been celebrated. We were called upon to sanction both acts, the divorce, and the new union; and we complied:—most obediently. The State banks, in turn, have given offence:—by too faithfully obeying the orders of their lord and master; and now, the royal edict has again gone forth, and the cry is, “off with their heads.” The chamber of Blue Beard never exhibited a more bloody spectacle. Yes, sir, in little more than two years, these new favorites are discarded; and after the flattering picture drawn of the entire security of the State banks, we now behold upon our table a bill to settle up our accounts with the late depositories of the public money. The Executive has again taken the public treasure into its keeping, or, rather, has scattered it throughout the land, without the authority of law, in the hands of thousands of individuals. I repeat, sir, it does not become us to leave it in that condition. We may avoid the danger to which it is exposed,

in my humble judgment, by placing it as a special deposite in the local banks, and in making that deposite, preserve, substantially, the principle which the Sub-Treasury scheme is designed to assert. Special depositories no more imply any pecuniary or political union between the Government and the banks, than such an union would spring from employing a railroad, or steamboat company, to transport the mail or munitions of war. I trust, therefore, sir, we shall have the aid of the chairman of the Committee of Ways and Means to amend the bill in the way I have had the honor to suggest. It would be the most effectual means of rendering the measure successful, and putting an end to the hopes of those who look to its failure as resulting in the establishment of a national bank.

### REMARKS OF MR. HUNTER, OF VIRGINIA,

In the House of Representatives, October 10, 1837—

In Committee of the Whole, on the bill “imposing additional duties, as depositories in certain cases, on public officers.”

MR. SPEAKER: I arise under the painful sense that I am asking almost too much of this committee, when I throw myself upon its indulgence whilst I express my views in relation to the subject before us. But our present position is highly respectable; the consequences of our action in the existing crisis may be lasting to the country, and I wish to be heard in vindication of the principles which will govern my course. We stand, sir, in the midst of a great commercial revolution; we have just witnessed an explosion in the credit system, through which the stream of capital circulates and dispenses its mighty agency to the country. Old channels have been abandoned, new ones are being formed; and now, sir, when every institution of the land is trembling under the shock, and our most important interests are sympathizing with the distress in the circulating system of the body politic, the eyes of the people are turned in anxious solicitude upon our course.

They have suffered with exemplary patience, under calamities which would have goaded almost any other people to tumult and bloodshed; and they have even forbore to speak forth their grievances, as if fearful that the clamor might disturb the presence of mind of those whose peculiar task it was to work the ship of state off the lee shore upon which it was driving—“*Nec tumultus, nec quies*,” but there is that state of deep and silent suspense which more forcibly than by words seems to say that, upon this occasion, “our country expects every man to do his duty.” I feel, sir, a most painful sense of the responsibility of my position. On the one hand, I know that he can not be justified on the plea of ignorance who lightly tampers with the important interests now concerned in our action; and, on the other, if personal or party considerations were to deter me from doing whatever may be done for the relief of the country, I feel that my name would deserve to be pursued through all posterity with execrations. I might, perhaps, escape responsibility by declaring that, as I had nothing to do in producing the present distress, so I was bound to do nothing towards restoring things to a sounder condition. Sir, I scorn the excuse. I think I see something which may be done for the good of the country, and I am willing to share the responsibility with those who will attempt it. In taking my course I form no new connections, I make no alliances; I act as I was sent here to act. I legislate not for party, but for the good of our common country. I tread all personal and party considerations into the dust, when they present themselves in competition with the most important interests of the people.

Mr. Chairman, if I can free this Government from a corrupting connection, if I can aid in so moulding its action as to remove the causes by which it has disturbed the natural level of our circulating capital, and advance one more step towards that perfect freedom which American trade ought to enjoy, I shall be content, be my own fate what it may; but if I should unfortunately

work harm where I mean good, I shall only regret that others will suffer under the consequences of my mistake. But, sir, I turn from these considerations to the great question before us. How can we exercise the powers given us by the Constitution, and remould the fiscal action of the Government, so as to relieve the country of its sufferings, and prevent their recurrence again? It has been well said that debt is the evil under which we are suffering. The real balance of trade has been against us; the foreign creditor demanded the adjustment of this balance in specie; and the currency system of the country, having been inflated beyond its just dimensions, was unable to meet the demand for a conversion so sudden. What, then, can be done, sir, to relieve the people from this pressure? There are but two modes of relief from debt: the one consists in its payment; and the other palliates the evil by obtaining time, so as to divide between several years the burden which is too heavy for one. It is obvious that, as a Government, we have neither the right nor the means of paying the debt. Governments may spend money, but they never make it; and their attempts at political alchemy have always resulted, like the vain search after the philosopher's stone, in more expense than profit. Has the Government the means of extending the credit upon the debt due abroad? If this could be done, we should undoubtedly find immediate relief. Instances have occurred in the history of English commerce, and in some of our own States, in which Government has effected this purpose, by interposing its own credit between the domestic debtor and the foreign creditor. There are times when a people may be unable, without great suffering, to meet a sudden call for the balance of trade which exists against them. But it can scarcely happen that they should not be ultimately able to meet the call, if time were given. On these occasions, the foreign creditor presses, because he can not well know the actual responsibility of individuals. In such situations, the English Government has exchanged its own credit, which was undoubted, for that of the domestic creditor, who was thus enabled to make his remittances abroad in undoubted securities. We have no power here to enter into any such trade; and although the exercise of this power might occasionally be useful, yet it is too liable to abuse to have been wisely entrusted to us. The direct fiscal action of Government might have been rendered conducive to this end, and eminently beneficial. If we had issued certificates of loan upon time for the money necessary for Government, I believe, sir, that the merchant, instead of exporting his specie, would have given it to us in exchange for this paper, which would have served a better purpose abroad. In this way we should have done much for the relief of the country; we should have avoided all danger of a depreciated paper currency issued by Government, and we should have been clearly within the limits of our constitutional power. But the occasion has passed away; we have passed a bill for Treasury notes; and when I connect the discretion, as to interest, confided to the Secretary, under the bill, with his known opinions on that subject, I am bound to conclude that they will be issued and designed as currency.

But, Mr. Chairman, that subject is not now before us, and I will not detain the committee with its further consideration.

I shall pause but a moment to consider the expedient of a United States Bank, which has been suggested by some as affording the means of producing immediate relief. If this were so, the suggestion would be useless to those who, like myself, believe that it is demonstrable, and that it has often been demonstrated—that we have no power under the Constitution to charter such a bank. But, for one, I do not believe that the expected effect would flow from an institution. It would enter the field as a rival of the State institutions, and could only sustain the competition by either debasing its currency to the level of the State institutions, or by elevating their circulation to the sounder level which it might establish for itself. The first operation would prolong the present evils; and the other, if attempted by any but the most gradual means, would break the State banks, and aggravate the distress of the

community. But I pass from the consideration of the means of immediate relief, real or imaginary, which are not within our reach, to those which may be. And here I beg leave to pause upon our fiscal policy, and its incidental effects upon currency and trade. If it has introduced causes which disturb the natural level of circulating capital, and furnished a false excitement to currency and credit, that policy ought to be changed. Public convenience may require that the change should be gradual, but important interests demand that it shall be ultimately made. After much consideration, I have come to the conclusion that the present and past commercial distresses have been mainly produced by the American banking system; a system, sir, which, by the law of its creation, hurries to its downfall as the necessary result of its own action; and this catastrophe is only hastened by the excitement of the connection between it and the Government.

It has been said, Mr. Chairman, by McCulloch, one of the ablest political economists of the present day, that our system of banking is the worst in the world. I will not stop now to institute that comparison, or to examine his conclusion; but I shall demonstrate that its natural tendencies are to produce a state of things like the present, if I succeed in showing, first, that it causes a false distribution of capital, and secondly, that it creates a diseased action in the credit and currency systems, by forming an improper connection between them.

According to our banking policy, these institutions have the exclusive right of making a paper currency; and their paper only is received in payment of public dues. To these exclusive privileges they unite the power of drawing interest from an amount greatly exceeding their capitals. Take, in connection with this, the usury laws, which exist, I believe, in all of the States of the Union, and you have the result that capital, loaned through bank agency, will draw an interest greatly exceeding that which any other capitalist can derive from money lent. The loanable capital of the country will of course seek that investment, and fill those channels of circulation before it reaches any other—the consequences of the artificial direction thus given to capital, is its false distribution between the different sections of that country, and the different classes of society in that country, in which banks have those exclusive privileges. The loanable capital will seek the places in which these institutions exist, until it has exhausted the demand for it there, before it reaches those portions of the same country in which banks do not exist. It will do so, because through bank agency it can derive more than the legal interest within the sphere of its operations, whilst beyond that sphere its profits are confined to that interest. The system establishes, in effect, a bounty upon capital lent to the mercantile, and those classes whose labor brings a speedy return, at the expense of the agriculturists, whose returns are slow. Loans for thirty or sixty days are obviously more profitable than those for longer periods. It is the difference between simple and compound interest. The merchant, therefore, whose outlay is speedily returned to him, can thus afford to deal in these short credits, whilst the agriculturist, whose returns are generally annual, finds himself forced to pay compound, for what the merchant returns only simple interest. The effect of this is so much felt, although its causes are perhaps not generally understood, that in my State it is received almost as an adage, that no farmer can afford to go into bank. There is yet another mode, sir, in which the system produces a false distribution of capital. The available profits of these institutions, within the limits presented to them, are so great that they may become credit insurance offices. The directors, under these extraordinary advantages, may run the risk of insuring a favorite's credit when it is doubtful, when he may have no real resources, and thus the fair trader will be injured by the reckless and often ruinous competition of these men who have nothing in fact to lose. This, sir, will always happen when a bank has supplied the demands of good customers without reaching the limits of circulation prescribed to them. The temptation to run this risk is so strong that they too often yield to it.

Mr. Chairman, it is no answer to these objections, to say that every section of the country may be supplied with its due proportion of banking capital. The country is supplied with banks through its Legislature, and no Government has the means of ascertaining the relative wants of different sections in this respect. But, sir, if the Government could ascertain the relative proportions in which the different sections should be supplied to make the distribution just, it would be unable to make that distribution. A supply of all the capital wanted for loan in any country, through the medium of banks like ours, would expand the credit system so rapidly, from causes which I shall endeavor to show, as to produce revulsions which would present a scene of wide spread ruin and disaster. A fact which is so impressed upon the public mind, that every Legislature not perfectly wild in its movements, seems to have endeavored to restrain the system within the supposed wants of the country, rather than make the attempt to supply the value demanded. If I have been successful so far, Mr. Chairman, I have shown that this system is injurious in giving a false direction to capital, which, if left to itself, would seek those investments which had most natural advantages, and which therefore would have paid the highest profits.

I come now then to the false and artificial laws of expansion and contraction, which are introduced into our currency and credit, (as I maintain) by the banking system as it exists here. Instead of leaving currency and credit to the regulation of the great laws ordained by nature for that purpose, instead of leaving them to that self-regulating power which would adapt them to the changing condition of society, and harmonise them with each other, our Governments vainly practice their political alchemy, to the injury, and sometimes to the destruction of both. At their very creation, we arm these corporations with incompatible functions. We unite in them the money-making and the money-lending powers, and what, sir, are the inevitable consequences? Why they make as much money as possible, that they may have the more to lend. They have a direct interest in issuing as much as possible, and they always do it. When their capitals are loaned out, they can not add a dollar to the credit of the country, without making a like addition to the currency. The latter, under this system, is swelled to an undue proportion, and when once it is beyond its level, its overflow is inevitable. Debase it in the least degree, and its downward tendency is ever increasing. The moment you increase, in this way, the nominal or money price of commodities, the catastrophe is unavoidable. The merchant who deals annually in \$10,000 of bank credit, when wheat was \$1 per bushel, will require \$20,000 of the like credit to deal in the same quantity of grain. The banks which supplied the demand for credit, when wheat was at one dollar, are unable to meet that demand, when it is at double its former price. The cry is therefore, "more banks," and more paper money is the consequence, until the proportion between the currency and the material wealth of that country is greater than in other parts of the world. If the real balance of trade then turns for a moment against us, a great commercial catastrophe occurs. And even if this should not be the case, the trade in our currency becomes more profitable than that in our commodities. This currency promises to be convertible into specie, which is of uniform value every where. The Constitution of this country requires that it should be so convertible, and when the paper currency is purchased with commodities, the holder seeks a redemption of the pledge to pay in specie.

Mr. Chairman, I refer to that period in the English history, when its paper currency was so inflated as to furnish to a foreign enemy, the means of a direct attack upon its credit system. It is known that Claviere, whilst the Brissotine faction prevailed in France, bought up bills with the direct purpose of presenting them for specie, and breaking the Bank of England. A scheme which threatened so much of mischief as to have furnished the secret cause (as many believe) of the suspension of specie payments by that bank in 1793, a measure which is said to have been advised by the

ministry itself. I am greatly mistaken, sir, if this very trade in our currency has not been one of the leading causes of our present distress. But I will not enter into an inquiry which would lead through so wide a field of speculation. I have thus endeavored to show, sir, how this artificial connection between credit and currency causes them to perform that perpetual cycle of contraction and expansion from which our country has suffered so much and so often. It ought not to surprise us then if these vortices in our credit system, like those of the wild theorist of antiquity, should produce strange combinations and unexpected results. The epicurean philosopher accounted for the existence of the world, by supposing it to result from the fortuitous concourse of atoms, in these notices and we, not at all wiser, have attempted to build up a fabric of credit upon a revolving foundation.

I have said, Mr. Chairman, that the process which I have just described is the result of an unnatural connection between the credit and currency systems. It may be asked, in what respect is this connection unnatural? Why, sir, in this: we make the currency expand with the credit of the country, when in truth, although credit *must* expand when currency is increased, yet it *may* increase when currency remains the same. For instance, if we were suddenly to double the amount of money in the world, the same real value in credit must be doubled also in its nominal amount. But if the currency remained the same, new resources discovered in one country, making the employment of capital more profitable there, might readily draw a greater proportion of currency, as a measure of value, than circulated there before the discovery. Instead, then, of making the currency and credit systems the means of mutual expansion, they ought to be left separate. When each is true in the discharge of its own functions, they vary according to different laws and upon different principles. Let us look for a moment to the functions of each separately, for the purpose of ascertaining the true laws of their variation. And here I first inquire what is currency? It is that nominal and floating standard, by which mankind have consented to measure the value of their commodities, and to regulate their exchanges. To discharge these functions, it must first be durable, so as not to be consumed in the use; secondly, it must be portable, so as to be transferred conveniently from place to place, as the uses of exchange may require; and, thirdly, it must be uniform as a measure—by which I mean that the proportion between the currency and the material wealth of all countries should be the same; and to be a perfect measure of value, this proportion should not only be invariable in all places, but in all time, from age to age. The last desideratum, as to uniformity from time to time, has never been supplied in practice or even suggested in theory; but the first requisites are to be found but in one medium—I mean the precious metals. These, sir, are highly durable, are portable, and if not obstructed in their flow by artificial regulations, which disturb their level, their proportion to material wealth will be the same in every country, because the supply would be in proportion to the demand, and as there would be most demand for them where there was most material wealth, so the supply would also be greatest in those places. It is also a manifest requisite in currency, that it should exist in sufficient quantities to be available to all who have a use for it, and doubts have been expressed as to the existence of enough of the precious metals for the uses of money. But these I have always thought unfounded. It is obvious, that from time to time, even if the quantity remained the same, it would appreciate in value so gradually as not to affect the mass of contracts which are for short dates, by its change as a measure of value. And if the relation of debtor and creditor were not seriously affected by the change, it would be as convenient to use a half ounce of silver in the dollar as one ounce. This change would of itself present the means of doubling the currency. But if we put this out of the question, we have the facts that the quantity of the precious metals now bestowed on ornamental uses in Europe and America, is supposed to exceed

the gold and silver coinage of those countries by more than a fourth, and that the mines are constantly pouring in new supplies, which are capable of still further increase. Take these facts into consideration, and there is every reason to believe that the supply of these metals would be adequate to our purposes, if Governments would abandon their contrivances for furnishing a paper money currency. The general tendency of the metallic currency, through a series of ages, has been to increase somewhat faster than the material wealth of the world, so that experience would here seem to support me independently of theory. This very circumstance has sometimes operated to affect seriously those contracts which embrace a long period of time in their execution, as is the case in some of the English leases. But this change has been so gradual, that the great mass of contracts, which were for a shorter time, have been adjusted by this measure of value without serious inconvenience. If any improvement upon this metallic currency has been suggested in modern times, it is perhaps to be found in some such expedient as that of the bank of Amsterdam; a system which, upon an actual deposit of specie, issues a like amount of paper, for the actual return of which specie, upon the demand of the bearer of the paper, the faith of the State is pledged, or some security, equally undoubted, is given. The advantage of this circulation is, that it varies precisely with gold and silver as a standard of value; that it saves the loss by wear of these metals, and renders them in effect as portable as paper.

If the State Governments will have a paper currency, this is undoubtedly the safest mode in which they can put it forth. But a paper currency put forth by Government on any other principle, will always have the unfortunate effect of continually changing the measure of value by which contracts are to be adjusted. Different Governments adopt different rules of issue. The proportion of paper currency to material wealth, is different in each. A man contracts, expecting to deliver by one standard, and owing to its change is forced to deliver by another. He receives, perhaps, in ounces, and is forced to return in pounds. This injurious change in the relations between debtor and creditor, leads to disasters and sufferings, so often witnessed that I need not depict them. Other Governments have means of palliating the evils of this sudden change in the measure of value, not within our reach. When a demand is made for a sudden adjustment in specie, of contracts formed under the expectation that they are to be redeemed in paper, these Governments can, and always do, interfere to prevent this change in the relations between debtor and creditor. They make the paper a legal tender between man and man. Indeed, the English Government seems to be well aware of the necessity of making paper currency a tender, after it is once issued; it sees so clearly that contracts will always be made under the expectation of redeeming them in this paper, and that it would be impossible to force their adjustment in specie, that it has made the paper of the Bank of England a legal tender by a standing law of the land. Here we can resort to no such expedient. Nothing but gold and silver can be made a legal tender; a point of difference which no American statesman should lose sight of. What folly is it, then, to introduce by legislation a standard of measure in the formation of contracts, which can always be altered by the creditor at his pleasure, in despite of our laws! How vast and complex is the fraud which we thus practice upon our citizens, when we indirectly force them to contract by one standard, whilst the Constitution requires them to pay by another! If a law were passed requiring every man who had contracted to deliver a bushel of corn to deliver two, the injustice would not be greater, nor the mischief more, than our paper currency has often produced. So much, Mr. Chairman, for the operation of our banking system upon the currency; let us trace now its effects upon credit.

What is credit? and what is the real law which regulates its expansion and contraction? Credit, sir, is the contrivance by which we translate future resources to our present use and employment; or in other words, it affords the means by which we obtain the present use of capital by a pledge of future

resources—of resources which exist either in mind or matter—of resources to be found, sir, either in our skill and industry, or in capacities yet to be developed in our material possessions. The fabric of credit, to endure, sir, must rest on the solid rock of responsibility, and not upon the fleeting sands of mere confidence: or, sir, if I may change the figure, credit is the venous system through which the stream of capital flows, to visit every part of the body politic with its life-dispensing power. Disturb for a moment the free and natural course of its circulation, and you derange every function of social life. Leave it to follow its natural courses, and it will quicken anew the spirit of enterprise, impart more vigor to the arm of industry, and dispense health and freshness to the frame and spirit which it supports and vivifies.

I have said, sir, that it was the pledge of future resources, for the present use of existing capital. To make the operation beneficial, this pledge must be upon real resources; so that the borrower may not only return the principal and interest of the capital employed, but also retain a profit himself. If his employment returns him an amount just equal to, or a less amount, than the principal and interest of this capital, there is a clear loss to society of his labor, at least, and perhaps of more. It is manifest, then, that this operation, if beneficial to society, must be founded upon real resources, and new capacities for producing wealth. There is a certain amount of capital in the world, to which Government can not add by any of its regulations. This is all which can be distributed; and if the credit system exists in a sound condition, this capital will be distributed between the different parts of the world, and amongst different individuals in society, in the relative proportion of their comparative resources. That country which can give most for the use of capital will be first supplied, according to the laws of trade; and any community which, directly or indirectly, gets possession of more capital than its relative resources entitle it to enjoy, receives it upon the terms of paying for the use of more capital than it can advantageously employ. This, sir, could never be the case if Government were not to interfere; but, unhappily for mankind, it too often happens that a Government, under the vain hope of benefitting its people, pursues a system of measures which disturbs the natural level of capital. For an instance of this, I need only refer to the currency operation of our banking system. I have shown, sir, that the operation of this system has a tendency to increase the currency of the country, in which it exists, far beyond the basis of the metallic, which is the currency of the world. The nominal amount of money is increased, and its real value diminished. Suppose, for instance, that two dollars represent the same amount of the necessities of life which were formerly represented by one. The capital which is borrowed at this nominal rise in its money price, must be returned when the nominal price falls, and the real value is raised. In other words, the community which borrowed in half dollars must return in dollars. The reason of this is obvious. The credit system of any country, when it is sound, rises or falls with its relative resources. This is the true and single law of its valuation. But Government interposes and alters the measure of value. It doubles, for instance, the proportion between the paper currency, and the material wealth of the country, by forcing every addition made to credit, through the banks, to produce a like addition in currency. The country, then, which has fewest resources in comparison with others, may have the largest nominal credit system, on account of the inordinate expansion of the standard by which its value is measured.

The credit system being thus expanded, let us look for a moment into the mode of redeeming the obligations thus incurred. This debt can only be discharged by a system of exchange, under which one debt is made to offset another, so as to save the necessity for currency; or else by redeeming the obligations in money. So far as the exchanges adjust the balances due on a certain day throughout the country, the operation is beneficial; and the relations between debtor and creditor are not ruinously affected, notwithstanding the inflation of the

currency. But in this diseased state of affairs, the operation of the conversion of that portion of the credit system which must be redeemed by money is terrible. The obligations were contracted upon the paper standard, but they must be redeemed in specie, if the creditor chooses to demand it, and this he will do, if the paper currency exceeds its just proportions, because then it will be to his interest to exact this mode of adjusting contracts. So far, then, Mr. Chairman, I have endeavored to prove to this committee that our banking system produces, first, an unjust distribution of capital between the different sections of the same country and the different classes of the same society; and, secondly, that the connection which it instituted between currency and credit caused them both to expand and contract, according to laws different from those which nature had prescribed for their regulation. If I have been successful in my effort, I have shown that these effects must flow from the very laws of their creation, and that this was the original sin of them both.

I know, sir, that some advantages have also resulted from their operation, but none, in my opinion, which compensate for these evils. The advantage of adjusting the balances, due under the credit system, by exchange or offset, so as to avoid a direct result to currency, is immense; and it is true that a large capital is necessary for this business. It is necessary, because the greater the variety of exchanges commanded by any one institution, the greater the facility for offsetting the one debt against another. The limit to this advantage is only to be found when the amount of capital employed in this way, by any one institution, is so great as to preclude competition. It was the opinion of Mr. Baring, however, one of the most intelligent of English merchants, when examined before a committee of the House of Commons on this subject, that the important business of exchange could be effected more readily through private dealers than by banking institutions; and there seem to exist strong reasons for his opinion. Be this as it may, however, and let us suppose, for argument's sake, that in a young country like ours we can only raise capital enough to deal in exchanges, domestic and foreign, by means of corporations, still I maintain, sir, that these corporations should be single in their end and aim. They should be confined to the business of dealing in exchanges, and all power of issue should be denied them. If the banking system of this country is ever reformed, the change must be conducted in that spirit of analysis which has effected most of the modern reforms in science. If currency be the object of the Constitution, I have already intimated the model upon which I think it should be moulded. If the regulation of exchange and the diffusion of loanable capital be the object, the institution should be confined to this end alone. A currency bank should exist for currency alone, without the power to discount; and a bank of discount should be confined to that purpose without the power to issue. The true secret, I believe, sir, of regulating the machinery of corporations so that it shall work the precise end intended for it, and no other, is to create them with a single purpose, upon which they will then be sure to move. But, sir, unite in them incompatible functions, and you are apt to introduce a complexity into their operations, which will often produce results entirely unexpected at their creation, and contrary to the public good.

I believe, sir, that the history of our system of paper currency connected with credit, as we have instituted that connection, would illustrate the truth of my views, if there were time to enter into this inquiry. I will not raise an issue of fact, however, when my purpose is satisfied by dealing with first principles. I will not enter into the history of that early struggle between the colonies of Massachusetts and Rhode Island, for the field of circulation which each was endeavoring exclusively to occupy with its paper issues; a contest which waxed so warm as to make a reference of their disputes to the Crown necessary for the preservation of peace. Neither will I occupy the committee with the history of that continental money, whose improvident issue was said by one who both felt and knew its consequences, to have caused

more real suffering than all the complicated horrors of the war of the Revolution. Did time permit, I might well pause, for the purpose of tracing to the inevitable tendencies of our banking system, the wide spread derangement of our currency and credit, from the suspension of specie payments during the war, until 1819, when the bank of the United States itself was perhaps only saved from a like catastrophe by the suspension of a Treasury draft. Yes, sir, and for confirmation almost as strong as proof of holy writ itself, I might turn from that period to this. In a time of profound peace, when the mighty energies of the American people were tasking themselves to their utmost upon the finest theatre for exertion which any people ever enjoyed, we have seen their career suddenly stayed, and the arm of enterprise itself folded in the mournful contemplation of the ruins of the prostrate system of credit; a fabric which fell, sir, as I before observed, because it was founded, not on the solid rock of responsibility, but upon the fleeting sands of a mere confidence—a false confidence—engendered, sir, by those very institutions which were relied upon as the pillars of the edifice.

And here, Mr. Chairman, let me not be misunderstood. I do not war upon existing institutions, but with the policy which gave them birth. I would be the last man in this community to encourage a violation of these vested rights. Neither do I blame individuals, sir, for entering into employments to which the policy of their State Government invited them. I have no desire either to return suddenly from one measure of value to another, so as to disturb the relations between debtor and creditor. I go for reform, sir, nor for revolution. I wish to see a change of policy, it is true; I care not how gradual it be, so the prospect of reform be certain. As one of the means of effecting this gradual reform, I propose a divorce between this Government and all banks. I propose it, sir, as a measure required by public interest, and ultimately beneficial to the banks themselves. The deposits of public money, upon which these institutions trade, and the credit given to their paper by means of its receipt in public dues, only serves to stimulate an action already false in its nature, and tends but to hasten the round of expansion and contraction which they are ever performing. In that point of view the connection is injurious alike to the Government, the people, and the banks. Upon every occasion in which this connection has existed with the State banks, we have seen it result in a general explosion of the credit system. I believe no one doubts but that this connection hastened the late catastrophe, which furnished the occasion for the late call of Congress. The receipt of bank paper in payment of public dues increases its credit, and extends its circulation. The amount of paper currency necessary for making all the payments required in collecting and disbursing the public revenue, is added to the natural circulation of the banks, and has no other basis than the confidence that it will be received in payment of Government dues. As this revenue expands and contracts, so this portion of the currency increases or diminishes. Whilst the surplus revenue was collecting, this circulation increased upon that credit: it increased, too, from the use of the deposits upon which they traded; and when the surplus and annual revenues of the Government were being distributed, and diminished, a portion of this currency was drawn from the field of circulation; and being no longer useful, its conversion was sought in specie. Here is the unhappy and fruitful cause of fluctuation in credit and currency, which must always exist under a connection between Government and bank. There were doubtless other causes growing out of that connection, which tended to hasten the suspension of specie payments. I throw them out of consideration, however, because they do not enter into the general question, and take only those consequences which necessarily flow from a connection between bank and Government under any circumstances; and having shown the injury which they work to the bank. I turn to their operation upon the fiscal concerns of the Government: when this violent rupture of the ties

which bind them together takes place, the Government is forced either to take depreciated paper, or to demand specie. If they take the first alternative, they give a bounty to each State to depreciate its paper, to lower its taxes, and duties become no longer uniform. If they choose the latter alternative, they find that its operation is to raise the taxes upon the people precisely at the time when they are least able to encounter an increase of expenditure. If, on the other hand, this connection had never existed, the banks would have been better able to meet their engagements, because their circulation would have been more limited and more justly proportioned to the wants of trade. The operation, too, would have kept enough of specie in circulation to have met the demands of Government, and to have afforded a rallying point to the banks when any sudden emergency created an unexpected demand for specie. If I have shown, Mr. Chairman, that this connection injures both bank and State, I need not state the obvious consequence, that whatever injures either the banks or the Government, injures the people also. But my colleague seems to suppose that this Government can find the means of regulating the operations of these banks, and of producing, through them, a sounder currency. His project supposes a system of rewards and punishments, through the fiscal action of this Government, which is so to control the banks as to effect this salutary end. I will not revert to those views which I have just given, to show that this expectation is false in theory; nor will I pause, to cite to him the opinion of Secretary Dallas, who, after a long experience, in 1816, pronounced this hope to be impracticable; much less would I cite to him as authority my own opinion upon this subject. I will take his position as true, for argument's sake; and then I would ask my honorable colleague how it is that, thinking with me that this Government cannot charter an institution for the purpose of controlling currency, still he will maintain its right to buy up the corporations of the States, and regulate their chartered functions, so as to control the currency and the exchanges of this country?

But, Mr. Chairman, much as I object to the connection between this Government and the banks, on account of the disturbing causes which I think it introduces into the action of the currency and credit systems of the country, I have another objection still more powerful: I never wish to see the banks converted into political engines again. Of all the enormous additions which have been made to Executive patronage, in late years, I regarded its connection with the State banks as the most fearful. The army of office-holders, though you should count them as 100,000 strong, would confer not half the power upon the Executive which the possession of the State banks would give to him. Convert them into political engines to be worked by his hands; give him the control over the exchanges and currency of the country; give him the dispensation of bank favors, and if he were disposed to use them for personal advancement, he would scorn your title of king, and your gewgaw of a crown, as if the offer intimated a doubt of his absolute authority without them. If the choice of means were given to a wise king, who wished to maintain his power, he would not choose a nobility, said to be the natural support of the crown; but he would ask for some hundreds of corporations, wielding the money power of the whole country. He would ask for those whose deliberations might be secret, whose agents might be invisible, and whose march upon their purpose could only be diverted by that impulse of interest which he alone could regulate. Give him these, sir, and he would despise your standing armies and your orders of nobility as cumbrous devices, unworthy of the refinement of the spirit of modern despotism. Mr. Chairman, I have always regarded the connection between bank and state in this country as a conjuncture most ominous to our liberties. Use the public money to buy up the State banks for the use of this Government, or of its Executive branch, and you at once convert them into political engines, you deprive the States of the control of their own institutions, and you place the people under the dominion of a league of corporate influ-

ences. Endow a moneyed corporation with the functions of Government, and you behold at once the most ruthless of all despotisms; and the history of human suffering and of East Indian oppression is not silent upon this subject. You may place the worst of men in authority, and he will have some touch of human feeling. Not so with a moneyed corporation: it deliberates in secret; it moves by the power of a majority, with no sense of personal and individual responsibility at the bar of public opinion; and it is governed by the single impulse of interest. You can not move it to pity for the present, or to remorse for the past; for its action is mechanical, and not under the influence of feeling or of soul. I protest then, sir, against any attempt to bind the moneyed corporations to one government, and by one common political purpose. I have given my reasons for objecting to any connection between Bank and State, and perhaps it may be reasonably required of me to suggest some better plan for the custody of the public treasure. If the selection were left to me, sir, I should adopt the plan of special depositories. The General Government should be independent of the banks as to the medium in which its revenues are collected, and banks would be independent of the Government when they were no longer exposed to the power of its rewards through the privilege of trading upon the public depositories. If such an arrangement could be effected by giving the banks a fair compensation for keeping the public money, at the same time that they were effectually restrained from using it, I should much prefer it to the scheme proposed by the Committee of Ways and Means. The pecuniary responsibility would be greater than that of individual collectors, and its custody of the public revenue would, perhaps, be safer. But the chief recommendation would be in the means which this plan would afford the representatives of the people to ascertain the state of the public money, if at any time there was cause to suspect either the ability or the honesty of the Secretary of the Treasury. I shall not fatigue the Committee, however, with the details of a scheme which I shall not propose by way of amendment, as there would be no reasonable prospect of its adoption at present. I should greatly prefer a bill carefully framed upon this basis to the one now before us; but I give to that the decided preference over the other alternatives, of a United States Bank, or the connection between the Government and the State banks. Doubtless, there will be difficulties attendant upon any scheme for regulating the custody of the public revenue. The money power in all its combinations, presents the most difficult problem to be solved in the science of Government. But we must choose the best plan within our reach; it is idle to expect perfection in a system of finance. I go, sir, for the great principle of divorce, without committing myself to the specific details of this bill further than by the expression of a preference for them over the connection between Bank and State. In that comparison, I have satisfied myself that it does not increase Executive patronage, as its opponents maintain; nor do I believe that its tendency will be to retard the resumption of specie payments. It, in fact, diminishes the Executive patronage by a larger amount than any other reform ever proposed under this Government. It subtracts the entire amount of bank patronage from the Executive, and in comparison with this, the few additional officers to be created are as nothing. How is this bill, sir, to retard the resumption of specie payments by the banks? They will be afraid, it is said, of runs upon them for specie to be paid for public dues. This objection, sir, is more specious than valid. The quarterly receipts of this Government will range from six to eight millions. The greatest possible amount of the addition to be made to the legal currency, under this bill, would be six or eight millions, and in point of fact I am informed that a far less sum would suffice, as the public money is paid out nearly as fast as it comes in. Is it to be supposed, sir, that the eight hundred banks of this country could not meet such a requisition, if they were ready in other respects for the resumption of specie payments? But, sir, in point of fact, the requisition for specie upon the banks, or upon the country, under this bill, can not amount to a dollar

if these Treasury drafts be issued for circulation, as I presume will be the case. They furnish more than enough of medium for the collection of our revenues. The banks, Mr. Chairman, can not resume specie payments generally until the foreign debt is nearly or wholly liquidated. When that is done, if they will elevate the value of their currency to the par of specie, partly by curtailing their circulation gradually, and within the limit of the present discount upon their paper, and partly by a judicious command of exchanges for converting their own obligations, they may then safely resume specie payments. Whenever their paper will command its par in specie in the market, they may safely undertake to give specie for it themselves. This I believe to be the only true mode of effecting the resumption, and this operation is entirely independent of the fiscal action of the Government. Rely upon it, sir, that a speedy resumption of specie payments by any other means would be impracticable, without producing more distress than we have yet seen in the community. To take their depreciated paper in payment of the public dues, would rob them of all inducement to resume, as the Government credit would thus be worth more to them than it would be if their paper was convertible.

Mr. Chairman, I know that I have this day presented views which, if true, will disturb the dream of those who believe that an infusion of banking medium, like the fabled juice of Medea, will renovate the body politic, and restore to age the vigor and freshness of youth. I know, sir, that there are many who will view my opinions as wild and extravagant. But I am willing to leave the issue between us to the arbitration of time and future experience. I am aware, too, that you cannot touch a fibre of one of the cords imposed upon trade, by the restrictive system, without exciting a host in opposition. But, sir, in a contest upon the great principles of free trade, I am willing to enlist for the war. I feel that they must succeed, because I trust to the power of truth. Its pace may be hobbled, but its march will still be onward. Yes, sir, it will be onward and onward, until the people awake to a sense of the injustice which imposed fetters upon the free spirit of American enterprise. I hope yet, sir, to see the day when the captive will throw its hands loose from their bonds, and proclaim in joyful exultation to the world, that it is free—free to pursue the impulses of its own genius, free to take the direction of its own interest, and ready to put forth the whole of its mighty energies to the fulfilment of the proud destiny which will then await it.

### SPEECH OF MR. MOORE, OF NEW YORK.

*In the House of Representatives, October 13, 1837.—*  
In Committee of the Whole on the bill imposing additional duties, as depositories in certain cases, on public officers.

Mr. MOORE addressed the committee as follows:

Mr. CHAIRMAN: It is with a degree of reluctance that I solicit the indulgence of the committee at this late period of the session. It is well known that, since I have had the honor of a seat in this House, I have troubled it but seldom with remarks of my own. Indeed, I have long considered it neither proper nor respectful in any member of any legislative body to engross the time to be devoted to public business in speech-making, unless the speaker have it in his power to impart some important information, or shed new light on the subject of debate. And here, sir, I feel bound to confess, that were I now to be governed strictly by this rule, I would have refrained from participating in this discussion.

Mr. Chairman, I regret to say that such is the poor and unprofitable fashion of the times, that, unless the people's representatives occasionally make long and lusty speeches, they are but too liable to incur the people's displeasure. And for this reason they often deem it expedient to make elaborate speeches on some given subject, that

shall, when printed, occupy so many columns of a newspaper, or so many pages of a pamphlet. In order to comply with this requisition, the member is often compelled, especially when the subject does not happen to be a very fruitful one, or the speaker does not chance to possess that kind of creative power which can produce something out of nothing, so to draw out and dilute his ideas, that the reader, should he judge from their texture and gossamer properties, would be liable to conclude that, like the spider's web, they had been spun rather from the bowels than the brain. The cause of this evil, sir, lies, in a great measure, with the people themselves. The representative, unless he inflicts some half dozen speeches upon the body to which he may belong in the course of a session—whether called for or not, whether to the purpose or not—returns to his constituents under the apprehension that he will not receive at their hands the gratifying welcome of "well done, good and faithful servant." The political aspirant, therefore, must either make up his mind to swim with the current of public opinion, and speak often, or to remain silent, and sink beneath its waves; and as legislators, like other men, are more or less moved by self-love, pride, and ambition—passions upon which hang the fever of the world, and which stimulate men to action—they are but too liable to consult their own, rather than their country's interest, and to embarrass the business of the nation, by making speeches designed for home consumption, and their own political aggrandizement. Sir, I intend no disrespect to the members of this body, nor to the people who send them here; I but speak of a custom which I conceive to be justly obnoxious to censure; I speak of men as I find them, and as they are. I am aware, sir, of the irrelevancy of these remarks, and will not further occupy the time of the committee by pursuing them.

Previously to approaching the subject, properly before the committee, I will briefly notice certain remarks of the gentleman from Pennsylvania, (Mr. Naylor,) who has just taken his seat. He has paid high and deserved compliments to the workingmen of the north—to their intelligence, and to their integrity. To those sentiments my heart most cordially responded. He represented himself to be a *workingman*; he professed great regard for the interests of workingmen; he declaimed most energetically in their behalf; but he uniformly votes against every measure which they advocate. During the present session he has voted for the United States Bank; he has expressed his determination to vote against the bill on your table. But he knows that the workingmen are opposed to the United States Bank; that they are in favor of the divorce bill, so called; and I feel justified in saying, that ninety-nine out of every hundred workingmen are favorable to this bill. Sir, the relation in which I stand to the laboring classes enables me to judge of their views on this subject. I am in daily correspondence with workingmen in different parts of the Union; and I know that an unanimity of opinion and of sentiments in its favor prevails amongst them. Sir, I can not conceive how the honorable gentleman can reconcile his professions with his practice. If he knows the feelings and the opinions of the workingmen as he ought to know them, and if he estimates their intelligence and their integrity as he professes to estimate them; why then does he go counter to their views and to their will? Sir, the laboring classes have had too many such advocates! They have been too often flattered and betrayed by politicians! Too often deceived by those who caressed and bepraised them! But, sir, the gentleman from Pennsylvania, not content with eulogizing the laboring men of the north, has made a false issue with the gentleman from South Carolina, (Mr. Pickens,) by misrepresenting his views. Sir, what was the position taken by the gentleman from South Carolina? I understood him to say that the incorporated monopolies of the north were inimical to the interests and the liberties of the laboring classes; were calculated to abridge their natural and political freedom, and to subject them to a moneyed aristocracy; and, for the expression of these sentiments, the gentleman from Pennsylvania has thought proper to rebuke him. But let

me tell the gentleman from Pennsylvania, that the laboring classes of the north are apprehensive of the very evils so ably depicted by the gentleman from South Carolina. Look at their organs; consult their papers; and you will find that exclusive legislation—that the grants of chartered monopolies—are regarded by them as hostile to their interests, and dangerous to their liberties. And did not the gentleman from Pennsylvania, previous to his election, and during the canvass, did not he intimate his opposition to these very moneyed monopolies, now dignified by him under the title of *institutions*? And how has he answered the expectations which he created by his professions? By voting for a United States Bank! By opposing the bill which proposes to disconnect bank and State! In a word, by warring with all the principles, and opposing all the wishes, of the laboring classes! "If such be thy gods, O, Israel! wo! wo! to those who bow before them!"

I now, sir, feel constrained to notice, briefly, some remarks which were made yesterday by my honorable and much respected colleague (Mr. Hoffman) while addressing this committee on the bill under consideration. I understood him to say, sir, that the present Chief Magistrate is, in a great degree, indebted to the influence of the banks for his political elevation. Sir, I deny the correctness of this assertion. I am satisfied that Martin Van Buren owes his elevation to his own merits, and to the unbought suffrages of a majority of the American people. But, sir, if my colleague represents this matter truly, and the election of Mr. Van Buren to the Presidency was achieved through bank officers or bank influence, what an important lesson does it teach us? And how forcibly does it illustrate the dangers of the banking system? If banks band together in one political contest, they may in another. If they unite their energies in behalf of one individual, they also may unite in behalf of another, without any regard to his merits, his virtues, or his qualifications, provided he will lend himself to their interests. This is a fruitful theme, but I will not pursue it at present. I now turn to the subject of *political changes*, on which my colleague has said so much. If I mistake not, he took occasion to rebuke the chairman of the Committee of Ways and Means for certain *alleged* political somersets, which he is said to have made some few years since. My friend over the way (Mr. Cambreleng) is fully competent to defend himself from the charge, and I shall, therefore, leave this part of the subject in his hands. On the general topic of *political changes*, my colleague (Mr. Hoffman) has all the advantages over me which practice and experience can give. It would, therefore, be manifestly imprudent for me to enter the lists with so old and so experienced a tactician in this branch of *political science*. Did I desire instruction on this subject, my colleague would be the very first man to whom I would apply. He should be my preceptor above all others: for I am satisfied that none can be better qualified than himself, to descant on the facility with which political changes can be made; none have the power to speak more feelingly and understandingly on the subject. It was but a short time since, sir, when my colleague and myself stood foremost in the ranks of the democracy; when the old wigwag resounded with our respective voices; when we advocated the same measures and the same men; when we sang the same political hosannas, and worshipped at the same political altar. But, sir, that time has passed; and my colleague, instead of joining with me in the old rallying cry, chooses to lift up his musical voice in a political palinode; and we now find ourselves planted foot to foot as political opponents, instead of standing shoulder to shoulder, as political associates, as we were wont to stand. In the course of his remarks, my colleague discoursed right eloquently on the calamities of the times and on the sufferings of the people. But on this topic he is not singular nor alone. All his whig brethren have strenuously emulated each other in their extraordinary professions of peculiar love for the patient people. When I reflect on the wonderful solicitude manifested by the members of the opposition for the welfare of the nation, I can not withhold an expression of admiration at the patrio-

tic and benevolent spirit which pervades and warms and expands their benevolent bosoms.

We have heard gentlemen from the East and the West, from the North and the South, mingling their notes of lamentation over the sufferings of the unfortunate wherever found. Every fibre of their heads and hearts, every feeling of their souls and bodies, appears to be attuned to benevolence, and to vibrate with deepest sympathy at the calamities which they assure us have befallen our common country. Sir, these are honorable feelings, and highly creditable to human nature. Patriotism so exalted, philanthropy so generous, sympathy so sincere, benevolence so pure, holy, and *disinterested*, cannot fail to challenge our warmest admiration. When we hear men sincerely deplore the misfortunes of their fellows, we can not but admire, honor and respect them. But how are these feelings of respect and admiration strengthened and augmented when we behold them exerting their utmost energies in behalf of the unfortunate; when we see them promptly and eagerly rushing to the rescue!

And, sir, here I must be permitted to intimate to my political opponents, that in order firmly to establish their characters for *superior* patriotism and philanthropy, it will be necessary for them to *act* as well as to *feel*. If you know the remedy, gentlemen, and apply it not, the sincerity of your professions may be doubted. The uncharitable may surmise that party is your object, and public good the scapegoat. Sir, what would we think of the patriotism of the man who was able, but unwilling, to succour his country in the hour of her extremity? Or what would we say of the benevolence of a physician, who refused to administer to his sick and dying patient the remedies which he knew would restore him to life, health, and vigor? And are not gentlemen aware, that after having so constantly, so earnestly, and so eloquently, bewailed the fallen fortunes of their country, they will naturally be looked to by that country with anxious shuddering solicitude for the remedies competent to heal the deep disease, which, we are told, is preying upon its vitals? Are they not aware that their benevolence will be questioned, and their sincerity doubted, even by the confiding and the faithful?

But, sir, we have been told that the friends of the administration have the *power*, and that the *responsibility* rests with them! Sir, what are we to understand by this? Is it meant to be insinuated that the administration party in this House have the *power* to relieve the distresses of this country, but that they have not the *will* to exercise it? Is it meant to be affirmed that the dominant party are so utterly destitute of feeling and of patriotism, as willingly and intentionally to withhold the aid which they might rightfully and constitutionally extend to the people? Is it their intention to represent us to the American people in so odious and offensive a light? Sir, I am aware that the gentlemen in the opposition have long claimed all the wisdom, and all the worth, and all the decency; but I did not suppose, until now, that they also claimed all the patriotism, all the benevolence, and all the sympathy.

For one, sir, I protest against such unwarrantable and unfounded pretensions. I am clearly against this additional *monopoly*. If the gentlemen really possess all the charity and benevolence which they claim, I trust that they will not be inexorable towards us; that they will not thrust us beyond the pale of humanity; that they will not strip us of all the common attributes of civilized men, nor paint us as savages or brutes, by representing us to be deaf or indifferent to the voice of distress. Why should we be thus treated as guilty of the grossest injustice—of the most flagrant inhumanity? If the gentlemen of the opposition do not consider *adequate* the means of relief proposed by the Executive, let them suggest such as will be effective, and, my life on it, if these means shall be just, proper, and constitutional, the friends of the administration will cheerfully yield them their most cordial and hearty support. We confess that we know no other remedies for the ills complained of than those we have already suggested. And if the gentlemen in the opposition have it in their power, as they would have us and the country believe, of proposing an

efficacious and constitutional remedy, for heaven's sake let them tell us what it is! If there be a balm in Gilead—if there be a physician there—let him administer the balm to our afflicted country. Do not, I beseech you, gentlemen, do not any longer keep secret your political catholicism, like quack physicians; but, like good and true patriots, make it publicly known, that it may be employed for the healing of the nation.

My colleague has pronounced the Sub-Treasury system *unconstitutional*, but did not attempt to *prove* it so. Now, sir, by way of a set-off, I pronounce *unconstitutional* the substitute of my colleague, a national bank; and so I shall endeavor to prove it, by calm and dispassionate argument. A national bank being the principal antagonist measure to the bill under discussion, I shall confine my remarks principally to that subject; and, as this is the only point that has not been fully and thoroughly discussed in the progress of this debate, there will be the greater propriety in this course. I shall, therefore, attempt to argue at length this part of the subject.

I can find no authority in the Constitution for granting charters of incorporation, of whatever name, kind, or description; and no honorable gentleman, I presume, will hazard the declaration that such power is *directly* given to Congress by the Constitution. The most hardy and reckless advocates of a national bank have never ventured to affirm that such power was specific and direct—that the warrant was express. They all resort to the doctrine of implication and construction. Sir, let us examine this doctrine; let us take up the Constitution in a spirit of honesty and soberness, and see what clause of that instrument, if any, vests in Congress even an *implied* power to incorporate a national bank.

Sir, I am aware of the vastness of the subject which I propose to examine. I am aware that the constitutionality of a national bank has been repeatedly discussed by the most eminent jurists and statesmen of the nation. And I am also aware that an attempt, on my part, to grapple with a subject of such magnitude, and under such circumstances, will be attributed by many to a want of discretion, if not to a culpable vanity. Be it so. I conceive it to be my duty—I know it to be my right—to express my views fully on this subject; and, although I may be unable to shed any additional light on this long agitated and vexatious question, yet I will, nevertheless, state the arguments and considerations which exert a controlling influence on my judgment. Permit me then, sir, to call, for a moment, the attention of the committee to the peculiar character of our Government. It is conceded by all parties, I believe, to be a Government of limited and specified powers; which powers are expressly prescribed by the Constitution. To the Constitution then, and to the Constitution alone, must Congress look for all and every power they would exercise. Unless, therefore, the power to grant charters of incorporation be expressly granted by the Constitution, the exercise of such power, on the part of Congress, would be a violation of that instrument. But, say gentlemen, although we do not pretend to assert, that the power to incorporate is given in direct terms to Congress by the Constitution, we contend, nevertheless, that such power is derived by fair and legitimate construction. But, when the advocates of this doctrine have been called upon to designate the clause of the Constitution which confers on Congress the power to incorporate a bank, they have been sadly puzzled to comply with the requisition, but have wandered and wandered from article to article, and from clause to clause, seeking in vain for authority. When driven from one position they flee to another; ever vacillating; never fixed in their views; never satisfied with their own, nor with each other's arguments. No unity of opinion prevails among them as to the particular clause in the Constitution, where this doctrine of construction and implication, authorizing acts of incorporation, is to be found; but, like certain deluded ones of old, one cries, lo! it is here, and another, lo! it is there; when, as was the case with the asses of Kish, it happens to be "nowhere." But, sir, let us examine those parts of the Constitution where this power is

said to reside. Some have attempted to locate it in the first article of the eighth section of the Constitution, which gives Congress the power "to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare, of the United States." The power to "lay and collect taxes" and to "pay the debts of the United States," in other words, the power to raise and appropriate money, and the power to grant charters of incorporation, I believe never have been, and I presume never will be, regarded as synonymous, even by the most desperate "constructionists." Those, therefore, who pretend to find authority to grant charters of incorporation, in the article under consideration, must look for it in the words "common defence and general welfare." And it is from these words that some pretend to derive the power to incorporate a national bank. Can those who have contended for this construction have considered well of the consequences which must inevitably follow from an exercise of such implied powers? Have they reflected, that, by giving to these words the construction they contend for, they render the enumerated powers of the Constitution nugatory? that they virtually annul the powers reserved to the State Governments? break down all the constitutional guards designed to protect the rights of the States, and of the people, and make the Constitution itself, in the hands of Congress, what clay would be in the hands of the potter? And, lastly, have they considered that this doctrine is flatly contradicted by the tenth amendment to the Constitution, which expressly declares that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people? General Hamilton, latitudinarian as he was on the subject of construction, had too much regard for his reputation to give to the words, "to provide for the common defence and general welfare," a construction that would confer on Congress powers not enumerated in the Constitution. By reference to his report on manufactures, it will be found that he confines, in every instance, the application of these words to the power given by the first sentence of the clause; and in this particular Mr. Jefferson agrees with him. The latter, in advertising to this subject, calls it "a grammatical quibble, which has countenanced the General Government in a claim of universal power. For," continues he, "in the phrase to lay taxes, to pay the debts, and provide for the general welfare, it is a mere question of syntax, whether the two last infinitives are governed by the first, or are distinct and co-ordinate powers; a question unequivocally decided by the exact definition of powers immediately following." Sir, I conceive that the clause of the Constitution under consideration admits of but two constructions: the one limiting the powers of Congress, as contended by General Hamilton and Mr. Jefferson; the other, conferring on Congress powers incompatible with the spirit, and utterly subversive of all the express powers of the Constitution—powers independent of, and paramount to, the Constitution itself—powers indefinite, boundless, omnipotent. If the latter construction be admitted, the *will of Congress*, and not the Constitution, is the law of the land. Or if, peradventure, Congress should think it *expedient* to revert to the Constitution at all, it would only be necessary to refer to that part of it containing the cabalistic words "common defence and general welfare;" and as these words, according to certain commentators, convey a plenary power on all subjects, and are applicable to all cases that come within the jurisdiction of the national legislature, it would be quite unnecessary to look further. This would be economical, withal—saving much precious time to the people's representatives, which otherwise might be squandered in wandering about the constitutional kingdom in search (as well search for the lost pleiad) of the enumerated powers, which, unfortunately, have been swallowed up by the implied powers discovered in the words "common defence and general welfare." Let us suppose the doctrine here combatted to be established and carried out into practical legislation. Congress is applied to by a number of influential individuals

for an act of incorporation, granting to them and to their successors and assigns for ever, the sole and exclusive right, extending to all the States in the Union, of smelting iron ore with anthracite coal, and of manufacturing the same. The memorialists set forth in their petition the immense benefits that would result to the nation from their contemplated enterprise. They dwell upon the advantages incident to associated capital, and concentrated wisdom and industry. They represent that the mining interest of the country would be benefited in proportion to the extent of the monopoly—inasmuch as the products of the iron and coal mines would ever find a ready market at the company's works; that the public in general would be enabled to obtain the manufactured articles at a much cheaper rate, and of a better quality; and that, in time of war, arms and ordnance could be furnished with greater facility, and of superior temper and calibre. The States, notwithstanding all these plausible representations, remonstrate—individuals remonstrate. The States urge that the grant would be a violation of their reserved rights, and the principle upon which the Union was founded; and demand of Congress the source whence the power is derived to grant such charter of incorporation? Congress very complacently point them to the potent words "common defence and general welfare," and the thing is settled. Individuals represent, that an equality of civil and political rights constitute the basis of purely democratical governments; that none but equal laws can legitimately flow from the principle of equal rights; and that all laws, which invade that principle, conflict with the spirit of our institutions, and are, to all intents and purposes, legislative frauds upon the rights of the people; and, consequently, utterly destitute of constitutional sanction. They further show, that an exercise of power, such as asked for by the petitioners, would confer exclusive privileges and legislative favors—infringe on their natural and political rights—violate the sacred principles of justice and political equality, and, for this reason, be clearly unconstitutional. But Congress, regardless of the truth and propriety of these representations, grant the charter of incorporation, and when called upon to show their constitutional right to do so, triumphantly refer to the magical words "common defence and general welfare," and there the matter ends. I have put this case for the purpose of illustrating the evils consequent upon an assumption of power, such as contended for by those who maintain that the clause we have been examining authorizes Congress to establish a federal bank. And, as legislators are as much subject to infirmities as other men, and the world not having, as yet, approached that desirable state of which Plato dreamed—"the perfectibility of man"—it is not only possible, but very probable, that cases of this kind might frequently happen. Nor can those who contend for the principle which merges all power in the words "common defence and general welfare," or, what amounts to the same thing—in the will of Congress—object to any case coming within that principle, however dangerous and pernicious in its consequences. As this clause of the Constitution has been, and is still, much relied on by the advocates of a United States Bank, I will take the liberty of introducing such authority in opposition to their views, as will, I trust, have weight, both with this house and the nation. The fourth resolution passed by the General Assembly of Virginia, in December, 1798, reads as follows:

"That the General Assembly doth also express its deep regret that a spirit has, in sundry instances, been manifested by the Federal Government to enlarge its powers by forced constructions of the constitutional charter which defines them; and that indications have appeared of a design to expound certain general phrases, (which, having been copied from the very limited grant of powers in the former articles of Confederation, were the less liable to be misconstrued,) so as to destroy the meaning and effect of the particular enumeration which necessarily explains and limits the general phrases; and so as to consolidate the States, by degrees, into one sovereignty; the obvious tendency and inevitable result of which would be to transform the present republican system of the United States into an absolute, or, at best, a mixed monarchy."

Mr. Madison, in his report commenting on this resolution, observes:

"The first question here to be considered is, whether a spirit has, in sundry instances, been manifested by the Federal Government to enlarge its powers by forced constructions of the constitutional charter,

"The General Assembly having declared their opinion merely, by regretting, in general terms, that forced constructions for enlarging the federal powers have taken place, it does not appear to the committee necessary to go into a specification of every instance to which the resolution may allude. The alien and sedition acts, being particularly named in a succeeding resolution, are of course to be understood as included in the allusion. Omitting others which have less occupied public attention, or been less extensively regarded as unconstitutional, the resolution may be presumed to refer particularly to the bank law, which, from the circumstances of its passage, as well as the latitude of construction on which it is founded, strikes the attention with singular force; and the carriage tax, distinguished also by circumstances in its history, having a similar tendency."

"1. The general phrases here meant must be those 'of providing for the common defence and general welfare.'"

"In the 'Articles of Confederation,' the phrases are used as follows, in Art. VIII: 'All charges of war, and all other expenses that shall be incurred for the common defence and general welfare, and allowed by the United States in Congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several States, in proportion to the value of all land within each State, granted to, or surveyed for, any person, as such land and the buildings and improvements thereon shall be estimated, according to such mode as the United States in Congress assembled shall from time to time direct and appoint.'"

"In the existing Constitution, they make the following part of sec. 8: 'The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare of the United States.'"

"This similarity in the use of the phrases in the two great federal charters, might well be considered as rendering their meaning less liable to be misconstrued in the latter, because it will scarcely be said that, in the former, they were ever understood to be either a general grant of power, or to authorize the requisition or application of money by the old Congress to the common defence and general welfare, except in cases afterwards enumerated, which explained and limited their meaning; and if such was the limited meaning attached to these phrases in the very instrument revised and remodelled by the present Constitution, it can never be supposed that, when copied into this Constitution, a different meaning ought to be attached to them."

"That, notwithstanding this remarkable security against misconstruction, a design has been indicated to expound these phrases in the Constitution, so as to destroy the effect of the particular enumeration of powers by which it explains and limits them, must have fallen under the observation of those who have attended to the course of public transactions. Not to multiply proofs on this subject, it will suffice to refer to the debates of the federal legislature, in which arguments have on different occasions been drawn, with apparent effect, from these phrases, in their indefinite meaning."—*Elliot's Debates*, vol. 4, pp. 577–8.

Again: the same distinguished personage, in a letter to Mr. Stevenson, dated November 27, 1830, in which he examines the origin and progress of the clause under consideration, remarks that:

"A special provision, says Mr. Madison, could not have been necessary for the debts of the new Congress; for a power to provide money, and a power to perform certain acts, of which money is the ordinary and appropriate means, must, of course, carry with them a power to pay the expense of performing the acts. Nor was any special provision for debts proposed, till the case of the revolutionary debts was brought into view; and it is a fair presumption, from the course of the varied propositions which have been noticed, that but for the old debts, and their association with the terms 'common defence and general welfare,' the clause would have remained, as reported in the first draught of a constitution, expressing generally 'a power in Congress to lay and collect taxes, duties, imposts, and excises,' without any addition of the phrase 'to provide for the common defence and general welfare.' With this addition, indeed, the language of the clause being in conformity with that of the clause in the articles of confederation, it would be qualified, as in those articles, by the specification of powers subjoined to it. But there is sufficient reason to suppose, that the terms in question would not have been introduced, but for the introduction of the old debts, with which they happened to stand in a familiar, though inoperative relation. Thus introduced, however, they pass undisturbed through the subsequent stages of the Constitution."

"If it be asked, why the terms 'common defence and general welfare,' if not meant to convey the comprehensive power, which, taken literally, they express, were not qualified and explained by some reference to the particular power subjoined, the answer is at hand, that although it might easily have been done, and experience shows it might be well if it had been done, yet the omission is accounted for by an inattention to the phraseology, occasioned, doubtless, by the identity with the harmless character attached to it in the instrument from which it was borrowed."

"But may it not be asked with infinitely more propriety, and without the possibility of a satisfactory answer, why, if the terms were meant to embrace not only all the powers particularly expressed, but the indefinite power which has been claimed under them, the intention was not so declared; why, on that supposition, so much critical labor was employed in enumerating the particular powers, and in defining and limiting their extent?"

"The obvious conclusion, to which we are brought, is, that that these terms, copied from the articles of confederation, were regarded in the new, as in the old instrument, merely as general terms, explained and limited by the subjoined specifications, and therefore requiring no critical attention or studied precaution."

"Mr. Wilson, justly distinguished for his intellectual powers, being deeply impressed with the importance of a bank at such a crisis, published a small pamphlet, entitled 'Considerations on the Bank of North America,' in which he endeavored to derive the power from the nature of the Union in which the colonies were declared and became independent States; and also from the tenor of the 'articles of confederation' themselves. But what is particularly worthy of notice is, that with all his anxious search in those articles for such a power, he

never glanced at the terms 'common defence and general welfare,' as a source of it."—*Elliot's Debates*, vol. 4, pp. 646–7.

And here, sir, I think I may safely rest this part of the subject.

The second paragraph of the 8th section of the Constitution, which vests in Congress the power "to borrow money on the credit of the United States," has also been appealed to by the friends of a national bank. But as nothing like an argument has ever been adduced in support of this position, as it rests upon mere conjecture, without the shadow of authority to support it, and as a bill to charter a bank is not a bill to borrow money, I will not trouble the committee with any further remarks on this point, but proceed to examine the third paragraph of the 8th section of the Constitution, which gives Congress the power "To regulate commerce with foreign nations, among the several States, and with the Indian tribes." This clause has been appealed to by the advocates of internal improvements, as authorizing Congress to construct roads and canals, &c.; it has also been appealed to by the friends of the tariff system, as vesting in Congress an implied power to protect our domestic manufactures; and lastly, it has been appealed to, as authorizing Congress to establish a United States Bank. Now, sir, in my humble opinion, the power to regulate commerce, does not include the power to make internal improvements of the character just noticed—to protect manufactures by imposing a tariff—nor to establish a national bank. Neither the clause immediately under consideration, nor any other found in the Constitution, authorizes Congress, in my judgment, to do either of those three things. Sir, is it meant to be affirmed, that the power to "regulate commerce" includes the power to regulate the currency of the several States? If so, then is Congress authorized, under the power to "regulate commerce," to regulate the issues of all the State banks—for these constitute the principal currency of the country: on the other hand, if it be meant that Congress have not the power, under this clause of the Constitution, to regulate the currency, how can it be said that Congress are thereby authorized to charter a bank for the purpose of regulating commerce, when the only object of a national bank, as we are told, is to regulate and equalize the exchanges and currency of the country? Again: if the power to "regulate commerce" includes the power to incorporate a bank, why may it not also include the power to grant charters of incorporation for other purposes? Why not authorize Congress to incorporate companies for objects of internal improvements, for manufactures, or, what would appear to be rather more congenial, for ordinary commercial purposes? If Congress can, by this clause of the Constitution, authorize one set of men, under an act of incorporation, to deal in bank paper, they possess equally the power to authorize another set to deal in silks and satins, calicoes and gingham. Nor can this position be controverted. The stockholders and agents of a bank are as much traffickers and dealers in paper money, which is a species of commercial commodity, as merchants are in broadcloths and cassimeres. If an act of incorporation, therefore, can be claimed in the one case, as a proper and necessary means to "regulate commerce," it unquestionably can in the other. But the clause in question confers no such power. The power to "regulate commerce," and the power to grant charters of incorporation are separate and distinct. The former is conferred by the Constitution, the latter is not. Sir, what was the nature of the power which the framers of the Constitution intended to confer on Congress by this clause? Evidently, to authorize Congress to prescribe or establish certain rules by which commerce should be governed. But will it be pretended that the authors of the Constitution meant that this power, which they vested in Congress alone, should be transferred by Congress to an incorporated company? That a chartered company should possess the exclusive power of regulating the commercial interests of the nation? of prescribing rules for its government? of determining the principles on which it should be conducted? and thus place one of the great interests of the country beyond legislative and constitutional control? No one, I presume, will say, in direct terms, that such was the inten-

tion of the framers of the Constitution; and yet such is the inevitable result to which the doctrine of construction, here combatted, leads. If such rules of construction prevail, it will be impossible to define the limits of the power of the Federal Government under the clause, "Congress shall have power to regulate commerce," &c. I will conclude my remarks on this clause, by reading from Mr. Jefferson's official opinion on the constitutionality of a United States Bank, the follow extract:

"To erect a bank, and to regulate commerce, are very different acts. He who erects a bank creates a subject of commerce in its bills: so does he who makes a bushel of wheat, or digs a dollar out of the mines. Yet neither of these persons regulate commerce thereby. To make a thing which may be bought and sold, is not to prescribe regulations for buying and selling. Besides, if this were an exercise of the power of regulating commerce, it would be void, as extending as much to the internal commerce of every State, as to its external. For the power given to Congress by the Constitution, does not extend to the internal regulation of the commerce of a State, (that is to say, of the commerce between citizen and citizen,) which remains exclusively with its own Legislature; but to its external commerce only, that is to say, its commerce with another State, or with foreign nations, or with the Indian tribes. Accordingly, the bill does not propose the measure as a 'regulation of trade,' but as 'productive of considerable advantage to trade.'

Some have attempted to locate the power to incorporate a national bank—Mr. McDuffie, for example, in his report of 1830, as chairman of the Committee of Ways and Means—on the fifth article of the eighth section of the Constitution, which gives Congress the power "to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures."

"The power to 'coin money and fix the value thereof,' is expressly and exclusively vested in Congress. This grant was evidently intended to invest Congress with the power of regulating the circulating medium. 'Coin' was regarded, at the period of framing the Constitution, as synonymous with 'currency,' as it was then generally believed that bank notes could only be maintained in circulation by being the true representative of the precious metals. The word 'coin,' therefore, must be regarded as a particular term, standing as the representative of a general idea."—*Rep. H. R. 1st Sess. 21st Cong. No. 355, vol. 3, p. 6.*

Now, sir, if "coin and currency are synonymous," signifying the same thing—if coin be currency and currency coin, Congress is vested with the power "to coin money, regulate the value thereof, and of foreign currency." According to this reading, Congress is authorized, not only to regulate the currency of this country, which consists principally of bank notes, but also the currency of other nations, whatever symbols of industry they may select as mediums of exchange. The chairman of the Committee of Ways and Means appears to have been as much at fault in his knowledge of the currency, properly considered, as of the character and powers of the Constitution; otherwise, he would not have confounded bank notes with coin—the pretended representative with the thing represented. I say the pretended representative, because the amount of paper money afloat exceeds, at least, five times the amount of specie wherewith to redeem it. It is not, therefore, strictly speaking, a representative of coin, or real money. It has become rather an instrument of speculation, than a measure or representative of value. The currency of a country, in order to be sound, as every political economist knows, ought to be equal to the precious metals, or to consist of the metals themselves. But the paper currency of this country is, and was even during the existence of the late Bank of the United States, but the mere *supposititious* representative of property. That paper money can never become a proper standard of value, is evident from the fact that it is constantly liable to fluctuation, depreciation, expansion, and contraction. And would it be doing justice to the framers of the Constitution, to their sagacity and integrity, so to construe that instrument, or any part thereof, as to authorize Congress to make paper credit, of whatever kind or description, a standard of value? The only standard or measure of value known to the Constitution is gold and silver; a standard, by the way, which has been recognised and adopted, from the earliest ages, by all civilized nations throughout the world. If Congress are authorized to incorporate a company, which shall possess the independent and sovereign right to coin or manufacture money, and regulate the value thereof, why may they not also invest such corporations with power to control the commerce of the country in all such exchangeable articles or com-

modities that may properly come under the standard of weights and measures? Why not go still farther—for if Congress can delegate to a corporation this prime attribute of sovereignty, the establishment of a standard of value—why not, I say, extend it to every other specified power of the Constitution? For, I repeat it, if Congress have the power, under this or any other clause of the Constitution, to delegate to a corporation of its own creating any one of the enumerated powers, they may, with equal propriety, delegate to it every other power. Let Congress recognise this construction, and what would be the consequence? Sir, we should no longer be a nation of freemen, living under a free Constitution; but the slaves of soulless corporations. An independent and irresponsible power would be established in the land; the restraints and limitations imposed upon Congress, by the Constitution, would be overthrown; and the foundations of your Government not only rocked, but riven.

Sir, let us examine a little farther the extraordinary argument urged by Mr. McDuffie, in support of his most extraordinary position. "Coin," says he, "was regarded, at the period of framing the Constitution, as synonymous with currency, as it was then generally believed that bank notes could only be maintained in circulation by being the true representatives of the precious metals." What! sir, coin and currency—coin and paper money—coin and bank notes regarded as one and the same thing, as synonymous, at the time of framing the Constitution? What! "generally believed at that period," that paper money was "the true representative of the precious metals?" Sir, does not the whole history of "that period" contradict these reckless and unfounded assertions? I appeal to the historical recollections of every gentleman on this floor, if it does not. Is it not notorious that the framers of the Constitution were emphatically hard-money men? Is it not notorious that gold and silver are the only currency recognised by the Constitution? Is it not known to all that Congress have no power, under the Constitution, to authorize any individual, company, or corporation, to issue federal paper money? Every part of the Constitution which relates to the subject of money is clear, explicit, and unequivocal. The intention of the framers of the Constitution on this subject, is not only made manifest by the letter of the Constitution itself, but also by a law passed immediately after the meeting of the first Congress under the Constitution, which defines the kind of money to be received by the Federal Treasury. This law provides "that the fees and duties payable to the Government, shall be received in gold and silver coin ONLY." This statute, be it remembered, was passed within one month after Congress had assembled. And again, the law in reference to that part of the revenue accruing from the sale of the public lands, passed in 1800, declares that specie and evidences of the public debt, shall alone be received in payment of such lands. These two acts relating to the subject of the federal revenue, passed immediately after the adoption of the Constitution, ought, and must be, regarded as unerring interpreters of that instrument, so far as the point immediately under consideration is concerned. If the members of the first Congress regarded paper money and "coin" as synonymous, why did they enact that gold and silver coin *only* should be received in payment of the federal revenue? If they even considered paper money, or bank notes, as synonymous with coin, as contended by Mr. McDuffie, they appeared, at all events, to discriminate between *paper coin* and gold and silver coin, by making the latter *only* receivable in payment of the public dues. So that "gold and silver coin," and not *paper coin*, appear to be the only currency known to the Constitution, or to the laws of Congress which define the kind of currency to be received in payment of the federal revenues.

I would now call the attention of the committee for a few moments, to the last paragraph of the 8th section of the Constitution: "To make all laws which shall be necessary and proper to carry into effect the foregoing powers." It will not be pretended, I apprehend, that this clause vests in Con-

gress any new substantive power; or that it in any wise supersedes or invalidates any one of the enumerated powers. This position would be too extravagant, too monstrous, for even modern sophists to take. It will, I trust, be conceded, that the powers comprehended in this clause are subordinate and incidental in their nature, merely conferring on Congress the right to exercise such means as shall be strictly necessary and proper to execute the express powers; or, without which, the powers expressly granted cannot be carried into effect. This point yielded, as yielded it must be, the question arises, whether a national bank be a necessary and proper mean to carry into effect any of the specified powers? In order to show that it is necessary, essential, indispensable, it must be made to appear that the enumerated powers can not be carried into effect independent of a national bank. Experience has demonstrated that they can, one and all. And, in the second place, in order to prove that a national bank is a proper mean, it must be shown that the power to create it is an incidental, and not a substantive power; which, I apprehend, can not be done. No, sir, it cannot be shown that the power to grant charters of incorporation, is merely an incidental or subsidiary power. Among all the powers enumerated in the Constitution, I defy gentlemen to designate a solitary one that is capable of being wielded with more potent effect; not for good, but for evil. If Congress possess the power to grant a charter of incorporation, in their national capacity, in one case, they do in another. If they possess it at all, they possess it without limit, and can extend it, whenever they think proper, to any and every object whatever; whether it be in derogation of State and individual rights, to a Mississippi land monopoly, to a monopoly of the trade of the Indies, or to the cod and whale fisheries. Sir, what is the distinguishing characteristics of incorporations? They are essentially aristocratic in their nature; being invested with exclusive privileges—privileges withheld from the rest of society. They are allowed to purchase and hold real estate; which the United States themselves can not do without obtaining the consent of the States. They are allowed to hold property in mortmain, and are capable of being so organized or constituted as to change the course of descent in the several States; I mean where their corporate character is concerned. Nor is this all: so sacred are their rights held, and so carefully guarded are they by the legislature and judiciary, that they can not be reached by law without permission on their parts: nay, more, they are even placed beyond the control of future Legislatures—at least, such is the opinion of some. And yet we are told that a power to incorporate—a power of such great and fearful magnitude, and capable of producing so much mischief—is, after all, a mere incident of a power! Think you, sir, that if the members of the convention, who framed the Constitution, had considered a national bank either a proper or necessary means to carry into effect any of the enumerated powers of the Constitution, that they would have rejected a direct proposition to establish a bank, or refused to invest Congress with power to grant charters of incorporation, of whatever description? Is it probable that wise and patriotic men would have acted so inconsistently—so absurdly? "It is known," says Mr. Jefferson, "that the very power now proposed as a means, was rejected as an end, by the convention which framed the Constitution." "A proposition," he adds, "was made to them to authorize Congress to open canals, and an amendatory one to empower them to incorporate. But the whole was rejected; and one of the reasons of rejection urged in debate was, that they then would have power to erect a bank." Here then, sir, is authority not to be questioned, not to be controverted, that the power to erect a bank, "proposed as a means, was rejected as an end," by the very authors of the Constitution itself. The fact, therefore, that the framers of the Constitution deliberately and designedly withheld from Congress the power to incorporate a bank, utterly excludes the idea that such power was intended to be granted, either expressly or incidentally, specifically or impliedly. To contend that a power, *intentionally withheld* from Congress by the framers of

the Constitution, can be *rightfully exercised* by Congress, is to outrage common sense, and all approved rules of construction. Let the principle be once established, that neither the express letter of an instrument, nor the evident intention of its author or authors, is to be taken as evidence of its meaning, and all written constitutions, contracts, laws, and charters, become a dead letter. I would entreat gentlemen to consider well before they give further countenance to such doctrines. I would respectfully remind them, that by disregarding the express provisions of the Constitution, and the evident intention of its framers, and resorting to construction and implication alone for authority, they will eventually raise up a monument of folly, which, if not as impious, will create as much confusion as that which towered on Shinar's plain. Let it not be supposed, however, that I would deny the existence of all implied powers. I am aware, sir, that the convention, in framing the Constitution, marked out and enumerated the principal ends of Government, without particularizing *all* the means by which these ends were to be secured. A discretionary power, to a certain extent, must necessarily be left with Congress. The Constitution, for example, has vested in Congress the power to raise and support armies. But at what time armies are to be raised, to what extent, and for what cause this power is to be exercised, it has necessarily left to be determined by the National Legislature. Many other cases might be cited, where the means necessary to carry into effect the enumerated powers are left to the selection of Congress. But the mean, or incidental power, ought, in all cases, to bear a due relationship to the specified power. It was well remarked by a distinguished Senator (Mr. Clay) in debate, that:

"In all cases where incidental powers are acted upon, the principal and incidental ought to be congenial with each other, and partake of a common nature. The incidental power ought to be strictly subordinate, and limited to the end proposed to be attained by the specified power. In other words, under the name of accomplishing one object which is specified, the power implied ought not to be made to embrace other objects which are not specified in the Constitution. If, then, you could establish a bank to collect and distribute the revenue, it ought to be expressly restricted to the purpose of such collection and distribution."

"I contend that the States have the exclusive power to regulate contracts, to declare the capacities and incapacities to contract, and to provide as to the extent of responsibility of debtors to their creditors. If Congress have the power to erect an artificial body, and say it shall be endowed with the attributes of an individual—if you can bestow on this object of your own creation the ability to contract, may you not, in contravention of State rights, confer upon slaves, infants, and senes covert, the ability to contract? And if you have the power to say that an association of individuals shall be responsible for their debts only in a certain limited degree, what is to prevent an extension of a similar exemption to individuals? Where is the limitation upon this power to set up corporations? You establish one in the heart of a State, the basis of whose capital is money. You may erect others, whose capital shall consist of land, slaves, and personal estates, and thus the whole property within the jurisdiction of a State might be absorbed by these political bodies. The existing bank contends, that it is beyond the power of a State to tax it; and, if this pretension be well founded, it is in the power of Congress, by chartering companies, to dry up all the sources of State revenue."

Yes, sir, the honorable Senator was right, when he said that the incidental power ought to be *strictly subordinate*, and limited to the end proposed to be attained by the specified power. He was right in saying, that in all cases where incidental powers are acted upon, the principal and incidental ought to be congenial with each other, and partake of a common nature. And he would have been equally right, had he added, that no means can be proper that are not compatible with the spirit of the Constitution and the genius of our Government. But I will no longer detain the committee on this branch of the subject, having already shown, as I believe, beyond all cavil, that the clause which has been last examined does not confer on Congress power to incorporate a moneyed institution of any description.

I will now proceed to examine arguments—not of a constitutional character, nor strictly applicable—but nevertheless frequently appealed to by the advocates of a national bank. I allude to that class of arguments which rests on precedent alone for support. The friends and champions of a United States Bank, when no longer able to find legitimate support, when forced to abandon every constitutional position, seek refuge in the misty regions of precedent. The acts of former legislatures, and the opinions of the Supreme Court, and *not* the

Constitution, are appealed to for authority: and lo! King Precedent is anointed with the unction of infallibility, becomes the keeper of their consciences, and the object of their idolatry; his behests the laws, his standard the mistletoe, which these political Druids venerate. But to vary the figure—what is there in the character or nature of precedent so sanative and holy that can heal all moral maladies, and justify all political transgressions? Or, wherefore is it, that precedent should fetter the intellect, destroy moral agency, and bear sway where reason and conscience should alone preside? Sir, would it not be well for those who have sworn to support the Constitution, to pause and reflect before they subscribe to a doctrine so fraught with mischief, and so inimical to reason?

It is alleged, by some of the servile brain-bound slaves of precedent, that Congress would be justified in chartering a bank, (at the present time,) whether authorized by the Constitution or not, because similar institutions have hitherto existed. They contend, that inasmuch as those institutions were established by Congress, submitted to by the people, acquiesced in by the States, and sanctioned by the Supreme Court, that they were recognised by all the acts which imply the sanction of organic law. Sir, I can not, for one, yield assent to doctrines so false, so loose, so licentious. I deny that the great body of the American people, the democracy, are, or ever were, in favor of a chartered money monopoly, *whether State or National*. The insinuation is a rank and insolent libel on their patriotism, their intelligence, and their integrity. No, sir, the frank and honest hearted democrats of this country utterly reject and abhor the doctrine, that time or precedent can sanctify iniquity, or justify any *infraction of the social compact*.

It is contended by another, but similar class of moralists, that the Constitution ought to be so construed, as to expand with the growth of the country, and conform to its diversified and mutable relations. Against this doctrine, also, I enter my protest. It is too ductile to be either safe or sound; too liable to be drawn out to dangerous lengths, and bent to mischievous purposes. Sir, what is the nature of the obligation under which we act? What is required of us before entering upon our duties as representatives? It is required, by the Constitution, that "the Senators and Representatives and the members of the several State Legislatures, and all executive and judicial officers, both of the United States, and of the several States, shall be bound, by oath or affirmation, to support this Constitution." Sir, the requisition is emphatic and positive—couched in language not to be misunderstood. Our duty is palpable—we can not err *ignorantly*. We are bound, by all the obligations which an oath imposes, to "support this Constitution." We are not required to "support" the forced constructions that may be given by a pliant court, or by a careless or venal Legislature.

We are not called upon to "support" a constitution corrupted by congressional interpolations, or distorted and sophisticated by the legal mummeries of the bar or the bench. Nor are we obligated to support a constitution that may be construed to change with times and circumstances; that may grow with the growth, and decay with the decline of the country: but we are bound by our solemn oaths or affirmations to "support *this* Constitution" in its purity and integrity, unsophisticated and uncontaminated. Sir, there are two classes of men in this world who rely upon precedent, and who seem to believe in its infallibility with a great deal of spirit and perseverance. The one, the morally lax, who have no objection to transgress, provided they can find a pretext in precedent; the other, the mentally indolent, who find less labor in adopting the opinions of others, than in analyzing and investigating for themselves; while the rigidly honest and intellectually industrious, spurn all mental tyranny, refusing, in all cases, to yield their assent but as the result of their conviction. Sir, let me not be misunderstood when I say that precedent is dangerous and pernicious; I mean that it is so when regarded as an obligatory rule in matters of legislation, and in the common affairs of life. In courts of justice, in the dispensation of civil and criminal law, it may,

to a certain extent, be advantageously referred to as a guide. For so diversified and complicated are the subjects of litigation, that it is impossible for the legislator to anticipate and provide for every case that may occur. It becomes the duty, therefore, of the judge, the organ of the law, not only to proclaim the written law of the land, but also to decide in cases where no statutory provision has been made, as reason and justice may dictate. Nor, as a general rule, ought decisions thus made be lightly regarded by succeeding judges, especially in cases where the points in litigation are analogous. But, sir, while I willingly admit that precedent may be properly referred to as authority in the *administration* of the law, I utterly deny that it is necessarily obligatory upon *legislative bodies*. It matters not, therefore, whether a precedent in favor of a United States bank be found in the acts of former legislatures, or in the decisions of the Supreme Court; it is, in either case, incompetent to control the acts of this body. Congress, I trust, will never be willing to acknowledge the binding force of precedent, in the decision of constitutional questions. But, sir, admitting, for the sake of argument, precedent to be good authority, what does it prove in this case? I apprehend that it would rather make against, than in favor of, a bank. We find, in 1811, when a renewal of the charter granted in 1791 was applied for, that its constitutionality was discussed, and that the application was rejected. And further, when the bank petitioned Congress for time to wind up its affairs, the petition was referred to a committee who reported against the application, urging that it was unconstitutional, and the report was concurred in. In 1813, when the subject of a bank was again before Congress, and while under discussion in the House of Representatives, a distinguished gentleman from Massachusetts, (Mr. Webster,) then a member of the House, declared in his place, while opposing the bank, that the renewal of the bank charter had been refused, *because it was unconstitutional*; and Congress again decided against a bank. In 1832, the bill to renew the charter granted in 1816 was vetoed by the late President, and subsequently rejected by Congress, both alleging that it was unconstitutional: So that the precedents, so far as the action of Congress is concerned, are equal. If reference be had to the States, we shall find that a large majority of them have been opposed, on constitutional ground, to a United States Bank. Whatever authority, therefore, may attach to precedent, makes against a bank. But the Supreme Court has decided that Congress have power to incorporate a bank; and these decisions are appealed to with as much apparent triumph by the advocates of a national bank, as if the decrees of that court were binding on Congress, and settled the constitutional question for ever. Sir, what are we to understand from this? Is it meant to be insinuated that the three departments of Government are not co-ordinate, and that the Judiciary is clothed with the exclusive attributes of supremacy? that neither the Executive nor the Legislative Departments are allowed to judge of their own powers, when acting within their appropriate spheres, and in the discharge of their official duties? Is it intended that the understandings, the oaths, and the consciences of the other two departments, are to be silenced and overawed by the despotic fiat of the bench? This heretical, servile, and detestable doctrine, is industriously propagated, I am aware; not boldly and openly, but clandestinely and insidiously, by hints, insinuations, and mysterious givings out. God forbid, patriotism forbid, that it should ever be acknowledged by the Executive or Legislative Departments, or received by the American people. For one, I reject it with disdain. I deny, and defy mortal man to prove, that the decision of the Supreme Court can settle a constitutional question in any other than in a judicial sense. It can not affect legislation—can not control the decisions of Congress, or of the Executive—can not control the sovereign and absolute power of the people, nor of their representatives. It is just as much the province of Congress, or of the Executive, to

decide upon the constitutionality of any matter that may properly come before them for their action, as it is for the Judiciary when it comes before them for decision. Congress is no more bound by the opinions of the Supreme Judges than are the judges by the opinions of Congress. The Constitution vests "the judicial power in a Supreme Court, and in such inferior courts as Congress may from time to time ordain and establish." In all instances, therefore, where suits are prosecuted in the courts of the United States, of which the courts have jurisdiction, and decided by the Supreme Court, all such decisions are final. That being the court of the last resort, the parties can not appeal, but in all cases are bound to abide by such decision. But, as has been before remarked, no decision of the Supreme Court can be obligatory upon either of the other co-ordinate departments. When either is called to the discharge of its appropriate duties, that branch, and not the Supreme Court, is the judge, under the Constitution, of its own acts. Nor are the decisions of the Executive or Legislative departments binding upon the judges of the Supreme Court, when acting within their appropriate spheres. So long as each of the several departments acts as a check upon the other, there is less danger of the abuse of power—whether springing from ignorance or unlawful ambition. But, it may be asked, how constitutional questions are to be settled in the event of a non-concurrence of opinion in the co-ordinate departments? I answer—by the people through the ballot boxes. For let it be borne in mind, that this Government is emphatically a Government of the people: it emanates from the people—its powers are granted by the people, and are to be exercised for their benefit; and, so far at least as the representative department is concerned, in pursuance of their instructions, whenever they may think proper to exercise the right. All the departments of Government, the Executive, the Legislative, and the Judiciary, were established by the people to transact their business, agreeably to the powers bestowed. Consequently, when contradictory opinions are entertained by the several departments, with regard to the extent of their constitutional powers, the people are the only tribunal to which the matter in dispute can be properly referred; and their decision, proclaimed through the ballot box, must be final and conclusive. I am aware, sir, that this doctrine will not be very popular in certain quarters; but I conceive it, nevertheless, to be in accordance with the genius and spirit of our institutions, and maintainable upon strict democratic principles.

It being admitted, then, that the several departments are co-ordinate, and their opinions, therefore, not binding upon each other, it remains to be considered what weight is due to the decisions of the judiciary in favor of the constitutionality of a United States Bank? Sir, whatever importance I might be willing to attach to the opinions of such an enlightened tribunal on doubtful and intricate subjects, I am unwilling to concede to them a controlling influence in the decision of a question like the one under discussion, when I am furnished with a written Constitution for my guide, and in which every delegated power is distinctly and accurately delineated, both to the natural and the mental eye.

Sir, I have examined this instrument intently, anxiously, and, I trust, honestly; but no where do I find in it a power to grant charters of incorporation. Sir, I affirm, and hold that I am able to maintain, in defiance of all the arts of sophistry and mystification, that the convention which framed the Constitution did neither grant any express power authorizing Congress to charter a national bank, nor intend that any power whatever, whether incidental or otherwise, should be exercised for such purpose. And, further, that the convention positively rejected a direct proposition to empower Congress to incorporate a national bank, and repeatedly rejected written propositions to grant charters of incorporation. But let us first examine for a moment the ground assumed by the judiciary, in arguing the constitutionality of a national bank. By reference to a decision had in the case of *McCulloch* against the State of Maryland, it will be found that the principles upon which the judiciary rely are substantial the same which

prevailed in 1791, and ushered into being the first Bank of the United States. The main point of the argument of General Hamilton, as well as that of the Supreme Court, in support of the constitutionality of a bank, turns upon the alleged necessity of the measure. The judges, as I understand them, acknowledge the absence of all express constitutional authority, admit that the power can only be derived by implication, and only exercised on the ground of a just necessity. That is, a bank is constitutional, if it be necessary to carry into execution any of the express powers; but, if not necessary to that end, or if that end can be attained by other appropriate means, then it is not constitutional, the power to incorporate not being expressly granted to Congress. Upon this hypothesis Congress have no constitutional power to charter a national bank, if such bank be not absolutely and indispensably necessary to the execution of a specified power. Query: Would even the necessity of the measure justify its adoption, without an amendment to the Constitution? But, sir, it yet remains to be shown that a national bank is an essential mean of executing any of the enumerated powers, and, until this be done, the opinions of the judiciary avail nothing. Whatever may be the general principle affirmed by them, their arguments neither make for, nor against, the constitutionality of a national bank. It is affirmed by the Supreme Court, in the case already alluded to, that "the Government which has a right to do an act, and has imposed on it the duty of performing that act, must be allowed to select the means." Sir, I am constrained to doubt the validity of this doctrine, when carried to its full extent. Suppose we put it to the test. It is not only the right, but the duty of Congress, to "regulate commerce." Does it follow that they have the right to make use of what means they please, in order to accomplish that end? If so, they may incorporate a company for that purpose, alleging that an act of incorporation is a necessary mean for the attainment of the end proposed; in other words, that the regulation of commerce could not be so well effected in any other way. And why not? There is no constitutional difficulty in the way that may not be surmounted with the ladder of construction. And if Congress should only happen to think that a chartered company would be the best mean to "regulate commerce," what would there be to prevent such incorporation? According to the position assumed by the Supreme Court, you can first raise this power from an incident, and then consider it a principal—confer on it the power of legislative procreation, and authorize the mother institution to propagate her bastard progeny in every State and Territory in the Union. And why not, I say? You have all the authority in favor of it which precedent can furnish, in the charter of the late United States Bank. That institution had the power conferred upon it by Congress of multiplying its progeny at pleasure. It had the power, by virtue of its charter, to establish branch banks, without the consent of the States, whenever and where-soever it pleased. It had the legislative power delegated to it by Congress, in defiance of the checks and restraints which the American Constitutions interpose, of creating, at its option, other banks and other directors; and this power received the sanction of the judiciary. If Congress possessed the constitutional power to incorporate a moneyed institution, such as the late United States Bank, it may also possess the power to charter a company, and endow it with the faculty of legislative fecundity, to regulate the commerce of the country. Only let Congress adopt the principle that they have the power to select what means they please, in order to carry into execution a specific power, and all the limitations, all the restraints which the grant of delegated powers impose, are broken down and subverted for ever. Sir, I must be permitted to say that I consider this doctrine not only false, but dangerous to liberty. The exercise of a discretionary power in the selection of means, must necessarily be limited to such means as are strictly proper; and no means that are incompatible with the principles upon which our Government is founded can be proper, however convenient they

may be. A chartered monopoly is not, can not be, a proper mean to carry into effect any of the ends of a Government based on the principles of political equality. Would you consider the exercise of exclusive political privileges as an appropriate means to promote the principle of equal political rights? The idea is absurd upon the very face of it.

Mr. Chairman, I would not wantonly assail the reputation of the judiciary. I trust that I am capable of fairly and honestly appreciating the character of that enlightened and honorable tribunal. But however highly I may esteem them for purity of purpose and integrity of character, I can not, with the evidence before me, regard them as unerring in judgment; and I trust that the day is far distant when they will be recognised by Congress, or the American people, as a body of infallibles. Sir, I believe that I am justified in saying, that the circumstances which surround and necessarily operate upon the American judiciary, are unpropitious to liberty; the nature of their office, the tenure by which it is held, and the fact of their non-accountability to the people, must—on the known principles of human nature—have a tendency to render them covetous of power, arbitrary and despotic. Nor is this all. Indocinated from their youth in the principles and prejudices of English jurists; educated in English books; ever consulting English authorities; constantly familiar with monarchical doctrines; in a word, all the laws of mental association, under which their intellects are reared and fashioned, are inimical to that broad-based and high-toned freedom which the American people delight to cherish. Nor will the truth of this position be doubted or denied, by those who are familiar with the history of the past; who have studied the springs of human action; reflected upon the nature of human power; and observed its constant proneness to enlarge, or overleap its boundaries. But why appeal to hypotheses, when I can so readily summon facts to my aid? The history of the Supreme Court is rife with testimony directly to the point. By a careful examination and analysis of its decisions, it will be found, that they have, in most instances, leaned to the side of federal power; overlooked the rights of the citizen and of the States; and evinced a strong and uniform bias for a consolidated Government. The alien and sedition laws—notoriously unconstitutional, and so pronounced by Mr. Jefferson and the American people—received the sanction of that court. The sedition, or "gag law," made it an offence, punishable by indictment, to publish any thing which even had a tendency to bring into disrepute the officers of the Government; and many worthy and patriotic citizens were, in pursuance of that nefarious law, incarcerated for daring to complain of the oppressions of their rulers. And this law, unconstitutional as it was, and subversive of the rights of the citizens and of the principles of our Government as it was, received the judicial sanction of the Supreme Court. Sir, I will hazard the declaration, and without the fear of contradiction, that, if all the principles which have received the sanction of the judiciary, were now in full force and operation, the American people—bereft of all the blessings of a free Constitution—would, at this moment, be writhing under the unmitigated oppressions of a heartless, ruthless despotism. And, yet, sir, strange as it may appear, there are those among us, notwithstanding their knowledge of this truth, and notwithstanding all the judicial libels upon the Constitution, which are plain to their eyes and to their understandings, who still cleave to that tribunal with all the zeal and enthusiasm of infatuation—regard it as the exclusive depository of wisdom, of freedom, of patriotism—and its decrees as infallible, fixed, and immutable, as the fiat of fate.

But, sir, I will bring the decisions of the judiciary to a decisive test, viz: the intentions of the framers of the Constitution with regard to such institution. And here, then, I wish it to be borne in mind, that the judiciary have uniformly admitted that the power to incorporate a national bank was not among the enumerated powers of the Constitution, and that it could only be derived by implication. In admitting that the power in question was an implied, and not an express power, they necessa-

rely assume that the framers of the Constitution intended to vest in Congress a power which they omitted to specify; for surely it could not be pretended by an intelligent body of men, such as compose our judiciary, that Congress possessed the constitutional power to do an act which the Constitution no where expressly authorizes, and which the framers of that instrument evidently intended to *interdict*. This doctrine of construction, therefore, rests entirely upon the *known* or *supposed intentions* of the convention which framed the Constitution. It is incumbent, therefore, on those who allege, in the absence of all direct authority, that Congress possess an implied power to incorporate a national bank, to show, at least, that the convention did not intentionally withhold the said power from Congress. Now, sir, if this can not be done, but, on the contrary, if it can be proved that the subject in question was agitated in the convention which framed the Constitution, that propositions were there made to invest Congress with power to charter a bank, and that all propositions having that object in view were rejected by the convention, it necessarily follows, that Congress possess no such power, whether express or implied—the decision of the Supreme Court to the contrary notwithstanding. I then take this ground: that, inasmuch as there is no express constitutional authority given to Congress to charter a bank, and as the framers of the Constitution repeatedly and deliberately rejected all propositions to vest in Congress power to grant acts of incorporation of whatever description, that Congress, therefore, are as virtually and morally prohibited from granting a bank charter (in its national capacity) as if the Constitution contained an express prohibitory clause with regard to it. I repeat, that this is my ground; and if I can show that the framers of the Constitution did not intend to vest in Congress power to grant acts of incorporation of any kind, but *designedly withheld* such power, then the constitutional right to charter a bank, does not, and can not, belong to Congress. In order to show what were the views entertained on the subject of a national bank, as well as of every other species of incorporation, by the framers of the Constitution, it will be necessary to consult the journal of the convention, as well as the statements of several of the delegates after the convention rose. But previous to introducing these authorities, I will state—what is already known to the committee—that there were two parties in the convention, who held opposing views relative to the form and character of the Government proposed to be established. The one, advocated a supreme national or consolidated, the other, a federal form of Government. The latter eventually triumphed. The friends of a supreme Government, after being defeated in all their direct efforts, endeavored to accomplish their purpose by indirect means, as fully appears by the following extract from "Taylor's New Views of the Constitution:"

"August 18. It was proposed to empower the Legislature of the United States, (the word national is now dropped), 'to grant charters of incorporation in cases where the public good may require them, and the authority of a single State may be incompetent; to establish a university; to encourage, by proper premiums and provisions, the advancement of useful knowledge and discoveries; to establish seminaries for the promotion of literature and the arts and sciences; to grant charters of incorporation; to establish institutions, rewards, and immunities, for the promotion of agriculture, commerce, and manufactures; and to regulate stages on the post-roads,' which, with other propositions, were referred to the committee of July 2d.

"September 14. Question. To grant letters of incorporation for canals, et cetera; negatively. To establish a university; negatively.

"Their rejection was a necessary consequence of substituting a Federal for the National Government, zealously contended for, from the 29th of May to the 14th of September. It was obvious that powers to establish corporations, prescribe the mode of education, patronize local improvements, and bestow rewards and immunities for the promotion of agriculture, commerce, and manufactures, would certainly swallow up a Federal, and introduce a National Government. When, therefore, a federal system obtained the preference, it would have been inconsistent with the high degree of intelligence possessed by the members of the convention, to have permitted their determination to be defeated by these indirect attempts. This intelligence was assailed by the soothing but insidious restriction, that the powers to incorporate, grant exclusive privileges, and exercise every species of patronage, were only to be exercised 'in cases where the public good may require it.' The same soothing but insidious argument is now addressed to the intelligence of the public, to justify an exercise of the very powers which the intelligence of the convention withheld from a Federal Government; and whether the promise of public good, has been fallacious or fulfilled by the monopolies of currency, of manu-

factures, and the extension of federal patronage, the public can decide. Yet, whatever may have been their temporary effect, it is obvious that the enlightened framers of the Constitution considered the condition of public good, as an enlargement, and not a restriction of power; and that it would defeat all the limitations of the Constitution, by which a Federal Government could be formed or sustained. It was a pretext which would fit every encroachment or usurpation, and no powers could be more indefinite and sovereign than those of granting exclusive privileges, bestowing rewards and immunities upon the three comprehensive interests of society, agriculture, commerce, and manufactures, and patronizing capitalists, paupers, sleeping in the bed of public good, bore so strong a resemblance to the old bed of justice in France, which was the repository of evil as well as good, that they were all rejected. It was evident that they would be sufficient to re-hatch the strangled national form of Government; and the convention having finally preferred the federal form, thought that no good to the public could result from such powers which would recompense it for the evils it would sustain from the subversion of that form. The convention saw, that if Congress could exercise such powers for the public good, it might, upon the same ground, usurp any powers whatsoever, and in rejecting the propositions decided between investing that body with a general or limited federal authority. Hence the power to regulate commerce was not intended to revive the rejected propositions to empower Congress to bestow rewards upon agriculture, commerce, and manufactures. Hence the rejected proposition to empower Congress to direct the exercise of the judicial power, can not enable it to extend the jurisdiction of the Supreme Court; and for the same reason, a power to make war can not revive the rejected power to make canals, or to perform any of those *et cetera*, whatever they were, referred to by the journal. If these sweeping and indefinite sovereign powers, or all powers thought by those who exercise them to be necessary for the public good, with an *et cetera* besides, though proposed and rejected, do yet pass to Congress under the Constitution, then the battle between the national and federal parties in the convention terminated quite contrary to the usual course of things; the vanquished were victorious, and the victorious were vanquished; and if they were now alive, one party would be as much surprised to discover that it had carried the consolidating propositions which it had lost, as the other that it had lost the federal principles which it carried. The spectacle of the slain rising up alive, and the living falling down dead, could not have been expected by either.

"No powers can be more sovereign and arbitrary than those of deciding and doing whatever may administer to the public good, and of pilfering private property by privileges, partialities, premiums, monopolies, rewards, and immunities; nor more capable of reaching any end. Had the rejection of such powers been unnecessary for the security of a federal form of Government, the convention might have still been justifiable for the act, as being then tyrannical, fraudulent, and oppressive. Did the convention reject them in fact, and repent them in *masquerade*? I discern no evidence in the journal to excite such a suspicion. Colonel Hamilton, far from discerning the supposed ingenuity of sinking a national form of Government in a lake of obscurity, to be fished up by a long line of constructions, when it might be safer to avow the intentions, seems to have quitted the convention in despair, soon after the failure of his project. Mr. Randolph, undoubtedly influenced by having lost his plan, also refused to sign the Constitution. And though Mr. Madison and Colonel Hamilton both signed it, and Mr. Randolph supported it in the Virginia convention, they must have been influenced by the patriotic motive of effecting some good, though they could not accomplish all which they attempted. These are strong reasons to prove that the gentlemen who have contended for a supreme national Government, and of whose propositions for that purpose one was adopted by the Constitution, did not imagine they had succeeded."

It appears that the indirect and insidious means (which were intended to be exercised through the medium of incorporations and exclusive privileges) of the consolidationists, to establish a supreme national Government, shared the same fate in the convention, as did their more open and direct efforts. But, sir, let us proceed to examine the evidence on the point in question, in the order in which it stands on the journal of the convention. On the 29th of May, the third day after the convention had formed a quorum, Mr. Pinckney, delegate from South Carolina, submitted the plan of a constitution, in which he proposed to bestow on Congress the power "to borrow money," &c. &c. After various propositions, plans, and resolutions, had been sufficiently debated—

"It was moved and seconded that the proceedings of the convention for the establishment of a national Government, except what respects the supreme executive, be referred to a committee for the purpose of reporting a constitution, conformably to the proceeding aforesaid—which passed unanimously in the affirmative."

On the 24th of July, the committee, consisting of five, were chosen, and on the 6th of August, the committee reported the "draft of a Constitution," and among other powers proposed to be given to Congress were the following: "To lay and collect taxes, to borrow money, and emit bills on the credit of the United States."

On the 16th of August, when this "draft of a Constitution" was under discussion, and particularly the power last above mentioned:

"It was moved and seconded to strike out the words 'and emit bills' out of the eighth clause of the first section of the seventh article—which passed in the affirmative."

"Yeas, New Hampshire, Massachusetts, Connecticut, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, Georgia, 9. Nays, New Jersey, Maryland, 2."

The convention, after having denied to Congress the power to emit bills of credit—which power had been possessed by the confederation—deemed proper to extend a like prohibition to the State Governments; this subject was decided on the 28th day of August, when the 12th article was under consideration:

"It was moved and seconded to insert the words 'nor emit bills of credit,' after the word 'money,' which passed in the affirmative."

On the 18th of August, as has already been shown, two different propositions were made to authorize Congress to grant acts of incorporation, and were both rejected. On the 14th of September, the power to create corporations was again proposed to be vested in Congress, but was again, and for the third and last time, rejected, (see journal.) Thus far the journal of the convention. I would now ask the attention of the committee to the statements made by the members of the convention.

Luther Martin, a delegate from the State of Maryland, in his disclosures to the Legislature of that State, makes the following remarks:

"By our original articles of confederation, the Congress have power to borrow money and emit bills of credit on the credit of the United States; agreeable to which was the report on this system as made by the committee of detail. When we came to this part of the report, a motion was made to strike out the words 'to emit bills of credit;' against the motion we urged, that it would be improper to deprive the Congress of that power; that it would be a novelty unprecedented to establish a Government which should not have such authority. That it was impossible to look forward into futurity so far as to decide, that events might not happen that should render the exercise of such a power absolutely necessary; and that we doubted, whether if a war should take place it would be possible for this country to defend itself, without having recourse to paper credit, in which case there would be a necessity of becoming a prey to our enemies, or violating the Constitution of our Government; and that, considering the administration of the Government would be principally in the hands of the wealthy, there could be little reason to fear an abuse of the power by an unnecessary or injurious exercise of it. But, sir, a majority of the convention, being wise beyond every event, and being willing to risk any political evil rather than admit the idea of a paper emission, in any possible case, refused to trust this authority to a Government, to which they were lavishing the most unlimited powers of taxation, and to the mercy of which they were willing blindly to trust the liberty and property of the citizens of every State in the Union; and they erased that clause from the system."—*Elliot's Debates*, vol. 1, p. 413.

"By the tenth section, every State is prohibited from emitting bills of credit. As it was reported by the committee of detail, the States were only prohibited from emitting these without the consent of Congress; but the convention was so smitten with the paper money dream, that they insisted the prohibition should be absolute. It was my opinion, sir, that the States ought not to be totally deprived of the right to emit bills of credit, and that as we had not given an authority to the General Government for that purpose, it was the more necessary to retain it in the States. I considered that this State, and some others, have formerly received great benefit from paper emissions, and that if public and private credit should once more be restored, such missions may hereafter be equally advantageous; and further, that it is impossible to foresee that events may not take place which shall render paper money of absolute necessity; and it was my opinion if this power was not to be exercised by a State without the permission of the General Government it ought to be satisfactory even to those who were the most haunted by the apprehensions of paper money; I therefore thought it my duty to vote against this part of the system."

"The same section, also, puts it out of the power of the States to make any thing but gold and silver coin a tender in payment of debts, or to pass any law impairing the obligation of contracts."—*Id.* p. 422.

"March the 11th, 1798.—When the bank bill was under discussion in the House of Representatives, Judge Wilson came in, and was standing by Baldwin. Baldwin reminded him of the following fact which passed in 'the grand convention.' Among the enumerated powers given to Congress, was one to erect corporations. It was on debate struck out. Several particular powers were then proposed. Among others, Robert Morris proposed to give Congress a power to establish a national bank. Gouverneur Morris opposed it, observing that it was extremely doubtful whether the Constitution they were framing could ever be passed at all by the people of America; that to give it its best chance, however, they should make it as palatable as possible, and put nothing into it not very essential, which might raise up enemies; that his colleague (Robert Morris) well knew that 'a bank' was in their State (Pennsylvania) the very watch word of party; that a bank had been the great bone of contention between the two parties of the State, from the establishment of their Constitution, having been erected, put down, erected again, as either party preponderated; that, therefore, to insert this power, would instantly enlist against the whole instrument, the whole of the anti bank party in Pennsylvania. Whereupon it was rejected, as was every other special power, except that of giving copy-rights to authors, and patents to inventors; the general power of incorporating being whittled down to this shred. Wilson agreed to the fact."—*Jefferson's Memoirs*.

Now, sir, let us consider, for a moment, the several statements made by the delegates to the convention, and of Mr. Jefferson, in connection with the evidence contained in the journal, and see if an array of testimony be not presented in opposition to the unfounded and impudent assumption—that it was the intention of the convention to authorize Congress to "emit bills of credit"—that is decisive

and overwhelming. It appears by the disclosures of Luther Martin, as well as by the original journal, that propositions were repeatedly made, in the convention, to authorize Congress to emit "bills of credit," and that all propositions to that effect, were the most signally rejected! It is expressly stated by Attorney General of Maryland, that a majority of the convention "were willing to risk any political evil rather than admit the idea of a *paper emission in any possible case*;" and that they (the convention) "erased that clause from the system." And again, when speaking of the extension of the prohibition to the States, he remarks: that "the convention were so smitten with the paper money dread, that they insisted the prohibition should be absolute!" So that both Congress and the States, as we have already seen, are prohibited by the Constitution from "emitting bills of credit;" or from issuing paper money, "in any possible case." It is contended by Mr. Gallatin, in his "Considerations on the currency," &c. that bank bills and bills of credit are one and the same thing. He remarks: "the Constitution of the United States prohibits every State from issuing bills of credit; now, the bills emitted by a bank," he adds, "are to all intents and purposes bills of credit." And hence he concludes, that the State which creates such bank, violates the Constitution. If the bills issued by the State banks, are to all intents and purposes "bills of credit," in the constitutional sense, as Mr. Gallatin contends—and I am not disposed to dispute the point with him at present—then would bills issued by a United States bank also be bills of credit. If a State, therefore, by issuing bills of credit, or by incorporating a bank for that purpose, violates the Constitution, Congress, by doing the same thing, equally violates that instrument; because, as has already been shown, the power to "emit bills of credit," was withheld from Congress as well as from the States. The reason why a prohibitory clause was not incorporated into the Constitution in relation to the United States, as well as to the State Governments, is obvious. By the articles of confederation, Congress were expressly authorized to "emit bills of credit." This power had been exercised by Congress, and the evil effects resulting from it, in the shape of continental money, were in evidence before the members of the convention at the time of framing the Constitution. The framers of the Constitution, admonished by the history of the past, wisely and patriotically endeavored to guard their country from a similar evil in future, by excluding from the new Constitution the power which had been conferred on Congress by the articles of confederation, as well as by prohibiting the exercise of that power to the State Governments.

Congress are, by the Constitution, not only deprived of the power of "emitting bills of credit," or of "issuing paper money in any possible case," but expressly limited in the exercise of their power, with regard to the currency, to the coining of gold and silver, and to the regulation of the value of foreign coin. And when Congress have done this, they have done all that the Constitution requires or permits them to do on the subject of the currency.

Having shown that the power to "emit bills of credit" is not delegated to Congress, and that such was the "dread of paper money" entertained by the convention, that they withheld from Congress the power to issue, or cause to be issued, such money "in any possible case," I might dismiss this part of the subject without further remark; but as it is my wish to put an end to all doubt and cavil, I will, even at the hazard of using tedious repetitions, again refer to the important fact, that it was repeatedly proposed in convention to vest Congress with power to grant charters of incorporation, and that all such propositions were rejected in every instance, and under every modification. This position has been fully established by the journal of the convention, as has been already shown, as well as by the statements of able and honorable members of that body. Mr. Madison, in his reply to General Hamilton's arguments in favor of a national bank, informs us that "a power to grant charters of incorporation had been proposed in the convention, and rejected." Messrs. Baldwin and Wilson, both distinguished members

of the federal convention, have informed us, through Mr. Jefferson, that among the enumerated powers ("proposed to be") given to Congress was one to erect corporations; and that "it was, on deliberation, struck out." And further, that "Robert Morris proposed to give Congress power to establish a national bank;" and that the proposition was opposed by Gouverneur Morris, on the ground that it would be unpopular with the people. This proposition was also rejected by the convention. Well, sir, we are at length enabled satisfactorily to determine whether a power to grant charters of incorporation be a *substantive* or *incidental* power. That it was not regarded as an incidental power by those members of the convention who were the advocates of incorporations, is evident from the fact that they proposed to class it with the enumerated and substantive powers. And that it was not considered as incidental by those members who opposed it, is equally manifest from the reasons urged by them in debate against it. They opposed it, not on the ground that it could be derived by implication, but on the broad democratic principle, that it was incompatible with the character of the Government which they had been delegated to establish, and because its exercise would be dangerous to the liberties of the people. The position assumed by the judiciary, therefore, that the power to charter a national bank is an *incidental* power, is condemned and contradicted by the unanimous sense of the convention. The convention, by deliberately withholding from Congress the power to grant charters of incorporation, for both general and special purposes, thereby clearly and indisputably discountenanced and condemned the principle. Yes, sir, it was the principle of exclusive privileges and of chartered monopolies to which they were opposed, and which they promptly, sternly rejected, as often as introduced, and in whatever shape presented. And will it be pretended that the authors of the Constitution, after having thus repeatedly and unqualifiedly disapproved and repudiated the principle, still recognised and approved it in the shape of a bank charter, in its most dangerous, revolting, and malignant aspect? Who is prepared to accuse the authors of the Constitution with such palpable inconsistency, or culpable duplicity? Sir, I am compelled to believe that the man who affirms that the framers of the Constitution, after having rejected all propositions to grant charters of incorporation, whether for general or special purposes, intended, at the same time, to authorize Congress to charter a national bank, holds in light estimation, either the character of that body, or his own honor.

Mr. Chairman, I will, in a few words, conclude my remarks on this branch of the subject. It is admitted, on all hands, that ours is a Government of specific and limited powers. In the language of the Constitution:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The power to grant charters of incorporation was not delegated to Congress, nor intended to be so, by the convention which formed the Constitution, and, consequently, can not be exercised without violating that instrument. And, with a perfect knowledge of this fact, with a full and perfect understanding that the convention purposely withheld from Congress the power to "emit bills of credit," or paper money, "in any possible case;" that they also prohibited the granting of charters of incorporation of every kind and description; I can not, I say, with all that information before me, consent to vote in favor of any incorporation, and especially a bank charter, which stands doubly condemned by the framers of the Constitution. No, sir: were I to do so, with the evidence before me, I should consider that I had sinned against light and knowledge—sinned past recovering and past forgiveness, and should ever regard myself as a perjured man—perjured both in the eyes of God and of my country.

But, sir, the American people are opposed to a national bank. The knowledge of this fact—and no man can plead ignorance with regard to it—I should suppose would be a sufficient reason why the people's representatives should oppose it. For my own part, sir, were I to support any

measure which has been so generally and emphatically condemned by the people, I should consider that I had grossly outraged public opinion, insulted the majesty of the people, disregarded their express wishes, and betrayed their best interests. And, sir, I can not conceive how any honorable gentleman, who claims to be a republican—who professes to entertain a due regard for public opinion, and a willingness to act in obedience to the expressed will of the majority—can possibly yield his support to a measure that has been so recently, so repeatedly, and so signally condemned by that majority. Shall I be told that the people would take this new institution into favor, provided it were established, and that they would cherish and sustain it hereafter? Let not gentlemen lay the "flattering unction to their souls." No, sir, the history of the late bank is too fresh in their recollections. The people of this country are too prudent and too wise not to be admonished and profited by the teachings of the past. They are too jealous of their rights—too much enamored of liberty, to regard, with favor, a monster that might, at its pleasure, violate those rights and crush that liberty. And gentlemen who act upon the supposition that the American people will ever become the friends and willing supporters of an institution so hostile to the spirit of freedom, err as widely as would have erred the friends of the infant Bacchus, had they commended him to the arms of Juno for succor and protection.

But, sir, we are told by the board of trade, and others friendly to a national bank, that the general welfare of the country requires at our hands the establishment of such an institution. For one, sir, I am disposed to doubt the correctness of this proposition. I am strongly inclined to the opinion that these modest patriots are not quite so well qualified as they imagine, to decide what would, or what would not, promote the public good. I have yet to learn, that those gentlemen are more deeply skilled in the science of government and of political economy, and that they cherish a warmer regard for the public weal, than those of other pursuits and of a different political faith. I have yet to learn that they are benevolent and patriotic beyond their generation, or that they have been anointed with the oil of wisdom above their fellows. Sir, whence comes their authority to decide what measures shall, or shall not, be adopted in reference to the general welfare? When, and how, were they constituted and appointed conservators and guardians of the public interests, that they thus ape the language of supremacy, and assume the tone of oracular wisdom? Have not the great mass of the people had sufficient experience with regard to a national bank? have they not felt its benefits and evils, its advantages and disadvantages; and have they not condemned it—I had almost said, with the voice of unanimity? And shall they be deemed incompetent to judge of the utility, character, and tendency of such an institution? Sir, by what other criterion than that of public sentiment, clearly expressed and fairly ascertained, shall we judge of a public measure? Shall we adopt the views and opinions of the few, to the exclusion of the many? Shall we not allow the great majority to determine what is, as well as what is not, for their welfare? And have not that majority solemnly decreed, in a voice that is still ringing in our ears, that a national bank is not a national benefit, but a national evil; that it is not a public blessing, but a public curse? If we regard public sentiment, therefore, as a proper test of this measure, we must necessarily decide against it. We are bound to believe that it would not be productive of public good, as represented by the petitioners; but of public mischief, as declared by a majority of the people. It will not be disputed, but that any class of citizens have a right to ask, at the hands of Government, the adoption of such measures, or the enactment of such laws, as may, in their opinion, subserve their interests: provided always, that such measures, or laws, do not conflict with other interests of the State, or revolt the "stomach of the public sense." A national bank does both; and has, consequently, no claims to the favorable regard of Congress.

Sir, let us consider, for a moment, whether we can look with safety or propriety, for wise, patrio-

tic, disinterested or salutary counsel from the source whence the petitions and demands for a national bank proceed. Do we find the patriotic, the clear-headed and honest-hearted yeomanry and mechanics of the country clamoring for a national bank? No, sir. No—the productive and laboring classes appreciate their political welfare too highly, to desire such an institution. The great majority of bank advocates are to be found among the non-producers—the traffickers and speculators of the country—children “of lofty hopes and low desires,” most of whom are peculiarly affected by the present pressure of the times. And would it be the part of wisdom to give heed to counsel emanating from such sources? Can it be reasonably expected, that men relying solely upon bank facilities—men suddenly disappointed in their high expectations of immediate wealth and consequent influence, would be the most competent to direct the action of Government and control the destinies of the nation, at such a conjuncture? No, sir—their habits of life—of thinking—their peculiar situation—the circumstances which influence their judgments, and impel them to action—all—conspire to disqualify them for the task. We know, sir, that it is more natural for men in affliction—whether physical or political—to have recourse to *palliatives*—to immediate and temporary expedients, than to deliberate on the means necessary to secure *permanent relief*.

#### REMARKS OF MR. CAMBRELENG, OF NEW YORK,

*In the House of Representatives, October 13, 1837—*  
On the bill imposing additional duties on public officers, as depositories of the public money, and requiring the payment of the revenue in specie, or evidences of public debt.

MR. CAMBRELENG said that an apology was certainly due to the members of the committee for throwing himself upon their indulgence at so late an hour, worn out as they all were by daily and nightly sessions. He had hitherto abstained from debate, anxiously desiring the early passage of the important measures reported; and he should not now have addressed the committee, but for the strange character of the proceedings of the House during the present session, called, as it was, under extraordinary circumstances. The banks had suspended specie payments; the Government, with a surplus of forty-two millions and a half, found its Treasury embarrassed; and there was every reason to expect that it would soon be without means to meet its current expenditures. Trade was also paralysed, by a revulsion more violent than any that had hitherto checked the onward course of the prosperity of this country.

Called together, Mr. Chairman, under such circumstances, I had supposed that whatever might be our opinions of past events, or of our mutual errors, we should come here prepared, without regard to party, to provide a common remedy for a common calamity. I had thought that we should be unanimously disposed to relieve our Treasury from its embarrassment, in a mode calculated to aid most extensively in giving renewed activity to our internal circulations, and in reviving trade. Judge, then, of my surprise to see every measure recommended by the President not only opposed, but its passage retarded by every movement that could embarrass the proceedings of this House. So far from aiding us in our measures, the gentleman from Massachusetts (Mr. Cushing) told us that he would not “raise his finger to relieve the Treasury from its embarrassments.” (Mr. Cushing explained.) I am happy, sir, that the gentleman is penitent. I understood him as the reporters did; (Mr. C. said his remark had not been correctly reported.) But the gentleman from Kentucky, (Mr. Menefee) a gentleman who from his debut here promises to be an ornament to this House, indeed he is already so—that gentleman went further still, and rejoiced at the embarrassments of our Treasury.

The spirit of party must be violent indeed, when it makes war upon the Treasury of our own Government, instituted for the common benefit. Had

gentlemen come forward, as the country expected they would do; had they united with us, and passed our bills a month ago, they would have afforded immediate and general relief to every part of the Union. Instead of that, what have we seen? Opposition to every measure of relief. When we proposed to relieve the Treasury from its engagement to deposit nine millions with the States, we were told of the millions due from the merchants and the banks. The bonds were not to be postponed to relieve our debtors from the necessity of purchasing specie at a premium, and to aid the banks in an early resumption of specie payments. Our southwestern banks were to be called upon to pay their balances, by distressing their debtors, and at a crisis when specie in that part of the Union was at twenty, thirty, and forty per cent. premium. All this was to be done, at a moment when trade was paralysed, and credit destroyed, for the purpose of depositing nine millions with the States! The issue of ten millions of Treasury notes too—a measure calculated to give general relief in the present condition of our internal exchanges and circulation—that measure was resisted. The interests of the Treasury, and of the country, were to be set aside, in order to furnish a stock to our capitalists, or to enable the Bank of the United States to purchase its bonds at its own price! And now, when it is proposed to separate the Treasury from the banking institutions of the country, to dissolve that fatal union which has contributed so largely to disturb their operations, and to shatter the fortunes of trade, a proposition is made to reunite them by stronger bonds, and to perpetuate their mutual embarrassments.

Relief has not been the order of the day with gentlemen. They had no measure to propose to calm the agitations of trade, to revive confidence, and to give a new impulse to the prosperity of the country. Their movements were of another character. Agitation was the order of the day; and, at the moment when the country anticipated prompt relief, we have found ourselves in the midst of another panic session. The gentleman from Pennsylvania (Mr. Sergeant) has told us of “the awful winter” approaching, and we have heard from all quarters the old war-cry of a national bank or a revolution. The removal of the deposits, the specie circular, and all the stale subjects of debate for five years past, have been revived. Preparation is evidently made for a third campaign for a Bank of the United States—that sovereign remedy for all the calamities brought upon the country by the mal-administration of our late President.

Sir, although these subjects are stale, it is useful to consider them at a time when we may justly appreciate them, and in connection with the inquiry into the causes of the recent revulsion and the general suspension of specie payments. As to the specie circular, I shall soon dismiss that. What was its operation? It increased the specie in the western deposite banks, in thirteen months, some three millions and a half. And whence was this amount drawn? From the ports on the Atlantic and the Gulf, into which there were at the same time flowing more than ten millions of coin and bullion beyond the amount exported. Was the deposite in the western banks special? No: every dollar of it might have been returned. It might have been drawn by the banks on the Atlantic and the Gulf; and would have been drawn, had they not been, at the same time, receiving three times the amount from abroad. Such, sir, is the whole currency operation of the specie circular—that measure which seems, in the estimation of gentlemen, to have been the terrible author of all the calamities of the commercial world. According to their argument, it followed the swift current of the Ohio and Mississippi to New Orleans, and swept away the most eminent houses in that city. It took the course of the Gulf Stream, and gave a shock to every city on the Atlantic. It prostrated more than a hundred of the most enterprising merchants of New York; crossed the Atlantic, shook the royal exchange, and continued its disastrous course throughout all Europe. But, sir, the most remarkable performance of this tremendous measure we did not hear of for some months after it was issued. Before it visited the two continents on our side, it

actually passed through the globe, and produced an earthquake in the Celestial Empire. In this revulsion, the Hong merchant was the first victim. Mr. Chairman, the question is unworthy of argument—it is fit only for ridicule. I was glad to hear the learned and travelled gentleman from South Carolina (Mr. Legare) who addressed the Committee this morning, do justice to the specie circular, and admit that but for that, Heaven knows “where we should have gone.” Sir, if that specie circular, and the London bankers’ circular—a measure ill-timed, sudden, and overwhelming—if both these circulars had been issued twelve months earlier, it would have saved, on both sides of the Atlantic, many a merchant from bankruptcy, and thousands of families from poverty and want.

Equally unsubstantial is the charge against the late administration for drawing specie from Europe. If gentlemen would reflect upon the operation of the measures of Congress and of Parliament, adopted upon no party grounds, and upon the effect of a constant influx of capital from the old to the new world, they would find no difficulty in accounting for our heavy importations of specie for some years past. They will find the foundation laid by the act of Parliament of 1833, and our coin law of 1834. The former made Bank of England notes a lawful tender; dispensed, in some measure, with the use for gold, and encouraged its exportation; while the latter raised the price of gold above the European standard, and facilitated its importation into this country. The act of 1834 was the first measure ever adopted by us calculated to fortify the basis of our commercial credit, and to secure a just portion of the metallic currency of the world. Had the Bank of England not suspended specie payments for twenty-five years, we should long since have discovered and corrected the error in our coin laws. Had we revised them forty years ago, the trade of this country would have rested on a more stable foundation than it now does. For years we were mere traders in currency. We drew it from the islands and countries south of us, and exported our silver to China and our gold chiefly to Europe, even after the expense of coining. We have latterly exported little to China, less than three millions in five years; and the course of trade, and the operation of the coin laws of England, France, and this country, do not authorize us to anticipate its steady exportation as heretofore. In the last fifteen years we have imported about eighty-seven millions from the countries and islands south of us, and there is always a current of coin and bullion setting in from that direction. There will be no difficulty now in securing a substantial basis for trade, if our State Legislatures do not banish specie from the country, and if we separate our revenue from our bank note circulations.

If we would ascertain the causes of the recent revulsion, we should be obliged to go back to a very ancient date. The gentleman from Pennsylvania (Mr. Sergeant) has truly told us that all countries are liable to revulsions, whatever be the character of their currency. When credit is abused, an explosion must follow; and credit has been sometimes abused excessively, even in countries with a metallic currency. But, sir, the gentleman was obliged to go back a century for the explosion in France; and that explosion was an affair of the King, who, in December, 1718, took Law’s bank into his own hands. Wherever Governments permit paper to be substituted for the precious metals, revulsions must become an every day affair, and their violence is also very much increased by mercantile notes and bills, issued in exchange for credit, the whole of which explodes at every revulsion, and steadily increases the amount of bankruptcy. The rapid growth of this country, and the bold and enterprising character of our trade, render us more liable than other countries to frequent and violent revulsions.

But, sir, all these causes combined, have never before produced a general suspension of specie payments, in time of peace, in any country. We must seek for other causes for an event so extraordinary. It is possible that the circular of the London bankers, issued, we may say, by order of the Bank of England, and coming suddenly upon the trading

and banking interests of this country, might have produced it; but it is by no means certain.

There was, however, a manifest cause of this suspension, in the connection of our Treasury with the banking and trading interests of the country, under which they had to encounter the pressure of the deposit act, and, what was more powerful still, the hostility of the Bank of the United States and its friends. I do not refer to the deposit act with a disposition to criminate gentlemen who supported it. The surplus was an evil. They discharged what they considered a paramount duty in getting rid of it; but they did not foresee the disastrous consequences which would follow the sudden withdrawal of so large an amount from the banks at such a crisis. That was not, however, the only measure. There was a supplementary act which you yourself, Mr. Chairman, (Mr. Smith of Maine being in the chair,) moved out of its order and carried through this House at midnight on the last night of the session. That act authorized the immediate transfer of the public money from bank to bank, and State to State; and it was for executing both these laws together that the Secretary of the Treasury has been so unjustly censured. Let us suppose, sir, that England had a surplus of five hundred millions of dollars which, in a ratio to her revenue, would be equivalent to our forty millions. Suppose it to be deposited in the local banks, and that Parliament had ordered it to be withdrawn in nine months and distributed among the counties in England, at a time too of a heavy pressure on the money market. Would it not have broken all the banks in Great Britain and Ireland? If this five hundred millions had been deposited in the Bank of England and its branches, and had been, as ours was, employed in commercial discounts, the shock to trade and banks would have been still more violent from the convulsive but vain efforts of the Bank of England to meet the demands of the Exchequer and to sustain specie payments. Such, sir, must be the condition of trade and banking in every country where they are united with the fluctuating revenues of Government.

The next obvious consequence of this connection, is the five years' war of the Bank of the United States, and its friends against the deposit banks, the Treasury and the country itself. What, sir, is the brief history of this war? The President, in discharging a high public duty, knowing the immense power of such an institution, and foreseeing the mischiefs which would result from perpetuating it, brought the question before the nation for its decision. Without waiting for that decision, the bank memorialized Congress six years before the period for winding up its concerns, and a bill was passed through both Houses, with a knowledge that the President would reject it. The pretext then was, that it was necessary that the bank should at that early period know its fate, and commence winding up its concerns gradually. The election of the President in the same year, (1832,) ratified his veto. Steps were taken to employ other banks, and towards the close of the next year the deposits were partially removed. The bank, anticipating this order, commenced the first campaign against the deposit banks, the Treasury and the country, by curtailing rapidly. The pretext for this step was the necessity of fortifying herself to meet the hostility of the Executive in withdrawing the deposits. And pray, what was the enormous amount of these deposits? Not thirty-seven millions, sir, the amount ordered to be removed under the deposit act, but less than seven; nay only about three millions at that time, for some of it remained more than a year afterwards. Nor was it transferred from city to city or State to State; but with little exception, from one bank to another in the same city. Yet, alarmed at this tremendous order, which had been anticipated for months, this great bank, with its capital of thirty-five millions, was afraid of the deposit banks, and was compelled to curtail its discounts more than eighteen millions in nineteen months. The alarm was spread through our cities; the local banks were forced to follow its example; and trade, which had been in a prosperous course, was suddenly brought to a stand without any commercial cause whatever. The celebrated panic session opened with the cry of ruin and revo-

lution, and our cities were for months agitated by the stormy conflicts of parties. The first campaign for a Bank of the United States terminated with that session.

Foiled in this experiment upon the deposit banks and the country, the president of the bank changed his policy. This crippled institution, almost broken down by its efforts to pay over a few millions to other banks, as soon as the session was over, suddenly found itself able to enlarge its discounts to the amount of ten millions! The bank commenced extending its facilities in November, 1834, and in eight months increased them more than nineteen millions of dollars. The trading and banking interests of the country, after being so long chained down by this tyrant of trade, were suddenly set free. The banks generally followed the example of the United States Bank, by enlarging their discounts, and every branch of trade was stimulated to engage in the wildest speculations. If all the banks in the country had contracted and expanded in the same ratio, it would have made an aggregate fluctuation in commercial facilities of near three hundred millions. The fluctuation of the Bank of the United States alone from April, 1833, to July, 1835, amounted to about thirty-eight millions. Suppose, sir, the Bank of England had not its capital, its deposits and circulation invested in public securities; suppose, instead of its mere surplus, it had its forty millions sterling employed in commercial discounts, and that the bank, struggling to compel the country to renew its charter, were to curtail and extend its discounts in two years and three months more than twenty millions sterling—what would have been the condition of the trade and local banks of Great Britain and Ireland at this time? Precisely what ours is. The close of this second campaign has been triumphant—more than triumphant—for the president of the bank and its friends have not only broken all the deposit banks, but almost every other bank, not excepting the Bank of the United States with its thirty-five millions, although rechartered with additional strength and enlarged powers. The Bank of the United States has contributed its share in increasing the calamities of the day. It has triumphed over the deposit banks and the Treasury; but it has not yet conquered the people of the United States.

Now, in the midst of all this wreck of credit, while the victims in this war lie scattered around them, gentlemen, as if in mockery, invoke the aid of the trading and banking interests to engage in a third campaign; and for what, sir? For a national bank, which they dare not themselves propose; which they admit to be hopeless; which stands condemned by the people; who, after all these struggles, have sent to both Houses the largest majorities ever known, against even the expediency of such an institution. The merchants and bankers of this country are again invited to engage in a third and suicidal war, to keep trade and banking in violent agitation for three years to come, and to terminate the campaign in another scene of bankruptcy and ruin. None but the determined partisans of the Bank of the United States will answer to the call. The intelligent and candid of all parties must be convinced, after five years' bitter experience, that the trading and banking interests of the country have nothing to gain by enlisting in our political wars; and that so long as their fortunes are associated with the fluctuating revenues of this Government, they must be periodically broken down.

In these contests, sir, the credit of our banks has been destroyed. We have made discoveries, too, which warrant the belief that we may anticipate a similar violation of the contracts of this country, and destruction of its currency, at every violent revulsion. The members of our stock exchange have found out that when stocks are depressed by a pressure, and they are threatened with ruin, they can save themselves, and raise stocks twenty or thirty per cent. by compelling the banks to suspend specie payments. The banks have discovered, too, that they have absolute dominion over our State Legislatures, through the power which they exercise over the currency and the country. Indeed it is probable that in a period of alarm, which exists

in every revulsion, trade may solicit the banks to suspend their payments. It may not happen that all the banks will suspend; but nothing can prevent many of them from falling in every revulsion, but an entire separation of their concerns from those of the Government.

The State bank deposit system has most unquestionably failed, notwithstanding it is still supported by a few, but a very few, friends of the administration. The present crisis drives us to the necessity of choosing between a Government national bank of vast power, and a simple Treasury agency with no other power than that which this Government has always exercised in collecting and disbursing the public revenue. Although gentlemen have not yet the courage to unfurl their banner every where, yet there can be no doubt there is still to be a struggle for a national bank. The gentleman from Pennsylvania (Mr. Sergeant) tells us we flourished under the auspices of such an institution for forty years, and that the experiment was fully tried, and was triumphant. It was certainly fully tried, but I deny that it was triumphant. It was at all times a frail foundation for the vast fabric of credit of this country. The suspension of specie payments by the Bank of England in 1797, protected the first bank till its charter expired. I do not know that its solidity was ever tried but once, when an eminent merchant of Salem would have broken the branch at New York, and consequently all the other banks, if it had not yielded to his demands. As to the late Bank of the United States, we have the authority of two of its presidents: one tells us that in 1819 no man believed the bank would continue to pay in specie for one month; and the other, that in 1825, the currency of the Union depended upon his midnight journey from Philadelphia to New York. A very solid foundation this for the trade, currency, and contracts of a nation! As to its conservative power over State banks, we have had innumerable failures of them during the existence of both; and all the money which we have actually lost by local institutions, amounting to more than a million, was lost when the late Bank of the United States was in operation.

A national bank, such as we have had, was an experiment indeed, and a fearful one too. It was without a parallel in the history of Governments. I appeal, sir, to the gentleman from South Carolina (Mr. Legare) whether France or England ever chartered a national bank to employ the revenues of Government in commercial discounts, to regulate exchange, or to furnish a national currency founded upon the credit of private stockholders? If the banks of England or of France were permitted to use the vast revenues of these countries in extending facilities to trade, and their income, like ours, was constantly vibrating between an enormous surplus, without a public debt to absorb it, and a sudden deficit of revenue, it would be disastrous to the trading and banking interests of all Europe. Nor was any such bank ever established to regulate exchange. The gentleman from South Carolina well knows that the exchanges of Great Britain, Ireland, and of all Europe, are managed by local banks and private bankers, and that the latter are almost exclusively employed for that purpose on the continent. They are infinitely better managed there than they ever have been here. The laws of trade alone can regulate exchange. But even their operation is defeated by the course pursued by the banks in this country, and especially the Bank of the United States and the deposit banks. They have encouraged a wild spirit of speculation, by discounting millions of exchange not founded upon property; but a mere exchange of credits between distant points; and of notes payable at a hundred places in the interior, counter to the current of remittance to the Atlantic cities. The main cause however of the derangement of our internal exchanges is one which is unavoidable; that is, the periodical and sudden decline in the great staple of remittance required to discharge the debt annually due from the southwestern to the northeastern States. There is more elasticity in our foreign exchanges; and with a judicious reform of our currency we have little to fear. Our commercial tables may alarm us, but they afford no satisfactory evidence of the amount of debt due

and actually payable abroad at any one period. We know not what portions of our importations of specie and merchandise represent the proceeds of our exports to foreign countries, and what part of them arise from the sale of our stocks and bonds; from the transfer of the emigrants' property to this country, and from the steady current of capital which is uniformly flowing from the reservoirs of Great Britain, France, and Holland into this country, seeking permanent investment. When we see some thirty, forty, or fifty millions against us we forget that we see but a part of the account. Our imports must necessarily exceed our exports permanently, while we perpetually receive, through these sources from abroad, an increasing amount of capital far beyond any remittance of dividends. We have more to fear from our vitiated currency than we have from our foreign exchanges.

Neither, sir, is a national bank required to furnish us with a currency. The Bank of France issues no note under five hundred francs. The issues of the Bank of England are, essentially, exchequer bills, or what we should denominate Treasury notes without interest. They are founded upon the credit of Government. The whole capital, deposits, and circulation of the bank are invested in loans, in various forms, to Government. The people of England are taxed to pay the interest on their own money and their own credit, to be divided among the stockholders of the Bank of England! However unjust this financial system may be, it would be more disastrous to Great Britain and Ireland were the deposits and circulation invested in commercial securities. The private discounts of the bank form but a small proportion of its transactions. It is a Government bank, and as its circulation is founded on public securities, the profit on it should be a public concern. If such issues, which are essentially the credit of the State, were not made a source of profit to banks, the power would never be abused.

Happily for this country, sir, this experiment of a national bank has not been tried, and has not been triumphant. Had we made perpetual a bank authorized to control the commercial credit, the banking institutions, the revenue, and the currency of this country, we should have conferred on one man a greater power than the people and the States surrendered by the Constitution to all the departments of this Government combined. In his hands would have been the power to regulate the price of labor and the value of property; to elevate trade to the highest point of speculation, and to prostrate it in a moment; to draw into one vast circle the incorporated wealth of the nation; to concentrate and direct its power; and so to regulate the movements of his institution, by its expansions and contractions, as powerfully to influence our elections. Whether governed by his fears or his ambition, the destiny of the nation would have been in his hands. He might, as we saw some years ago, by his imbecility, ruin trade, break the banks, and endanger, if not destroy, the currency; or, as we now see, his ambition might tempt him to consider his institution as a political engine; he might attempt to regulate the succession to the Presidency. This was the experiment, sir—this was the design in 1791. Fortunately for the country it has failed—the people, not the bank, have triumphed: and, as it regards the President who accomplished it, the wreath of Orleans may perish, but the gratitude of his country can only expire with its liberty.

Mr. Chairman, we have but one alternative left. We must collect, keep, and disburse our own revenues. This proposition was made, in 1835, by a gentleman from Virginia, (Mr. Gordon) then a member of this House. He proposed to employ our own officers for these purposes, to appoint receivers general at certain points, and that "the whole revenue of the United States, derived from customs, lands, or other sources, shall be paid in the current coins of the United States." In replying, on that occasion, to the gentleman from Virginia, (Mr. Robertson,) who is now near me, I stated that "I concurred entirely in his principles;" that I considered it my duty, at that time, to regulate, "in the best practicable manner under [then] existing circumstances, the deposits of the public money;" that

we could manage our finances "if there was not an incorporated bank in the Union;" and that I hoped "the time could come when we should be able to dispense with the agency of all banks, especially those of circulation." That time has arrived, sir, much sooner than I expected. It is forced upon us by the banks themselves. In 1835, they had been selected by the Secretary of the Treasury, and I had two motives for continuing them as our agents, which I then stated. One was, that I thought them the "safest places of deposit;" but I now see that safety—ultimate safety—is of little importance, if the Treasury is to be periodically deprived of the use of its funds. The other reason was that now given by the gentleman from Virginia, (Mr. Mason,) that the deposit banks might aid in reforming our currency, by withdrawing their small notes. Between that gentleman and myself I am sure there can not be any difference of principle, for his course has been democratic and constitutional. But, sir, I submit it to his judgment, whether experience has not proved that such an experiment upon the currency has been, and must be, wholly abortive. Suppose our agents withdraw their small notes from circulation conformably to our law, have we not seven hundred and fifty other banks employed in issuing them as fast as they are withdrawn? You might effectsome reform if you employed the whole eight hundred, but not otherwise. But, if you were to propose that, is it probable that the banks in the interior, half of whose profits arise from circulation, would accept your agency? All the reform we can effect, is by confining our Treasury to specie and evidences of public debt. The small notes and the banks must be left to the authority that created them—the State Governments, with whose duties it is not our province to interfere, directly or indirectly.

But how has this simple proposition to collect our revenue in coin or evidences of debt, and to disburse it through our own officers—a proposition almost as old as the world—how has it been received? Why, sir, it is denounced as an experiment never before attempted—as a dangerous innovation—as something monstrous. One would suppose, from the language of gentlemen, that we were about "to subvert the whole social fabric," to revolutionize the age, and through a rapid dissolution of morals, intelligence, and liberty, go back, as the gentleman from South Carolina (Mr. Legare) says, to the age of "iron money and black broth!" Why, sir, we have been, happily without being conscious of it, in a very lamentable condition for five months past; we have been, ever since the 10th of May last, actually circulating iron money, and drinking black broth! Luckily, however, the trade of the country, and the country itself, have very much improved since then, notwithstanding this Spartan discipline.

But what are the objections to the measure proposed? The unsafety of the public money. This is certainly an age more distinguished for discovery than experiment. After having trusted our public officers with the public money for near half a century, we have suddenly discovered that it is now to be "plundered" by these "faithless agents." Prior to 1800, every bond was collected at your custom-houses; and throughout the whole history of our revenue, every dollar, whether from lands or customs, has been placed to the credit of our officers before it was transferred to the credit of the Treasurer. The cashier of the New York custom-house collected five millions last year; one of your land receivers had, in the course of the year, two millions to his credit, and the collector of New York some sixteen or seventeen millions. Since 1789 we have had about eight hundred millions to the credit of our public officers, and gentlemen have just found out that we are for the first time about to confide in them, because we propose they should keep, under the direct supervision of other officers, that which they now have passed to their own credit, without any check or guard whatsoever. Your disbursing officers are also entrusted with the public money. Your receivers, collectors, and disbursing officers may apply the public money to what purpose they please, and, under existing laws, we have no security whatever but their bonds. We propose to enlarge this security; to

place guards over them on the spot, and to have visiting officers, besides, to see that the keeper of the public money and his supervisors all discharge their duty with fidelity to the Government. We propose to secure the revenue by stronger regulations than any that have hitherto existed. France has tried this experiment with an annual revenue of about two hundred millions of dollars, and we dare not try it with a revenue of twenty. Defalcations have occurred, and would occur, under any system. But ours has been a loose one, and, unfortunately for the argument of the gentleman from Virginia, (Mr. Garland,) all the defalcations he refers to have occurred under our laws as they now are, and during the very time when the United State Bank or the State banks were employed as depositories of the public money. Sir, if gentlemen can contrive any plan of special deposit, which will not be abused by permitting the public revenue to be used by the banks, or which will not aid in the circulation of their notes, it might be adopted. But they will find it very difficult to devise any special deposit system which will not be evaded by the banks.

Another objection is the prodigious increase of Executive patronage. One gentleman, not of this body, has stated (as I have seen it reported) that we are about to enlist an army of a hundred thousand public officers. Why, sir, if we did not add one officer to the number now in the public service, there would be, as there actually is at this time, no difficulty whatever in collecting, keeping, and disbursing, our revenues. Convenience may require the addition of a dozen clerks; greater security might be effected by employing half a dozen receivers general at points where the revenue exceeds the amount of the officers' bonds; and, to perfect that security, you may appoint two visiting agents. Were we to go further than the bill proposes, and appoint all these, is that patronage to be compared with the political influence exercised over your eighty-eight deposit banks, with their two thousand officers and directors, and some fifty thousand stockholders? Sir, the argument is unworthy of refutation.

The gentleman from Virginia (Mr. Mason) proposes, if I understood him correctly, to collect our revenue in specie, or its equivalent, and to make our disbursements in local bank paper. This is an extraordinary proposition, especially from one so devoted to the Constitution. What, sir! collect our revenues in coin, or its equivalent, extort the last fraction from the public debtors, and then turn to our creditors, and avail ourselves of this general act of bankruptcy, which the banks have established for the country, by their joint resolution to suspend specie payments? Are we to receive coin, or its equivalent, all over the Union, and pay our debts in depreciated paper, varying from five to forty-five per cent? I think the gentleman from Virginia will, upon reflection, abandon a proposition so unjust to the public creditors, and founded upon so palpable a violation of the public faith.

That, however, which seems most to alarm gentlemen, and especially the gentleman from Pennsylvania, (Mr. Sergeant) is, that we are to have two currencies, as the gentleman tells us, "one for the Government—another for the people;" "the people do not sit at the same table." Is this intended for argument, sir? I hope not. But, as the gentleman from Pennsylvania has prepared his table, and appears to be so solicitous to provide something for the people, I would advise him to take his seat, and to place before him his favorite dish, that "spurious progeny of local paper;" and then to invite a distinguished gentleman from the other wing of the capitol to take his seat at the other end of the table; and spread before him his "mortified mass of the body politic," though, by the way, no favorite of his. Then, sir, let these two distinguished gentlemen issue their proclamation to "the people," and invite them to participate. Will they come to the feast prepared for them by the gentlemen from Pennsylvania and Massachusetts?

Mr. Chairman, arguments not addressed to the understanding have no permanent effect. If gentlemen mean any thing by their two currencies; if they mean that this Government shall collect its revenues in depreciated local paper; if they propose

to collect our taxes from the States, and to receive payment for our public lands in eight-and-twenty different currencies, let them boldly take their ground, and not evade the question by popular appeals. Let them set the Constitution at defiance, and offer a premium to every State and Territory in the Union to depreciate its bank paper, for the purpose of diminishing its taxes and the price of the public lands; let them for ever postpone the resumption of specie payments, and disorganise the Union. Gentlemen dare not, as a party, take that ground: they know that the revenue must, and will be, collected in specie, or its equivalent, in a medium common to all the States or there is an end of our present constitutional Union. Sir, as to this question of two currencies, what is it? If bank notes are equivalent to specie, the people have two currencies, and the Government but one.

One would suppose, too, we were about to monopolise all the coin in the country. Why, sir, of the whole metallic circulation, assumed at eighty millions, the Treasury would require but a sixteenth part: the banks would have five-and-twenty, and "the people" fifty millions for general circulation. Even of the five or six millions of coin which might be abstracted from the general mass, one-half at least would be represented by Treasury warrants in circulation, founded upon the specie in deposit. There would be at no time more than two or three millions of specie in your depositories in every part of the Union not represented by these warrants. As to an excess or surplus beyond six millions, that will never occur; because Congress will now be compelled to do what ought to have been done when the public debt was extinguished: they must make permanent provision for guarding against a surplus, by investing the excess, whenever it is beyond six millions, and throwing the specie at once into circulation, and then to exhaust such surplus by a graduated reduction of our taxes. This accumulation of specie, which excites so much apprehension, is, in my view, the strongest recommendation of the proposed measure. It will keep our revenue down, and avoid the recurrence of a surplus to distract our councils, and make the States dependent upon our Federal Treasury. It will be a regulator of trade far better than the foreign exchanges. It will indicate the approach of over-trading, and not like the latter, rise after the mischief is done. To the banks it would be a steady and salutary check, in preventing the excessive and unwarrantable issues of their credit, by bank notes or otherwise, in periods of speculation—not for the purpose of circulation, but to furnish fictitious capital, by a mere exchange of credit for credit, to stimulate excited enterprise, to abuse credit, and to terminate in revulsions, ruinous to trade, and calamitous to the laboring classes.

The gentleman from South Carolina, (Mr. Legare,) objects to the measure, because it would make "New York the grand market for specie, and all the rest of the States tributary." I was happy to hear that he was not the author of this suggestion. I hope, sir, the honorable Senator (Mr. Preston,) to whom he referred, is also not responsible for its origin, for it is utterly without foundation. I had seen it before in an essay ascribed to a gentleman of South Carolina of great experience as a statesman, financier, and banker, who has suddenly and zealously enlisted against us. Whether this objection rests upon the authority of either or all these gentlemen, the author of it evinces a very limited knowledge of the financial operations of our Government. What would be thought of a Secretary of the Treasury, who would discharge the duties of his office so absurdly, as to transmit the public money from other States to New York, where two-thirds of the whole revenue from customs is collected, and where a large surplus, (except now when the revenue is every where suspended) uniformly exists, beyond the amount required for expenses in that vicinity? His duty is directly the reverse. The excess of revenue at New York must be placed in other States, where it is to be expended. But, sir, how is it transferred—does a dollar in specie go for these purposes, or for Treasury remittances, between different parts of the Union? Not one. We may require small amounts, as we always have done, in specie, for complying with In-

dian treaties, and for some of our expenditures abroad; but in all the great operations of the Treasury, no balance is transferred from city to city or State to State in specie. The warrant is issued upon the place where an excess exists, beyond what is wanted there; it is sent to the point of expenditure, and travels through the medium of trade, or the banks, to the place where the money is deposited, and the specie is drawn by the bank from the depository. So far as the Government is concerned, the coin remains where it is collected, and merely circulates between the bank and the depository. Such is the extent of these specie transfers which are so alarming to distinguished gentlemen from South Carolina.

We have now to notice a formidable objection. It is said we propose to establish a universal and exclusive metallic currency, and in the language of the gentleman from South Carolina, (Mr. Legare,) to effect "an absolute subversion of all credit and all commerce—an utter destruction of the whole fabric of society." This is indeed, sir, an age distinguished for discoveries. We have been for years endeavoring to secure through our federal legislation, a broader basis for the vast fabric of credit in this country. Gentlemen have cordially co-operated with us in accomplishing a purpose almost universally acknowledged to be necessary to give stability to trade, and solidity to our tottering banking system. But when we propose a measure calculated to forward effectually an object so essential to the morals and prosperity of the Union, they suddenly discover that our design is to break up the very foundations of civilized society, to return to "iron-money and black both"—to absolute barbarism. Gentlemen well know, that whatever may be our abstract opinions as to the effect of paper money on the morals and condition of society, no man in this "bank note age" can expect more than to reform the abuses of the system. But before they so roughly denounce the principles of those with whom they are politically associated, I would admonish gentlemen to consult together, and come to some understanding as to what they mean by "an exclusive metallic currency," and the "destruction of the credit system." The gentleman from South Carolina, (Mr. Legare,) and the gentleman from Virginia, (Mr. Garland,) considering how harmoniously they act together, have placed themselves in an awkward attitude before the country. The former gentleman denounces the currency of France as the author of her poverty; the latter eulogises it as the soundest in the world, and recommends it to us as a model for our imitation! And now, sir, what becomes of all the violent denunciations of the gentleman from Virginia about this monstrous attempt to introduce an exclusive metallic currency? Who had gone beyond the gentleman from Virginia? No bank note circulates in France of a less denomination than five hundred francs, and the whole amount is but about twenty millions of dollars in paper to four hundred and fifty millions of gold and silver. Is that a metallic currency? Is the credit system destroyed in France? Sir, the gentleman from Virginia will find, upon an examination of his own doctrines, that it will embarrass him to explain in what essential principle relating to currency he is opposed to the present administration.

The gentleman from South Carolina may also discover that his principles are not so hostile as he imagines, to the separation of bank and State. Why, sir, he admires the Scotch banking system, the very essence of which is its freedom from all legislative interference. The union between Parliament and this branch of trade has been long since effectually dissolved. Trade and not Government regulates the quantity of banking capital in Scotland. He seems struck with admiration at the splendid results of "the credit system" in that country, and ascribes them to the substitution of paper for a metallic circulation. The gentleman mistakes the shadow for the substance. The astonishing industry and wealth of Scotland, and the moral condition of her people, are owing, among other causes, to the absolute freedom she has enjoyed in banking, the best regulator of all trades when free. The act of 1708 did not extend to Scotland; she was not under the dominion of the Bank of Eng-

land. She had no gigantic institution to break her local banks periodically, and to throw thousands, nay, millions, of laborers out of employment. Beyond the Tweed, capital, free from all restrictions, flowed into this channel, and kept pace with labor, population, trade and wealth, and sustained the vast increase of her commercial credits. The banks of Scotland are an improvement upon the plan of our savings institutions. They have in that country not only a large amount of banking capital, but more than a hundred millions of dollars, drawn from all classes of society, in deposit upon interest, yielding a profit to the community as well as to the banks; thus mutually benefiting the capitalists and the country, and encouraging frugality and enterprise. Her "credit system" rests upon a foundation almost as broad as the whole property of Scotland. Her stockholders are not, like ours, exempt from responsibility. The public interest and security are not, as with us, sacrificed to encourage the growth of corporations—of partners not individually liable for their debts, and not responsible to the country for their management. Her banks are essentially the guardians of the poor, as well as the regulators of trade. It is to these circumstances we may chiefly ascribe the rapid growth of Scotland, notwithstanding her disadvantages of soil and climate, and without the appendage of an impoverished laboring population, as in England and Ireland. It is wholly immaterial to Scotland what may be the character of her circulation. She is an interior province; exchanges do not press upon her; England intervenes and sustains the shock. Like our country banks, theirs have little use for specie; and, like them, they have their "specie fund" in the centre of circulation. Had she been on the borders of the British channel, where her local circulations would come in contact with the metallic currency of the continent, she would have long since discovered that, however convenient small notes may be, the imaginary convertibility of bank notes into coin is but a frail protection to labor, and a weak foundation for the credit and contracts of a nation. Protected by her interior position, as well as by skilful management, her population has escaped some of the consequences of this abuse of credit.

But the chief object of the admiration of the gentleman from South Carolina was the triumphant result of the credit system in England. Why, sir, nothing can be more unlike than the credit systems of England and Scotland, as they were prior to 1826, both in their characters and their results. The one was a system of despotism, the other of liberty. The one filled the country with pauperism, the other kept labor steadily employed, and with parental guardianship hoarded the small accumulations of the poor. But it was in England that the gentleman saw "the grandest work of civilized life in any part of the world"—the splendid result of her credit and banking system. Sir, while the classical and intellectual gentleman from South Carolina was admiring the Corinthian grandeur of this proud fabric of the credit system, in the ecstasy of his admiration, he forgot that he was standing on a vast ruin of violated rights; lost in his sublime contemplations, he heard not "the accents of despair," nor the wailings of poverty, uttered by millions who had fallen victims to the credit system of England. He had not probably examined the poor man's record. He could not persuade himself to believe that, amidst all this bustle, life, and splendor, all this wealth and grandeur, he was in a nation of paupers. He could see it all in his travels through impoverished France with her metallic currency, but not in England with her credit and banking system. Well, sir, here is that record of its results which escaped the gentleman's observation. Two millions four hundred and ninety-three thousand, four hundred and twenty-three families "receiving relief not included in the returns for this year." But it is added, in this work published by the London Statistical Society, "judging from the results here exhibited, the paupers form the greatest portion of the whole population." Such, Mr. Chairman, is the foundation upon which rests this "grandest work of civilized life," this triumphant evidence of the blessings of the English banking and credit system.

[Mr. LEGARE inquired the date of the work.] The work was published in 1827; the statistical table of pauperism is for the year 1821-22. [Mr. L. added that there was a change since then.] The poor laws are reformed, it is true; but was not capital emancipated from the dominion of the Bank of England in 1826? was not banking, for the first time, set free in the great commercial and manufacturing districts? Sir, I have travelled a little, too. I have contemplated with delight the rich treasures of the Louvre and of the Vatican; the sublime doric and the proud corinthian; but it was in the beautiful valleys of France and Germany—on the Rhine and on the Elbe—it was amidst the mountains of Switzerland and Wales that I saw, without regard to questions of currency, or even forms of government, sound morality and personal comfort; it was these scenes that reminded me of our western paradise. And, sir, I could but regret that the tenants of those mountains and valleys were governed by that concentrated power of associated wealth which rules Governments, controls monarchs, and regulates the destiny of every nation in Europe.

Mr. Chairman, we have a great constitutional duty to discharge. We have to regulate the coinage, and by requiring the collection of our revenue in a common medium, to secure equal taxation to the States of this Confederacy, and to preserve for the whole people a measure of value of ancient origin, for labor, property and contracts. In discharging this duty, we have not only to encounter the vices of our complicated banking systems, but also a revolution which has been going on more than a century, and one which threatens in the end to substitute a mere exchange of credits for the ancient standard of nations. It commenced with the charter of the Bank of England, in 1694. This substitute first appeared in the form of notes of twenty pounds; in 1759, it was reduced to ten pounds; in 1793 to five pounds; and in 1797 the bank suspended specie payments, and commenced issuing one and two pound notes. After a fatal experiment of five and twenty years—fatal to the morals and welfare of the people, however necessary it may have been to Government—the bank resumed specie payments in 1822. The currency was reformed, and all notes under five pounds (about equal to twenty-five dollars) were prohibited in England and Wales. This was not, however, the most material reform.

The restriction on banking, which had been imposed in 1708 to protect the monopoly of the Bank of England, was repealed in 1826. For one hundred and eighteen years no association could be formed for banking purposes with more than six partners. Under this system, the trade and currency of England were periodically convulsed. The great regulator of banking in that country, by its own alarms and powerful efforts to save itself, brought down country banks by the hundred in every revulsion, prostrated trade, and threw millions of the laboring population out of employment. The violent revulsion of 1825 brought about the reform of 1826; and "with the consent" of the Bank of England, her monopoly was partially relinquished, and the great commercial and manufacturing districts were permitted, like Scotland, to form as many banks as they pleased. England has escaped some of the violence of the recent revulsion. Her banks have not suspended specie payments. The Bank of England was not saved, as in 1825, by an accidental discovery of one pound notes! It was not because there had not been over-trading in England; far otherwise. There never was a period when there was more extensive speculation in every branch of trade, and when her capital and credit were more widely extended in every quarter of the globe. How has it happened, then, that she did not suffer as in 1825? Because the revulsion in that year broke down the monopoly of the Bank of England; because capital, freed from its dominion, flowed with astonishing rapidity into that branch of trade, and was ready to meet the sudden and large addition which speculation had made to the mass of commercial credits. Some of these associations, it is true, were embarrassed by the revulsion; the wonder is that more were not brought down by it.

They were all of recent origin; and this trade had been effectually prohibited for more than a century. These were not the only reforms. That remnant of barbarism, the usury law, was also in effect repealed, by exempting all bills having not more than ninety days to run from their operation; and this has been subsequently extended. The rate of interest, sir, is the safety-valve of credit. It should be permitted to rise and fall with the pressure upon the money market. In this country we have locked it down, and doubly prohibited the free use of capital. The inevitable consequence is periodical explosions. But with all these reforms, it is still the policy of England to substitute credit for a metallic measure of value. That credit, it is true, is not so vitiated as it was; but by making Bank of England notes a lawful tender, and by authorizing the joint stock associations to issue their notes, redeemable in these notes, they have laid the foundation for revolutions in trade, which are not yet developed. These associations had not been long enough in existence to show to what amount they could increase their circulations, though long enough to prove how rapidly they could increase them. While the use of credit founded upon property should enjoy absolute freedom, the abuse of credit, by issuing that which is founded upon credit, should never be encouraged by Government.

The most powerful antagonist, however, of a uniform measure of value is our own banking system, unquestionably the worst in the world. If we had no other motive, we should be compelled to collect our revenue in a metallic currency, in order to preserve something in the country as a standard of value. We have six and twenty Legislatures and two Territorial Councils steadily at work enacting laws to banish specie from circulation. The present crisis, no doubt, must produce reform; but it can not be expected to be immediate or general, so long as our laws are made by those who entertain hostile principles of government, especially on this question of currency. It is true, there is a common conviction that our banking system is bad, and that our local circulations require reform; but when will that ever be effected, if we surrender up our constitutional standard? If we do not lay the foundation here, our banking system will never be reformed. It is impossible to imagine a system more discordant, and more embarrassing to trade, than the system of the United States as a whole. Capital is not at liberty to flow into this branch of trade as in England and Scotland. Government must regulate the quantity in each State. Our State Government might with equal propriety and wisdom regulate the quantity of capital in every other branch of trade. And what is the consequence of this legislative interference with banking? Why, sir, two of our cities have each more banking capital than the State of New York, with her hundred cities and towns, and with more than two millions of population. The commercial emporium of the Union, the centre of circulation, the point upon which the whole fabric of commercial credit, internal and external, presses at every revulsion, is permitted to employ, in this branch of trade, some twenty millions—about one-third the banking capital of a neighboring city. Such legislation is as absurd as it is unequal. It is calculated to unregulate trade and embarrass the banks.

Banking, legitimate banking, is a trade, and should be as free as all other trades. Let it regulate the quantity of capital, and this branch will keep pace with all others; it will increase with the increase of commercial credits, and with the growth of trade. As the demand increases, so will the supply; and no portion of the capital of the country will be unemployed. This is the secret of the success of the Scotch banking system, which is weakened, and not strengthened, by her small note circulation.

Currency, sir, is not a trade. Governments will be called upon to decide whether an attribute of sovereignty shall be exercised by trading companies, and if so, to what extent. They must determine whether such companies are to be permitted to furnish the world with their credit as a substitute for a metallic standard, with liberty to increase and diminish it at pleasure; for that is the result which seems approaching. The great question to be de-

termined is, are trading associations to be authorized to issue a species of State credit, and to collect a revenue, now amounting to six or seven millions annually, and constantly increasing, and to indemnify an abused community by producing periodical bankruptcy, poverty, and want? The gentleman from South Carolina knows that almost all the distinguished authorities are against his "credit system."

It is a conceded point, that the regulation of the quantity of currency which is the measure of value, ought not to be entrusted to those whose profits are increased by abusing the trust. You might as well at once surrender to these corporations the power to regulate the value of our coin, and let them adulterate it, or arbitrarily raise its nominal value at their pleasure, as monarchs formerly did, to the ruin of their people. Upon what ground is it that Governments have been induced to give their aid in substituting the paper of trading companies for the current coin of the world? An increasing demand for a medium of circulation and a deficiency of the precious metals. The former is admitted, the latter I deny; and on neither ground can these issues be defended. Sir, there has been no age of the world when it was so abundantly supplied with circulation, independent of all the small notes (I mean under fifty or one hundred dollars) in Europe and America. How is it with the precious metals? In the work referred to by the gentleman from South Carolina, the quantity of money in the Augustan age is estimated at less than two thousand millions. Why, sir, since 1492, we have drawn from the American mines alone, more than six thousand millions of dollars, and the aggregate of coin, bullion, and plate in the world, is estimated at from seven to ten thousand millions. The quantity of specie might have been an object of solicitude in earlier ages; but of what consequence is it now, when, for all its great offices, we have discovered other substitutes. We have discovered a mine richer than all the mines of Mexico and Peru—the human mind. We have drawn from that inexhaustible mine, countless millions of substitutes for specie, in the form of public debts, bank stocks, and stocks of every kind; of bills of exchange, notes of hand, bank drafts, and bank checks. These are our circulations which give velocity to trade. It is these, amounting to thousands of millions, which have accelerated the growth of wealth among nations, and not the contemptible amount of your small note circulations in Great Britain, Ireland and America. In the present age, trade provides its own substitutes for specie, in adjusting balances not only between States and Nations, but between individuals, and without the agency of bank notes. Specie is only wanted to adjust balances between nations when credit is suddenly destroyed. It is however wanted in every country as a standard for local circulation, and to sustain the increasing amount of commercial credit. The value of property is sufficiently affected by credit founded upon credit, in the form of bills of exchange, without extending this abuse of credit in the form of currency. The former we can not reach by legislation, and we have no right to do so if we could, however injurious its operation is upon trade. The latter interferes with the currency established by the Constitution, and we should adopt every measure that we can to prevent it from destroying our standard altogether.

This revolution may be accomplished. The precious metals may eventually be banished from the circulations of the world, and we may have no other standard than bank notes. I admit, sir, that as a mere question of trade it would accelerate the accumulation of wealth, and the growth of our cities. But what are the sacrifices attending such a system? Do you not lay the foundation of your cities on the ruin of your population? Sir, while we sacrifice the poor, we transfer political power from the agricultural and laboring classes of society to those thousand corporations which seem to have been, from the beginning of our free Governments, the only interests worthy, in the estimation of our American legislators, to be exclusively cherished, protected, and patronized. Sir, go on with your credit and banking systems; banish the precious metals; establish your paper standard, and let the value of pro-

erty and the price of labor float upon its agitated surface; let them rise with its expansions and fall with its contractions; and then, sir, gentlemen may anticipate every five years the return of the "awful winters" referred to by the gentleman from Pennsylvania. One of them is now approaching—an awful winter indeed for the poor; thousands will be struck down by poverty and want. Sir, I do not ask gentlemen for their charity. I make no appeals to their humanity, but in the name of HIM who made us all, I entreat them to spare them their taunts—do not stigmatize them—let these poor laborers die in peace and of famine, in a land overflowing with the richest abundance. Pardon these victims of your policy, should they in their last hour pray that their country might be delivered from your calamitous "credit system."

Mr. Chairman, upon the firmness and integrity of the people of this country, at the present crisis, depend the condition of our society and the character of our Government. It is evidently a struggle for power by some of the corporations of this country, but I trust not all of them. It is a great issue; for every thing moral, social, and political is at stake. On such an occasion, gentlemen may well discard their prejudices—republicans have been separated on party grounds, but not on principle—they may readily unite when a question arises involving the welfare of the people, and the very existence of free Government. In a cause so just we have little to fear, and every thing to hope. I can not believe that in the approaching contest we shall lose one sincere friend of this administration. Some have, I think, prematurely decided upon the measure now proposed; they have denounced it without proper examination. I am sure no sound republican can, upon deliberation, be ultimately found against it. While, sir, on the other hand, the proposition to separate bank and State must rally and unite the democracy of this country, by whatever questions they may have been hitherto divided. They will never consent that the Treasury of the United States shall be controlled by the stock exchange of Wall street, or of the Royal Exchange; that the public revenue shall be again made instrumental in augmenting the disasters of the country; and that the Government shall be periodically embarrassed for want of means, by entrusting its funds to institutions whose fate depends upon the slightest counter movement in any part of the commercial system of the world. Nor, sir, can I believe that any sound republican is prepared to substitute the credit of our corporations for the common medium and common standard of the world. No, sir: on these questions the democracy will be found united, as they always have been whenever the honor or the interests of their country were involved, as they are at the present crisis. Let not gentlemen deceive themselves; their victories always come with our calamities, and disappear with returning prosperity. The concentrated power upon which they depend cannot yet regulate the succession to the Presidency.

Sir, I have detained the committee too long. We challenge gentlemen to the vote. Let the gentleman from South Carolina declaim over his "iron money and black broth;" let gentlemen denounce the measure as an experiment or an experiment; let them call it a Sub-Treasury scheme, or by what name they please; but let them afford us an opportunity to test its advantages to trade, to banks, the Treasury and the country. We fear not the results of the experiment.

### SPEECH OF R. BARNWELL RHETT, OF SOUTH CAROLINA,

In the House of Representatives, September 29, 1837—  
On the bill authorizing an issue of Treasury notes—

MR. CHAIRMAN: I shall follow the suggestion made by the chairman of Committee of Ways and Means, and consider all the bills upon your table, as constituting one system, although contained in different bills. To the bill authorizing the Treasurer to issue Treasury notes, I shall propose, as amendments, that these notes shall bear no interest; and that the Secretary be authorized to issue ano-

ther kind of paper—*bills receivable in payment of the public dues*. When the bill regulating the depositories of the public money shall come up for consideration, I shall also move the amendment I send to the Chair, providing for a gradual dissolution of all connection between the Government and the banks; dispensing entirely, in the course of three years, with the use or reception of their paper; and using them only for the safe-keeping of the public money by special depositories. By these amendments, the Government will have the option of issuing their Treasury notes bearing no interest, or bills receivable in payment of the public dues; the Government will be separated from the banks—the public moneys be kept in the banks on special deposit—and the revenue be collected either in Government paper or specie. There is but one other alternative before the committee to this system in this shape, or by other modifications, and that is the project of the gentleman from Virginia, (Mr. Garland,) to reunite the Government to the State banks, receive their paper in payment of the public dues, and make them, as heretofore, the general depositories of the money of the country. These are the two projects for consideration.

If, sir, we are to have Treasury notes, I prefer that they should not bear interest. In issuing these notes, it is not our object simply to raise money, or to pay debts; but, in the paralytic state of the country, we want a medium in which the revenues of the country can be easily collected, and domestic exchanges be carried on without embarrassment to the banks. If these notes bear interest, their circulation will be impeded, if not stopped entirely; they will be retained on hand as investments. Nor, sir, do I think the objection, that if they do not bear interest they will fall below par, is well founded. Although they can not be employed like specie in paying debts abroad, they will answer a function which specie cannot perform, in carrying in the exchanges of the country. This peculiarity of usefulness, in the present situation of the country, will more than counterbalance any other advantages which either bank notes or specie may possess over them as a medium of circulation.

But, sir, I prefer, to Treasury notes in any shape, the medium I propose—*bill receivable in payment of the public dues*. A Treasury note, is a promise to pay, for the redemption of which, specie must be collected and reserved. A bill receivable in payment of the public dues, is merely a promise to receive, and has its promise fulfilled when received; the one, requires the abstraction of a large amount of specie from circulation—the other, not only abstracts no specie from circulation, but will actually be equivalent to an additional supply of specie to the amount of the issue. The one, may bring the Government in collision with the banks in the delicate position in which they will be placed when they resume specie payments—the other will give the Government the means of collecting its revenue without enrenching in the least upon the resources of the banks. The one, is intended as a temporary expedient; it is a debt, and the debt must soon be paid; the other is merely an instrument of collection, and can be kept out for ever, and be expanded or contracted as the wants of the country for the purposes of exchange and collection may require. For these reasons, I prefer, to Treasury notes, bills receivable in payment of the public dues.

But, Mr. Chairman, the same objection will be urged to this kind of paper which has been urged against Treasury notes not bearing interest—they will fall below par. Their appreciation or depreciation will entirely depend upon the great principle of supply and demand. If there are more bills in circulation than are needed for the purposes of exchange and the collection of the revenue, they will depreciate; if less, they will rise in value. This kind of paper is not an untried experiment, and new in the history of finance. It has been tried and used with success in far worse times, and by far feeble Governments than our own. The very first paper money issued in America was of this kind. Upon the failure of the first expedition against Canada in 1690, the Province of Massachusetts laid a tax upon the people to meet the expenses; but as the soldiers were impatient, and

would not wait until the tax could be collected, the Government issued notes, "*which were to be received for payment of the tax and all other payments in the Treasury*." Before the time when the taxes were to be collected, the notes of course depreciated, because there was no demand for them; but, "as the time of payment of the tax approached, the credit of the notes was raised, and the Government allowing five per cent. to those who paid their taxes in notes, they became better than money." The Government, encouraged by the restoration of credit to the bills, afterwards issued others in charges of the Government. They obtained good credit at the time of their being issued. The charges of Government were paid in this manner from year to year. Whilst the sum was small, silver continued the measure, and bills continued their value." Thus, for twenty years in Massachusetts, until the year 1711, the revenue of the Province was collected in bills receivable in payment of the public dues, which maintained an equal value with specie. In this year, to defray the expenses of a second expedition to Canada, these notes were greatly multiplied; of course they fell immediately below par, and went on depreciating with every additional issue; because the supply exceeded the demand. More notes were put into circulation than were needed for the collection of the revenue, and for payments to the Treasury. Another instance of the effects of receivability in payment of the public dues, may be seen in the continental money issued by the confederation in our revolutionary war; for the coercive enactments were futile in sustaining the paper. So long as the issue was moderate, it sustained its par value with gold and silver. Mr. Jefferson and Mr. Payne testify, that until the issue exceeded nine millions of dollars, there was no depreciation; and when forty-six millions were issued, the depreciation was but one per cent.; but, when it reached three hundred and fifty-seven millions, in the midst of a revolution, of course the depreciation became several hundred per cent.; and this depreciation would have taken place, (although not to the same, yet to an enormous extent) if the issue had been gold and silver, instead of paper money. Three hundred and fifty-seven millions of specie, was probably forty times as much specie as was then used in the country for the circulation of the products of its labor. The effect of such an addition to the circulation, would be to make forty dollars buy what one purchased before. Although, in relation to each other, the products of labor would remain the same in value—as money became cheaper, every thing would nominally rise in value. The great error of our fathers was, in supposing, that money of any kind could be multiplied indefinitely, without any regard to the great principles of supply and demand. "Do you think, gentlemen, said a member of Congress, that I will consent to load my constituents with taxes when we can send to our printer and get a wagon load of money, one quire of which will pay for the whole?" Had they proportioned their issues to the amount of taxes to be raised, or limited them to the wants of the circulation, the continental currency would never have materially depreciated. But their situation was a peculiar one. The confederacy could not effect loans; and by the articles of confederation they could not tax the people directly. Their only expedients for carrying on the war were fighting and paper money, and they freely used both. Great Britain, also, after the suspension of specie payments by the Bank of England, from 1797 to 1823, exhibits another strong instance of the effect of receivability in payment of the public dues, to sustain a paper issue. The notes of the Bank of England, during this period, were but little more than Government bills receivable in payment of the public dues. The whole capital of the bank, of £14,000,000, had been borrowed by the Government, and the bank had stopped paying specie for its notes. The notes, therefore, had neither bank capital nor specie to support them. The faith of the Government, and their receivability in payment of the public dues, constituted almost their only title to credit; and, for twenty-seven years, this cur-

rency sustained that great people through a war for existence, with half of Europe subsidized in the contest, whilst her commerce and her power advanced hand in hand to its present mighty consummation. All of these instances are of past times. But we have before us now, in the Treasury drafts lately issued by the Secretary of the Treasury, a strong exemplification of the effect of receivability in payment of the dues to the Government, in sustaining a paper issue. These drafts are drawn upon the deposit banks who have stopped paying specie; they have been presented and protested, but being due by the Government, they are of course receivable in payment of debts to the Government. Very few of them have been returned to the Treasury, because they are needed for the purposes of exchange; and are now three per cent. above the best bank paper in value, and but two per cent. below specie. They have thus the reproach, it is true, of being below par—that is, below the value of specie. But I doubt if this language is correct when applied to the subject. Specie is no longer a portion of the currency. It is a commodity for barter, like flour or tobacco, and ought not to be considered, rather than any other commodity, as a standard of value for the currency. If it constituted a portion of the currency of the country, these drafts, unless multiplied beyond the demand, would undoubtedly be of equal value with specie; because they are needed for an operation which specie can not perform—to conduct the exchanges of the country. But, sir, admit that these drafts are below par, and that the bills I propose to issue will likewise be below par—where is the injury? The only effect will be a mitigation of the tariff, and a proportionate relief to the people. The importer will pay less duty by this depreciated paper to the Government, and will charge less to the consumer. The Government will only not collect what it does not want, and what, in strict justice, it ought not to require. The worse evil then under the paper issue I propose, will thus be a benefit.

Mr. Chairman, there is another aspect in which the paper I propose to be issued by the Treasury should be viewed, in relation to the exchanges of the country. I mean its bearing upon the project of a United States Bank. The great purpose for which such an institution is needed, is to equalize exchanges—to afford a general medium of circulation by which debts can be paid, and money transmitted from one quarter of the Union to another without great loss and expense. The local banks, if we are to judge from the past, can not, or will not, furnish such a circulation. The inconvenience and loss, for want of such a medium, are unquestionably great; and I do not think will be long endured. In countries like England, or even France, where the capital of ages has been accumulated, and the facilities of intercourse actually bring the remotest parts of the country almost into contact, the business of exchanges may well be carried on without the aid or intervention of Government or banks. But, in a country like ours, young in the accumulation of capital, and covering such an immense space of territory, it may well be doubted, if one or the other of these instruments will not be necessary, to place the exchanges of the country upon an easy and proper footing. By issuing bills receivable in payment of the public dues, I believe a medium will exist, which may be made available in the hands of individuals for all the purposes of exchange; and which will entirely supersede the necessity of a Bank of the United States. To those who believe that such an institution will be unconstitutional—ruinous to the State banks in the process of bringing it into operation—and dangerous to the liberties of the country when established, this view ought not to be without weight. Here is a safe, constitutional, harmless, self-correcting medium, by which the dues to the Government may be collected; the State banks left free to resume specie payments with all their resources untouched by the Government, and the great purpose of a United States Bank supplied. You will also perceive, that by this system, all the objections which have hitherto been urged to a Treasury organization, by which the Government is separated from

the banks, and its own dues collected, will fall to the ground. It is practicable, beyond doubt, if experience is any test; it is safe, if banks, where the funds may be specially deposited, are safe; it is cheap, for a multiplication of officers and chests and vaults will be unnecessary. Its currency will be that of the people; just that which they most require—consisting of paper and the precious metals—either payable into the Treasury, as the public debtor shall prefer. All the imputations of a design, by this system, of bringing the whole country down to a hard money currency, (an attempt as wicked as it would be impracticable,) and of destroying the local banks, are rendered pointless.

Let us now turn, Mr. Chairman, to the alternative scheme before the committee—that submitted by the gentleman from Virginia—the exploded pet bank project. Time, sir, has set its mark upon this system. The Government has twice tried it, and it has twice failed. Indeed, so gross and indisputable was its failure in 1816, that the constitutionality of the United States Bank, then chartered, was based upon the fact, that the State banks were incapable of carrying on the fiscal operations of the Government; and when, in 1833, the experiment was again adopted, its failure was predicted, and the prediction has been realized. And how, sir, can it be otherwise under such a system? Eight hundred banks—scattered over twenty-six sovereign States, who may indefinitely multiply them—irresponsible to the Government—irresponsible to each other—having but one principle of conduct, gain—how can stability and safety for the Government, in connection with such institutions, in any trying emergency, be expected? And look at their situation now. In New York the banks have six and a half paper dollars out in circulation, to one in specie in their vaults. The banks of Alabama, nine to one; Boston, six to one; Pennsylvania, six to one; Virginia, five to one; and in this situation, with public confidence shattered, they are yet to go through that difficult process (which in England, in 1823, prostrated hundreds of banks,) of resuming specie payments. Many of these banks must break in the effort to resume specie payments; and should their paper be received in payments to the Government, or they be used as depositories of the public funds, loss will be inevitable to the Government. Now, what is the constitutional principle upon which alone the Government can connect itself with these institutions? It is the same upon which the United States Bank, in 1816, was established: That they are "necessary and proper" for the collection of the revenue and the fiscal operations of the Government. But will it be contended, can it be seriously argued, that the State banks, in their present situation, (throwing aside all past experience of their incompetency,) are "necessary and proper" instruments for the collection of the public revenue? But it is said that the Government should support the banks, even at the hazard of the revenue; because the banks are the people; and the Government, in separating itself from the banks, separates itself from the people. Is this the fact? Are the banks the people? They are corporations established in the different States, composed of certain individuals who own the stock, and have put out their notes *bearing no interest*, for the notes of individuals *bearing interest*. In this way, the community owes a great deal to the banks, and the banks owe a great deal to the community; but take the aggregate of mutual indebtedness, and it constitutes, comparatively, but a small portion of the whole capital of the country. There is not one of the southern States, in which there are not ten times as much paper in the bonds and notes of individuals in existence, as there are bank notes. Why should not Congress, then, undertake to legislate for the support of this whole mass of paper, as well as that of the banks? Why should capital, vested in bank stock, be fostered by congressional legislation, and that vested in land and stock be fostered by congressional legislation, and that vested in land and slaves be unprotected? Have we so soon forgotten the great constitutional principles upon which we opposed the tariff laws? It was contended that Congress had a right, incidental to the right of laying duties, to lay them in

such a manner as to have for their primary object the encouragement and support of domestic manufactures. We denied the right, and insisted that Congress, under the guise of laying duties for revenue, had no right to foster any particular class or interest at the expense of the rest of the confederacy. And does not the same principle apply here? Congress has a right to lay taxes and collect the dues to the Government; but it has no right to jeopard the revenue, which belongs to all the people of the Union, for the purpose of supporting a peculiar class or interest.

But, sir, are gentlemen sure that a connection with the Government will be of any benefit to the banks in the effort to resume specie payments. In many parts of the country, in South Carolina for instance, if there should be any benefit, it would be exceedingly small; for the whole amount collected from the customs in that State, for the last two years, does not exceed four hundred and thirteen thousand dollars a year. But where the benefits are expected to be great, so must also be the hazards. When these banks resume specie payments, their paper will not be immediately at par. Public confidence will not be won, until they have tested their ability to sustain themselves in this trying position. Until this is proved, their paper will be below par; and, if receivable in payments to the Government, will, of course, be eagerly sought for, to perform this function. In so doubtful a position, what will be the duty of a public receiver to whom such bank bills are paid for dues to the Government? Assuredly, to cash them in specie at the counter of the bank. If he did not do so, and the bank failed whilst he retained the notes on hand, he would be responsible. Now, will it aid the banks, in the effort to resume specie payments, to be obliged to redeem immediately in specie all their notes which may be received by the collectors in payment of the public dues? Let gentlemen take heed that this connection of the Government with the banks, so eagerly sought for, may not be as fatal to them, as the embrace of the serpent to Laocoon.

But, Mr. Chairman, there is one other objection, which, if all others, failed, would be insuperable with me to any connection of the Government with the banks—I mean the patronage it gives to the General Government. I am a nullifier, and will never consent that more power should be given to this Government than strictly belongs to it. Experience has shown that the tendency of our federal system is to consolidation—a concentration of all power, first in the legislative, and then in the executive department of this Government. It is strong enough, without being connected with the money power of the country. When the connection with the banks was dissolved a few months since, there were eighty-six deposit banks, being the leading banks in every part of the Union, under the control of the Secretary of the Treasury. Now, when a bank is influenced, it is not merely the directors, officers, and stockholders, but all other banks in the same vicinity, and all who are dependent upon these banks, who may be affected.

If we were heavily in debt, and large revenues were to be collected and deposited, it is impossible to imagine a better instrument in the hands of a popular and ambitious man, by which the liberties of the country may be subverted and his power perpetuated. The Treasury scheme I propose for collecting the revenue of the country, when compared with this in the patronage to be dispensed, is absolutely insignificant. The Secretary of the Treasury supposes that it will require thirty officers more than are now employed to carry it into operation; but suppose as many officers necessary as there were pet banks—eighty-six, a man for a bank—will not the difference in patronage be immense? It can not be doubted.

Mr. Chairman, neither in the scheme proposed by the gentleman from Virginia, nor in that which I have advocated, can I perceive any extensive relief to the country. The people unquestionably are distressed and embarrassed; but within the competency of this Government, limited in its powers, I can discover no higher or better means of assistance than those I have suggested. Those who have been accustomed to look to this Government

for every thing, naturally look here in this emergency; but the remedy is in time and the people themselves. The State banks, unless hurried on by coercion or popular clamor, will in due time resume their healthy action; and the unbroken energies of this free and mighty people will soon work out their own salvation. Upon the causes of our distressed condition, I will say a few words before I close.

The gentleman from Kentucky, (Mr. Menifee,) who sits before me, when a few days ago discussing the bill for the postponement of the fourth instalment of the surplus revenue, broadly maintained that it was Executive usurpation alone which had occasioned the calamities under which we labor. I agree with him that the illegal seizure of the deposits by the Executive, and placing them in the deposit banks, was one of the links in the chain of causes which produced our calamities; but he overlooks the far higher and greater causes which have originated in legislative usurpations upon this floor. The Bank of the United States, unconstitutionally created, was one of these causes; and, although an unquestionable benefit when its recharter was denied, yet, extending as it did, its roots into all the commercial and pecuniary interests of the country, it could not be abstracted from the immense sphere in which it moved without convulsion. Hundreds of banks sprang into existence to fill the vacancy it was expected to occasion, whilst those which were already in existence gave a loose rein to their issues. But it was the surplus revenue, for which the gentleman was contending, which most obviously shows the fallacy of his position. If the surplus revenue had not existed, Executive usurpation and corruption could not have rendered it injurious or dangerous. And what produced the surplus revenue? The tariff—the American system—that poison still lingering in the veins of the body politic—that unhallowed and corrupt combination, as unprincipled as the partition of Poland, by which one section of the Union was plundered for the benefit of another. Taxes were laid by Congress, not to support the Government or to pay our debts, but to foster the manufactures of the north at the expense of the rest of the Union; whilst the revenue, thus unconstitutionally raised, was to be expended in internal improvements in the north and west. And so enormous were these exactions, that although, by the compromise bill of 1833, not less than seventy millions have been saved to the people, in the face of the most reckless and profligate expenditure, the Treasury still overflowed; and, on January last, there were thirty-eight millions of surplus to be deposited with the States. The State banks, where these funds were deposited, were stimulated by them to inordinate issues of their paper; and the free accommodation to individuals which these issues afforded, fed the rage for speculation. Suddenly the deposits were called for from the banks by the deposit law. The call met them unprepared, because they could not collect from their customers. They pressed the community, but the community, who had borrowed on the faith of an easy indulgence, were as little prepared as they were for payment. The Specie circular came in also with its operation, weakening their vaults and crippling their resources. The result was distress every where, a panic, and the suspension of specie payments. These certainly were not all the causes of our present embarrassment; but, were it not for the legislative usurpations of Congress, I do not believe the catastrophe under which we suffer would have been produced. And what, sir, would have been the situation of this country, if South Carolina had not nullified your tariff laws, and the compromise bill had not passed? Instead of thirty-eight millions, there would have been upwards of one hundred millions of surplus revenue in the banks, under the control of that usurping and corrupt Executive the gentleman has so strongly denounced. Could the liberties of the country have survived such a state of things? Could the deposit banks ever have repaid the money? and if they could, after it had formed the basis of an immense issue of paper, who will measure the ruin the sudden abstraction of such a capital from the banks would have produced, in combination with the other causes

which have prostrated the country. But the gentleman from Kentucky overlooks these immense benefits resulting from the compromise bill; and can only see, in this measure, the design “to arrest treason, and save the genius and chivalry of the South from an ignominious gallows.” Sir, to know whether the gallows would have been ignominious in such a cause, it is necessary to understand it. What was it?

For ten years, from 1822, (when William Lowndes, filling the very representation I now occupy, declared upon this floor that the South was more heavily taxed than any people upon earth,) in person, or through our representatives, we remonstrated against your unjust and unconstitutional oppression. Instead of relaxing, we saw your policy grow stronger by time; and, bribed by its operation, those who were once with us in denouncing it, made common cause with our old opponents, in the effort to rivet it upon us for ever. At length, all confidence in your justice, slowly, reluctantly departed; and the melancholy and stern conviction was forced upon us, that we must right ourselves—alone must right ourselves. South Carolina met the emergency in which you placed her as it became her. She nullified your tariff laws. And did you then enforce them? Not and why? Sir, I will tell you: you dared not. It is one thing to sit here upon well stuffed hair-seated chairs, and legislate the property of the South into the pockets of more favored sections; and it is another to collect your black mail by the sword. And did we commit treason by this act? The gentleman from Kentucky says so, and that the compromise bill was intended to arrest it. Sir, if it was treason, it was treason hatched in Kentucky, that gentleman's native State, and practised by Virginia when she nullified the sedition laws; and Thomas Jefferson, Madison, Rowan, Nicholas, and Macon, were some of the arch traitors who taught or committed it. Mr. Chairman, I will vindicate the fathers from the aspersion of their sons. These men were not traitors. They were those who, in 1801, in the language of Mr. Jefferson, “saved the Constitution in its last gasp” from the strangling hands of consolidationists. They were not traitors, but wise and intrepid statesmen—the great fathers of the republican party, by whose sagacity and energy this Union now exists. Were it not for the principles of this party, and the watchfulness and opposition of the South, this Constitution would long since have been frittered away by constructions; and this Government, becoming one vast consolidated despotism, would have left no alternative to the free but to dissolve it. We but carried out—conscientiously carried out—the great principles of the republican party; and when you thought fit, by your compromise bill, to give way before our armed resistance, the gentleman from Kentucky says that it was “to save the genius and chivalry of the South from an ignominious gallows.” Sir, we certainly should be vastly grateful for the tragic benevolence of these disinterested philanthropists, who manifested on this occasion so noble a disregard for their own safety, and such tender consideration for ours. Whilst passive, “the genius and chivalry of the South” appealed in vain to their sensibilities; but no sooner was it aroused by their selfish oppressions, than all their melting sympathies overflowed for its salvation. Sir, the gentleman has done gross injustice to himself in uttering such sentiments. They are only worthy the bigot or the slave; of a mind which can tolerate no difference of opinion, or which succumbs to any. The gentleman should have vanquished before he vaunted, and possessed himself of the mantle of success, to cover over the hideous lineaments of cowardice and oppression which marked his cause. Had South Carolina been invaded, upon the first gleam of the bayonet along our mountain passes, he would have seen and known what the chivalry of the South really was, not in bloodless tropes and metaphors, but in the stern realities of the tented field. Not only Carolinians, but thousands of volunteers from the whole South, whose names are upon the file, would have met you in that fierce contest; and if the man who lately ruled this confederacy with more

than a monarch's power, and his abject followers (more base than he, for he had personal animosities to gratify) had not met in the gaps of the Saluda mountains another Thermopylae—if they had penetrated to our plains, and had not found the more vast cemetery for their interment, and with fire and sword Carolina had been desolated, and not one free spirit had been left living or dying to strike for her rights—in her fall liberty would have been avenged; and, like the mighty Nazirite of old, grasping the pillars of the Constitution, the Union would have perished in her ruins. Sir, this is no Government of force. No free Government is a Government of force. Fear is essentially the attribute of the slave; and the Government which appeals to this principle for support is already a despotism. Opinion, free, intelligent public opinion, can alone perpetuate our institutions; and when this fails, all that can maintain them fails. The sword can dissolve, but it can not cement your Union together by the blood of your citizens; and if it had been drawn against us, however mournful the consequences, we were prepared, fully, firmly prepared, to abide the issue. We knew the mighty inheritance for which we were to contend—that soil over which, for two centuries, we had been the lords; and those altars at which our fathers knelt and we had received our brides. We won it by the sword, and we were prepared to keep it by the sword; or to perish, as millions of our race had done before us, the victims of oppression and power combined. And if we had fallen in the field, or on the scaffold, (as the gentleman supposes,) would our fall have been inglorious? Sir, it is not the manner of death, but the cause, which makes death infamous. When Tully thrust his head out of his litter to the lictors of Anthony, who decapitated it, and his dead hands were cut off and suspended in that forum, in which they had so often pleaded for liberty and justice, was his death ignominious? Hayne perished on the scaffold—was his death inglorious? Why, in Abbeville district, there still stands the tree upon which, in our Revolution, twenty whigs were hung at one time; did these men die ignominiously? The youth of Carolina, as they approach such memorials of their country's sanguinary wrongs, tread more lightly upon the turf, whilst their hearts swell with the mighty lesson they inspire, that to die and die “ignominiously” in defence of our country, is the duty and the privilege of the patriot. It is the cause which makes death glorious.

But, Mr. Chairman, shall things come to this in the administration of the affairs of this Union? In this free and enlightened age, are differences of opinion to be considered crimes; and the gibbet and the halter to be held forth as the great instruments of establishing truth? If so, we had better separate at once, for the Union must be dissolved. God grant that it may long endure, a blessing to the powerful people who are growing up beneath its auspices. But should it be dissolved, history—when all the interests and passions, which pervert the views of contemporaries, shall sleep with the departed—impartial history will record, that the South was ever true to the faith which bound her to the rest of the confederacy. Although, under the mildest and most favorable operation of the Constitution, she must bear an unequal portion of the burdens of the Government; at this she has never murmured. In prosperity she has upheld, and in adversity she has never abandoned you. All she requires is, that you adhere to your compact with her. Take what is legitimately needed for constitutional purposes, but in all other things leave her alone to her own resources and destiny. And is this an unreasonable request; or is it hard to grant it? Must perpetual agitation be the penalty she must ever pay for her connection with you? and shall the bond of our Union, which was designed by our fathers to be a bond of affection and peace, be sacrilegiously converted into an instrument of bigotry and oppression? After a cycle of forty-eight years, we have arrived, apparently, at a new era under our Constitution. Let us forget the past, excepting in the lessons of forbearance and moderation which its experience affords. For that noble State, which I in part represent, I know I can with confidence

anticipate her course. Too generous to remember wrongs—too proud to resent them—too great to practise them—she will ever be true to the cause of liberty, the Constitution, and the Union.

## REMARKS OF MR. TOWNES,

OF GEORGIA,

In the House of Representatives, September 28, 1837—

In reply to Mr. Dawson, on the "bill to postpone the fourth instalment of deposits with the States."

Mr. TOWNES addressed the House as follows:

Mr. SPEAKER: I would not have risen, after the protracted discussion we have had, but for the very remarkable speech of my colleague (Mr. Dawson,) who has just taken his seat. Sir, I have no expectations to fulfil, no vanity to gratify. But when my colleague thinks proper to address his and my constituents, rather than the members of this House, with the view, doubtless, of operating on them, it shall be my duty to examine the correctness of his argument, and to expose whatever errors may be suggested to my mind. For my honorable colleague, I now do, and trust I ever shall, entertain the kindest personal regard; but when he rises on this floor, and uses unauthorized denunciations of measures and motives, I feel that circumstance a sufficient apology for the time I shall consume.

Sir, when my honorable colleague rose to address the House last night, he gave us to understand that he brought no *party feeling* to the discussion; that he should alone confine himself to the bill on your table, and give the reasons that would induce him to vote against that measure. I think the gentleman was unfortunate in this remark. Why should he have thought proper to give notice that he was about to discuss this subject *without regard to party*? What act of his political life would have exposed him to a *suspicion so uncharitable*? It is true, I believe, sir, that my colleague is always found acting with one political party against the other, but surely no one could suppose this to be the result of *party feeling*! For myself, I have known the honorable gentleman too long and too well for the disclaimer of party feeling which he placed in the front part of his speech to mislead or deceive me. My colleague, at an early part of his remarks, if I understood him correctly, maintained that the funds, now in the deposit banks, were available for all the purposes of the respective States, as well as for the exigencies of the General Government; and the better to fortify himself in this position, he propounded questions to members from different States in which the banks are situated, with a view to show their solvency. The information thus obtained was deemed amply sufficient for the purpose of my colleague.

Sir, it is not the ultimate solvency of the banks that we are looking to, but it is whether the banks can now, on demand, pay the amount on deposit, in such funds as would enable the States to use it profitably. Has my colleague established this important fact? I think not, sir. In some of the States, where there are large amounts in the deposit banks, it may be to the interest of the people of those States, that the deposit of the fourth instalment should be made, for it is manifest that some of the States would be benefited, while a majority would be injured. My colleague insisted, and properly, too, that the funds in the Treasury of this Government, in January last, were alone the funds that could be deposited, and which were composed exclusively of the notes of the deposit banks, and such other local institutions, the paper of which was received on deposit by the pet banks, as they are called. My colleague then, after having satisfied his own mind (rather better I think than that of any other) of the solvency and availability of the funds now in the deposit banks, in the accustomed taste, and manner of the day, poured forth his lamentations over the ruined and wretched condition of the whole country, brought about by causes he did not pretend to explain. This picture, so fancifully drawn by some, and so faithfully repeated by many others, was well rehearsed by my colleague, and, as is usual with those who can see in

the times evidence of folly and wickedness in the present administration, and the necessity of rescuing the people from themselves, he declared himself in favor of *relief*. And, sir, what is the relief he would give? Who is it he will relieve? And what is his mode of relief? The first step in my colleague's great scheme of relief is, by depositing with one hand the fourth instalment, amounting to upwards of nine millions of dollars, with the States, when, with the other, in order to relieve the Government, he would have to take back not only that very fourth instalment, but also a large proportion of the sums heretofore deposited. This, sir, would be one of the consequences of rejecting the bill on your table. It surely can not be the object of the honorable gentleman to cut off all supplies to the Government! It is not, I hope, his purpose to bring the Government to bankruptcy! Much less will he consent to bring disgrace upon the institutions of the country, and more especially, as he tells us he has no *party feelings* to gratify! Patriotism imperiously demands of every member on this floor to deal fairly between the Government and the people; for if you cripple and dishonor the one, you disgrace and enslave the other.

Sir, what are the demonstrated, and I may add virtually conceded, facts as regards this question? First, sir, that all the funds now in the Treasury, available and unavailable, do not much exceed eight millions. Of this there are less than two millions strictly available; and now my colleague is fretting and chafing, because we will not consent to deposit with the States upwards of nine millions, when we have only about eight in the Treasury, and a very large proportion of that not available. And, sir, because the party in power will not do this, he has been pleased to characterise the course of the administration as a "humbug upon the people." Sir, this brings me to perform an unpleasant duty: I regret it, but my colleague has brought it on himself. He charges every motive but the correct one, upon those who vote for this bill; he alone claiming the credit of unmasking the wretched deformity of those who advocate that measure; and showing, by a report from the Secretary of the Treasury, the gross inequality and injustice of this bill. However high I may estimate the opinions of my colleague on most subjects, I can not, after the evidence he has furnished against himself as a financier, hold any opinions of his as unquestionable authority on that subject. Is it not in the recollection of every gentleman on this floor, that my colleague, when this bill first came up for consideration, offered an amendment, the first, as I presume it will be the last, of its character known to the legislation of this country? What could have been the object of the gentleman in offering that amendment? Was it because he really believed that the unexpended balances of former appropriations, estimated by the Secretary of the Treasury at about twenty-four millions, was evidence of that sum of money then in the Treasury? No, sir: my colleague knew that these twenty-four millions of unexpended balances of former appropriations were a charge now existing against the Treasury. Either he must have known this, or the fact of his not knowing it will essentially destroy the confidence which would otherwise belong to his statements as to the condition of the Treasury. If, sir, I am right in supposing he understood what the Secretary of the Treasury meant when he speaks of the unexpended balances of former appropriations, as a charge against the Treasury, I ask the gentleman, in all candor, who it is that has attempted to "humbug" the people? He well knew he could not "humbug" this House; and I therefore have a right to conclude that he wished to "humbug" his constituents. And yet my friend from Georgia will have it that the friends of the administration, believing that the resources of the Government are adequate to meet all the engagements and liabilities of the Treasury, are nevertheless disposed to withhold from the States the last instalment under the deposit law. For myself, sir, I am free to admit that I was as much opposed as my colleague could be to the passage of this bill until proof was adduced, most conclusive to my mind, that there was an actual deficit in the Treasury. Could I longer doubt as to the course I was bound, from

every consideration of patriotism, to pursue? On the one hand stood your Treasury depleted, disarranged, and disordered—stripped of all its resources by the sad revulsions in trade and commerce—with the Secretary asking Congress to give such facilities as the exigencies required; and on the other the States urging that the last farthing in the Treasury should be deposited with them for safe keeping. What, sir, would be the duty of the Secretary of the Treasury if the bill now under consideration be rejected?

In the first place, he would be required to deposit money which is not in the Treasury, and the deficit would have, of necessity, to be supplied by a loan, and then the principle would be fully established, that this Government will borrow money to loan or give the States, that they may appropriate the same to all the purposes of internal improvement. Is my colleague prepared to sanction this doctrine? Is he prepared to see works of internal improvement carried on by a system of legislation that would beggar the South and enrich the North? I should hope not. Yet, sir, if this bill be rejected, we shall be compelled to create a loan in the first place, to be discharged hereafter by an increase of duties on foreign imports. The traff, so justly odious to the southern interest, would be increased in order to discharge the national debt which would be the consequence of further continuing the policy of the deposit act of June, 1836. Have we not witnessed enough during the progress of this discussion, to awaken the fears of every southern member on this floor? Look, sir, at the course of debate on this question. For the first few days the bill was resisted on the ground that gentlemen were unable to come to satisfactory conclusions, from the report of the Secretary, as to the actual condition of our finances. This ground was taken and insisted upon by every gentleman who opposed the bill. An honorable gentleman (Mr. Briggs) who addressed the House some days since against its passage, declared himself so much bewildered and embarrassed from the humbuggy report of the Secretary, that he appealed to one of the committee (Mr. Hamer), "to remove the shadow from his eyes." I am unable to say whether the gentleman from Ohio has yet performed that operation. I apprehend, sir, that in order to operate with success upon the gentleman from Massachusetts, (Mr. Briggs) you should observe the preliminary treatment of all skilful surgeons, first to prepare the system, which in this case could only be done by removing the money from his reach. No, sir, when money is in the way, "shadows" will rise, and in vain can we hope to approach a subject in that clear light so important to the best interests of the people. But, sir, it is a curious fact, well worthy of remembrance, that all, or the most of those who have opposed this bill, on the ground that they could not understand the report of the Secretary of the Treasury, were able to understand, with great clearness, that the deposit act of June, 1836, was a *bona fide* contract, entered into between this Government and the States, whereby upwards of thirty-seven millions of money was to be deposited with the States; and that the faith of this Government was pledged to make this deposit, whether in point of fact there was a surplus or not. Sir, the first ground taken in the debate was abandoned. The second was then assumed, that this law was a contract, and that the public faith and good morals, demanded a fulfilment of it on the part of this Government. When I advert back to the period when this law was passed, and the arguments then advanced in its favor—when I recollect that a large majority of all parties then united in the measure, which they professed to believe necessary, to guard against the alleged Executive patronage, in converting the money to improper uses—when, sir, I remember that these arguments, enforced as they were by all sides of this House, failed in convincing me that the principles of that bill were not dangerous to the people and to the Government, I can not but feel gratified that none of the responsibility of that measure rests on my shoulders. But, sir, the last ground taken in this debate throws off all disguise, and places this question on a new and still more objectionable ground. Have we not heard

loud rejoicing at the humbled and prostrate condition of your Treasury? Have we not been given to understand, by the avowed friends of the American system, that they can and do perceive the revival of the principles of that system in the rejection of this bill? Have you not heard that the financial measures of this administration had exploded, and upon its ruins would be erected a new system, against which my colleague and myself have been equally opposed? Is there not enough in the signs of the times to deter my colleague from pursuing any course that may again give pretext to any portion of the representatives of this Union to increase the tariff? Sir, upon no principle consistent with the elevated stand the South should occupy on this floor, can we justify the rejection of the bill on your table. I deeply regret that my colleague should have thought it his duty to have discussed this question on the ground of preserving the "rights and equality of his constituents." Sir, who is opposed to the rights of their constituents? That is not the question. It is, how can we best protect their rights? My colleague's plan would be to pay them the fourth instalment in the funds of the banks of Alabama, Mississippi, Ohio, Kentucky, and Indiana, on which they would lose from fifteen to thirty per cent. as he well knows that the paper of the banks of those States is not current in Georgia, and if used at all, must be converted into other funds through a broker. But this is not all: the people would be required to return this very money in specie. Surely my colleague would not desire to bless his constituents with a calamity so great!

Mr. Speaker, when my colleague endeavored, by his argument, to show that all the people of Georgia required was money, regardless of consequences, or the principles involved in their receiving it, I must confess I felt humbled, and that the true spirit of the people I represent in part had been unfairly stated to the House and to the nation. No, sir, it is not money that we want; we desire a free Government—a Government administered upon principles securing every man in every portion of this Union in the enjoyment of his property and the fruits of his industry. No, sir; my colleague has underrated our constituents, by placing this question on grounds too narrow. Sir, a more high minded, generous, and patriotic people than those represented by the gentleman and myself in part, do not breathe. When in their history, and to what period of their existence, was it ever known that they sat down upon the selfish and sordid calculation of dollars and cents, when the public welfare was involved? Go back, sir, to the remotest period, and let my colleague tell when great constitutional and legal principles were involved on the one side, they ever looked to the petty, wretched, pitiful consideration of money on the other. Sir, I will not dishonor their high and exalted claim to patriotism, secured by an uninterrupted course of public measures, and political principles, by addressing an argument to feelings which I have yet to learn they possess. No, sir; as my colleague has supposed on his return to his constituents, he will be asked to give his reasons for the vote he may give on this question, I ask him to tell, what is now placed beyond doubt, that so far from there being a surplus in the Treasury to deposit with the States, that there is an actual deficit of several millions; that so far from the Government being able to make the fourth deposit, we are compelled to issue Treasury notes to meet the current expenses of the Government; that if we do not withhold the fourth instalment, we will be compelled to borrow three or four millions to enable the Secretary of the Treasury to carry into effect the law; and after telling them this, he may say, that so far as Georgia is concerned, the best he could do was to get Alabama, Mississippi, Indiana, and Ohio paper; and above all, let him tell them, that if he votes against the bill, he admits, by that vote, that a power exists in this Government to tax the people to raise a surplus to be distributed among the States for works of internal improvement! Let my colleague tell this, and I am not afraid to meet the judgment that may be pronounced upon the vote I give, by my

constituents. With no expectation of addressing the House to-day, I have, Mr. Speaker, in a desultory manner, attempted an answer to the argument of my colleague; and, sir, in conclusion, if my counsel could prevail, I would beg him to re-examine the whole question, and renounce at once the errors into which he has fallen.

## REMARKS OF MR. TITUS,

OF NEW YORK,

*In the House of Representatives, Tuesday, October 10, 1837*—On the bill from the Senate postponing the payment of duties on revenue bonds

MR. TITUS said he had hoped that some of the honorable members of this House, whose character and talents would have given weight to their opinions, would have thought proper to address the House upon the bill before it. He was aware that views similar to his own were entertained by very many upon this floor, but the disposition generally manifested, seemed to render hopeless any opposition to the amendment offered by the honorable chairman of the Committee of Ways and Means. Viewing it, however, as he did, and in the absence of any discussion, he felt it to be his duty to give very briefly his objections to the consideration of the House.

The first section of the bill grants an extension in the time of payment on all revenue bonds of nine months. To that he had no objection. The condition of the times unquestionably requires it, on the ground that it will render the payment ultimately more certain, and it may moreover tend, in some degree, to relieve those immediately connected with the importing interest. Still it appeared to him, that the only just and tenable ground upon which an extension could be granted, was the additional safety attained by that extension.

But neither the second section of the bill nor the amendment offered, can be entertained upon the principle of increased security, or of relief to any portion of the community, except the merchants. There is no indebtedness to the Government that the amendment proposes to secure; on the contrary, it releases in these days of non-payment, from the custody of the Government, the merchandise held in security for cash duties, and proposes the substitution of a lengthened credit upon bonds, subject of course to the contingencies of the times.

He was opposed to this portion of the bill, as well in regard to its practical effect, as to its violating a settled principle of existing laws. He took it for granted that the laws in relation to revenue were proper and just; they had been a subject of exciting interest and profound discussion during a long period, and were finally settled in the spirit of compromise amid the convulsions of the nation. Were they to be lightly disturbed? Were they to be approached without great and apparent causes? However unimportant in that point of view the present proposition might appear to the House, it acted forcibly upon his mind. It was well known to this House, and to the nation, that at the last session of Congress, the Committee of Ways and Means, with its present chairman at its head, introduced a bill to reduce the duties on imports. It bore in that character too unfavorable an aspect to meet support, and was abandoned.

The subject is now approached with more caution, and we are only presented with the first step by which the ladder is to be mounted; another is about being introduced, which, if accepted, will scatter to the winds whatever of protection, if protection it can be called, that the producing classes now receive.

The proposition, then, being to that effect, it is desirable that the Committee of Ways and Means should approach the subject directly; that they should toe the mark, and introduce a bill entitled an act to repeal the duties on imports. Its object would then be understood, and the honorable members of this house would act advisedly.

The practical operation of this bill will be to increase, and throw into market, the already excessive importations of goods, paying, by existing laws, cash duties. The means obtained by the

bounty of Government, will furnish forth new importations; and none can act with such deleterious effect upon the labor and interests of the producing classes, as those of this character; and an acquiescence in the demand of the commercial interest, will fall with peculiar hardship upon that extensive class of the people. They suffer not only in common with all other classes of the community, but by the provisions of this bill, they, in effect, are required to furnish forth the means to enable the importers, by further unnecessary importations, still more to injure and depress them.

Gentlemen are aware that merchandise paying cash duties, as embraced in this bill, consists of wool, woollen goods, and goods of which wool is a component part. We have been told in this hall, that our manufactories are generally suspended in their business; that thousands of our citizens connected with them are out of employment, and are in a condition of want and suffering; and it is well known by those conversant in such matters, that the price of goods of this description is depressed beyond all former precedent. The quantity on hand of this kind of goods, foreign and domestic, is immense; and the amount of wool in the warehouses, and remaining yet in the hands of the producers, scattered over the northern half of the Union, can not be less in value than twenty millions of dollars.

Does not this state of things exhibit embarrassment and distress to an extent that does not require legislative enactments to increase it? Shall the command—he believed the term was not inappropriate—of the commercial interest add to the general calamity, by screening themselves from the effects of their own imprudence, and throwing it with appalling force upon the great mass of the producing classes, whom that imprudence has already so severely injured? It is true, that those classes are not asking for relief; they disdain to prefer the mendicant's prayer; but, in the language of the honorable gentleman from Ohio, they pull off their coats, roll up their sleeves, and go to work.

He had said that the distresses of the people were principally caused by the imprudence of the commercial interest. It was generally conceded that they had proceeded mainly from over-trading; but, to his mind, a proper distinction had not been taken as regards the kind or character of over-trading. So far as the individual concerned is affected, no distinction exists; but it must be borne in mind that, however severe the revulsions in business may, at any time be among a great people, a vast majority of individuals are not materially affected by it—a vast majority do not incur liabilities that create embarrassment. Hence, when the balance of trade is not against us with foreign nations, our immense domestic operations are not impeded; and, although in their excesses individuals will suffer, capital is not diverted from its accustomed channels; it merely changes hands within a circle over which it is not required to pass. A brief view of our own condition will establish that position. Our domestic operations, including current business and general indebtedness, reach to an amount of which it is difficult even to form an opinion. We have no data to direct us but what is derived from our knowledge of indebtedness to banks, but he thought he was more likely to be below than above the mark in placing it at two thousand millions per annum.

This immense business had at all times been transacted without difficulty, when balances abroad had not pressed too hard upon us. No revulsions under such circumstances had taken place, and all the efforts to that end that were made by politicians and others, in 1834, were abortive. No efforts could have been more animated, nor means more powerful applied, to create confusion and produce disaster; but the energy and resources of the people, not being crippled by foreign demands—the payment of which required the basis of our paper currency, bore up triumphantly and successfully against the storm. In illustration of this view of the subject, he would adduce a remark of an English statesman in comparing the relative condition of England and the United States in the present crisis. He said that the former, with a national debt of eight hundred millions of pounds

sterling, and an annual tax of fifty millions sterling upon the people, was prosperous and unembarrassed, and its industry and trade not materially affected; whilst, on the contrary, the Government of the United States, with a surplus of forty millions of dollars, and the people comparatively no taxes to pay, yet the Government and the people were alike bankrupt. Without literally adopting these positions, they nevertheless went clearly to elucidate to his mind the effect, of the commercial action of the two countries. England has no balances against her, and, hence, the comparatively partial evil she experiences; whilst the balance against us required, in its liquidation, the coin of the country—the basis of our paper currency. The step taken was inevitable. The basis of our currency would have been swept from the country but for the proper and justifiable course of those who held it in possession. Had England received her dues, she would, of course, not have felt the blow; but had we promptly paid our debts we should have been ruined.

In establishing the position that the present state of things has been produced principally by over-trading, the condition of England has been assimilated to ours, and her embarrassments ascribed to the same causes. In his judgment, however, there was a material, a radical difference—our over-trading consisted in buying too much, in buying more than we can pay for, of foreign countries. The over-trading of England, on the contrary, consists in selling more than she can obtain pay for, and the losers only feel the effect, without its pervading all branches of business. Our over-trading abroad, as before remarked, in creating balances against us, affects in a greater or less degree all classes of community by its operation on the currency. He hazarded little in saying that excessive importations had been the forerunner of all the severe revulsions we had felt for the last twenty years. That of 1819 must be familiar to most of the members of this House, and he thought no individual could doubt its cause. It operated with extreme severity; and however great may be the embarrassment and suffering of the commercial interest at the present time, the general distress at that period was incomparably greater than it now is. Our numerous manufacturing establishments, with scarcely a single exception, were overwhelmed in irremediable ruin. Thousands of farmers canged proprietors, and those who but yesterday thought themselves secure in a certain, though, perhaps, humble independence, were on the morrow the tenants of their former freeholds. And it may not unworthy of remark that they asked not, received not, any of the bounties of Government.

He had no doubt of the existence of the difficulties complained of by the commercial interest. Public fame, as well as the documents before us on that subject, establish that fact; and he should hope for the honor of humanity that that distress must be deep indeed, that could bring before us, begging alms, that class of our citizens, who, in their own estimation, and as it would appear in the estimation of this House, were first in importance as they were in wealth.

He trusted the provisions of the first section of this bill would afford them great relief; at all events it was their proportion of the bounties of Government. He considered the second section, as well as the amendment offered, went to increase by the aid of the Government, an evil which had, to a great extent, been checked by its own excesses. Importations, embraced in the amendment, being principally from the west of Europe, had in general been ordered since the commencement of the present embarrassments. The importers were consequently aware of their inability, if that inability exists, to comply with the requirements of the revenue laws. If then they have knowingly and purposely plunged in beyond their depth, they should be left, as the great mass of their fellow citizens are, to get out of their difficulties, without the special bounties of the Government. He would say no more, except to express the hope, though apparently a vain one, that those who had contributed to the establishment of the present revenue laws, would feel and see the propriety of rendering them permanent.

## SPEECH OF MR. RIVES,

OF VIRGINIA,

In Senate, September 19, 1837.—In support of the bill introduced by him designating the funds receivable in payment of the public revenue, and in opposition to the Sub-Treasury scheme.

MR. PRESIDENT: I rise, in pursuance of the notice I gave yesterday, to ask leave to bring in a "bill to designate the funds receivable in payment of the revenue of the United States." It will be borne in mind, by the Senate, that among the most prominent, and certainly not the least important objects presented, both by the President's message and the report of the Secretary of the Treasury, for the "immediate attention" of Congress at their present session, is the expediency of some legislative provision defining the character of the funds to be received, in future, in discharge of the public dues. From the intimate connection between the collection of the public revenue and the general currency of the country, this question has, in my estimation, far more essential bearings on the great interests of the community than any which the President has submitted for our deliberations. The Committee on Finance, however, to whom the Message was referred, have not thought it proper to make any report on that portion of it, and we have been informed by the honorable chairman that it is not their intention to make any report upon it at the present session. It is this omission, on the part of the committee, that it is the object of my motion now to supply.

The President recommends that henceforward the whole revenues of the United States shall be collected exclusively in gold and silver. A proposition of so marked a character, emanating from a source of such high authority, could not fail to excite deep anxiety in the public mind; and it seemed to me that all uncertainty, in regard to the policy of the Government on so vital a subject, should be promptly settled one way or the other by the action of the legislative department. It is my misfortune to differ with the President in his views of the expediency of this proposition. I am fully convinced that, in the actual condition of our circulating medium, and in what is likely, for years to come, to be its condition, the operation of such a measure would be distressing to the community, injurious to every branch of industry and enterprise, and, above all, would postpone indefinitely that return to specie payments by the banks, which is the great object of the public solicitude, and ought to be the end and aim of our deliberations here. Viewing the question in this light, I desired it should be met with promptitude, considered with candor, and decided with wisdom.

Since I gave notice yesterday of my motion, two gentlemen, the Senator from South Carolina, (Mr. Calhoun,) and the Senator from Missouri, (Mr. Benton,) have submitted propositions intended to carry out the President's recommendation, differing somewhat in detail, but both founded on the principle of rejecting bank paper altogether in the operations of the Government, even though immediately convertible into specie, and issued by banks of unquestionable solidity. Both contemplate, as does the recommendation of the President, a thorough revolution in the policy and practice of the Government. From the origin of the Government it has been the practice of the Treasury Department to treat the notes of specie-paying banks as equivalent to specie; and the joint resolution of 1816 expressly placed bank notes, convertible into specie, on the same footing with specie in the fiscal transactions of the Government. It is true that, under the construction given to that act by the law officer of the Government, the late President of the United States caused an order to be issued, requiring payments for public lands to be made in gold and silver alone, still leaving the other branch of the revenue (the customs) to be collected as heretofore, in the notes of, or checks on, specie-paying banks. That order was understood at the time to be issued for objects purely of a temporary nature; and as such it may have been a salutary measure. But its continuance as a part of the permanent policy of the Government was almost unanimously repudiated by the voice of the representatives of the people and of the States.

You well remember, Mr. President, that the discussions to which this subject gave rise, during the last session of Congress, terminated in the passage of a bill, by overwhelming majorities of both Houses, distinctly re-affirming the principle of the joint resolution of 1816, in relation to the receivability of the notes of specie-paying banks, and containing also the significant provision, that in future no discrimination should be made between the different branches of the revenue, as to the medium in which they were to be paid. The bill received the votes of nine-tenths of the members of this house, and near three-fourths of the other. Still it did not become a law. The circumstances under which it was arrested in the ordinary and regular course, and which alone prevented it from being now the law of the land, are fresh in the recollection of the country. I will not speak of them, for it is my sincere wish to keep out of the present discussion every thing which may awaken unpleasant feelings. But this I will say, that no act of legislation was ever the subject of a more watchful scrutiny, in the various stages of its progress; few, if any, have ever met a fuller discussion, or a more deliberate consideration; none, within my experience, has ever received a more unanimous and emphatic assent of the bodies by which it was passed. The country, too, so far as I have been able to learn—and I have not been an inattentive observer of the evidences of public sentiment on the subject—has responded, with a general voice of approbation, to the decision of Congress, and warmly and cordially sustained it. It is that measure, thus doubly sanctioned, with some modifications suited to the change of circumstances, that I beg leave to re-present as a compliance with the call of the President on Congress for further legislation, believing it to be adapted to the exigencies of the occasion, as well as useful and salutary in its general operation on the currency.

The principles of that bill were these. It declared that the public dues should be collected in specie, or in the notes of specie-paying banks, under certain restrictions in regard to small notes, which were intended to operate the suppression (ultimately, but gradually) of all notes under twenty dollars; and it further provided, as I have already stated, that, in future, no discrimination should be made between the different branches of the revenue, as to the funds in which they were receivable. These principles are incorporated in the bill I now ask leave to present, and in the very language in which they stood in the bill of last session. The modifications of that bill, which I have made with reference to existing circumstances, are these: In contemplation of the contingency, now highly probable, of an issue of Treasury notes, I have introduced an alternative clause, declaring that, in addition to specie and the notes of specie-paying banks, the public dues may be collected "in any other medium specially authorized by law." The other modification has relation to the great desideratum of an early resumption of specie payments by the banks; and consists in a proviso that "he notes of no bank which now fails, or may hereafter fail to redeem its notes in specie, shall, at any time, be received in discharge of the public dues, unless such bank shall, on or before a given day, have bona fide resumed payment in specie." The object of this proviso is to designate a fixed period for the resumption of specie payments by the banks, which may serve as a rallying point to them all, and produce that concert and harmony of movement without which this most desirable end cannot be accomplished. There will be no difficulty, I think, from the data already in our possession, or easily attainable, in fixing that period understandingly and judiciously. The mere designation of a day by Congress will, itself, be powerfully operative in effecting the result we aim at. You doubtless recollect, Mr. President, what was the effect produced by a similar proceeding in 1816-17. By the joint resolution of April, 1816, the 20th February following was fixed as the day for the resumption of specie payments by the banks. The banks themselves determined, in a formal convention held for the purpose, not to resume until the 1st of July, 1817; but the firm adherence of Congress to their original resolution,

forced the banks to yield, and they finally and simultaneously resumed specie payments on the 20th February, 1817, the day indicated by an act of Congress.

The inducements to an early resumption of specie payments held out to the banks by this bill are two-fold. It addresses itself both to their hopes and their fears. It says to them, in effect, that whenever you resume specie payments, (provided it be before a certain day,) your notes, under the restrictions of the bill, shall be receivable in payment of every branch of the public revenue, whether for lands or customs; but if you do not resume by that day, your notes shall not be received in payment of public dues, even though you may thereafter resume. The banks will thus be doubly stimulated to a resumption of specie payments—by the promise of a benefit on the one hand—by the exhibition of a penalty on the other.

With these provisions, I do not doubt the early re-establishment of a sound and healthy state of things. What is the present condition of the country, and what the treatment it demands? If we look around us, we find all the great sources of national prosperity still unimpaired—the land, the labor, the capital of the country in their accustomed fertility and abundance. And yet industry is paralyzed, commerce at a stand, the currency degraded and deranged, the precious metals fled from circulation, the land overrun with spurious or precarious substitutes for money, exposing every interest of society to insecurity and hazard—an insecurity and hazard involving alike the wages of labor, the value of property, the fulfilment of contracts, all the acquisitions of the past and all the hopes of the future. Now, what is the remedy for this extraordinary state of the body politic? It is comprehended in a single word. The restoration of confidence.

It will be admitted, on all hands, that the first thing to be brought about, with a view to the amelioration of the present condition of things, is the return to specie payments by the banks. But that return cannot be effected without a restoration of confidence; and confidence is to be restored mainly by the policy and example of the Government. With its aid in the re-establishment of confidence, nothing is clearer than the ability of the banks, at an early day, to resume and maintain specie payments. Let us, for a moment, look at the condition of the country and of the banks in regard to those particulars which form the leading elements of this question. And, first, as to the stock of precious metals in the country. This supply in the country is most abundant; for, although a good deal has gone out recently to pay off our foreign debt, an equal, or nearly equal, quantity has come in. It is shown by official returns that the importations and exportations of specie, during the year, very nearly balanced each other. The quantity in the country at this moment, according to the estimates and statements we have received from the Treasury Department, is nearly three times as great as it was four years ago. The means to enable the banks to resume and sustain specie payments are, therefore, ample and unquestionable, as soon as confidence shall be restored. Then, as to the balance of our foreign debt, which forms another important element of this question—it has been in a course of constant and progressive reduction for the last six months, and with the aid of the new crop which is now coming in, and the great diminution of foreign imports, we shall soon see it entirely extinguished. At the same time, the great mass of the banks throughout the country have been diligently preparing themselves for a return to specie payments, by a steady and judicious reduction of their circulation.

Nothing, then, is wanting to a speedy accomplishment of that great object but the restoration of confidence, and it depends mainly on the action and policy of the Government to supply that requisite. The currency of the country is, at this moment, in the condition of a human body in a state of suspended animation—the heart still beats, the principle of vitality is unextinguished, but the active functions of life are suspended. Let the Government but breathe the breath of confidence into it, and it will be at once resuscitated. It is

the more necessary that the Government should give its aid in this work of restoring confidence, because, whether justly or unjustly, it is from the Government that the greatest danger of hostility is apprehended. Let this apprehension, then, be quieted by some pledge of security, by some token of encouragement and confidence.

The Senator from South Carolina (Mr. Calhoun) asserted yesterday that the disease of the country is *debt*, the only remedy is *time*, and that he relied much more on the cotton and tobacco crops for relief, than upon any action of the Government. Sir, the debt of the country, as I have already remarked, has nearly reached its extinguishment, either by actual payments or the bankruptcy of unfortunate debtors. But, if this were not so, the cotton and tobacco crops, though essential ingredients of relief, do not supersede the necessity of other and auxiliary remedies. Examples are not wanting in the financial history of this and other countries, to show the magical effects of confidence in periods of great public distress, and how that confidence depends on the conduct and policy of the Government. The year 1793 was a period of the severest commercial distress in England. More than a hundred country banks became bankrupt, and the whole country seemed destined to a similar catastrophe; when a single act of the Government, *encouraging confidence*, produced immediate and general relief. I allude to the offer made by the British Government, in that crisis of suffering and alarm, to lend to solvent dealers five millions of pounds in exchequer bills. A considerable part of the sum was not taken or even applied for; but the simple offer of the credit of the Government, in restoring confidence between man and man, elicited the dormant resources of the country, and relieved at once the general distress.

We have had a similar and striking example in our own country. You well recollect, Mr. President, the memorable panic of 1834, which ensued on the removal of the deposits from the Bank of the United States. The storm which was raised on that occasion was directed chiefly on the great commercial emporium of New York. The legislature of that patriotic and powerful State, with a paternal sensibility to the interests and sufferings of her citizens, came forward and authorized the creation of a stock of six millions of dollars to be lent to the banks, for the purpose of sustaining them under the extraordinary pressure to which they were exposed. What was the effect? Not a solitary dollar was taken by the banks; but the offer itself operated like a charm. It *restored confidence*, and *relieved the pressure*. These examples may serve to show gentlemen that there is some practical virtue in confidence, and in the moral power of the Government to promote and encourage it. What does the country ask at the hands of the Government at the present moment? Is it a loan of six millions? No, sir. The only boon that is asked, the only aid that is wanted, is, that the Government should not discredit, by its act, the great circulating medium of the country, in which ninety-nine hundredths of the transactions of society are negotiated and settled, when that medium shall be restored to soundness, and brought back to the standard of convertibility into specie.

In connexion with this subject, I beg leave to call the attention of the Senate to one remarkable consideration. It is this: the President, in tracing the causes of the present calamity, states that the same embarrassments and distresses have existed in England as in this country, arising from the same general causes, with this only difference in the result—that here the banks have suspended specie payments, while in England no such catastrophe has occurred. This difference, to my mind, comprehends every thing. It is rendered the more remarkable by the fact that, during the progress of these difficulties, England was constantly losing her supply of the precious metals, the stock of bullion in the bank having been reduced from about eight million to four million pounds sterling, (one-half of her ordinary quantity,) while in this country, during the same period, the precious metals have been steadily flowing in upon us, and accumulating in an unprecedented manner; so that at the time of the suspension of specie payments we

had three times the amount of specie we ever possessed before. According to these circumstances the results in the two countries ought to have been precisely reversed. We should have continued to sustain specie payments here, while a suspension of them in England would seem to have been inevitable. Why has it been otherwise? How has it happened that England, with her supply of the precious metals reduced to one-half her usual stock, has continued specie payments, while we, with three times the amount we ever had before, have been compelled to suspend specie payments? The solution must be found mainly in the fact, that in England, in periods of commercial distress, *confidence* is always encouraged by Government, while here nothing was done by the Government to animate and sustain confidence. I do not mention this as matter of reproach to the Government. It may be that the Government here believed it had no constitutional faculty to interpose, in any manner, for the support of confidence. But, unfortunately, direct and open attacks on the commercial credit and institutions of the country, well calculated to *destroy confidence*, were made in a quarter which, from the relation it bore to the Government, gave rise to lively apprehensions of hostility from the Government itself. These apprehensions are now again revived, by the recommendations of the President—a recommendation which, if attempted to be carried into execution, would, in my humble judgment, render the recovery of the country from its prostrate condition hopeless and impossible.

It is a matter susceptible of demonstration, that if the policy of demanding specie exclusively in payment of the public dues shall now be adopted, it will be utterly impossible for the banks to resume specie payments. It is an invariable law of currency, well stated by my honorable friend from Georgia (Mr. King) yesterday, that if there be two currencies in a country, one answering all the purposes of the other, and a *valuable purpose besides*, the currency answering the additional purpose will always command a premium. This is the condition of the country at the present moment. Bank paper constitutes the great mass of the circulation, while gold and silver are only to be had at a premium. If the Government shall now adopt the policy of requiring payment of its dues in specie alone, this state of things must be perpetuated. Applicable to all the purposes for which bank notes can be used, and over and above that, answering the important purpose of paying the public revenue, from which bank notes will be excluded, specie, under these circumstances, must continue to command a premium. Can the banks resume specie payments in the face of a premium borne by gold and silver? The very moment they opened their vaults, the holders of notes, in order to secure the premium to be obtained for specie, would make a general run upon them for cash; and, if they opened their vaults, it would only be to close them immediately.

But again, sir: would not the *example* of the Government, in the indiscriminate rejection of all bank paper, have a powerful moral influence in exciting the jealousies and suspicions of the whole community? If the Government, by its acts, shall declare bank paper to be worthless or unsafe, will not the people also take the alarm? Will not a general distrust be created of all banking institutions, and will not every person holding their paper become impatient to convert it into specie? In this pervading want of confidence, their vaults would be drained of every dollar they possessed. It is demonstrable, therefore, that, under the policy of collecting the dues of the Government in hard money alone, we never can accomplish that great object in which the whole country has so vital an interest—the resumption of specie payments by the banks.

How does the proposition of the honorable Senator from Missouri (Mr. Benton) bear upon this question? Its practical effect, if I understand it correctly, will be to enforce a *penalty* upon the banks for resuming specie payments. In the amendment offered by him there is a blank left for the day after which the revenues are proposed to be collected in gold and silver only; and I understood the gentleman to say it is his intention to fill that

25th Cong....1st Sess.

Sub-Treasury—Mr. Rives.

Senate.

blank with the day on which the banks would probably resume specie payments. I believe, sir, said Mr. R. (turning to Mr. Benton,) I am not mistaken. [Mr. Benton. Right, right.] Then, Mr. President, here is a positive penalty denounced against the banks when they shall return to specie payments. As the law now stands, the notes of specie paying banks are receivable in payment of the public revenue. The Senator is willing that this should continue to be the law while the banks do not pay specie for their notes; but then they do pay specie, the honorable gentleman says to them, we will revoke this privilege, thenceforward reject your notes, though immediately convertible into specie, and declare that, from and after the day of your resumption, nothing but gold and silver shall be received in discharge of the public dues. Is not this, in effect, a direct penalty visited upon the banks for returning to specie payments? Under such a policy, this great object of public interest and anxiety never can be accomplished; and I recur with confidence to my original position, that the only means by which it can be effected is a just, safe, and paternal policy on the part of the Government, announcing to the banks, that, on such conditions as may be necessary to guard against the recurrence of the catastrophe, we are now suffering from, we will receive your notes, convertible into specie, in payment of the public dues, as they have been received, by the practice the Treasury Department or by express enactment of law, from the origin of the Government down to the present time.

I have thus far, Mr. President, spoken of this matter in reference to the particular circumstances of the crisis, and what appears to me to be the pressing and paramount object to which the attention of every patriotic legislator ought to be directed at the present moment—an early resumption of specie payments by the banks. But, looking at it in a broader and more general point of view, I ask, sir, upon what principle of republican Government is it that the Government can be justified in drawing a line between itself and the people—in saying there shall be one currency for the Government and its officers, and another for the great body of the community—that the better currency shall be for the governors, and the baser currency for the governed? Such I have shown must be the effect of demanding the public dues in gold and silver exclusively, while the great mass of the circulation shall consist of bank paper. Sir, I have always been taught to believe—my honorable colleague and myself learned it from the bill of rights of our own State, as soon as we were capable of reading—that a common interest between the governors and the governed is a fundamental principle of free institutions, and that the best means of “restraining the former from oppression is to make them feel and participate the burdens of the latter.” Let the Government share the same fate with the citizen, and you give it the strongest of all motives to watch over the general interests. On the other hand, place it in a position different from that of the great body of the community, especially in so vital a matter as that of its revenue and pecuniary support, and you make it, at once, callous and indifferent to the sufferings of the people, and even give it an interest to perpetuate those sufferings. You destroy all sympathy on the part of the Government with the people, and you alienate the confidence and affections of the people from the Government.

What, sir, is at this moment the ungracious attitude in which the Government is placed towards the people? Its officers and contractors are paid in gold and silver, or in Treasury drafts made receivable in discharge of public dues, and therefore nearly equivalent to gold and silver, while the community at large are left to conduct their business, as they may, in an irredeemable paper currency. Does not this operate as a virtual increase of the salaries of public officers, in the midst of general distress affecting all the rest of the community? The gold and silver which they receive is at a premium of ten or twelve per cent. and the Treasury drafts at seven or eight per cent. above the actual and common currency of the country. This premium is, I repeat, an addition of so much to

the amount of their salaries; for, in a practical sense, there has, as yet, been no depreciation in the value of current bank notes. They pass for as much in the ordinary business of life—in the payment of debts, in the purchase of necessities and conveniences of whatever is worn, drank, or eaten—as they ever did. The premium, then, which the public officers and contractors obtain on their gold and silver, and Treasury drafts, is so much clear gain to them. And at whose expense is it acquired? Is it not at that of the great body of the people, the ultimate tax-payers and supporters of the Government? Does any one suppose that the importing merchant, who has to give ten or twelve per cent. for the gold and silver, and seven or eight per cent. for the Treasury drafts, with which he pays his duties to the Government, does not add an equal amount, with the usual profit upon it, to the price of his goods? It is, then, the consumer at last, or, in other words, the great body of the people, who are subject to increased taxation for the benefit of the office-holder and the contractor.

Sir, this is a state of things which I do not wish to see perpetuated. It is contrary to the genius and fundamental principles of our republican system. Of all schemes of policy I can conceive, that which proposes a permanent distinction between the Government and the people in their pecuniary interests—one currency, and that the better one, for the Government, and another, and inferior currency, for the people—such a system of discrimination is, to my mind, of all others, the most injurious and revolting in principle, the most heartless in character, and the most despotic in its tendencies. It is like quartering the Government, as a foreign enemy, on the heart of the country. You entrench it behind a frowning fortification, surround it with battlements, and lay the country, far and near, under contribution for the support of this garrison of office-holders. Desolation and oppression are without, while the tenants of the citadel are revelling in luxury and profusion within. I am not willing, for aye, to see the Government of my country placed in this anti-social, if not belligerent, attitude towards the people. I am not willing that this favored land, to which the nations of the earth are looking for a successful example of the practical enjoyment of free institutions, should exhibit such a spectacle of inequality and oppression in the eyes of the world.

Much reliance, Mr. President, has been placed on the popular catch-word of divorcing the Government from all connection with banks. Nothing is more delusive and treacherous than catch-words. How often has the revered name of liberty been invoked, in every quarter of the globe, and every age of the world, to disguise and sanctify the most heartless despotisms. Let us beware that, in attempting to divorce the Government from all connection with banks, we do not end with divorcing the Government from the people. As long as the people shall be satisfied in their transactions with each other, with a sound convertible paper medium, with a due proportion of the precious metals forming the basis of that medium, and mingled in the current of circulation, why should the Government reject altogether this currency of the people, in the operations of the public Treasury? If this currency be good enough for the masters, it ought to be so for the servants. If the Government sternly reject, for its uses, the general medium of exchange adopted by the community, is it not thereby isolated from the general wants and business of the country, in relation to this great concern of the currency? Do you not give it a separate, if not hostile, interest, and thus, in effect, produce a divorce between Government and people?—a result, of all others, to be most deprecated in a republican system.

We have been told, Mr. President, of the embarrassments and inconveniences to which the Government is exposed, by receiving its revenues in any thing but gold and silver, in such an event as has now overtaken the country and involved it in general distress. For one, sir, I cannot respond to this appeal. I do not desire to see the Government placed in a position that would exempt it from embarrassment when the people are embarrassed. Would it give any satisfaction to a patri-

otic mind, in the present calamitous condition of the country, to see treasures of gold and silver pouring into the coffers of the Government, while the people are suffering all the evils of an irredeemable and depreciating paper currency? For myself, I am free to say, that neither as a citizen nor as a representative, having it in my power, if I would, to participate, in some degree, in these peculiar advantages of the Government, could such a state of things minister the slightest gratification to me. No, sir, my heart disowns the thought. So far from it, the contrast would be but a new feature added to the mortifying and distressed condition of the country, and casting reproach upon our institutions which admitted such an unnatural and anti-republican inequality. If any thing could make your Government a callous and indifferent spectator of the sufferings of the people, refusing a helping hand to their relief, and “mocking when their fear cometh,” it would be to place it in a position like this. No, sir; whenever the people suffer embarrassment, embarrassment should be felt by the Government, that it may be stimulated, through experience of the common suffering, to do all it can to prevent or relieve that suffering. I am for holding the Government in all things to a common fate with the people, so that whatever touches the one shall be immediately felt by the other. Let the condition of the Government answer to the condition of the people, so that the conduct and policy of the one may, with equal fidelity, reflect the interests and sentiments of the other.

This, sir, is the principle which has always guided my views in regard to the great question of the currency. No one desires a sound reform of the currency more than I do; but I wish to improve it for the benefit of the people as well as of the Government. I desire to see a large infusion of the precious metals into the general circulation and business of the country, and not a monopoly of them by the Government. This great object can be effected only by the suppression of bank notes of the lower denominations, and not by demanding gold and silver alone in payment of dues to the Government. Let all notes under twenty dollars be gradually suppressed, and you will have an abundance of gold and silver in common circulation, passing from hand to hand in the common business of society. That will be a salutary and beneficent reform, enuring to the advantage of the great body of the people, as well as of the Government; and when it shall have been accomplished, when gold and silver shall thus have become the common currency of the country, you may, without hardship or injustice, demand payment of the public dues in the precious metals. But this most desirable result, the general circulation of gold and silver in the common business of life, never can be effected, (as I think I have fully shown on another occasion,) without a previous suppression of bank notes of the lower denominations. In every scheme of reforming the currency, which looks to the benefit of the people as well as of the Government, this is the great point to be aimed at. It was the leading object of the measure I brought forward during the last session of Congress, and which then received the almost unanimous sanction of this house, and the assent of a large majority of the other, though, from causes to which I have already alluded, it failed to become a law. The same measure, in all its essential principles, I now again submit for the consideration of the Senate.

The President, sir, in his message, tells us that the requisition of gold and silver in payment of the public dues would have “a direct tendency to produce a wider circulation of the precious metals, to increase the safety of bank paper, and to improve the general currency.” I desire to treat the opinions of the President with all possible respect—a respect felt alike for the individual and the magistrate; but unless I have wholly misconceived the elementary principles which belong to this subject, as well as their obvious practical operation, it is impossible to sustain any one of these positions. How, sir, can the collection of the revenue in gold and silver tend “to widen the circulation of the precious metals?” It is a well known and invariable law of currency, that bank notes and coins

of the same denomination can not circulate together. It is in vain, then, to attempt to *widen the circulation* of gold and silver by any other means than by the suppression of bank notes of the lower denominations. But, not now to dwell on this view of the subject, (which I have fully developed and enforced elsewhere,) I maintain that the collection of the public revenue in gold and silver, while the common currency of the country consists of bank paper, instead of *widening the circulation* of those metals would have the effect of taking them out of *general circulation* altogether. In the remarks I have already made, I think it has been satisfactorily shown that the necessary effect of this policy would be to cause gold and silver to bear a premium. Bearing a premium, they would not circulate as currency at all, but would be at once converted into an article of merchandise. The public debtor would buy them of the broker to pay his dues to the Government; and when paid out to the public creditor, he would go and sell them again to the broker. Instead of entering into circulation, all of them that were seen would be restricted to this narrow round of traffic, while the great mass of them would be withdrawn from public view as well as use.

Then, sir, as to the tendency of this policy to "increase the safety of bank paper," would you increase the safety of bank paper by abstracting the fund for its redemption? Yet such would be the plain operation of this policy. The Secretary of the Treasury has referred to the condition of the Treasury in 1834 as affording a general average to illustrate the operation of the new financial system he proposes. In looking at the Treasury statements for that year I find that the average amount of public moneys on deposit in the city of New York, during that year, was about five million; while the whole amount of specie in the banks of the city was about two million. Taking this as a fair average for that city, what would be the influence of this new policy of collecting the public dues in gold and silver on the *safety of bank paper there*? Where would you get the five million of specie to meet this demand for the public revenue? It is evident the banks would be drained by it of their stock of the precious metals, and the community would thus be deprived of the security on which they relied for the soundness of the bank paper held by them. The "improvement of the general currency," then, which the President anticipates as the result of the policy he proposes, would, unless the principles heretofore received as incontestable truths on the subject of the currency be utter fallacies, amount to this: that the precious metals would no longer form a part of the general circulation; that they would cease to be currency, and become mere articles of merchandise, to be obtained only at a premium; and that the specie basis, on which the soundness and safety of bank paper so mainly depend, would henceforward, to a great extent, be withdrawn and monopolized by the Government.

But it has been said, and I regret to perceive that the idea is countenanced by the high authority of the President, that the general currency of the country is a matter with which this Government has nothing to do; that its duties are confined to the exercise of the coinage power, and the collection of its own revenues in gold and silver; and that the general circulating medium of the country must be entirely abandoned to the separate and often conflicting control of the individual States. Now, sir, as my opinion differs alike from this view of the subject, and from that urged a few days ago by the Senator from Massachusetts, (Mr. Webster,) I beg leave to state briefly what they are. The whole history of the formation of the Constitution, as well as the internal evidence of its provisions, prove, beyond question, that the framers of that instrument intended that there should be a *common currency* for the Union, and not "as many different currencies as there are States." They, doubtless, believed that that currency would consist almost entirely of gold and silver. There were but two banks then in existence, whose issues formed an exceedingly small part of the general circulation. They no more foresaw that immense multiplication of banks, which has made bank paper the actual

currency of the country, than they foresaw the two great discoveries of the age—steamboats and railroads—which have had so extraordinary an influence on the wealth and resources of the country. Believing that gold and silver would continue to constitute the currency of the country, they placed the "regulation" of that currency expressly under the control of Congress, and took it away, in terms equally express, from the States. But, while they did this, they left with the States (for the omission to take it away amounted to the same thing) the power of incorporating banking institutions. In the general and extensive exercise of that power by the States, the issues of the banks have come to take the place of gold and silver, and to form the actual currency of the country. In the practical working of our system, then, a state of things has grown up entirely unforeseen by the founders of the Constitution. This Government has no authority, by force of law, to put an end to that state of things; nor is it desirable, considering the many and indisputable conveniences of a sound paper currency, in the present advanced stage of commerce and civilization, to destroy it altogether. But, as the original design and intention of the Constitution certainly was that there should be a *common currency* for the Union, it is incumbent upon Congress, in the exercise of the powers delegated to it, to do all it can to fulfil that design, and to render the actual currency of the country as sound, as equal, and as nearly equivalent to gold and silver, as possible.

This duty is essential to the harmony and friendly intercourse of the States, and is, indeed, intimately connected with all the objects of a *common Government* which led to the establishment of the Constitution. But this duty is to be measured by the extent of the powers which have been delegated to Congress; for it must always be borne in mind that this Government can exercise no other power than such as have been specifically delegated to it. Now what are those powers in regard to the question of the currency? The Senator from Massachusetts (Mr. Webster) argued, the other day, as if the Constitution had given to Congress a substantive and plenary power to "regulate the currency," *eo nomine*, and inferred from thence the power to establish a national bank to regulate the issues of the State banks, which form the actual currency of the country. But, in the first place, the Constitution has not delegated to Congress any general or substantive power to "regulate the currency," nor has it, anywhere, either by express grant, or necessary implication, given to Congress the power to create a banking corporation. What, then, are the powers it has vested in Congress on the subject of the currency? In the first place, it gives to Congress "the power to coin money and regulate the value thereof." But since the precious metals form so small a part of the actual circulation of the country, this power, however important in itself, can exert no controlling influence on the general currency. We then find that the Constitution gives to Congress the power "to lay and collect taxes, duties, &c., to pay the debts, &c., of the United States." From the large amount of the receipts and disbursements of the Government, this power is susceptible of an extensive and important bearing on the general currency of the country. In the exercise of it, it is incumbent on Congress to make it instrumental to secure to the whole country, as far as possible, the benefits of a sound and equal currency, equivalent every where to specie. It may be so managed, by receiving the paper and employing the agency of the State banks in the fiscal operations of the Government, under certain salutary restrictions and conditions, as to impart to the issues of those banks, forming the actual currency of the country, some of the most essential qualities of a sound, stable, and equal circulating medium. But if, on the other hand, this incidental control, through the revenue power of the Government over the actual currency of the country, is to be abandoned, and that currency be regulated exclusively, as is now proposed, to the separate and conflicting legislation of the individual States, our whole monetary system, affecting so widely and deeply the interests of society, must run into wild disorder and confusion, and one of the highest ob-

jects of the Constitution be nullified and defeated.

This, sir, was the doctrine steadily maintained by the late administration. From the removal of the deposits from the Bank of the United States, down to the close of that administration, it was constantly put forth, in bold relief, in the messages of the President, and the reports of the Secretary of the Treasury, as well as in the speeches of its leading friends in this and the other branch of Congress. The obligation of the General Government to watch over the general currency, and to secure to the whole country, as far as possible, the benefit of a circulating medium that should be sound and of equal value, was distinctly recognised and admitted; and it was contended that this object could be as effectually accomplished through the State banks, as by the agency of any national incorporation. The management of the revenue through those institutions, was to be the instrument by which the end was to be accomplished, and the particular means relied on was to make a suppression of the small notes, and some other reforms in the currency, the *conditions* of a deposit of the public funds in the banks, and of the receivability of their notes in payment of the public dues. By the employment of these means, the late President, in his last annual message but one to Congress, said, "we should soon gain, in the place of the Bank of the United States, a practical reform in the *whole* paper system of the country;" and, looking forward to the ultimate suppression of all bank notes *below twenty dollars* as the result of this policy, he hailed it with enthusiastic patriotism, as "forming an era in the history of our country, which would be dwelt upon with delight by every true friend of its liberty and independence." The present Chief Magistrate, in his celebrated letter to a member of the other house, speaking of this same policy, said: "nothing but a *faithful prosecution* of it by the General Government and the States is necessary to place us on a footing of equality with other nations," enjoying, in the highest degree, the advantages of a stable and uniform currency. To all this I was a sincere convert, and am still. I still believe that it is the duty of this Government—a duty from which it can not free itself without betraying one of the highest objects of the Union—to exercise a superintendence, in all constitutional modes, over the general currency, so as to secure to the *whole* country a sound, stable, and, as nearly as may be, uniform medium of exchange; and, to use the language of the late President of the United States, that "the management of the public revenues, through the State institutions, may, and ought to be, made auxiliary" to the accomplishment of this great end.

The measure which I now offer to the consideration of the Senate, and which received the almost unanimous sanction of both houses of Congress at the last session, is the result of these views. Permit me, for a few moments, to inquire what would be its practical effects on the general condition of the currency, if the policy it holds out should be carried into full effect by the co-operation of the States and the General Government, as I think it would be if sustained here. It contemplates the gradual suppression, after given periods, of all bank notes under ten and twenty dollars respectively. Supposing this last limit attained, how would the currency of the country then stand under its operation? According to a calculation I submitted last winter, founded on authentic data, it would, in that case, be constituted nearly as the currency of England is; that is, nearly one-half of the precious metals, and the residue of convertible paper. Would not such a constitution of the currency as this accommodate all the wants of the community? What are the real wants of the country in regard to currency? To have a sound, stable, and convenient medium of circulation, for ordinary and local purposes; and for occasional and more extended use, a medium which, in addition to these fundamental properties, shall be substantially of uniform value throughout the whole country. Now, for the first description of uses, there could be no better currency than the policy of this bill would give us. There would be an abundance of gold and silver in circulation for the great mass of daily and ordinary transactions, while, for

large payments and remittances, we should enjoy the conveniences of a sound, convertible paper medium. In regard to those distant uses which call for a medium of general and uniform credit, the occasions of them are either travelling or remittances. But for travelling, there could be no medium of more uniform and general credit than the gold coins, which, in the case supposed, could always be had without difficulty, while they would, at the same time, be perfectly portable and convenient. As to distant remittances, they are hardly ever made in money of any sort, but are effected through drafts and bills of exchange; and when the local currencies within their respective spheres shall be raised to par with specie, the rates of exchange, with the advantages of so portable a currency as gold to adjust balances between the States, would be next to nothing—certainly as cheap as it has ever been under the regime of a national bank.

Among the most important advantages of such a constitution of the currency as is contemplated by this bill are the substantial securities it would afford against the peculiar dangers and evils of the banking system. Those evils are a tendency to over-issues of paper, fluctuations in the quantity of currency and in the value of property as affected by them, and the liability to a suspension of specie payments. The suppression of the small notes would operate, in two ways, to check over-issues. In bringing a larger quantity of gold and silver into circulation, it would, of course, diminish in the same proportion the issues of paper to form a part of the circulation. The number of issuers, too, would be diminished, for, the small note circulation being a considerable source of profit, its suppression would take away one efficient motive to the multiplication of banks. Then, as to fluctuations in the amount of the currency, and the often ruinous fluctuations that ensue in the value of property, this evil is greatly increased by the fact that, in the existing state of the currency in this country, whenever an unfavorable balance of trade creates a drain on the banks for specie, having no means of recruiting their supply but from abroad, for every dollar of specie that is drawn from them they are forced to draw in their own circulation to three or four times the amount. But when the domestic channels are filled with gold and silver, as they would be if the small notes were suppressed, the banks, being always able to replace whatever specie is drawn from them by a foreign drain, with an equal quantity obtained in the country, their circulation remains comparatively steady. The same circumstance, enabling the banks to meet any sudden run upon them by a prompt reinforcement of their resources, obviates the danger of a suspension of specie payments, and renders such a contingency next to impossible. If all bank notes under twenty dollars had been suppressed, who, for example, could suppose that, filled as the channels of circulation would in that case have been with gold and silver, and the quantity of bank paper comparatively small, the banks of this country would, in the late pressure, have been compelled to sustain specie payments?

The system of policy, then, proposed by this bill, if carried into full execution, would secure to the country a sound, stable, convenient, and substantially uniform currency—consisting nearly one-half of coin for the daily and ordinary transactions of life, and the residue of sound convertible paper, for large operations and commercial purposes. Without depriving the community of any of the advantages of the banking system, it would obviate the danger and cure the evils incident to that system. But the Senator from South Carolina, (Mr. Calhoun,) while acknowledging the high importance of the reform contemplated by the bill, objects that the means proposed for its accomplishment are inefficient. If that gentleman be right in supposing that the credit of bank paper is owing to its receivability in payment of the public dues, which, he says, operates as a general endorsement of it by the Government, then surely the means proposed by the bill are not inefficient. What more powerful inducements could be addressed to the banks to conform their issues to the provisions of the bill than the announcement that, if they did

not do so, the Government would withhold from them that which, according to the opinion of the Senator from South Carolina, alone gives credit to their paper? But, without agreeing with the Senator from South Carolina in the extent to which he carries his views of the credit of bank paper being solely derived from its receivability by the Government, I still believe that the *sanctions* of this bill, though I have never supposed them sufficient of themselves to fully accomplish the object, would exert a very considerable influence on the conduct of the banks. It must not be forgotten that the means proposed by this bill are the very means employed by the joint resolution of 1816 to bring the banks back to specie payments on that occasion, and which, notwithstanding the previously declared determination of the banks to the contrary, did bring them back to specie payments on the day fixed by that resolution. The same means, too, were employed with success by the Secretary of the Treasury, in 1815, to induce the banks to receive Treasury notes (which had sustained a considerable depreciation) at par, though they had before refused to receive them either in payment or on deposit.

But my reliance is not so much on the direct operation of this measure on the banks themselves, as on the moral influence it is calculated to exert upon the policy of the States, which have full and complete power to carry its object into effect. The public mind is now universally awakened to this great common interest of the currency, and is anxiously looking to Congress for the adoption of some common system, to be acted upon and carried out by the States, so far as their action may be necessary to supply the defect of federal power. The States have heretofore shown no backwardness in seconding the policy of Congress on the subject of the currency; but, on the contrary, have promptly and zealously co-operated in the reforms which have originated here, under the auspices of the national representation. The promptitude with which a majority of them have already prohibited the issue of bank notes under the denomination of five dollars, as soon as this Government adopted, in its fiscal policy, the principle of discontinuing those small issues, is an encouraging proof of the patriotic co-operation of the States. I may add to this proof the recent example of my own State, whose legislature, being in session at the time of the passage of the currency bill by both houses of Congress, during the last winter, immediately responded to the policy announced by that bill, by the enactment of a law prohibiting, after an early period, all bank notes under the denomination of twenty dollars. There is no fear that the States will abandon the General Government in this wise policy of reforming the actual currency of the country, if the General Government do not abandon them. Let Congress persevere in the policy so earnestly inculcated by the late administration, and so warmly embraced by itself at the last session, and that policy cannot fail to be carried on, by the co-operation of the States, to a triumphant and beneficent consummation. Public opinion, in our republican system especially, is the mistress of human affairs, of government and legislation, as well as every thing else. Let us, by the example of our measures here, awaken that opinion to the importance of the reforms which are needed in the currency of the country; and if it approve them, as we have every reason to believe it will, it will not be slow in finding, in some branch or other of our system, *efficient* as well as *appropriate* organs to work out its decision.

Besides the reform contemplated by this bill, there are others of high importance, in regard to the soundness and uniformity of the general currency, which an adherence to the policy of the late administration, with regard to the employment of State banks in the fiscal operations of the Government, would afford the means of accomplishing. In what did the boasted power of the Bank of the United States to preserve the soundness of the currency consist? Was it not in checking the issues of the State banks, when tending to excess, by periodical and frequent settlements with them, so as to keep them, to use the language of the president of that institution, "in the habitual presence of

accountability?" The same practice has long prevailed in Scotland, and constitutes, by general acknowledgement, the distinguishing excellence and chief security of the eminently successful system of banking in that country. All the banks have agents in Edinburgh, who regularly exchange their notes twice a week, and the balances are paid by bills at ten days' date on London. By this means, over-issues are effectually prevented, and the currency of that country, though consisting almost entirely of paper, has been preserved in a condition of constant soundness. Nothing would be easier than to incorporate this same regulating principle into a system of deposit banks. It might be made the duty of each of them, as a condition of their employment, to have frequent and regular settlements with all the banks with which they maintained relations of business, and to call, if necessary, for an adjustment of the balances in specie. This would be an efficient check upon over-issues; and, administered by some twenty or thirty deposit banks in different parts of the Union, would exert a far more powerful and extensive influence over the general currency of the country, than the same check in the hands of the Bank of the United States could have done; inasmuch as the aggregate capital and business of these deposit banks would, in all probability, much exceed that of the Bank of the United States. Here, then, is an object of the highest importance, in regard to the preservation of a sound currency for the whole country, which might be easily and certainly accomplished by a perseverance in the policy of the late administration. If to that were added, as there is reason to believe might easily be done, an arrangement among the deposit banks to receive and credit each other's notes as cash, whenever offered in payment of public dues, you would secure to the country the advantages of a convenient circulating medium of equal and diffusive credit throughout the nation, and possessing every attribute of the paper of the late national bank, without its unconstitutionality. By thus accommodating the practical wants of the country, in regard to currency, you would put an end for ever to the bitter and recurring struggles for a national moneyed institution, and would give that stability and repose to the social and business relations of the country which are so much needed for its prosperity.

But all these high considerations, it seems, are now to be disregarded, and a policy, announced with the most confident promises of success, and prosecuted, for more than three years, with a signal fulfilment of those promises, is to be, all at once, abandoned, for new and untried expedients. And why this sudden change of policy? Because the suspension of specie payments by the banks has occasioned some momentary embarrassments in the operation of the system. It is, therefore, pronounced that the system has been *tried* and *failed*; and I heard yesterday, with amazement, the Senator from South Carolina (Mr. Calhoun) appealing to the friends of the late Administration, in the confidence that, of all parties, they would be the most certain to join him in opposition to this system—that they who had been the sponsors, the advocates, the champions of it, who were identified with it in every possible mode of honorable commitment, would be the first to turn round and abandon and disown it! Why, sir, if they are against it, who are for it? That Senator said, if it be folly to adopt an "untried expedient," it is madness to employ one that has been *tried* and *failed*. But, sir, that is the question at issue. Has this system of State bank depositories *failed*? I say it has not, unless the explosion of a steamboat would justify you in pronouncing the great discovery of the age—the application of steam to navigation—an imposture, or the sweeping away of a mill by a fresher would prove that most useful invention, for the subsistence of man, to be an abortion. The recent suspension of specie payments by the banks is an accidental and an extraordinary occurrence, the result, as I shall show, of circumstances peculiar in their character and unprecedented in their combination, and affords no criterion by which the general utility or success of a system is to be judged. If we wish to form a correct judgment of the system of State bank de-

positories, we must review the whole history of its operations. And here I might appeal to the Senator from Missouri, (Mr. Benton,) who was the zealous champion of this system at a period when its capacities were put to the severest test, if it did not then give the amplest proofs of its usefulness and efficiency. I refer to the memorable struggle of 1834, when the Bank of the United States, enraged by the loss of the public deposits, and stimulated by the desire of regaining them, waged open and violent war on these State institutions—when some of the State banks themselves, coerced or subsidized by the Bank of the United States, joined in the unnatural and fratricidal conflict—when the eloquence of his body was thundering upon the system, and the artillery of the press at the same time pouring in its unrelenting and destructive fire. Did not these abused institutions then give triumphant evidence alike of their strength and their fidelity, and bear the country and themselves harmless through the conflict? There can be but one answer to the question.

In reference to the stirring and important events of that day, I will say, that no one more heartily approved the conduct of the late Executive in removing the public deposits from the Bank of the United States than I did. I believed that the bank had not only failed in the prompt and faithful discharge of its fiscal duties to the Government, but, in one instance particularly, that it had balked and counteracted the execution of a great measure of public policy. It had, moreover, manifested a dangerous spirit of ambition by an active interference in the politics of the country. I held, therefore, the conduct of the late President, in the removal of the public deposits from the Bank of the United States, perfectly justifiable; and I viewed it with the more satisfaction, because, believing the institution itself to be unconstitutional, I saw in the measure of the President the most certain means of preventing its recharter. But while I considered the removal of the public deposits, under the circumstances of the case, lawful, justifiable, and proper, it was evidently a bold measure, and not without hazard of disturbing, for a time, the business and pecuniary interests of the country. It was the firm, judicious, and patriotic conduct of the selected State banks, sustained, as they then were, by the prudent confidence of the Government, that mitigated, and, in a great degree, obviated the threatened pressure, and ultimately reconciled the public mind to this bold and decisive measure of State policy. I little supposed, while the Government was thus leaning on these State institutions for co-operation and support, that they, too, in their turn, were destined for the sacrifice; and that the only favor they were to expect was the Cyclops' boon to Ulysses—that of "being last devoured."

But, sir, not to dwell, in particular, on the success and services of the deposit banks in that period of trial and danger, let us inquire what have been their general conduct and efficiency. Have we not seen the satisfactory manner in which they have discharged their duties as fiscal agents of the Government, year after year, made the subject of the warmest eulogies in the annual messages of the President, and the reports of the Secretary of the Treasury, and put in striking and advantageous contrast with the operations of the Bank of the United States? In the very last message of the late President, (in December last,) in bearing his testimony to the promptitude and regularity with which the transfers of the public moneys had been made by the deposit banks, he showed that the amount of these transfers during the preceding year (about forty million of dollars) was more than double the largest sum which had ever been transferred during an equal period by the Bank of the United States; and all this had been effected without the smallest expense or cost to the Government. At the same time he states that an amount of domestic exchanges had been negotiated by the banks for the public exceeding more than three times the operations of the Bank of the United States, in the same way, during an equal period of time, and generally at rates below those charged by that institution. What more could be expected or desired? And what does the Secretary of the Treas-

ury now tell us as to these deposit banks? That their condition, in regard to the great elements of soundness, was never better than at present; that, in a comparative view of their means and liabilities, both immediate and ultimate, the proportion of the former to the latter is considerably increased, and is now much greater than has been customary with the banks of this country, or even with the Bank of England; that, since the suspension of specie payments, they have paid the drafts and accounts of the Treasury upon them to the amount of between fifteen and twenty millions, in a manner acceptable to the holders; that there remains now but a comparatively small sum due from them to the Government; and that of that sum there is no reason to apprehend the loss of a single dollar.

In the presence of these facts, with what propriety can it be said that the State bank deposit system has failed? If a temporary suspension of specie payments, under most extraordinary circumstances, constitutes a failure of a system, then the national bank system and the hard money system have equally failed. I say the national bank system, because the Pennsylvania Bank of the United States, (which we all know suspended specie payments at the same time with the deposit and other State banks,) we have the authority of its President for saying, possessed all the strength and real advantages under its charter from the State of Pennsylvania that it did under its charter from the United States. If it had been a national, instead of a State institution, it would equally have suspended specie payments, under the extraordinary circumstances of the crisis. And has not the hard money system, if we apply the same test, also failed? Where now is all that boasted abundance of gold and silver which, we were told, was to overspread and rejoice the land? Do you see a dollar of it in circulation, performing its true office of effecting payments in the business of the country? No, sir; all, all has disappeared.

If, then, the State bank deposit system has failed, the other systems, proposed by one party or another to be substituted for it, are equally demonstrated to have failed. But, sir, this system has not failed. The banks have been embarrassed and momentarily obstructed in some of their functions, by circumstances which have embarrassed and deranged the whole commercial world. If they have bent, for a time, beneath a tornado which has swept over the globe, it is only that they may rise again, and resume their erectness and vigor, when the fury of the storm is spent.

But, superadded to these general causes of embarrassment, there have been peculiar and extraordinary causes operating here, (most of them originating in the errors of our public policy,) which have mainly contributed to the recent disaster, and which, being such as will not occur, or may be guarded against in future, prove nothing against the system itself. Some of these anomalous and disturbing causes I will briefly advert to: and first, to that enormous surplus revenue which we permitted to grow up, under our own improvident legislation. Forty millions of public money were thus thrown into the banks, upon which they were not merely authorized, but invited, to found new discounts and accommodations to the public. It was a virtual addition of so much to the capitals of the banks, by act of the Government itself; which naturally led to an increase and dangerous expansion of their business. But, sir, another disturbing cause, not less mischievous in its operation, has been the factitious importation of gold and silver into the country, during the last three or four years. It is estimated that the quantity of the precious metals in the country has been increased in that time, under the various provocatives administered in one way or another, nearly another sum of forty millions. This enormous augmentation of the precious metals has been the subject of much inconsiderate exultation; but, in truth, sir, it has been one of the most efficient causes of the present derangement of our currency. What became of all this gold and silver, as it was brought into the country? It could not enter into circulation, because the channels of circulation were already occupied by the smaller bank notes, which we have seen, will invariably exclude coins of the

same denominations. It went, then, to enlarge the specie basis of the banks, and for every hard dollar they thus acquired they put out, in the usual ratio of their circulation to their specie, three or four paper dollars.

Gentlemen who have patronized this artificial importation of gold and silver, with a view to enlarge the metallic circulation, and restore the "constitutional currency," have committed a great mistake. They began at the wrong end. They should have first provided for the suppression of small notes, and then the gold and silver, as they came into the country, would at once have entered into circulation. But, brought into the country as they were in large quantities, before any opening was made for their circulation by the previous suppression of the small notes, they accumulated in banks, where they furnished the basis of new issues and discounts, and thus formed one of the chief causes of that undue distension of the paper system, which terminated in the recent catastrophe.

I have already alluded, Mr. President, to a measure, the protracted continuance of which had, in my opinion, no small agency in producing the suspension of specie payments by the banks. I mean the specie circular. It has been common to assume the amount of specie paid into the land offices as the true measure of the operation of that order. But this is a very fallacious and inadequate view of the subject. What is called *Land office* money, or money receivable in payment for the public lands, is the universal standard of the currency in the west. In all private payments and transactions, it is the sort of money that is required. When, therefore, by the specie circular, convertible bank notes, however sound, were no longer receivable in payment for public lands, and gold and silver were made the only *Land office* money, every body wanted gold and silver. This necessarily gave rise to extensive demands upon the banks in that portion of the Union for specie, which they provided for by drawing large supplies from the east. But this was not all. All persons emigrating to the west, whether they intended to buy public lands or not, felt it necessary to provide themselves with *Land office* money—the general and standard currency of the country to which they were going. The ordinary preparation for removal was first to convert all the bank notes held by them into gold and silver. This, I know, has been extensively the case in Virginia, for many of my friends and neighbors have recently migrated to the west, and in every case they have gone to the banks, whose paper they held, to exchange it for specie. The same thing has, doubtless, occurred in every portion of the Union whence emigrations have taken place to the west. I have been informed, particularly, that it was so in the northern and eastern States—that great hive which has poured forth so many swarms of useful and enterprising citizens to people and subdue the western forest. Gentlemen who represent those States here can correct me, if my information has been erroneous. These multiplied and extensive calls for specie, resulting from the direct and indirect operation of the Treasury order, must have produced a very serious pressure upon the banks throughout the country, but especially in the Atlantic cities. It was a sudden and unnatural displacement of the precious metals, which could not fail to give a violent shock to the whole system of bank credit founded upon them. But when the Government announced its final determination to continue this specie circular as the permanent policy of the country, the blow was decisive and fatal. In the permanent and indiscriminate refusal of the notes of all banks in the largest branch of the public revenue, an official discredit was stamped by the Government upon bank paper, which, in the critical state to which it had already been brought by the circular, it could not survive. Public confidence was shaken, distrust and panic were produced, systematic runs upon the banks commenced; under which, whatever their ultimate ability, they were forced to succumb for the time.

I know, sir, that this catastrophe has been sometimes, in particular quarters, attributed to the transfers of public money under the deposit act. But if the specie circular had not been issued, and that

act had been executed in the true spirit of the policy which shaped its provisions, no sensible embarrassment could have resulted from it to the banks. The act itself was a measure of wise and necessary policy. It grew out of a state of things which presented these three alternatives: An immense surplus of near forty millions of public revenue was to be continued in the deposit banks, and used by them in ministering to a reckless spirit of speculation, at the hazard of the ultimate loss of the whole fund to the Government, as well as of great injury to the community; or, secondly, it was to be wasted in projects of Government expenditure, which were not merely useless, but highly dangerous and pernicious; or, lastly, it was to be laid by, in ratable proportions with the several States, as temporary and unquestionably safe depositories, with the privilege of using it, till called for by the wants of the nation, in such manner as they should think best for the benefit of their respective communities. I think, sir, there are but few candid and patriotic minds which, looking back to the state of things which then existed, will not at once decide that the last alternative—that which was embraced by the bill—was the one most proper to be adopted. At the same time, its provisions were of the most liberal and considerate character, in regard to the banks from which these moneys were to be drawn. The whole payment was to be divided into four equal instalments: the first, not to be paid over by the banks till after six months' notice given by the act itself; and the three remaining instalments to be paid at successive periods of three, six, and nine months thereafter. Ample time was thus afforded to the banks to meet these payments; and there is reason to believe that, upon a judicious plan of execution, the greater part, if not the whole, of the necessary transfers might have been made through the trade and commercial exchanges of the country, not only without inconvenience, but with real accommodation to the business of the community. A fundamental principle of the act was the six months' notice given to the banks before the commencement of its execution. But, instead of this, anticipated transfers to the amount of ten or fifteen millions (unless I am erroneously informed) were made, and without any known necessity for them, very soon after the passage of the act. In the execution of the law also, it is said that large amounts of specie were drawn and transported to and fro, to the great disturbance of commerce, when the same movement of funds might have been effected with ease, through the customary channels of trade, without displacing a dollar. I have heard, for example, of a case in which a bill of exchange had been declined, and a considerable sum drawn and transported, in specie, when, almost as soon as the specie arrived at its destination, the bill of exchange overtook it, and brought it or its equivalent back again to its original point of departure. It is not my purpose, sir, to enter into any detailed examination of the mode in which the deposit act has been executed; but I refer to these circumstances to show that, if inconvenience and embarrassment, to any serious extent, have really attended its operation, there is ground, at least, for the inquiry, whether the fault has been "in the law, or in the administration of the law." I am far from imputing any thing wilfully wrong to the Secretary of the Treasury; but I am well satisfied that the inconveniences which have been felt might have been avoided by a different execution of the law.

If I am not mistaken, Mr. President, in this review of the circumstances which have mainly contributed to the recent suspension of specie payments by the banks here, I have shown that suspension to be the result of causes which are not likely to occur, or may be guarded against in future. Our late experience will, I think, effectually admonish us against another surplus revenue, which has been the chief source of the derangement in our monetary concerns; and in this respect, I am happy to perceive that the President gives us the assurance of a cordial concurrence of views on his part. Neither shall we, I trust, again do violence to the natural laws of trade by forcing large quantities of gold and silver into the country, in the vain hope of extending their circulation, before any opening is made for them by a suppression

of the smaller bank notes, but with the real effect of stimulating and expanding the paper system; and, if we may judge of the opinions of future Congresses by the almost unanimous sense of the last, we shall not again be exposed to the disturbing operations of a specie circular. The suspension of specie payments, taking place under circumstances so peculiar and anomalous, and so unlikely to occur, or so easy to be guarded against in future, proves nothing, in my estimation, against the general expediency of using the State banks as fiscal agents of the Government. But, if it were otherwise, is this the time, I would ask, to withdraw the countenance and support of the Government from them? I would appeal, to those political friends with whom I have acted in steady and harmonious opposition to the Bank of the United States, and ask them if they have not seen the attitude assumed by that institution? Do they not recognise her controlling influence in the late meeting of the banks of Philadelphia, in which it was resolved not to join in the measures proposed by the New York banks with a view to an early resumption of specie payments? It is evident she does not desire a return to specie payments; and there is reason to believe, from the large extent of the commercial operations in which she has been engaged, that, however much her strength may be vaunted, she is, least, of all the respectable banks in the country, prepared at this time to meet her liabilities. All her power and influence, then, in conjunction with those of the allies she has enlisted, will be exerted to delay the resumption of specie payments by the other banks. How important is it that a design, so contrary to the best interests of the country, should be counteracted; and what mode of counteraction is there so effectual as to reinforce the other banks with the confidence and support of the Government? I appeal then again to my political friends, who deprecate, as I do, the dangerous dominion of this ambitious institution, if this is the time to weaken other institutions, who must be mainly relied on to balance her power and defeat her schemes.

If ever a party, Mr. President, was honorably committed to the prosecution of a great public policy, it seems to me that the friends of the late administration are so committed to the policy of employing the agency of State institutions, in the fiscal concerns of the Government, as the true practical substitute for a dangerous national institution. A system of financial administration, founded on that principle, was organized and put in motion by the late Executive; it was attended with eminent success for three years and a half, till momentarily thrown out of gear by the extraordinary convulsions of the times; its satisfactory results were made the theme of repeated and earnest representation to Congress, by both the President and the Secretary of the Treasury; it was the policy under which the whole republican party rallied; it formed, indeed, the defensive rampart from which they fought, as they believed, the battles of constitutional liberty against a powerful and aspiring moneyed monopoly. But we are now called upon, all at once, to abandon that policy; we are appealed to by the Senator from South Carolina, (Mr. Calhoun,) in the name of State rights, to make war upon State institutions; and summoned, in the name of republicanism, to surrender a republican strong hold! Sir, for every republican authority that can be vouched in favor of the Sub-Treasury scheme, a hundred might be adduced in favor of State institutions as the depositories of the public revenue. The Senator from Missouri, (Mr. Benton,) with a triumphant sense of the weight of that authority, produced to the Senate a few years ago an extract from the opinion of Mr. Jefferson, on the constitutionality of the first national bank, in which that great statesman pointed to the State banks as the practical and efficient substitute for a national institution. We all know that, too, was the ground occupied by Mr. Madison and his republican associates in the debates of Congress on the same occasion. When the question of the recharter of the bank came up in 1810-11, the same ground was again taken, and adhered to by the organs of the republican party in Congress.

But let us see what has been said on this subject

by distinguished statesmen of the republican party, to whose opinions actual and large experience in the administration of the public finances gives a peculiar and impressive weight. In a letter addressed to a committee of this body in 1811, by Mr. Gallatin, then Secretary of the Treasury, and who had presided over that department for a term of ten years, that able financier, after speaking of the many conveniences afforded by the banking system for the collection, safe-keeping, transmission and disbursement of public moneys, employs this emphatic language: "State banks may be used, and must be used, in case of a non-renewal of the charter [of the Bank of the United States,] by the Treasury." What renders this testimony of Mr. Gallatin the more important is, that Mr. Jefferson, in 1803, (then President of the United States,) addressed a letter to him as Secretary of the Treasury, suggesting for his consideration the question, Whether it would not be practicable to organize a distinct machinery, for holding and administering the public funds, through the officers charged with their collection and disbursement? With his attention thus specially called to the subject of an independent fiscal agency, such as is now proposed, and with the advantage of all the lights which could be obtained from a free consultation with Mr. Jefferson, Mr. Gallatin reports to the Senate of the United States, as the mature result of his experience and reflection, that "State banks may and must be used by the Treasury, in case of a non-renewal of the charter of the Bank of the United States."

Let us now consult another great oracle of American finance on this subject; and, however I differed with him on one of the leading questions of his time, I cannot mention the name of Mr. Dallas on this floor without bearing the humble tribute of my admiration to the superior ability, the fertile resource, the elevated moral courage and fearless patriotism with which he conducted the finances of the nation, at a period of the greatest difficulty and embarrassment they have ever seen. It is well known that Mr. Dallas came into the Treasury Department shortly after the suspension of specie payments by the banks in 1814, and continued, through the whole period of his administration, to struggle with all the formidable impediments occasioned by the state of things. His embarrassments were much increased by the wide diversity that had arisen in the value of the various local currencies, and the consequent refusal of the banks, which had been employed as public depositories, to receive and credit the notes of each other as cash. In this state of things he was driven to the necessity of considering the very question; which is now presented, of discontinuing the banks as depositories, and henceforward committing the custody and safe-keeping of the public moneys to the hands of officers of the Government. The result of his deliberations is given in a very interesting report submitted by him to the President, in 1816, at the moment of his retirement from office, in which he rendered a full account of his arduous and responsible stewardship. In that paper, after referring to the embarrassments I have mentioned, he says: "In this state of things, the Treasury was driven to a choice of expedients; that is, either to take the hazard of accumulations of revenue in the hands of individual collectors and receivers, or to recognize as places of deposit the banks (being, however, banks of unquestionable solidity) established in the districts most affected by the course of exchanges. Many powerful considerations led to an adoption of the latter measure." Thus we see that Mr. Dallas, after full deliberation, "for many powerful considerations," gave a decided preference to State banks as public depositories, even while they had suspended specie payments, over the individual agency that is now proposed, and actually employed as many as ninety-four of those banks in that capacity, cumbersome and inconvenient as so large a number necessarily was.

These, Mr. President, are authorities entitled to no light consideration. It seems, however, we are growing far wiser than the great minds that have gone before us. I am one of those, sir, who believe in the progress of light and knowledge. But still I cannot but reverence the lessons of wisdom

bequeathed to us by our ancestors; and, when I see especially the same question presented again and again for consideration, and men of the highest experience, sagacity, and patriotism, giving, under every change of circumstances, their concurrent testimony in favor of the utility and advantages of a particular system of administration, I confess my mind bows with unreluctant deference to such a weight of authority.

And now, sir, permit me to say something in regard to the machinery that is proposed to be substituted for the State banks. Can you rely upon it? Does it afford any adequate guaranty for the safety of the public moneys? I say you cannot; all experience proves you cannot. Look at the records of your Treasury Department, and see in how many instances your receivers of public money fail to pay over, as they are required to do, the moneys collected by them. Look at a brief but most pregnant report made on the 23d of February, 1820, to this body, by Mr. Crawford, then Secretary of the Treasury. He states the amount lost to the Government by the infidelity of officers employed in the collection of the public revenue, from 1789 to 1819, at one million and a half of dollars; and the losses sustained by the misapplication of the public money by the officers of Government employed in disbursing it, he adds, "there can be no doubt greatly exceed those which have been incurred in the collection." Here, then, we have an aggregate loss to the Government from the infidelity of its officers, employed in the collection or disbursement of the revenue, during the first thirty years of its existence, greatly exceeding three millions of dollars! This period, it must be remarked, too, was one characterized, during the greater portion of it, by extreme simplicity in the organization of the Government, as well as by a very moderate amount both of revenue and expenditure. It must be borne in mind, also, that the losses sustained were by the infidelity of officers employed merely in the collection or disbursement of the public money, who held possession of it momentarily and *in transitu* only, till they could hand it over to the banks in which it was to be deposited, or pay it to the public creditors whose claims were to be discharged with it. But under the system now proposed, these officers are to be themselves the depositaries of the public money, and to retain continuous possession of it till called for by the actual expenditures of the Government. How infinitely would the hazards of infidelity and misapplication be increased by such a state of things!

With great deference, then, to the honorable Senator from New York, (Mr. Wright,) this system has not even the merit of being an "intrinsical expedient." It has been tried, though to a limited extent, in the operation of this Government itself; and the bluer fruits of that partial experiment are found in the facts I have just stated. But, sir, it has been fully tried in my own State. The Treasury of Virginia was formerly organized on that principle of personal custody and control of the public moneys, which is now proposed to be made the basis of a new system of fiscal administration here. Without entering into any painful details, I will only say, that the experiment signally and mournfully failed; and from that period, the public moneys have been kept in, and disbursed by, the banks, under efficient checks against abuse and misapplication by the public officers authorized to draw on the public funds; upon which plan the finances of the State have ever since been conducted with perfect success. When I consider the infirmities of human nature, I am utterly opposed to a system which would subject it to such cruel trials as that now proposed must inevitably do. I hope, sir, my standard of virtue and integrity is not much lower than that of other men, and yet I can conceive that even an honorable man, having a large sum of public money lying idle in his hands, for which there was no call in the public service, appealed to by a friend in distress, whose destinies, and those of wife and children, might depend upon pecuniary relief at a critical moment, confiding in the solemn assurances of that friend that whatever money was advanced to him should be restored before there could be any occasion for its application to the public use—I say, sir, I can con-

ceive that even an honorable man, thus situated and thus appealed to, might be prevailed upon, by the feelings and sympathies of his heart, to yield from an idle public hoard the means of salvation and relief to a numerous and interesting family, and, his calculations upon the return of the money (thus momentarily diverted) disappointed in the end, find himself at last a defaulter to his public trust. But, sir, the temptations of another character, arising out of the necessities or speculations of the officer himself, having a large amount of idle funds at his disposal, would be constant, habitual, and powerful. To these would be superadded the danger of misapplication to political purposes. It often happens that public officers are zealous and active partisans. Suppose that such a one had in his hands a large amount of idle public money at the moment of a critical election, on which the continuance of his employers in power depended, would he not be strongly tempted to use the funds in his hands to sway the result, and would there not be the more danger of his yielding to the temptation, as he would naturally rely on the indulgence of those for whose benefit he had violated the trust? We are now, Mr. President, to found a system that is to last, and which may influence, for good or for evil, the destinies of the country in all future time; and consequences and dangers, however remote or improbable they may appear to some at the present moment, ought to be looked to and weighed. In this view, I cannot but fear that the system proposed will be found both demoralizing and unsafe.

The President, in his message, says, that the objection to the proposed system, as being unsafe, must proceed on the assumption that "a vault in a bank is stronger than a vault in the Treasury." This observation does not seem to me to be well considered. It overlooks the important distinction, that if the vaults of a bank be despoiled, and the public money be taken therefrom, the loss is not that of the Government, but of the bank; whereas, when the vaults of the Treasury are violated, the loss falls wholly and exclusively on the Government. In the one case, the stockholders of the bank are interposed between the Government and the violated vault, (their whole capital being bound to make good the loss,) whereas, in the other, no shield is interposed, but the Government is left naked to the spoiler.

Another most important objection to this system is the dangerous increase of Executive patronage it would bring with it. If I seem to give way too much to old republican jealousies, I hope gentlemen will pardon me. I imbibed them early from the fathers of our political church, and I cannot now get rid of them. I have always been taught to believe that the great danger to liberty is in the growth of Executive patronage. Every day's observation of the operations of our Government confirms me in the conviction that here is the *peculiar* part of our system, and that it cannot be too closely watched by the vigilance of the people and their representatives. The bill upon your table, sir, for organizing a new fiscal agency, is the latent germ of a vast growth of Executive patronage, which will spread and spread till it overshadow the land. If the immense moneyed concerns of this Government, which have heretofore been managed through banking institutions, (extending in number to sometimes near a hundred,) are to be henceforward committed to individual agencies exclusively, an enormous multiplication of those agencies will be inevitable. The bill now offered merely introduces the principle. Let the principle once receive the sanction of law, and it must go on. It will generate a force in itself that will be competent to carry it forward to a fearful development. I was informed, during my residence in France, that this Sub-Treasury system, which prevails in that country, embraced there not less than one hundred thousand officers. Our population is already near one-half that of France; and whether we are not, in time, to have here a swarm of official locusts, that will bear a corresponding proportion to those that now darken and devour that fair land, may depend upon the issue of our present deliberations. I repeat, sir, that the bill upon your table is but the grain of mustard

seed, the least of all seeds, but when it is grown it will be a large tree, overspreading the land with its boughs, so that the fowls of the air, yea, sir, birds of prey, will come and lodge in the branches thereof.

But it has been alleged by some that there is as much, if not more, danger of an increase of Executive influence from the employment of banks in the fiscal operations of the Government, as from the new official agencies that are proposed to be organized, under the absolute control of the Executive. What, sir, are the banks? Are they not institutions of the States, created by the States, supervised by the States, and dependent on the States? A breath of the States has made, and a breath of the States can unmake, them. They are subjected to the constant surveillance of the State Governments; and if any thing improper should occur in their administration, or exist in their connections, it would be promptly detected, and as promptly and vigorously corrected by the authority of those Governments—the natural and jealous guardians of of the public liberty against federal influence or encroachment. How powerless a share of the public deposits would be to sway these institutions, is strikingly shown by what occurred in my own State in the very origin of the State bank deposit system. An arrangement had been made between the Treasury and one of the banks to become the depository for Virginia, on certain conditions agreed upon by the parties. When the arrangement was submitted to a general meeting of the stockholders, they refused, by a large majority of voices, to accept the deposits on the conditions proposed, and furnished by their decision a conclusive and practical demonstration of the fallacy of the argument I am now noticing. Gentlemen seem to me to give a free scope, indeed, to their imaginations, when they gravely compare the influence to be exercised over institutions like these, made independent, too, by the very terms of the law, (which does not permit them to be discontinued, when once selected as depositories, except for special reasons to be laid before Congress,) with that which would exist over an army of fiscal officers, subject to the unrestrained orders, and removable at the absolute will of the President.

One of the most alarming and portentous aspects in the Sub-Treasury scheme still remains to be considered. To my view it has a squinting, an "awful squinting," towards a *Treasury bank*—a bank under the sovereign and exclusive control of Executive agents. It appears from the report of the Secretary of the Treasury that the contemplated fiscal agencies are to furnish "a paper medium" for the community, by "issuing certificates and drafts payable in specie to bearer or order, and made receivable for all public dues." After descending on the advantages of "this kind of paper," he says: "If the demand for such paper increased, public and private convenience might be promoted, and an equal quantity of specie, at the same time, preserved in the country, by reserving for this purpose, from any accumulation in the Treasury, a sufficient sum, and placing it a few important and convenient points, to render a greater number of certificates redeemable there with the very coin whose representative they are intended, and honestly ought to be." These views of the Secretary are referred to, and impliedly sanctioned, by the President in his message. Now, sir, is not this apparatus, to all intents and purposes, a *Government bank*? The fundamental idea of a bank is an institution which "issues and circulates a paper credit, founded on a deposit of coin or other property, which paper credit is to answer the purposes of money!" This project fulfils every feature of the definition. The officers of the Government are to issue a paper credit in the form of certificates and drafts, founded on a deposit of specie in the Treasury and Sub-Treasuries, which paper credit is to answer the purposes of money, or a general "circulating medium." It is a remarkable coincidence that this scheme is the precise embodying of the outline given by General Hamilton in 1791, of what he describes and avows to be a *bank*—a *Government bank*. Such, I believe, is the tendency and virtual operation of the Sub-Treasury scheme.

I ask gentlemen, then, if they are willing to or-

ganize a great moneyed machine like this, and put it, for all future time, in the hands of the Executive; if they are willing, in the form of a fiscal agency, to create a *Treasury bank*, with its ramifications penetrating every part of the Union, to be managed, directed, and controlled exclusively by Executive agents. To my mind it presents a fearful conjunction—Realizing that union between the moneyed and political power of the country, which reflecting men have hitherto considered the most fatal of all devices to the liberties of the people. I have revolved the subject deeply and anxiously, and I can see but two possible issues to the scheme proposed. It will either terminate in a great Treasury bank, such as I have described, affording a fatal accommodation to the moneyed concerns of the country at the expense of its liberties, or otherwise, failing, in any degree, to relieve the actual derangement of the currency—on the contrary, abandoning that currency to wild disorder and confusion—the people, finding the inconveniences of such a state of things no longer tolerable, will, with a voice extorted by their sufferings, call for a national regulator in the shape of an incorporated national bank! Either alternative is, to my mind, fearful and alarming; but believing one or the other to be the destined result of the scheme proposed, I entreat gentlemen to pause and consider well the consequences of their decision.

I recur now, Mr. President, to the question more particularly involved in the bill I ask leave to introduce. I think I have shown, sir, that the exaction of the public dues in gold and silver, while the great mass of the circulation shall consist of bank paper, would be oppressive in practice—that it is anti-republican in principle, as drawing an invidious line of demarcation between the Government and people—and, especially, that in the present circumstances of the country, it would indefinitely retard, if not render impossible, that resumption of specie payments by the banks, which is the great and urgent object of the public solicitude. In considering the propositions which the occasion has brought forth, I have been strongly reminded of the words of a great man—of one born to serve and instruct mankind. Speaking of the province and duties of a practical statesman, that great oracle of political wisdom says: "A statesman differs from a professor in a university. The latter has only the general view of society; the former (the statesman) has a number of *circumstances* to combine with those general ideas, and to take into consideration. Circumstances are infinite, and infinitely combined, variable, and transient; and he who does not take them into consideration is not erroneous, but mad, *metaphysically* mad. A statesman, never losing sight of principles, is to be guided by circumstances; and, *judging contrary to the exigencies of the moment, may ruin his country forever.*" I ask, sir, is this the *moment*, when the country is weak and suffering, to subject it to the action of so violent a remedy (if remedy it can be called) as that involved in the proposition to collect the revenues in gold and silver? Does it show a wise regard to *circumstances*, at such a moment, when that credit system, under which the country has grown up to power and greatness, and with which, for the present, at least, its most vital interests are identified—at a moment when that credit system, thus incorporated with the country, has already sustained one of the severest shocks to which it has ever been exposed—is it wise and prudent, I say, to introduce an innovation in the fiscal policy of the Government, which aims a fatal blow at that system, and all the wide-spread and diversified interests connected with it? The effect of this innovation, at the present moment, must be, as I have already shown, to fix upon the country, for an indefinite period of time, the curse of an irredeemable and depreciating paper currency, or otherwise to force, violently and prematurely, an *exclusive* metallic circulation, by compelling the banks at once to wind up their concerns. But what would be the consequence of thus compelling the banks precipitately to wind up their affairs? They have vastly more debts due to them than they owe. Compel them, then, to wind up, and you turn them loose, or rather drive them, in necessary self-defence, upon the community. According to the most recent and

authentic statements upon the subject, the aggregate amount of debts due to the banks is between four and five hundred millions of dollars. Force them, by your policy, to collect this vast sum from the community, and what a wide-spread scene of desolation, embracing every class of the community, must ensue! The banks will press upon the importing merchant, the importing merchant upon the retail dealer, and the latter upon his customers—the laborer, the mechanic, and the farmer. If the result of this desolating process should not be, in the language of Burke, "the ruin of the country forever," it would be, at least, to inflict upon it, causelessly and heedlessly, a blow, from which recovery could be effected only through long years of suffering and distress.

I stand here, Mr. President, as no advocate of the banking system. I have been the constant enemy of its abuses, the correction of which, by salutary and progressive reforms, I have steadily pursued, without aiming, however, at the destruction of the system itself, which the country has chosen to adopt, and under which it has hitherto attained a prosperity unparalleled in any age or quarter of the world. The measure I now offer to the consideration of the Senate is, in my humble judgment, one of the most effective reform. I have no interest whatever in banks. I do not own, never have owned, and never expect to own, a single share of stock in any bank, nor do I owe a debt, even of the smallest amount, to a bank. I mention these things, not because I could suppose that other gentlemen who might happen to be differently situated, could, in the slightest degree, be influenced by considerations of this sort. I deem too highly of the patriotism of my fellow-citizens not to believe them above all personal considerations, as I am sure all with whom I have the honor to be associated on this floor are, in pronouncing on great public questions, involving the interests of the country. I know, however, that there are ungenerous minds, which impute other principles of action to public men; and, following the example of the Senator from South Carolina, who spoke yesterday, (Mr. Calhoun,) I have thought it not improper to state what, from the nature of my pursuits, happens to be my situation in this respect. Those pursuits identify me by interest, as my feelings and tastes do by sympathy, with the great agricultural body of the country. I am under no bias to regard the interests of other pursuits or other classes of the community, except as I believe that, under our happy institutions, all pursuits and all classes are blended in one common interest, and must prosper or decline together. It is in this spirit, looking to the whole country and all its interests, that we shall, I trust, discharge our duties here. The occasion rises far above the narrow and fleeting interests of party, and demands the best exertions of all for the country. The measure which I have ventured to offer is one on which I have supposed all parties might unite, as all parties have heretofore united. Its effect, I persuade myself, will be both to revive confidence and to furnish security; and, with the language of encouragement and with the pledges of a wise and stable policy, proceeding from the national councils here, we shall soon see our youthful and vigorous country rising from her momentary prostration, and, Antæus like, gathering strength from her fall.

#### SPEECH OF MR. SMITH, OF INDIANA.

In Senate, September 21, 1837.—The bill "imposing additional duties, as depositories in certain cases, on public officers," together with the amendment offered thereto by Mr. CALHOUN, being under consideration, Mr. BENTON having laid his amendment on the table—

MR. SMITH, of Indiana, being entitled to the floor, rose and said: Suffer me, Mr. PRESIDENT, to make to the Senate my acknowledgments for its kindness in adjourning over last evening upon my motion. At that time I was too much indisposed to proceed; and, in return for the indulgence of the Senate, I can only promise you that I will detain it no longer than may become necessary to enable me

to submit, in as brief a manner as possible, some thoughts on this important subject.

Sir, in this my first attempt to address this august body, of which I have but recently had the honor to become a member, I am not unapprized of the delicacy of my situation, surrounded by old, able, and experienced Senators, who have grown gray in the service of the country, in this and the other body—men to whom the People have justly looked for the doctrines of constitutional liberty. It would almost seem presumptuous in me to throw myself into this debate; nor could I be persuaded to do so, to their entire exclusion, unless under a paramount sense of duty to my State. The country, however, will lose nothing from that source, as I understand that the subject now before the Senate is one which will undergo a full and ample discussion on the part of those distinguished Senators to whom the country is looking for information as to the best course to be pursued, not only on the part of the Government, but on the part of the People; and while it is to be hoped that most of them will respond to the call of the Senator from South Carolina, (Mr. CALHOUN,) I am still disposed to ask your indulgence to the expression of my own opinions on a subject on which the views of even such men are so opposite and so various.

Sir, this is a subject of great importance to the interests of the country, and one that has caused great anxiety in the public mind. It is therefore highly important that the whole matter should be laid clearly and fully before the People, that they may have an opportunity of judging for themselves on the merits of the propositions made here, both in favor of and against the views of the Executive. For my own part, it is sufficient for me to say that, if I know my own heart, I came to this body with a sincere desire to co-operate with the Executive Government in any measures which may benefit the People, or restore the national prosperity; and towards the individual now in the Executive chair, and the other officers of the Government, I have none other than the kindest feelings. But in relation to measures proposed for the benefit of the People, I hold myself at liberty to examine them fully and freely, without being controlled by those trammels which have been too often used to force men to act contrary to their convictions. When I took my seat in this body, it was with a full determination to examine carefully for myself the various propositions that might be presented, and to decide upon them according to their merits. Sir, we were called on to aid the Government, because it is obstructed in the exercise of its ordinary powers. And when we were told that the Government required our aid, that it was embarrassed for the want of money, and that it was necessary for Congress to grant it supplies to aid in the course of its ordinary operations, I did not hesitate, nor did I even examine very closely the propositions in relation to the means of those supplies; but, knowing that they came from the Committee on Finance, founded on the estimates of the Secretary of the Treasury, without any hesitation I voted for the bill authorizing the issue of Treasury notes. I preferred the bill as it was, without striking out the provision for interest on the notes. I was not willing to resort to a temporary expedient, such as issuing notes without interest, which, as heretofore, could serve only to delude the People, and end in disappointment without any practical benefit.

The next bill in order was the one to postpone the fourth instalment of the deposits with the States. It may not be strictly in order, but, as great latitude has been given to the debate, I beg leave here to give my reasons why I could not vote for that bill; and one of the strongest, in my mind, was this; that the Government of the United States, through the medium of an act of Congress, had raised expectations, on the part of the States, which it ought not to disappoint. The States had prepared to receive the money; they accepted the proposition of the Government, proceeded to legislate on the subject, and many of the States appropriated the whole fund: some to the important cause of education; some to aid in their works of internal improvement; some in one way and some in another, beneficial to the People. The States relied with full confidence on the receipt of the money; they had a right so to re

ly; and, although the facts may not strictly amount to a legal contract between the parties, it is certainly so nearly allied to one, that it would be doing the greatest injustice to the States and People to disappoint their just expectations, by withholding the instalment.

Again: it was admitted by the chairman of the Committee on Finance that, if the instalment was retained, being in paper, it could not be made available in aid of the necessities of the Treasury, as the Government would not use paper, and we would still have to authorize an issue of Treasury notes, and a loan of at least \$10,000,000. Why then withhold it from the States, who are willing to receive it in the very funds the Government rejects; and, in many instances, can accommodate the matter with their own deposit banks, beneficially to the Government, the bank, and the States?

But, viewing it as a question of inconvenience between the Government and the States, how stands the case? It would certainly be much less inconvenient to the Government to add the amount of the instalment to the amount of the loan she is compelled to make, at all events, than it would be to the States to lose the benefit of the money at this time. These, sir, are some of the reasons that induced me to vote against that bill. I thought it but justice to myself to state them, as I gave a silent vote on that occasion.

Sir, I have been surprised to hear this great subject argued here as if it were really a question between the Government on the one side, and the merchants and banks on the other—as if the great body of the People had no stake or interest in the matter. Do gentlemen really suppose that the banks and merchants are not creditors as well as debtors? Do they not know that for every dollar the banks and merchants owe, the People owe them at least as much? Do they not know that you cannot oppress the banks and the merchants without producing a corresponding pressure on their debtors, the People? Will not the importing merchants call upon their debtors, the retail merchants? The retail merchants are involved; but are they alone? No, sir; they go to their debtors, the People, with their demand augmented by their profits on the goods. The whole, sir, falls on the consumer. In this way the disasters of all classes in the country are necessarily identified. Sir, you cannot oppress the banks or the merchants, unless you, by the same measures, embarrass their customers, the People. If you put your iron hand on them, they resort to the People; and on the people ultimately the evil must fall. It is not the fact, that this is a controversy between the Government and the banks and importing merchants. It is a question involving the interests and prosperity of the entire country; and, sir, I am glad it is so. I should be extremely sorry to see the time when the great interests of the community shall be so separated that one may fall without the others. They are all embarked in the same national vessel; bound to the same port; and equal regard should be paid to them all.

It is admitted on all hands that, throughout the country, from one end to the other, confidence is destroyed. Yet it is said, truly, that we possess all the elements of prosperity, which only require to be put in action. But, sir, look at the state of our exchanges. Gold and silver, at Nashville, commands eighteen per cent. premium; United States Bank notes are brought up by brokers at twelve and a half per cent., to be sold by them at fifteen; Ohio, Indiana, and Kentucky paper from eight to ten per cent. premium. Such is the state of the money market there, as stated in the Nashville Banner; and so it is all over the country—at a premium at one place, and at a discount at another. Sir, it is impossible for the farmer, the mechanic, the merchant, or any other individual, to know what to do; such and so great is the destruction of public confidence and the derangement of the currency and the exchanges. But we are told from very high authority that the Government has nothing to do with the exchanges; that the merchants must manage them themselves, or that other means must be provided than those of Government. If, by this doctrine, I am to understand that Government has no power to fix the rate of exchanges, I admit its correctness. But if the Executive means to say that

Government has no power to aid in the application of the appropriate remedy for the deranged and obstructed exchanges of the country, I wholly disagree with him. Sir, it is an after-thought, to answer a particular occasion. It is an opinion never advanced before by any statesman. Such, sir, was not the opinion of President Jackson, or his advisers, at any time of his administration.

It will be recollected that, during the time of the bank war, when the power of the Executive Government was arrayed against the Bank of the United States, it was declared that one of the important functions of the bank, due to the interests of the People, was to regulate the exchanges; and therefore it was contended that it ought to be continued as the Government agent. On the opposite side, it was contended that the local banks, the State banks, the Government deposit banks, would regulate the exchanges with as much advantage to the People of the United States as the United States Bank. And yet it never was contended that the power of the Government, in its fiscal operations, could not be constitutionally directed so as to regulate the exchanges of the country. Allow me, sir, to read an extract from President Jackson himself, in which the regulation of the exchanges was considered an important part of the duties of the fiscal agent of the Government of the United States. The President, considering the matter of so much importance, uses the following language, for the purpose of satisfying the American People that the local banks, while they would perform equally well the ordinary duties of the Bank of the United States, would also perform the same office equally well, in regulating the exchanges of the country. He says:

"Experience continues to realize the expectations entertained, as to the capacity of the State banks to perform the duties of fiscal agents for the Government. At the time of the removal of the deposits, it was alleged by the advocates of the Bank of the United States, that the State banks, whatever might be the regulations of the Treasury Department, could not make the transfers required by the Government, or negotiate the domestic exchanges of the country. It is now well ascertained that the real domestic exchanges, performed through discounts by the United States Bank and its twenty-five branches, were, at least, one-third less than those of the deposit banks for an equal period of time; and if a comparison be instituted between the amount of service rendered by these institutions, on the broader basis which has been used by the advocates of the United States Bank in estimating what they consider the domestic exchanges transacted by it, the result will be still more favorable to the deposit banks."—*Message of 1836.*

Does any one suppose that President Jackson and his cabinet would have thought it so important to satisfy the public mind of the ability of the deposit banks, as fiscal agents of the Government, to regulate and assist in procuring a wholesome state of the domestic exchanges, if, in truth and in fact, the Government had no constitutional right to act in the matter?

It appears, sir, from a paper now before me, that such also were the views of Mr. Van Buren, as expressed in his letter to Sherrod Williams. I read this, sir, for the purpose of showing that this idea of denying to the Government, through its fiscal agents, the power to aid in the regulations of the exchanges, is an after-thought, to answer, as I said before, a particular purpose. Mr. Van Buren, in the letter referred to, says:

"The principal grounds relied upon for a bank, to establish its utility and necessity, as I understand them, are,

"1st. That such an institution is necessary for the transmission and safe-keeping of the public moneys;

"2d. To secure a safe, cheap, and convenient system of domestic exchange; and

"3d. To make and preserve a sound currency.

"The official reports of the Secretary of the Treasury show, first, that the average amount of money annually transferred by the Bank of the United States, from 1820 to 1823, was from ten to fifteen millions of dollars; and the amount transferred by deposit banks from June, 1835, to April, 1836, or about ten months, over seventeen millions

of dollars; in both cases, the operation has been without loss, failure, or expense. In regard to domestic exchanges, the following facts are also established by the same authentic source, viz. That the amount of domestic exchanges, performed at the last returns by the deposit banks, exceeded thirty-five millions of dollars; and at no return, for many months, has it been less than twenty-five millions; which, at an average of thirty millions at each return, would be, in a year, one hundred and eighty millions, if each bill of exchange run on an average of sixty days."

Now, sir, do not gentlemen see the vast amount of the currency of the country operating as a circulating medium, which assumes the character of bills of exchange? and do they not see the fatal consequences to the business and prosperity of the country, resulting from the derangement of this part of the medium of circulation, and the vast importance of regulating it by the fiscal agent of the Government, as no other power can do it? Sir, it appears conclusive to my mind, that when Mr. Van Buren was canvassing for the Presidency, he did not pretend that the Government had not the power to aid in the regulation of the currency and the exchanges. I think, sir, I have sustained the position clearly, that such was not the opinion of the late Executive, and that such was not the view of Mr. Van Buren when he was canvassing for the Presidency. But now, in order to sustain the divorce bill, which withdraws the aid of Government in regulating the currency and exchanges, it is necessary to repudiate the idea that Government should aid in regulating the currency and the exchanges, and to show that she has no power over this matter.

Again, sir: we hear from different quarters—I know not whence it originates—but we hear the cry of "propose your questions; bring forward your counter-propositions, if you are opposed to those of the Administration; this is a contest between the aristocracy of wealth and the democracy of numbers." Sir, I know not what the aristocracy is like, or of what it is composed. There may be such a thing in some of the older States, but it is unknown in the State from which I come. There, all are on an equality; or, rather, there is but one line of distinction between them; and that is the line which divides vice from virtue, honesty from villany: every man standing on his own merits, without regard to those factitious and invidious distinctions. But, even if such a line existed, are we to array one class of citizens against another—to excite envy and enmity on the one part, and contempt and hatred on the other? No, sir; under this Government all are on the same platform of equality, uninfluenced by artificial distinctions not founded on personal merit, and stimulated by the glorious consideration that the door to the highest offices within the gift of the People is alike open to all.

Sir, as to the embarrassments of the country—the great and menacing crisis at which we have arrived—I have but a few words to offer. We must be guided mainly by the light of experience in providing a remedy. Again and again has it been ascribed to the same cause—of overtrading, speculation, expansion of bank paper, &c. &c. The People, it is said, have become consumers, and not producers. No doubt these are some of the immediate causes of the evils complained of. But I have my own views on this subject; made up, (not here, for I have been eight years from the Capitol, but) at home with the People; and I think I know their views: they are founded on plain common sense. It is said there has been great overtrading, too much speculation, too much bank paper. Sir, I admit the fact; but, standing here as I do, I feel it due to myself, to my State, and to gentlemen here, that I should not withhold my more particular views on this subject—not for the purpose of criminating others, or of disuniting us; this would do no good; we ought, as far as possible, only to recur to the past to guide us in future, and to unite in attaining the great object of the session. I will not say, therefore, that this, that, or the other measure was wrong, for the purpose of censuring any one; but I do say that the People have a right to know all that they can know from us respecting them; they are

looking with intense anxiety to this body, both for information and relief.

Sir, I attribute this crisis of the country to something different from the Senator from South Carolina, (Mr. CALHOUN,) and, in doing so, I judge by the times of different events, and by their effects on the People. I know, sir, the great ability of that gentleman to argue away our common sense, and almost induce us to believe that a thing is not what is apparent on its face. I attribute these embarrassments and disasters to the destruction of the national bank, and the removal of the deposits, in the first instance, as the great moving cause. I cannot be satisfied without speaking the truth. Previous to changing the deposits these difficulties were unknown; the exchanges were unobstructed, and almost without expense; and bank paper was every where redeemed with specie. But the moment you said "break down the Bank of the United States," and it became evident that you would succeed in its prostration, these evils were excited; and banks sprung up, and banking capital increased all over the country in a manner without a parallel in the banking history of this or any other nation. Your next step was to remove the deposits of the Government from the United States Bank to the selected local banks. These deposit banks, so soon as they received the public revenue, were encouraged—nay, compelled—by the Government to expand their issues; it was expected and required at their hands before the Government would give them the use and control of the public revenue. The vacuum created by the withdrawal from circulation of the notes of the Bank of the United States was to be supplied by this better currency, as the People were told. The banks, thus encouraged and stimulated by Government, expanded their issues until the whole country was flooded with their paper; property of every kind took a sudden rise, except the public lands; produce was high, and paper money as plenty almost as the leaves on the trees of the forest. The temptation was too great; the People were seized with a kind of speculating mania; millions of dollars were drawn from the banks, and invested in public lands and other property; a great demand was created for merchandise in consequence of the facility with which money was obtained; and the importing merchant, willing to share in the golden harvest, made large importations; the whole country presented a most flourishing aspect, and the friends of the measures pointed with pride and self-gratulation to all these evidences of prosperity, and cried, "Now who can doubt the wisdom of our measures?"

In the midst of all this cheering, while the banks were pursuing the very course pointed out to them by Government, they were met by the cruel Treasury circular, the order in council, which required all payments for public lands to be made in gold and silver. Sir, what was the consequence of this order? Why, sir, it at once created a suspicion of bank paper; and that suspicion immediately ran through the public mind like fire through a dry western prairie; it was the tocsin of alarm to the People; public confidence was soon destroyed; and the consequence was, that specie soon commanded a premium. A run commenced upon the banks by the holders of their notes; but even this they could (most of them) have stood, but private depositors became alarmed, and withdrew their deposits, and hoarded them up; and the final consequence was the suspension of specie payments. Sir, thus, by your own acts, you have aggravated the very disaster which you produced, and which, in the first place, you ought to have prevented; and, in the second place, to have remedied. This state of things became contagious, and the contagion extended itself to every country, and to every interest, directly or remotely connected with us, with a violence proportioned to the intimacy of the connexion and the quantum of the interest involved. The extent of the injury sustained by the issuing of the Treasury order in council is not to be measured by its operation on the specie of the country, by diverting it from the channels in which the laws of trade required it to flow, but by the effect it produced on the public mind prejudicial to the credit, currency, and business of the nation. Sir, from the first moment I saw that order, I had no doubt of the ap-

proach of the final catastrophe. The banks, pressed on the one hand by the Government, and by their depositors and the holders of their notes on the other, were wholly unprepared and unable to stand up. I contend, sir, that the Government stimulated the banks to the unwarrantable expansion of their issues, in the first instance, by her measures, and then by her counter-policy, produced the catastrophe which followed. I presume these measures were adopted from patriotic motives; but, sir, can there be a question as to their wisdom?

It is admitted by all, that the revenues of the Government must be collected and disbursed; and that, in order to perform this operation, fiscal agents must be employed. The great question, then, submitted to us, is, what shall be that agent? That we may decide that question, Mr. President, with all the lights of experience and reason before us, it seems necessary to recur to the past policy of the Government. I do not this, sir, for the purpose of criminating or reproaching others who have differed from me on this policy—far, very far, from it. I recur to it as a matter of history of past events, that should not be lost to the statesman of the present time, while anxiously seeking for the true position of the vessel of state, and for the best means of extricating her from her perilous situation. The People want to be placed in a condition that they can pursue their various avocations with safety. The matters connected with this bill should be finally and forever decided, not to be disturbed without good cause: for it would be better for the People to know what they have to depend upon, though it might not appear at first so beneficial to their interests, than to be eternally deceived and deluded by "experiments" and "expedients," only proving that, even in these days, there are men who are "rich in promises, but poor in performances." Sir, the fiscal operations of this Government have been, for a great portion of the time since the adoption of the Federal Constitution, aided by a national bank. The first institution of the kind was established under the administration of, and approved by, President Washington, the father of his country. It passed a Congress composed of a large number of the very men who formed our glorious Constitution. I mention this fact for the purpose of answering an objection to a national bank, founded on these positions: first, that it is unconstitutional; secondly, anti-republican, and dangerous to liberty. I hear these objections urged from all quarters, by the politicians of the present day. Do these gentlemen suppose that the framers of the Constitution themselves did not know what powers were intended to be given by that instrument, or that they would so recently after its adoption wantonly violate its provisions? Or, can they believe that these patriots and sages would have adopted a measure anti-republican, and dangerous to liberty, so soon after they had crowned themselves with unfading laurels, in that glorious struggle which ended in the prostration of regal power, and the establishment of these free institutions under which we live, at once the envy of monarchs and pride of freemen? After this bank had discharged the duties assigned to it for the term of its charter, the local banks were tried, fairly tried, and proved wholly inefficient to discharge the duties which the United States Bank had performed: and the Government was compelled to ask for the charter of another national bank. This call was responded to, favorably, by almost the entire democracy of the nation, and by many who had voted against the old bank. The act was approved of by that great apostle of constitutional liberty, Mr. Madison. It subsequently received the approval of the highest judicial tribunal in your country, deciding the question of constitutionality—that great jurist, Chief Justice Marshall, on the bench. Sir, is this question of constitutionality never to rest? It has been decided in every way known to the Constitution. Why, then, disturb it?

I have said, Mr. President, that a great part of the time the Government has existed, she has used, as her fiscal agent, a Bank of the United States; and, let me add, up to the day of the removal of the deposits, not one dollar was ever lost to the Government, from any mismanagement on the part
